WHAT IS REAL SALESMANSHIP.

Real Salesmen Are Born and Not Made, Says N. A. Gladding—Study of Scientific Methods Helpful but "Divine Spark" Must Be There.

Salesmen—real salesmen—are born, not made. I suppose many will take issue with me in this statement, but as yet I have never seen a genuine "Simon Pure" salesman manufactured.

What I mean is, that if a man does not naturally possess the vital spark, the true instincts of salesmanship, I do not believe that it is possible for him to acquire it. And remember I am speaking now not of the everyday salesman, but the man who is able to go out and really do things. Personality, force, respect, confidence and numerous other qualifications must necessarily actually radiate from the man who "gets there."

It is true that the successful man must realize not only his own shortcomings, but his strength as well, in order that he may use his powers or curb his weaknesses at the crucial moment.

Careful study of scientific methods is, therefore, helpful, but what I mean to emphasize is, that without the real God-given power of true salesmanship, no man can ever become really big.

Have you ever stood behind a pile of boxes in some "live" store in your city and watched and listened to the genuine article showing and selling his wares to the merchant? If not, you ought to.

It is one of the most entertaining and fascinating experiences.

Talk about telling someone else how to do it! Why, no two successful Knights of the Grip go at it in the same way. Dubs—order takers—they may work alike, but "hope to die" salesmen, never—and it is really a good thing that they do not.

Salesmanship is just about the biggest thing in the world. The sales department can either make or break a business, no matter how well the factory or the jobbing plant is managed or how fine the goods may be. Tremendous responsibility, therefore, on the selling end is it not?

And now just a word for the benefit of employers, if they will kindly so take it! The best, the most scientific, the most effective salesmanship in the world may be ruined through a failure to co-operate fully with the efforts of the sales department. I believe that it is good policy to endeavor to appreciate the difficulties which the salesman must encounter and to render every possible assistance.

Untimely or poorly written letters from a collection clerk or a department head; poor attention to the detail of orders; slow shipments and many other things too numerous to mention, have been the means of losing many an account wherein true selling ability had been expended.

Salesmen—real salesmen (ergo the sales department) often suffer much from the sins of others. Co-operation, team work, a pulling together in every department, is the true secret of success in any business.

WINS OUT IN THE GHETTO.

Joseph Mayer Finds Attractive Store and First Class Stock Prove Big Aid to Business—Special Demonstration Offer.

Some time ago Joseph Mayer, who was conducting a successful talking machine store at 196 East Houston street, New York, decided to branch out a little and therefore opened a second store in the heart of the congested district of the East Side, at 101 Essex street, and where he had already built up a large clientele. While merchants in other lines of trade were in many instances content to permit their stores to reflect the squalor with which they were frequently surrounded, Mr. Mayer was of the opinion that what would be appreciated by Fifth avenue trade would appeal

with equal strength to East Siders, and he therefore proceeded to arrange the new store as attractively as possible. Handsome show windows, a tastefully decorated interior, and attractive demonstration rooms, together with a complete stock of both Victor and Edison machines and records, have combined to draw much trade to the store, including much from dealers who have not considered attractive quarters as an asset. From the selling end there is no effort neglected that will bring business and both stores are open evenings and Sundays. Adolph Mayer, a brother of Joseph Mayer, also has a talking machine store at 790 Ninth avenue, and both combine in their persistent and steady advertising in the daily papers in order to secure more effective displays. A special feature of the advertising is an offer of a free demonstration of either a Victor or an Edison outfit in the prospect's home, a blank for the insertion of the name and address being included in the ads.

MUSIC IN MOTION PICTURES.

Scientist Throws Sound Waves on Canvas and Shows Ten Qualities.

(Special to The Talking Machine World.)

Pittsburgh, Pa., Jan. 10, 1912.

In the future the question of quality of musical instruments or voices of opera singers will no longer be in doubt. An invention shown here last week projects photographs of sound waves on canvas. Of course, the temperaments of singers cannot be measured, but the vibrations of their vocal chords can.

Prof. Dayton C. Miller, of the Case School of Applied Science, of Cleveland, O., operated for the first time his invention for two hours before a big audience in the Carnegie Institute lecture hall. Their applause, their laughter and even the rustle of their every movement were shown upon a canvas. It was shown that the slide trombone has more tone quality than any other instrument and that the human voice has more tone quality than any instrument.

The "phonodeik," Professor Miller believes, will revolutionize orchestra music, because through it the imperfections in tone quality of any instrument can be learned more accurately than by the ear.

CARUSO AS A COMPOSER.

His Song and "Valse Lente" Two Examples of His Work—Played by Knickerbocker Orchestra—Caruso Sings His Own Song.

Enrico Caruso, the famous tenor, is well known to users of talking machines through the superb records of his voice in famous operatic arias and folk songs, but he is now to figure as a composer. Recently he has written a very pretty composition for the piano which bears the title of "Valse Lente," and a song called "Fenesta-Abbandunata" (The Abandoned Widow). Both numbers are yet in manuscript, but were introduced to the public last week by Henri Van Praag, the leader of the orchestra of the Hotel Knickerbocker, who also orchestrated these numbers. When these pieces were played last week Caruso, who was in the room, sang the song à la Neapolitan, with that charm of accentuation that is so peculiarly captivating in his singing of these Italian folk songs. It is needless to say that all who were present at this event were enthusiastic and showered compliments on the composer, on the orchestra and last, but not least on the singer, whose popularity is steadily increasing.

WHERE CONFIDENCE IS NECESSARY.

Selling goods isn't a question of convincing your customer through a strenuous argument, mind power, or will power. It's a question of convincing yourself. When you're convinced, the

battle is a good deal more than half won. So, to be a good salesman you must have eliminated doubt. You cannot afford to have a particle of suspicion as to the quality of the goods or their value. You must have the faith in them that moves mountains, and that faith will move the business as nothing else can.

EXECUTIVE COMMITTEE TO MEET.

Controlling Body of National Association of Talking Machine Jobbers to Convene in Chicago on January 28—Important Matters to Come Up for Discussion at Meeting.

A meeting of the executive committee of the National Association of Talking Machine Jobbers will be held in Chicago on Sunday, January 28, the hotel or other place of meeting having not yet been decided upon.

According to the schedule of the meeting a number of matters of great importance to the jobbers and to the trade in general will be discussed, such as the present exchange system for records, cut-out records, the shortage in certain styles of machines during the holidays and the size of monthly record lists. Secretary J. C. Roush, of the association, in sending out the notice of the coming executive committee meeting to the members of that body has especially solicited information from the jobbers regarding matters which they consider of sufficient importance to be considered at that meeting.

AN INDIAN TALKING MACHINE.

Interesting Story of How an Indian Medicine Man Succeeded in Imitating Work of White Men by Producing Native Talking Machine.

The natural shrewdness and cunning of the Indian, and especially of the Indian medicine man, are well illustrated in a story told by A. J. Farquharson, special representative for the Columbia Phonograph Co., in Arizona, and which should prove interesting to the readers of The Talking Machine World.

Some miles from Holbrook, in Northeastern Arizona, there is a small town or Indian trading station named Beam's Canon. Some years ago Mr. Beam, after whom the station was named, purchased a Columbia cylinder machine and played it for the benefit of the Indians, who in the beginning showed great fear of the outfit, the fear vanishing, however, when they became more familiar with the working of the machine.

Mr. Farquharson relates how, wishing to "show the flag" or rather the "musical notes" in all places, he took a Grafonola Favorite to Beam's Canon. He found that the Indians were not as surprised as he expected, except at the absence of a horn. Now, some sacred dance was in progress at the time and the medicine men, who were in high fettle, examined the instrument with much interest.

In the afternoon a medicine man was seen toiling up the trail to the mesa with a large square box on his back. Arriving at the gathering place, he gravely sat this box down opposite the Grafonola and drawing a piece of iron shaped like a crank from his kit, he inserted it in a small hole and commenced to turn it round; simultaneously there came from the box grunts and weird human sounds. When the medicine man turned his crank fast, the "music" increased in volume and tempo; when he slackened and slowed down, the Indian song became lento and pianissimo. The bystanders were amazed. "Behold, a Moqui Indian Grafonola!"

Some days later it was definitely discovered that the instrument had contained a man; then did Mr. Farquharson realize why offers of gold made by him for the Indian Grafonola were rejected. His dreams of a unique presentation to the Smithsonian Institute were shattered.

TRADE IN CLEVELAND.

Holiday Trade Was of Immense Volume—Activity Well Divided Among the Victor, Columbia and Edison Machines—Factories Worked Heroically to Fill Demands—Still if Stock Could Be Supplied at the Crucial Time 50 Per Cent. More Business Would Be Done—The Business Situation and Prospects for the Year Just Opened Are Most Satisfactory—What the Leading Concerns Report.

(Special to The Talking Machine World.)

Cleveland, O., Jan. 9, 1912.

The year went out in talking machine circles in a most cheerful mood. The hopeful view was dominant, tempered with conservatism and caution, bred of a realization that the times are undergoing an evolution, notwithstanding the unexpectedly prosperous business in December. The first step has been taken into a new cycle, different in most of its aspects from any that has gone before. What the great revolutionary industrial changes portend is still a matter of conjecture, but among talking machine dealers only the most hopeful conversation is heard and predicted coming years of prosperity. Whatever, however, of the future no present complaints are heard, except that the dealers could not obtain a sufficient supply of either machines or records to meet the unusual large demand. The large holiday trade nearly exhausted the stock of every dealer in the city, and judging from what they all say, nearly 50 per cent. more business would have been done if the goods had been obtainable.

Throughout the month of December, and especially the last two weeks of the month, business at the Columbia Phonograph Co.'s store was characterized by strenuous hustle and bustle throughout the day and late into the night, in both the retail and wholesale departments. "Business during the holidays," said Mr. Madson, "was and continues, extra good in all lines of our machines and records, but is exceptionally fine in the Regent lines. There is a great demand for our superb line of grand opera records, all who hear them expressing admiration at the lifelike rendition of the reproductions of the great artists offered by the Columbia Co. The new year has opened up most encouragingly, and for this and next month we have a fine lot of machine prospects. In December two new Columbia dealers were established in the city—the H. M. Brainard Piano Co., at 6525 Euclid avenue, and E. Propper, East 79th street.

The Edison jobbing house of Laurence Lucker, the only exclusive talking machine jobber in the city, is doing a large, satisfactory business. "Trade is good," said A. O. Peterson, manager, "and was

especially fine and satisfactory during the holiday season in both machines and records. The Edison Home and Standard, equipped with the new reproducers, as well as the Opera machines, are meeting with ready sales, and take exceedingly well with both dealers and customers. Among the dealers who have called in the past few days, all of whom gave good orders and reported fine business, were S. C. Jason, Lodi, O.; W. E. Shay, Elyria; Mr. Witt, of the Witt Music Co., Lorain, O.; J. Lightner, Painesville, O., and Mrs. John Kratz, of Akron, O.

Limited only by inability to obtain sufficient machines or records, and lack of room to accommodate customers during the holiday season, is the report from W. H. Buescher & Sons Co. "We did the largest holiday business by 50 per cent. than at any season since starting in business," said W. H. Buescher, "and it would have been of very much larger volume if we could have procured sufficient Victrolas to have met the demand. Our salesroom and warehouse is almost completely cleaned out of everything in the shape of a machine. Our stock was never so completely exhausted as it was the first of this year. Our record sales were not only exceptionally large, but the bulk were selections of the higher grades and highest priced."

"We were just simply overwhelmed with business during the holiday season," said Phil Dorn, of the Collister & Sayle Co., "and we could easily have doubled our sales, both in the wholesale and retail departments of machines and records, if a sufficient supply could have been procured. We were completely cleaned out of stock in both. We are now getting in supplies sufficient to keep trade moving, and the new year has opened up fine."

Business with the Eclipse Musical Co. is fine and the most satisfactory conditions prevail. Mr. Towell stated the company had a splendid retail holiday trade, principally of the highest priced machines and records, and that the wholesale business was phenomenally good and could have been increased to double the amount if the goods could have been obtained. He said he was especially pleased with the unusually large volume of business in the wholesale department, which is constantly increasing. The employees of the company, all of whom are adepts in the business, were compelled to work days and a greater part of the nights throughout the holiday season and are still busy. Roscoe R. Gorham, who started in the business with Lyon & Healy, of Chicago, covering Northern Indiana and Michigan with the Victor and Edison goods, later engaged with the Victor Co., covering Ohio for that company, has accepted a position with the Eclipse Co., where he has been engaged since the first of the year. He is a young man of ability, experience

and energy, and will undoubtedly prove a valuable acquisition to the corps of Eclipse employees. The talking machine department of the Bailey Co. has been a busy place during the past month. Mr. Friedlander expressed himself highly pleased with conditions. He stated the business of the past year showed an increase of fully 50 per cent. over 1910, and was the largest ever transacted by the company. "Our holiday sales of machines," said Mr. Friedlander, "were of the medium and lower priced machines—that is, the bulk of our trade was in that line—but we sold a large number of the highest priced machines, and were completely sold out of Victrolas. Our record sales were large, covering the entire lists of productions, and the demand has continued exceptionally good thus far this year."

Mr. Scroton, of the Caldwell Piano Co., reports the business of December, 1911, the best during his eight years' experience in the Victor business. He said the holiday trade of the company, covering the entire line of the Victor products, was of the most satisfactory character. So well pleased is the company with results in the sale of talking machines that hereafter four rooms, instead of one, facing on Prospect avenue, will be devoted to the business of the department, and a complete Victor line of machines and records will be carried. It is the intention to make the Victor business one of the features of the store. E. T. Caldwell, president of the company, resigned the last of the year 1911. Mr. J. Campion, formerly of Pittsburgh, has been appointed general manager and is now in charge of the business.

Everybody is pleased with business results at McMillin's Music Store, including H. E. McMillin himself. O. E. Kellogg, manager of the talking machine department, said: "Our Christmas and holiday business was in every respect the largest and most satisfactory we ever had. One peculiar feature was that we were just as busy December 30 as we were at any time between the 23d and that date. We were entirely sold out of Victors IV, VI and Victrolas. It was a successful wind-up of a prosperous year's business."

The Goodman Piano Co. is doing a good talking machine business, although Mr. Goodman devotes his attention and directs his energy more especially to the piano trade.

Mr. Probeck states that the Dictaphone business has been fairly good during the past month.

Geo. R. Madson has been receiving a number of New Year's cards from Columbia dealers. M. T. Wright, of Media, O., sent him this: "Have just been trying some of the January records and enjoy them hugely, as do many others. Am glad

The influence of the Victor-Victrola

The Victor-Victrola has accomplished wonders in arousing interest in music throughout the United States.

It has given to the people a thorough understanding of the world's musical masterpieces.

It has made classical music and grand opera as easily accessible as the lighter forms of music, and has stimulated the best musical taste.

It has injected new life into the musical instrument industry.

Dealers everywhere reap the benefits and the Victor-Victrola is today one of their biggest assets.

It's not only the great *names* in the Columbia record list—it's the uniform high average of every record in it that spells Columbia with a big "C."

Columbia Phonograph Co., Gen'l, Tribune Building, New York

TRADE IN CLEVELAND.

(Continued from page 4.)

to be a Columbia dealer and intend to keep at it. I thank you and Mr. Robertson for kindness shown me and wish you both a happy New Year."

W. F. Bletscher, who for several years past has been with the Columbia Co., in the Dictaphone department, severed his connection with the company January 1 and has engaged with the Roach & Reed Co., of this city, representative of the Edison Business Phonograph. His headquarters will be in Toledo. Mr. Bletscher is thoroughly competent in the commercial line of the phonograph business.

A young man employed by Laurence Lucker, Edison jobber, was arrested a few days ago for stealing an \$85 phonograph and 80 records. He had been stealing the records one and two at a time, but when his pockets bulged with four, Mr. Reterson, manager, called him down and instituted a search at his home, resulting in his arrest and the recovery of the goods.

R. Svehla, the West Side Columbia dealer, did a fine business during the holidays in both machines and records, especially in foreign records, of which he makes a specialty.

Reports of the most favorable character were made by Aldrich, Harvey & Co., who handle Columbia goods; Flesheim & Smith, Victor machines and Zonophones; Brown Bros., Victor goods, and the United Factories Co., dealers in Edison goods. Without exception they all reported an excellent holiday trade and present good business.

ELLIS HANSEN'S OWN STORY.

Originator of Victor Window Display System
Writes of His Experiences—His Appreciation of the Dealers' Co-operation and What Is to Be Done This Year.

The following interesting story regarding the organization and development of the window display system of the Victor Talking Machine Co., and which has come in for such high praise from advertising men and progressive merchants in all lines of business, appears in The Voice of the Victor for December under the caption of "A Dream That Came True," and from the pen of Ellis Hansen, head of the window display department of the Victor Co. Mr. Hansen says:

On April 18, 1905, the worst earthquake and fire of modern times destroyed San Francisco. I, at that time, was in charge of the show windows of Sherman, Clay & Co., whose beautiful store and building was, with the many other great business houses, entirely destroyed by fire. I lost everything I had, and the next day found me, with thousands of others, camping outside San Francisco with little prospects of food or shelter. How quickly help arrived is a matter of history, and a few days after the terrible experience I began to think of the future—what next to do.

Eight days before the earthquake, on my thirty-sixth birthday, I had received a letter from the Victor Company deciding me the first prize winner in the competition of Victor Windows held

by them and open to all stores in the country. This occurrence came back to my mind time and again, and on the second night I had to sleep in the open I dreamt that the prize window was to be reproduced in a number of cities by the Victor Company. That thought haunted me the next few days and finally, after much hesitation, I sent a letter to the general manager of the Victor Company, in which I told him about my idea and suggested my service to design windows for the use of Victor dealers. I received a very kind answer a few days after, in which I was told the idea was a good one, but as the company was at that time overwhelmed with orders it was impossible to try new experiments. I was, however, told to

ELLIS HANSEN

go to work for Lyon & Healy in Chicago, and followed this advice. That the idea had made some impression is proved by my connection with the Victor Company two years later. I have now had charge of the window display department nearly three years, and it has not been "all velvet" either—not for me and not for my company. Many costly experiments have been tried and given up, but we have learned by our mistakes, and to-day we are in a position to supply any Victor dealer with snappy, bright and artistic window displays that will attract attention and sell goods. The price we charge for these displays is about half of the actual cost. If the dealers should try to make up such a display without our help it would cost them more than ten times the price we charge. It is my absolute belief that before long Victor dealers all over the United States will lead this country in artistic and interesting window displays. I base my belief on the following facts:

First.—The enthusiastic support of our dealers, which has caused an enormous increase in our output during the last six months.

Second.—The many testimonials to the merit of our displays we have lately received from the most progressive dealers all over the country.

Third.—Sincere and highly complimentary comments by high-class advertising journals like Printer's Ink and others.

Fourth.—Our trained and well-drilled corps of artists and assistants, and an increase in floor space that will enable us to more than double our capacity.

Fifth.—The most wonderful spirit of liberality and broad-mindedness on the part of the Victor Company in appropriating great sums of money on this new and heretofore untried experiment of helping its dealers with their show-window advertising.

The new plans for the year 1912 excel all our former efforts. The new mechanical displays are novelties in window advertising that are really new.

My only regret is that we are not able to fill all the orders we have received for our Christmas windows. More than two hundred dealers will be disappointed in not receiving this window. This can, however, be avoided in the future by placing a standing order for our window displays.

I want to close this little article with thanks. Thanks to the dealers that made it possible for us to sell every Christmas display and December show cards that were made before the first of December.

Thanks to the distributors who so thoroughly believe in the good of these windows and show cards that they take all the trouble of distributing and handling these displays and signs without one penny's compensation. And last, thanks to the Victor Co. for the exceptional financial and moral support, without which my dearest dream would never have been materialized, but simply remained what it was the day after the earthquake, a dream.

LIKES TO HANDLE THE VICTOR.

M. J. Soukup, who handles Victor talking machines in addition to his general business as jeweler and optician in Decorah, Ia., has favored The Talking Machine World with a photograph of his Victor department which furnishes an idea of the business he has built up in his territory. Writing The World, he says: "The year just closed was the best since I started in business. I carry Victors exclusively and I like to sell them and have a very nice class of trade. Decorah has a population of 3,500, and I sell mostly the higher-priced machines and records. This spring I expect to enlarge my stock of records to include almost every one in the catalog. I enjoy reading The Talking Machine World and wish all connected with it the compliments of the season."

It is a fact that the public regards the representatives it meets and with whom it transacts business as the company itself. If customers are well treated by salesmen, if they are pleasant and affable, if they impress them by their alertness and their knowledge of their business, their patronage naturally gravitates toward that store. They like to go there and are glad to tell their friends about it and to influence their patronage in that direction.

COMBINED PLAYER AND TALKER.

The Subject of a Patent Granted to Walter M. Davis of New York, but Now Residing in Europe—Some Details of This Invention.

Walter M. Davis, of New York, has just been granted patent No. 1,013,589 on a combined piano-player and talking-machine.

This invention relates to improvements in combined piano-players and talking-machines and the object of the invention is to so combine a piano-playing device and talking-machine that the note sheet moving mechanism of a piano-playing device is automatically started from the talking-machine correctly and precisely at the proper time and speed, so that the movement is synchronous.

In the accompanying drawings in which letters of reference indicate like parts in all the figures, Fig. 1 is an elevation of parts of the piano-playing device and of the talking machine, parts being in section and parts shown diagrammatically, and others broken away. Fig. 2 is a detailed plan view of part of the starting mechanism in the piano-playing device. Fig. 3 is a plan view of the talking machine disc. Fig. 4 is an enlarged detail sectional view through the disc and support.

When playing by means of a piano-playing mechanism, the piano accompaniment to a musical or like performance, rendered or reproduced by a talking-machine, it is absolutely essential that the piano accompaniment shall begin precisely and exactly at the correct time so that the sounds produced by the talking-machine and the piano-playing mechanism shall be in perfect unison and harmony, as they were in the original production, in which they were produced by means of the voice or a solo instrument and an accompanying piano. The piano-playing mechanism and the talking-machine may be and preferably are driven from the same source of power, for example, the pumping bellows of the piano-playing mechanism, and must be driven at the same relative uniform speed in order to conform to the original production. But a piano-playing mechanism and talking-machine may also be driven by separate motors which are so timed that the moving parts of the piano-playing mechanism and of the talking machine have the proper relative speeds that are necessary for proper reproduction of the entire composition.

As the disc of the talking-machine is always moved a greater or less distance before the sounds begin to be produced, and the note sheet of the piano-playing mechanism must not be moved operatively until a certain predetermined spot on the talking-machine disc or record has been reached by the needle or stylus, means are provided to start the note sheet winding mechanism of the piano-playing device at the proper time.

TWO CONCERNS ENJOINED.

The Circuit Court for the district of Colorado has enjoined the Phonograph Record Exchange of Denver, Col., from the unlicensed sale of Edison records. This action is important in its affirmation of the Edison policy of protecting its dealers.

After an extended search for Judge Denison in the woods of northern Michigan, the Edison Co. obtained an injunction against the Smith Mercantile Co., of Grand Rapids, Mich., who were acting in violation of their dealer's agreement.

A HANDSOME WINDOW DISPLAY.

The Edison February window display marks a new feature in that company's efforts along that line. It is designed to require no fixtures what-

ever and to show what good effects can be obtained by the simplest possible treatment of a window.

THE NEW CONCRETE CABINET.

Latest Invention of Wizard Edison Arouses Much Interest in All Quarters.

Few of the inventions of Thomas A. Edison have received so much attention from the public press as his concrete furniture, the first samples of which were recently perfected. One of the most inter-

EDISON'S CONCRETE PHONOGRAPH CABINET.

esting pieces of furniture made from concrete is the phonograph cabinet, illustrated herewith, and which, when finished, has a remarkable resemblance to white enameled wood trimmed with gold. According to Mr. Edison, the new concrete cabinets can be made and sold at prices that compare favorably with those set on second-hand wood furniture and at the same time allow a substantial profit for the manufacturer. It is planned to have a factory in operation at an early date making concrete furniture of all descriptions. The illustration is shown through the courtesy of The Furniture World.

CREDIT MEN SHOULD BE PARTNERS.

Salesmen must be competitors, but credit men should all be partners. Credit men should not even try to stand alone. To paraphrase a little: They should share each other's woes, each other's burdens bear, and each should always ready be to help the other swear.

If a fellow will avoid being the same kind of a fool twice he stands a ten-to-one chance of being numbered among the sane and sensible, even though he may have been several kinds of fool during the course of his career.—Jed Scarboro.

IRENE FRANKLIN'S EDISON RECORDS.

The Edison people are announcing a series of records by the talented vaudeville star, Irene Franklin, famous the country over as a singer of character songs. Burt Green, her husband and co-star en tour, accompanies her on the piano in these records, in which she sings original compositions by herself and Mr. Green. As Irene Franklin has never before performed for any music-reproducing instrument, her singing for the Edison is expected to arouse great interest, and we are assured by

the company that these records are "Irene-true-to-life." The first three records announced are "I've Got the Mumps," "The Talkative Waitress" and "I Want To Be a Janitor's Child."

TALKING MACHINE EXPORTS.

The Figures for November Presented—Reports Show Falling Off for the Month.

(Special to The Talking Machine World.)

Washington, D. C., Jan. 9, 1912.

In the summary of exports and imports of the commerce of the United States for the month of November (the latest period for which it has been compiled), which has just been issued by the Bureau of Statistics of the Department of Commerce and Labor, the following interesting figures relating to talking machines and supplies are set forth:

The total exports of talking machines, records and supplies for November, 1911, amounted to \$269,556, as compared with \$316,960 for the same month of the previous year. The eleven months' exportation of talking machines, records and supplies amounted to \$2,632,311.

CONTEST AIDS HOLIDAY TRADE.

H. C. Powell Music Co. Offer Four Valuable Prizes to Holiday Buyers and Attract Much Favorable Attention.

(Special to The Talking Machine World.)

Parkersburg, W. Va., Jan. 2, 1912.

The H. C. Powell Music Co., this city, attracted much extra business to their store during the holidays by offering a series of prizes for the nearest correct guesses as to the number of seeds in a large sixty-pound pumpkin displayed in the window of their store. One guess was allowed on each purchase of 50 cents, but only fifty guesses were allowed to any one person. The four prizes offered, which were awarded on Christmas night, consisted of a \$150 Grafonola as first prize; a \$50 sewing machine as second prize; a \$40 Victor talking machine as third prize, and a \$25 Columbia graphophone as fourth prize. Two people guessed the exact number of seeds, which was 340, and the tie was decided by lot to the satisfaction of both parties. The contest attracted much attention and the expenses were more than met by the increased volume of sales.

SAYS \$210,000 IS DUE HIM.

W. E. Gilmore Wants Receiver Named for Llewellyn Realty Company.

William E. Gilmore, formerly head of the Edison companies in West Orange, N. J., has applied for a receiver for the Llewellyn Realty Co., of East Orange, of which he is a stockholder, and which owes him, he says, \$210,000. The indebtedness arose, he says, through cash advances and transfers of real property.

The assets of the concern are set at \$267,622.05, and unsecured liabilities at \$295,449.08.

The petitioner asserts that the company has been managed in an improvident and incompetent manner. He says the company owns several apartment houses in New York, among them four which are valued at \$951,700, but mortgaged so heavily that the equity is only \$130,483.30. The company's cash in bank is \$255.22.

Frederick R. Hasselman, of East Orange, is president of the company and also its treasurer; Richard P. Foard, of Newark, is vice-president and secretary, and Charles E. S. Thorn, of Newark, is the third incorporator. The company was incorporated in 1908.

An old merchant of Indiana was asked by his son and partner, "Dad, what shall I get you for Christmas?"

"A talking machine, John," said the old man. "I have always wanted one."

The father received a letter from his son on Christmas morning. It read: "Dear Father:—You said you wanted a talking machine. Well, I've got you one. I am married, and bringing home my wife."

The repertoire of the Edison Phonograph comprises all the great music of every kind, ever composed, presents all of the *greatest* stars in every field of entertainment.

The EDISON PHONOGRAPH

is the greatest factor in the world today in bringing the best of every character of entertainment within the reach of *all* the people.

NEW YORK, JANUARY 15, 1912.

JUST now business men in all lines of trade are busily engaged in closing up matters in connection with the Old Year and making active plans for the New.

The record for 1911 is not half as bad as many have predicted and while trade shows a material shrinkage in many lines from the high water mark year, yet, when measured from the low water mark year, 1911 takes rank as a good business year. This trade newspaper institution has intimate relations with a number of industries, and we have been obtaining through our representatives the opinions of business men regarding the volume of business for 1911, also their views for trade for the New Year. It is true that 1911 did not run on an even basis. In other words, there were some extremely stagnant periods and some very lively ones.

It is a fact that the moment that business becomes dull men immediately fall into the habit of uttering bitter complaints.

We have gotten into the habit of figuring that the business tide must always be rising, consequently when there is the least setback complaints then begin to multiply.

We cannot always keep climbing the hill without stopping for brief rests now and then; and the business world must obtain some relaxation.

In the talking machine trade a peculiar condition has existed straight through the year; that is, the inability of the manufacturers to supply the higher grades of talking machines in anything near the quantity demanded by the jobbing trade.

We question if in any other industry has there been such an amount of unfilled orders as has been evidenced in the talking machine industry straight through the year.

It may be said that these orders represented padding to a certain extent.

In other words, that the jobbers realizing that they could not secure all the stock they wished placed orders for more instruments than they believed they would get in the belief that they would profit in a percentage distribution.

In brief, if they ordered twice as many instruments as they expected to receive, their percentage of shipments would be materially large.

Be that as it may, the fact remains that the Old Year closed with more unfilled orders on the books of the talking machine manufacturers than ever before in the history of the trade.

Now, that counts for something surely. You cannot argue away such conditions. They are too solid and too substantial. We may say that business has shown a shrinkage. We may say that trade has been spasmodic. We may say that it has been at times depressing.

Argue all you will along these lines, gentlemen of the talking machine trade, but you have got to get back to the fundamentals, that there has been inability in the manufacturing departments to supply the demand.

Now, what does that mean? Only one thing—that there is an increased call for talking machines; in fact, such a demand that the manufacturing departments have been unable to cope with the situation.

Surely that does not mean that the talking machine business has reached its zenith.

No, for it is safe to predict that the sales for 1911 will far surpass those of any previous year.

In other words, trade will go marching on to higher and better accomplishments, no matter whether we have unsettled conditions in the political field or not.

Talking machines will be sold and sold in greater numbers than ever before.

The underlying conditions are too sound for the coming Presidential election to cause great disturbance to the business interests; and the savings bank deposits show that the people have resources which will enable them to gratify their desires in many ways. Talking machines, for instance, if you will.

The year closes with bank deposits heavier than they have been for years; and the crops which are unsold in the possession of the farmers run into colossal figures.

Recent heavy orders placed by the railroads show that this great department of the industry will be active during the New Year.

It is easy for a man to sit down and figure out prosperity. That is, on paper; just as easy for him again to conjure up all kinds of depressed situations; but there is a solid middle ground and it is not wise to figure too much on things being either easy or hard.

In other words, we should take the situation as we find it and make the most of it.

A great many people during 1911 were fearful lest the attacks upon corporations by the United States Government would be followed by the forced disintegration of great holding corporations everywhere.

AS a matter of fact, during the past few months there has been a steady increase of confidence in the Governmental attitude towards corporate interests and that has resulted in new investments—in increased betterments and in improved trade conditions in all the special branches of the industry.

Of course, we will always have some conditions to disturb us more or less and a great many men magnify the destructive results which come during the period when the people are exercised as to who will be the executive head of the Nation for the next four years.

As a matter of fact there will be less unrest this year, in our opinion, than ever before during the year in which we have elected a President.

Why? Simply because the people have been growing nearer together all the while regarding their political beliefs.

The Republicans believe that the tariff should be revised; but they figure that they can do it better than the Democrats because they have been friendly to the tariff.

The Democrats also insistently urge that the tariff should be revised, but they affirm that they are the ones to do it, so that no matter which party wins it is certain that generally they will be working along parallel lines, but specifically they may differ as to methods; and there are no issues at stake which will disturb the financial interests of the country in the same manner that they were shaken during the "16-to-1" campaign; and there are no Socialistic theories which tend to shake the confidence of people in the republican form of government.

THERE is a desire to get the Government on a better business basis than ever before.

We see that in almost every department at Washington.

Take the Post Office. For the first time in forty years that great department of the United States Government is placed upon a paying basis and keen business minds are working out problems

The big future of the business is in the high grade instruments. That has been the basis of our program for a long time, and there hasn't been a hitch in it.

Columbia Phonograph Co., Gen'l, Tribune Building, New York

in every other department; and as a matter of fact this country is too progressive.

It possesses too many business minds, keenly active, to recede from any position when it has once been found to be advantageous to the entire people.

Of course, we will have some excitement, but, as a matter of fact, the purchasing power of the people will be increased during 1912 by reason of the fact that more men will be employed, hence enlarging the field of business possibilities.

Some of the best posted business men of the country predict

the beginning of a real boom during the New Year.

We rather hope that this prediction may not come through because booms are dangerous.

The reaction which invariably sets in is too depressing.

It will be better, far, for business to keep moving steadily ahead at a natural pace than to have it accelerated by any boom conditions.

Save us from booms, but let us determine to do our part in the business building for 1912.

Let us not wait for it to pick up, let us pick it up.

TRAINING THE MEMORY.

An Asset of Unquestioned Importance to the Merchant Buyer and Salesman—The Ability to Recall Names and Faces Helps to Build Business—Mental List of Prices and Styles Permits Careful Buying.

A matter of considerable moment in retailing, and one that seldom receives the careful attention it deserves, is the value of a well trained memory. This applies to everyone in the store—from its head to the humblest employe.

To all who come in contact with the public the ability to promptly recall faces and names is a distinct advantage. Thus may the irate visitor be placated, thus may the hesitating customer's mind be made up. And if the one in attendance on her, or in conversation with her, can recall her address, her special tastes and other details, that customer is at once put in the most favorable mood.

To the merchant and to the buyer what a benefit it is to be able to recall, at a moment's notice, prices, terms, etc., applying to certain goods, manufacturers' names, how promptly or otherwise deliveries have in the past been made, and other occurrences.

Some feel that lack of recollecting power is a constitutional defect. This is wrong. A good memory can be acquired, says a writer in the Dry Goods Economist. Apart from the obvious essentials—love for one's work, intense interest in all one's undertakings and constant application of the mind to the development of one's store, or department, or section, as the case may be—there is a course of mental training to be constantly pursued.

Avoid dwelling on non-essentials. Do not, for example, cherish a grudge against anyone, be it competitor, or wholesaler, or store associate, or customer. Do not confuse the mind by thinking too much of past mistakes or of the good conditions which might have resulted from the pursuance of a certain course of action. Do not waste time in merely envious contemplation of the progress made by others. Keep the eyes of the mind looking forward and outward, rather than backward and inward. By shutting out as far as possible the petty thoughts which many merchants, and many employes, too, permit to harass them, the mind will be left freer for action of a beneficial character.

Those who have tried this kind of concentration have found it highly profitable as a means not only of strengthening the memory, but of making

themselves more contented, more ambitious and more efficient. The head of a certain retail establishment who is noted for his retentive memory ascribes his steady progress to the fact that he has learned the futility of harboring injurious thoughts, and, little by little, is becoming more and more able to shut them out—and keep them out.

To those who have acquired such a degree of self-control that even during periods of storm and stress they can concentrate their mind on the right kind of subjects, practically nothing in the way of memory-training ought to be impossible. And every step forward makes the road easier to travel.

COLUMBIA DISC PUBLICITY.

Unique Device for Calling Attention to Columbia Records in Display Windows—Now Ready for Shipment to the Trade.

The Columbia Phonograph Co., General, with its usual progressiveness, has perfected a unique device for use as a window display for Columbia

double disc records. The accompanying illustrations show both the front and back view. The first of these machines, roughly made, was issued some time ago to a few Columbia stores and dealers. They were very satisfactory in spite of their crudity, and this very distinctive and attractive method of displaying to the passerby that the Columbia double-disc record has "music on both sides" and "that it will fit any machine" is bound to be far more satisfactory. The mechanism is adapted to be set on the cabinet of any Columbia machine instead of the turn-table. The way the record is revolved and held in position long enough for each face of it to be read is extremely fascinating—the little wooden ball on the end of the string acting as the escapement which retards the revolutions by winding up and unwinding itself alternately around the two posts.

The display is being furnished to Columbia Co. stores with instructions to keep it well set up and in constant motion in the windows until further notice. They will be furnished to dealers at the actual cost of manufacture and packing.

FRONT VIEW.

BACK VIEW.

The Talking Machine Trade in New England

USING AUTO TO BOOST TRADE.

Clarence H. Seavey, of Haverhill, Mass., Doing Good Work in the Line of Victor and Edison Service by Means of the Automobile.

(Special to The Talking Machine World.)

Haverhill, Mass., Jan. 9, 1912.

Clarence H. Seavey, who conducts a very complete talking machine department in connection with his piano business at 44 Winter street, this city, is a great believer in the automobile as a trade augmentor, and in this connection he recently purchased a Ford car to solicit talking machine business on the road.

C. H. SEAVEY'S DELIVERY WAGON.

Mr. Seavey, who handles the Victor and Edison lines, was one of the dealers who took up the wagon proposition, but found the wagon too slow for his work, so he is now using the automobile, as shown in the photograph herewith attached. It goes without saying that this investment will prove a profitable one, for it insures not only quick deliveries but it is a splendid advertisement not merely for the business itself, and demonstrates that Mr. Seavey is an up-to-date, progressive business man who "does things"—a man who believes in "service" and who can be counted on to "deliver the goods."

There are few dealers, if any, this side of Boston, who are pushing business via the automobile

as is Mr. Seavey, and his efforts in this field may be emulated by others throughout the country.

INCREASING LINE OF JOBBERS.

Some Reasons Why the Oliver Ditson Co. Is Making Splendid Strides in the Talking Machine Field Throughout New England—Ditson Victor Service—An Organization Winning Out—Manager Winkelman's Success.

(Special to The Talking Machine World.)

Boston, Mass., Jan. 8, 1912.

When a concern transacts a whole lot of talking machine business and decides to do more there are many good reasons for it. One of the reasons that the Oliver Ditson Co. are increasing their efforts in the jobbers' field is that they think more dealers of the New England States should be benefited by the Ditson Victor service and organization.

All the trade know Henry A. Winkelman, the manager of the Ditson Victor department, and he is conceded to be one of the most experienced talking machine men in the country. Through his efforts both the Victor jobbing and retail departments of this company have grown steadily, and it is the 1912 aim of Mr. Winkelman to further develop both branches. He believes that the strong Victor service which they offer to the dealers of this territory is of unusual quality, covering complete stocks and a hand-to-back co-operation that is of considerable importance.

Furthermore, the Ditson Co. claim to have the largest Victor stocks of any jobber this side of Chicago, both in completeness and volume. They have made a study of the jobbing problem, and the result of this study is centered in their efficiency. We would like to show some of the trade who is at the head of this Ditson Victor department, but Henry Winkelman is a little retiring on newspaper publicity, preferring to make up this "non-accomplishment" by a further devotion of his hobby—the Victor business.

AN EFFECTIVE CIRCULAR.

(Special to The Talking Machine World.)

Providence, R. I., Jan. 5, 1912.

The Tone Controller Co., 287 Canal street, this city, is mailing to the trade a circular with the

headline, "A live position for the buyer of talking machine sundries." This refers to the "Dustoff" De Luxe disc record cleaner, which retails at 50c. They claim that the Dustoff keeps the tone of the record pure and clear and adds to the life of the record.

SOMETHING NEW IN NEEDLES.

W. H. Bagshaw Produces a New Needle Called the Duplextone—An Interesting Description and Illustrations of This Production Shown on Opposite Page—Mr. Bagshaw Is "Doing Things" in the Needle Line—That Is Why Business Is Steadily Expanding With His Establishment.

(Special to The Talking Machine World.)

Lowell, Mass., Jan. 8, 1912.

After considerable experimenting W. H. Bagshaw, the big needle house of this city, announces something new in talking machine needles. This new needle will be called the "Duplextone" for the reason that it can be played "loud" or "soft" by a simple adjustment of position upon the record.

Elsewhere in this issue are two illustrations which show the two positions of the "Duplextone" needle as used when playing.

It will readily be seen that a needle of this character will be of wonderful benefit to jobber, dealer and owner. Everyone will gain by its introduction, and at the same time it shows the aggressiveness of the men who are instrumental in upholding and increasing the wonderful prestige enjoyed by W. H. Bagshaw for the high quality of their products. It shows that W. H. Bagshaw is determining and catering to the popular need, and by considerable expense to themselves will send a sample package of these needles to any dealer in the world, provided he will mention his jobber and send a stamped addressed return envelope so no mistake will be made in delivering.

H. L. ROYER'S NEW ENGLAND TRIP.

(Special to The Talking Machine World.)

Boston, Mass., Jan. 8, 1912.

Herbert L. Royer, manager of the Arch street Victor department for the M. Steinert & Sons Co., spent a few days in Bangor, Me., following the Christmas holidays, and found the Victor business very good in that territory and with the prospects good for disposing of high-priced machines to many of the leading people of the Pine Tree State.

At this writing he is planning a quick trip to Connecticut and will make stops at New Haven, Bridgeport, Stamford and South Norwalk. Business at his quarters during the holidays was more than good, the only trouble experienced being the difficulty in getting goods promptly from the factory.

TAKES CHARGE AT PROVIDENCE.

(Special to The Talking Machine World.)

Providence, R. I., Jan. 6, 1912.

Fred Erisman was the manager of the headquarters of the Columbia Phonograph Co., this city, during the holidays. Mr. Erisman was with the Boston offices when the opportunity presented itself for a new manager, and Erisman was selected. Whether this is permanent is not known.

I believe in knowing just what I am doing and where I hope to land. I always strive to make others strive for something a little farther ahead, but I always know the exact point which I hope to attain, and I have figured out the steps I must take to reach that point.—Walter H. Cottingham.

The enlightened, careful credit men in this progressive day are a unit in regard to the advisability and imperative necessity of obtaining signed statements in every case where it is practical or possible.

Glance through this P-E Service Chat!

Last month we said: "Right service means dollars to you" and this is decidedly true.

A run on Amberolas, for instance, sells your stock and you could dispose of several more if you had the goods at once. You would even give a premium to have the machines promptly.

This is where the P-E Service enters. After your order is received, the FIRST OUT-GOING DELIVERY has your goods—all shipped complete. We time express and freight shipments so they are due at your store in time for clinching the sales.

Our two points of supply give to dealers in all parts of this eastern territory an equal opportunity to try our P-E (Perfect Edison) Service.

One order will show you just what we mean by P-E promptness and completeness. Send it in, no matter if small or large.

66 Battery-march
Street
Boston, Mass.

THE PARDEE, ELLENBERGER CO.

96 State Street

New Haven, Conn.

FROM OUR BOSTON HEADQUARTERS

324 WASHINGTON STREET, JOHN H. WILSON, MANAGER.

(Special to The Talking Machine World.)

Boston, Mass., Jan. 9, 1912.

Manager Arthur C. Erisman, of the Columbia Phonograph Co., began the new year with visions of big business, which was justified by the volume done in December, which he reports was the largest month since the Boston department has been established. He says that for the year the cash collections exceeded the total sales by several thousands of dollars. In fact, when he came to make a report on the twelve months' business, Mr. Erisman says he almost doubted the accuracy of the figures.

For the last several weeks prior to Christmas every man associated with the Columbia quarters was kept on the jump, and Mr. Erisman himself worked far into the night, which was absolutely necessary because of the absence of his brother, Fred Erisman, who was suddenly called to the Providence quarters of the Columbia to take charge of the business pending the arrival of a new manager. To help out in the interim, William E. Gutchell, whose territory is the State of New Hampshire, was brought into the Boston office, where he will remain until Mr. Erisman returns from Providence.

During the holidays Norman Mason, the manager of the retail department arranged some very catchy window displays, which quickly attracted the passers-by. Just now a Dictaphone demonstration in one of the windows is almost blocking the sidewalk. At one side sits R. L. Perrett, the Columbia's dictaphones salesman, busily engaged at a desk transacting business by means of a Dictaphone. On the other side is one of the woman employees, who is transcribing the dictation to a typewriter.

Another handicap from which the Columbia suffered during the holiday season was the absence of "Jim" Cahill, the shipper. He met with a painful accident early in December, while in the basement a piece of wood struck his eye putting it on the "blink" for three weeks. He is back at work now, and the shipping of goods has resumed its customary despatch.

Columbia Grafonola for U. S. S. Georgia.

Several of the officers dropped into the Columbia quarters in Tremont street late in the afternoon of January 2 and wanted to know if a machine could be shipped immediately onto the battleship Georgia, which then was lying off the Charlestown Navy Yard. Immediate delivery was necessary, as the ship was going to sail that night for Norfolk, Va. Assured that the machine would be despatched

promptly payment was made and a quantity of records also were bought. The Columbia grafonola was on board the Georgia almost as soon as the officers reached there.

Here's a Challenge.

The bowling team made up out of the membership of the Eastern Talking Machine Associates is still in the field and ready to meet any competitors. It has sent out a challenge to other teams to meet it on the alleys. Probably because all the talking machine boys are such good bowlers other teams do not seem over anxious to meet them.

Some Distinguished Visitors.

Ed. Whitney, of the Whitney Brothers Quartette, is just back from an extensive trip through the West, and he dropped in to see the boys at the Eastern Talking Machine Co.'s quarters the other day. Another notable visitor who was a caller there was De Gogorza, who spent an hour and a half entertaining some of the staff with his stories of how records are made abroad. Mr. and Mrs. Reinald Werrenrath, Collins and Harlan and the Peerless Quartette also dropped in and all expressed themselves enthusiastically of the future of the products of the Eastern Co.

Ralph Corey's Long Trip.

Special mention must be made of the visit to the Eastern Co. of Ralph Corey, the trombone soloist of Sousa's Band, who has just completed a 48,000-mile tour of the world, bringing his trip to a close at the Victor factory. Mr. Corey is an intimate personal friend of W. J. Fitzgerald, of the Eastern Co., and a large package of postals sent from all over the world tells pictorially just where his friend Corey has been.

W. O. Pardee Visits Boston Headquarters.

W. O. Pardee, of the Pardee-Ellenberger Co., visited the Boston headquarters, F. H. Silliman, manager, for a few days the first of the month. He had intended continuing his trip somewhat further, but changed his mind and returned to New Haven. Mr. Silliman says that the December business was very good and the prospects for the new year most promising. He says that a new invoice of machines and records is on the way, and both promise to be the superior of any goods yet put into the Boston establishment.

Preparing for Gala Entertainment.

The entertainment committee of the Eastern Talking Machine Associates is arranging for a whist party with light refreshments to take place on the evening of February 6 in the well-appointed

hall at the top of the Eastern Co.'s Tremont street establishment. The associates number about twenty-five employees, and with their ladies they will make up a merry party. The committee is getting some good talent together which will add to the pleasure of the evening. These parties are an annual feature to which the Eastern boys look forward with great interest.

Fishing in Freezing Weather.

George L. Cheney, of the Boston Talking Machine Co., has gone up to Lake Champlain, and he is having rare sport fishing through the ice.

Immense Victor Business.

Ubert Urquhart, manager of the Victor department for the Henry F. Miller Co., says the holiday business was all that could have been asked for, the only difficulty being that goods could not be shipped from the factory fast enough. During the week preceding Christmas the window of the Miller house devoted to a display of Victor goods was tastefully decorated with greenery and vari-colored electric lights, and was viewed with great interest by the multitudes that pass to and fro on busy Boylston street.

Expect to Be Ready in February.

J. G. Widener, salesman for the Eastern territory of the Boston Talking Machine Co., started off on a three weeks' trip a few days ago which will include Montreal, Portland and other cities. The Boston Co., which has opened a suite of offices at 41 West street, expects to be ready for business about the middle of February.

Good Reports from Pittsfield.

The Boston headquarters of the Columbia Co. received the gratifying information from the Pittsfield agency of the company a few days ago of a wonderful growth in the output of machines. E. A. Tompkins, the manager, writes that the December business was seven times greater than the December business of 1910, which itself was five times in excess of the same month in 1909. Mr. Tompkins is one of the most enthusiastic of the Columbia dealers in the State.

Get Proper Representation.

When the talking machine department first was installed in the Henry Siegel Co.'s large department store not a great deal of enthusiasm was manifested over it, and the department was shifted about from place to place. Gradually the house came to see that if properly cared for it ought to prove one of the most profitable adjuncts to the

FROM OUR BOSTON HEADQUARTERS.

(Continued from page 13.)

Siegel Co.'s large business. The talking machines now occupy permanent quarters on the Washington street front of the third floor, are splendidly fitted up and in charge of Fred V. Phillips, who is devoting all his energies to building up the business with the result that in the last few months this department has made rapid strides.

New Columbia Dealers.

Two new connections that Manager Erisman, of the Columbia Co., has just made are W. H. Wheeler & Son, of Springfield, Vt., and B. W. Hooker & Co., of Barre, Vt., both of which concerns have started the new year with a large consignment of Columbia goods.

Caroline White Singing for Columbia Co.

Caroline White, who has recently returned from Europe, where she met with meteoric success as a grand opera singer, has lately been singing for the Columbia, and as she is a Boston-born girl her records will be anticipated with much eagerness hereabouts. Miss White is now singing with the Chicago-Philadelphia Opera Company. Some new records recently made by Zenatello, the gifted tenor, singing with the Boston Opera Company, are pronounced to be among the very best that he has thus far given the public.

Install Talking Machine Department.

The Shepard Norwell Co., of Winter street, is one of the latest retail stores of the city to install a talking machine department, and it has a finely equipped place on the Temple place side of the third floor. It carries the Columbia goods, and Carleton Nesbitt, formerly of Rome, N. Y., is in charge of the machines, and Mrs. Jones has supervision of the records. E. D. Follin, a traveling man for Mr. Henderson, who has installed the department, and who has a number of similar ones at other places throughout New England, makes his headquarters there.

Piling Up Victor Business.

The Victor department of the Oliver Ditson Co., under Henry Winkelman's able management, continues to pile up business, and during the holidays the second floor of this large music house was one of the busiest places in the city. Most of the time it was difficult to supply the demand for goods.

New Edison Opera Machine Admired.

Chester J. Sylvester, manager of the talking machine department for the C. E. Osgood Co., is on the eve of taking account of stock, and not until that annual undertaking is over will the department lay in any great amount of goods. A machine that Mr. Sylvester is exhibiting with a good deal of pride just now is the new Edison Opera machine, which runs with wonderful smoothness. This large concern has well-established quarters at the rear of the first floor, where the records are demonstrated under excellent conditions.

CORPORATION TAX REPORTS.**Bill to Readjust the Time of Making Federal Returns.**

(Special to The Talking Machine World.)

Washington, D. C., Jan. 3, 1912.

An important amendment to the corporation tax law is proposed in a bill presented to-day by Representative Hill of Connecticut. As the law now stands corporations are required to make reports covering the fiscal year of the government, which expires on June 30. This has proved inconvenient to many corporations which close their books on January 1, March 1, or at other times in the year. The law that such corporations shall pay tax on income for the twelve-month period ending June 30 necessitates a readjustment of business organization in many cases.

The Hill bill provides that the corporation tax shall be paid sixty days after the termination of the calendar, fiscal or business year under which the respective corporations operate. Mr. Hill is hopeful that it will be enacted into law at this session.

BOSTON TALKING MACHINE MEN HAVE BEEFSTEAK DINNER.

(Special to The Talking Machine World.)

Boston, Mass., Jan. 9, 1912.

A large number of the representative talking machine men of Boston got together on the evening of December 27, two days after Christmas, for their first reunion. When the idea was first taken up it met with hearty approval and finally plans were outlined for a meeting at Frost & Dearborn's Restaurant in Pearl street. The committee in

and T. H. Duncan, of the Victor Talking Machine Co.; Geo. L. Cheney, J. G. Widener and Fred W. Hager, of the Boston Talking Machine Co.; Harry Skelton, of Thos. A. Edison, Inc.; T. Norman Mason, John O'Hara, James Holohan, Wm. E. Getchell and Jack Shaughnessy, of the Columbia Phonograph Co.; Jean Baldini, of the Boston Opera House; Rudolph Nagel, of the Boston Symphony Orchestra; Charles P. Trundy,

TALKING MACHINE MEN SNAPPED AT RECENT BEEFSTEAK DINNER.

charge of the details consisted of J. L. Gately, representative of the Victor Company; George Cheney, J. G. Widener and Fred W. Hager, of the Boston Talking Machine Co. For the time being the company calls itself "The Talks Club."

As each man entered he was handed a card on which was a representation of a big colonial doorway with the inscription "The latchstring is out," and across the top, "Welcome to Our Home." Then a big white apron was tied around each man and he proceeded down stairs into the rathskeller where he was handed a tin cup which he hung from his apron strings. The feast was served in the most impromptu and most informal fashion and such luxuries as plates were dispensed with, so were knives and forks. The service was liberal and frequent in both the wet and dry varieties.

Several of those present told stories, and some attempted to, but did not get very far. "Happy" O'Neil gave several songs, among them the "Mexican Twist," which got the whole crowd "a-goin'," and his accompaniments were well played by his side partner, A. C. Story. Mr. Hager explained the purposes of the gathering, which was that all the "boys" in the business might get better acquainted, that a fine feeling of good fellowship might obtain between them all. Everybody had a good time, so good in fact that it is likely another "beefsteak party" is likely to be enjoyed in six or eight weeks' time. Some of the boys in their exuberance forgot to take off their aprons when they departed, and they couldn't see why they were the objects of so much curiosity when they took their trains. Some of the boys are wondering who the two were who caused such merriment when they went into the South station that night.

Following is a list of the talking machine men who were present:

Henry A. Winkeiman, manager Victor department, Oliver Ditson Co.; A. W. Chamberlain, E. A. Welch, Frederick Kern, Capt. Ned Wilkinson, S. H. Brown, Burt Hudson, M. L. Read, W. J. Fitzgerald, "Happy" O'Neil and A. C. Story, of the Eastern Talking Machine Co.; John L. Gately

Chester J. Sylvester, Fred Lane, Ubert Urquhart and Mr. Chapple.

SALESMANSHIP ESSENTIALS.**Four Elements That Enter Into Every Successful Sale.**

Four elements are absolutely necessary to a sale—the buyer, the article to be sold, the salesman and the profit. Unless there is a profit it is not a sale—merely an exchange—and a business that does not show a profit at the end of the year is not on a sound, solid, business basis. There must be a profit, and salesmanship, therefore, is the art of selling products with a profit. It must be done through superior knowledge and reason, and power of persuasion, hence it is the convincing of another mind and a purely mental state. Unless the salesman can make the customer see it the way he sees it himself, he will be unable to convince, and fail

AN ANTI-LOQUACITY MACHINE.

"I think I'll have to invent for my own benefit," said the talkative man, "some sort of an anti-loquacity machine. I talk, I am willing to admit, I talk too much; when I get going I don't seem to know when to stop; and this machine that I'm meditating will be something in a small portable form that I can carry handily in my vest pocket and that will wiggle or weave or pop up or do something to remind me when I have talked to a reasonable limit, and I shall make it non-adjustable so that it can't be set to run beyond a certain limit; if it was not made non-adjustable I might be tempted to set it to run too long before it gave the warning."

"My primary purpose was, as I said, to invent this machine for my own benefit only, but now when I come to think it over I may put it on the market; there might be a few, at least a few other people who would like to buy one."

A great many people are like preserves: They need lots of sugar to keep them from getting in a ferment.

Striking at the Soul of a symphony.

Scratching and scraping at record's end like applause that comes too soon.

¶ When America's famous symphony orchestras sway vast audiences by the magic of their music interpretation, an eloquent silence immediately follows. To applaud at the instant of a symphony's close would be almost like sacrilege—for a real music lover. So with the rendition of some wonderfully compelling aria from a standard opera. Into those few moments of silence are crowded a wealth of appreciation and review—whole dramas of symphonies are visualized.

¶ Modern science and ingenuity bring the symphony orchestra or the great operatic singer right into your own home through the medium of the talking machine; and the same magic of music is enacted there.

¶ How infinitely more distressing than applause is the discordant, raucous grind that lurks in the inner rim of every disc record! This last scratching and scraping of the needle in contact with the record kills the climax of music reproduction. It sets your nerves on edge. If you are the owner of the talking machine you rush frantically across the room—but invariably too late.

¶ But there is no need of suffering the discord, the wheezing and the rasping. There is no need of marring the beauty of the splendidly reproduced symphony. It is a thorn of which the rose may readily rid itself.

¶ THE CONDON AUTOSTOP BANISHES DISCORD!

¶ You may now sit and listen to the symphony, muse in silence and enjoy the music to the full.

¶ The discord and the wheezing after every selection is declared by many to be the only fault that they have ever found. *Modern ingenuity has eliminated even that.*

¶ There is a story told of Michael Angelo that, when a friend visited him one day, he found him working over an exquisite piece of sculpture that appeared to be nearly finished. He marveled at its beauty. Months later he visited Angelo again and found him working over the same piece of sculpture. "Is this all you've been working on since I last visited you?" asked the friend, and Angelo replied in a surprised tone that it was. "Then you've been idling, haven't you?" was the next question. "Indeed, I have not," replied Angelo; "I have added a touch here and softened the expression there——" "But all these are trifles," interrupted the friend. "Yes," said Angelo, "but trifles make perfection, and perfection isn't any trifle."

¶ So with the talking machine of to-day. Its defects—trifles they have been called—have been eliminated, and the result has made for the complete enjoyment of its music.

¶ THE CONDON AUTOSTOP IS ESSENTIAL FOR ALL DISC MACHINES.

¶ Properly speaking, it is an accessory; but it is a necessity—reliable, effective and positive. At the end of a selection it

"UNPRECEDENTED" IS THE WORD

That Best Expresses the Condition of Trade in Baltimore During the Month of December—The New Year Has Also Opened Up with a Lively Demand—A Columbia Slogan That Means Success—Immense Victor Trade at the Stores of Droop, Kranz-Smith and Sanders & Stayman—Knabe Featuring Columbia Machines in Vigorous Way.

(Special to The Talking Machine World.)

Baltimore, Md., January 6, 1912.

Unprecedented is the word that expresses the condition of business during the month of December in the local field, according to the statements made by the managers at the various talking machine stores. While they all said that they expected a great month in consequence of the holiday buyers, they declared that business went considerably above their expectations. It doubled that of December, 1910. This pertains to both the sales of machines and records.

While so much is said for the last month of the year 1911, the figures for the entire year, according to the dealers, show it to have been one of the best in the history of the talking machine business in this section. The result is that all the dealers are delighted with the results and the future prospects for the trade.

Manager F. A. Denison, of the local branch of the Columbia Phonograph Co., is sporting a handsome new mahogany Morris chair which was given to him as a Christmas gift by the employees of the branch. He is greatly pleased with the present, as he expressed himself in a neat little speech of acceptance. Mr. Denison's office slate is still an interesting ornament, which never fails to attract the attention of those in the store. He declares that business for December was the greatest ever and has on the slate the following:

\$300 Every Day in January.

Let us make the

Baltimore

Branch

Bigger,

Better,

Busier.

Boost for Baltimore.

The salesmen also think a lot of the little mottoes that appear on the slate from time to time, and aim to comply with the manager's desire.

At the store of E. F. Droop & Sons Co., Manager Roberts stated that he and his salesmen were literally rushed of their feet looking after the wants of Victor admirers. He declares that the demand for all sizes and prices of machines was something above the average, and it required the excellent co-operation of the entire force to attend to all the business.

Thomas Gordon and Joseph Fink, who handle the talking machine end at the Kranz-Smith Piano Co., make similar reports concerning the Victor and express the belief that 1912 will show just as good results. All prices of machines were in demand, while the high-priced records were the most sought after during the holidays.

Sanders & Stayman, through Manager Albert Bowden, report a good month for both the Columbia and Victor lines and the operatic records. Their statements for the general conditions during 1911 also give the business a good boost.

William Knabe & Co. are featuring the Columbia line of talking machines. They believe the local field offers an excellent opportunity for the trade and they are going after their share. They have a very pretty window display which attracts considerable attention.

Cohen & Hughes and Hammann & Levin also make rosette reports concerning the business for December and the general condition of trade throughout the year just ended.

"Irrespective of frankness or its lack," says an enterprising New Yorker, who signs himself Sam W. Hoke, "the most important thing about a form-letter is an attention compelling opening paragraph. With that, it will be read through and will produce as good results as a real personal letter, under the same conditions."

Autostop carries the spirit of music.

Dispels distressing discords and gives silence its opportunity for service.

stops all sound—STOPS IT RIGHT THERE. It is not in the experimental stage. Its worth has been demonstrated times without number. It is guaranteed; and, not only that, it is guaranteed for life.

¶ Like many other products of human ingenuity that have a permanent place, it is a simple device. The pointed screw is a simple device, too. But just think how many years passed before carpenters came to realize that they did not have to bore holes before they inserted screws!

¶ In appearance the CONDON AUTOSTOP resembles the ordinary pound-weight your tradesman uses upon his balance scales, except for the fact that it has a hole in the middle and a knob upon the top. You take it by the knob and you place it in the center of the record—there is no screwing, no clamping; in fact, no bother at all. You simply place the record over the spindle, and then you place the AUTOSTOP on the record and prepare to enjoy the music, *without having to suffer the discord.*

¶ It makes no difference how long your record is—THE CONDON AUTOSTOP will serve its purpose and yours, for it is adjustable.

¶ In the side of the AUTOSTOP there is a sliding adjuster that looks like a steel hairpin with a pointer on the end. You arrange this adjuster so that the pointer extends to the last line of the record. This is a simple operation and requires but the fraction of a second.

¶ In addition to the part that resembles a pound-weight and that which resembles a hairpin, there is just one other factor that enters into the construction of the AUTOSTOP. That, too, is simple. It is just a steel lever that is fastened on the sound box. It has to be fastened there just once, and it stays there for all time. It does not need a skilled hand to apply it. An unskilled thumb and finger will serve just as well.

MR. DEALER.—How often have you been troubled with complaints from customers about the harsh, rasping sound that follows the rendering of a selection upon a disc machine? The CONDON AUTOSTOP will end the long procession of complaints and make friends of your customers.

Whenever you sell a talking machine hereafter, see that it is complete. And no machine can be complete without the little device that banishes the discordant conclusion. Tell your customers of the merits of the AUTOSTOP. Tell them that it stops the sound when the last line of the record has been reached—STOPS IT RIGHT THERE. Equip all the machines with the AUTOSTOP, and you will have no difficulty in selling the machine COMPLETE.

Make a point of telling your old customers—those to whom you have already sold disc machines. They will thank you for it, thank you for evidencing interest in their complete enjoyment, thank you for showing that your interest did not cease with the purchase.

The AUTOSTOP will increase your business. It will sell new records for you. Send for circulars and a sample. IT IS GUARANTEED FOR LIFE.

CONDON-AUTOSTOP CO.
26 FRONT STREET, NEW YORK, N. Y.

Looking back one year at the Columbia progress ought to make it easy for you to look ahead one year and make a pretty shrewd guess.

Columbia Phonograph Co., Gen'l, Tribune Building, New York

AN EARLY EDISON EXPERIENCE.

Walter P. Phillips Tells of an Interesting Incident in the Life of the Great Inventor.

Walter P. Phillips, who was himself a telegraph operator at an early age and an inventor of telegraphic improvements, formed an acquaintance with Thomas A. Edison more than forty years ago, long before Mr. Edison's brilliant characteristics had acquired national renown.

Mr. Phillips is not only a telegrapher and an inventor, but has had wide experience as a newspaper man. He possesses an easy, facile pen and his reminiscent sketch, "From Franklin to Edison," makes interesting reading. He says:

"When Edison was twenty-one or twenty-two years old he came to Boston and was employed for a short time as an operator. He was regarded as a good-natured, but hair-brained chap, and my impression is that he was finally discharged from the service for inattention to business. He was fairly punctual at all times, excepting on pay days, when he would come straying in an hour late and blandly ask some of us to lend him half a dollar with which to get his supper. When reminded that he had received half a month's salary that day, he would smile, and taking a brown-paper-covered parcel from under his arm, he would display a Ruhmkorff coil, an expensive set of helices, or something equally useless in the eyes of his comrades in the office; from which we were led to infer that the salary for the preceding half month had been exchanged for these apparently useless instruments. He spent a great deal of his time, when on duty, in making diagrams to show how wires could be operated in a multiplex way, and he held forth with undeniable eloquence on every conceivable subject excepting that relating to the prompt dispatch of such messages as the company then had on file for transmission. The office boys came and hung message after message on the little row of hooks in front of him, but Edison's interest in them generally carried him no further than up against the proposition that if by a system of rheostats, polarized magnets and batteries of different potentiality he could enable one wire to carry four sets of signals, two each in different ways, those troublesome messages, when intrusted to other hands than his, could be disposed of with increased rapidity. And so he used to sit and draw and dream, and let the business hang, until reminded by the chief operator that he must attend to his work. I did not even know his name at first, for some had referred to him as Victor Hugo when he made his appearance, and it was by that name that we generally spoke of him.

"Every device was employed to thwart his soarings after the infinite, and his divings for the unfathomable, as we regarded them, and to get an amount of work out of him that was equivalent to the sum paid per diem for his services, and among them was that of having him receive the press report from New York. He did not like this, the work continuing steadily from 6.30 p. m. until 2 a. m., and leaving him no time in which

to pursue his studies. One night about 8 p. m. there came down an inquiry as to where the press report was, and on going to the desk where Edison was at work, Night Manager Leighton was horrified to find that there was nothing ready to go upstairs, for the reason that Edison had copied between fifteen hundred and two thousand words of stock and other market reports in a hand so small that he had only filled a third of a page. Leighton laughed in spite of himself, and saying, 'Heavens, Tom, don't do that again!' hastened to cut the copy up into minute fragments and have it prepared in a more acceptable manner. While this was occurring Edison went on receiving, and the frequent trips of the noisy dummy box which communicated with the Associated Press rooms on the next floor gave evidence that he was no longer gauging his handwriting with an ultimate view to putting the Lord's Prayer on a gold dollar. But all at once there was a great noise, and it was evident that Press Agent Wallace, a most profane man, was coming down the stairs, swearing and shouting as he came.

"Everybody grew excited except Edison, who was, perhaps, dreaming of the possibilities in some of the realms of electrical endeavor in which he has since won renown. But we did not have long to wait to know the cause of Wallace's visit. Kicking open the door, he appeared to us, but he was speechless. The last note of his voice, and the last remnant of a vocabulary of blasphemy which was famous throughout the city, was gone. Standing there with both hands full of small, white pages of paper, he could only beckon. Leighton approached him, and tenderly took the sheets of paper from him, to find that Edison had made the radical change from his first style of copy to simply putting one word on each sheet, directly in the center. He had furnished in this way several hundred pages in a very few minutes. He was relieved from duty on the press wire, and put on another circuit, while the much-tried Leighton devoted himself to bringing Wallace back to a normal condition, admitting of the use of his voice and the flow of his usual output of profanity."

AN AGE OF ORGANIZATION.

Says John Kirby, Jr., president of the National Association of Manufacturers:

"We are living in an age of organization; an age when but little can be accomplished except through organization; an age when organization must cope with organization; an age when organization alone can preserve your industrial freedom and mine; and the sooner all business men learn the lesson that the preservation of their industrial and commercial rights is dependent upon organization the sooner will those rights, which are now hanging in the balance, be assured to them."

The quality of the salesmanship depends upon the energy which the salesman can generate, how he conserves it, how he expends it, and how he uses the time—a short period of which is his for use.

NOVEL RECORD PATENTED.

Has for Its Object the Production of a Perforated Strip or Ribbon Which Will Operate a Piano and Can Also Be Used in a Talking Machine—Some Details in This Connection Which Will Be Found Interesting.

A patent has just been granted on a musical record (No. 1,013,519) to John C. Sherman, Brookline, Mass.

This invention has for its object to produce a record containing perforations corresponding with the notes of a piece of music by the employment of which a piano may be mechanically played and which perforated strip or ribbon shall also contain a record by the employment of which in connection with a phonograph or like instrument the music of another instrument or of the human voice may be reproduced so that the sounds by both instruments shall be in proper musical relation to each other, that is so that they shall be reproduced in the same relation as when they are produced together by skilled artists.

For the production of a record embodying the invention, a ribbon or flexible strip of metal is preferred and perforations formed therein corresponding with the piece of music to be played by the piano but so arranged that the strip must travel faster than do the ordinary perforated strips or records which have hitherto been employed in mechanical piano-players. This quicker movement of the record is desirable because of the greater speed at which it is necessary for a phonographic record to move, which is ordinarily greater than the speed of the perforated record of a piano-player. The increased speed, however, at which it is necessary to move the piano-player record is compensated for in said record by properly locating and forming the perforations.

PUBLICITY A TRADE PROMOTER.

Fred G. Loeffler, the progressive talking machine dealer of Union Hill, N. J., has been featuring the talking machine in very striking advertisements in the Hudson Theatre News. He transacted a very large holiday business, and this may be ascribed in a large measure to his very well conceived publicity.

It is worthy of note that those dealers who took pains to introduce themselves to the public by means of carefully prepared advertising transacted the largest volume of business during the holiday season. If this policy were pursued, not merely during the holidays, but all the time, it would be found a profitable investment. The latter, of course, does not refer to Mr. Loeffler, for he is a great believer in publicity and its value, and has never failed to receive beneficial results.

JUST A QUESTION.

Did you let that last customer get out with only the records he asked for, or did you show real salesmanship and persuade him to buy some extra ones?

Established 1856.

WURLITZER

Fifty-sixth year.

Start the new year right by sending your Victor and Edison orders to Wurlitzer.

The motto of both the Cincinnati and Chicago Wurlitzer houses is "stocks as complete as the factories can make them."

This means two complete stocks to draw from—double facilities and a double chance of getting the goods you want when you want them.

Send your next order—large or small—to Wurlitzer. Give us the chance to make good with you as we are doing regularly for hundreds of talking machine dealers.

NO LET-UP IN PHILADELPHIA TRADE.

Talking Machine Business in Quaker City Still Keeping at Full Force—Despite Shortage in Some Styles of Machines and Records Dealers Do Not Let Any Prospects Get Away—New Edison Opera Model Pleases—What Jobbers and Dealers Have to Say Regarding Present Situation and Outlook—Columbia Co. Employees Dine.

(Special to The Talking Machine World.)

Philadelphia, Pa., Jan. 9, 1912.

The talking machine business in Philadelphia has been keeping up its good record, and there has been no let-up whatever in the demand for these instruments. The manufacturers have realized that there was going to be a continuance of the big business and have scarcely taken off any time to take account of stock, but have kept their factories going with full force and every part of their factories tensioned up to getting out just as much as possible. The manufacturers did very well by the dealers in the end, even if they did keep them guessing for a while, and made them do a lot of hustling during the last few days before Christmas. Everywhere I hear only praise for the manufacturers, and the dealers say that while they are still short on some stock they have a sufficient variety of instruments on hand to meet any business that may come their way. The only complaint they seem to experience at present is in getting records of a certain class sufficiently fast.

Louis Buehn, of Louis Buehn & Bro., says: "The orders we have received so far in the new year have been away ahead of our expectations. We had no idea of doing nearly the business we have done during the two weeks following Christmas. We are still slightly handicapped by a lack of merchandise, and on many styles of machines we have not much more than the samples on the floor. We have also been experiencing no little trouble in getting certain Edison records. Now that we have closed our books for 1911 we find that we had a decided increase over 1910 and our December business was the largest we ever had, and had we been able to get sufficient stock it would have been a question with us whether we would have been able to have handled it. To put it in a few words, our business was limited to the amount of business we could take care of. We could have done a great deal more business had we been able to have gotten the goods, and if we had been in a position to have handled it. Our business in Pittsburgh also showed a decided increase in December."

Mr. Buehn is very much pleased with the new Edison opera model, and he thinks it is the most satisfactory machine that the company has yet gotten out. He believes it is going to be a very good seller, and he says that every one to whom he has already shown it is enthusiastic over its clarity and graphic reproduction.

On Dec. 28 the managers and employees of the Columbia Phonograph Co. had a big dinner at Green's Hotel, after which they all returned to the store for a hilarious evening. They had dancing, and games of various kinds, including a tug-of-war. They were to have had a minstrel show, but they were compelled to call that off on account

of their tremendous holiday business. In the tug-of-war between the married and the single men the married men were badly defeated. Manager Henderson was end man for the married men, and he did wonders, but notwithstanding his individual efforts his side was pulled all over the floor.

The Columbia Co. had a very remarkable year. It was double that of 1910. The new year has started in a most satisfactory way, and all concerned have been very much pleased at the results. The company has organized a credit department here under the charge of O. C. Dorian, which will be of great assistance to the company as well as the dealers. Some very fine records made by Giovanni Zenatello, who has an exclusive contract with the Columbia; by Carolina White and by Van Hoos are in good demand. The Columbia Co. has exclusive rights with these three artists.

The Columbia Co. gave a concert at the Park Congregational Church at Thirty-second street and Montgomery avenue on January 12, and several days ago another concert was given at the church at Eighteenth and Tasker streets. The company will go extensively into the concert business in the new year.

Mr. Doerr, in charge of the talking machine department at the Weymann store, reports that the holiday business of the house was the biggest ever enjoyed, and this applies to both Victor and Edison goods. It was simply phenomenal, says Mr. Doerr.

Manager Elwell of the talking machine department of C. J. Heppe & Son, states that business for the two weeks succeeding Christmas has been considerably ahead of last year, and that December business was simply wonderful. Every available person about the Heppe place was called in to help get out the goods, and the holiday trade experienced exceeded expectations. They had trouble in getting records fast enough, and Mr. Elwell says that the Victor Co. is indebted to them about 8,000 records on order. William Keyes, in charge of the talking machine department of the Stoll Blank Book and Stationery Co., of Trenton, was a caller at the Heppe house the past week, and he reports that Trenton, like everywhere else, is talking-machine mad.

The Heppe department in the Hagar Bros. store at Lancaster did a very fine holiday business, and the Thompson street store also enjoyed a very large trade.

SOME ADVICE TO DEALERS.

Sousa and his famous band have just returned from one of the greatest trips in the history of musical organizations, having visited all parts of Great Britain, South Africa, Australia, New Zealand and the Hawaiian Islands. It is now intended to make a coast-to-coast tour, and dealers handling records would do well to be on the watch for this organization and be sure to feature in advertising and window displays the records made by this famous band. Dealers should be ever on the alert for artists, either in the concert or operatic field, when they appear in their city and of whose voices records have been made.

A phonograph, with records of speeches made by each of the students in public speaking at various times during their course, will show the develop-

ment of students in that subject at the University of Washington this year, says the Edison Phonograph Monthly.

TRADE GROWING IN ALABAMA.

Many New Additions to the List of Dealers in Birmingham During the Past and Success Is the General Rule—New Columbia Store Makes Good at Once—A. J. Wolf Manager of Talking Machine Co.—Department Store Adds Talking Machine Line—Victrolas in Demand—Other Interesting Items.

(Special to The Talking Machine World.)

Birmingham, Ala., Jan. 9, 1912.

The past year brought success to all the Birmingham talking-machine dealers and several new people entered the field here. The Columbia Phonograph Co. sent William Parks, formerly manager of their Wilmington, Del., store, to open a branch store in Birmingham. From the very beginning this store has been a big factor in the talking machine business of this section. Mr. Parks has gathered around him a splendid corps of men, and under his able leadership they have made the Birmingham store take its place among the leading Columbia stores of the country.

A. J. Wolf, who was manager of the talking machine department of the Aeolian Co., Indianapolis, resigned there to accept the managership of the Talking Machine Co., of this city. Mr. Wolf took charge of his new position in December, and immediately showed that he was a man of experience in his line. He reports everything to his liking in the way of business except his inability to get all the Victors and Victrolas his company can sell. Record-breaking business was done during the holidays, and Mr. Wolf reports an exceptionally good early January trade.

Loveman, Joseph & Loeb, the largest department store in the South, has added a talking machine department to its business, with Harold Broyles, formerly assistant manager of the local Columbia branch store, in charge. A complete stock of Columbia and Victor machines and records is being handled, and Mr. Broyles says the business during December far exceeded his expectations. The L., J. & L. store is sparing no expense to make its talking machine department complete in every detail, and with a man of Mr. Broyle's caliber in charge it will certainly get its share of the business.

Mr. Moody, manager of E. E. Forbes' talking machine department, says that in the last month of 1911 his company sold more Victrolas and more higher-priced Victrolas than during any month during his long connection with the company. Mr. Moody made a record for himself during the holidays for placing Victrolas of the highest prices and for getting the cash for them. He is firmly convinced that no family can be happy unless they have a Victor talking machine in the house.

There was a young girl named Aileen
Who purchased a talking machine,
But she played only "rag,"
So her pa got a bag,
No more that machine was seen.

SOME LATE EDISON NOTES.

Arrangements Made to Adjust Reproducers at the Factory—The New "Opera" Model Phonograph—Edison's Birthday—Travelers to Meet—Dolbeer Optimistic—Recent Visitors at Orange, N. J.—Other "Live" Gleanings.

A new Edison departure is the readjusting of reproducers at the factory, instead of having the work done by dealers. A form letter is being sent out to dealers, which they can mail to customers. This letter states the new plan and gives full directions for shipping the reproducers direct to the factory for repair at the uniform price of 50 cents each.

The latest addition to the Edison phonograph line is the "Opera" model, and it has now been on the market long enough to enable the manufacturers to gauge its popularity. Reports show conclusively that the Opera has established a strong cohort of admirers, and this model is now firmly established in the front ranks of the Edison line.

February 11 will be an eventful day at Orange, for the reason that it is the birthday of that widely known and distinguished person, Thomas A. Edison.

The writer heard a group of men discussing "Who's Who in the Globe's Limelight" the other day, and everyone concurred that the most prominent and widely known person is Thomas A. Edison; that he is held in esteem by the people of all the earth. When one considers the achievements of Mr. Edison and the wonderful publicity that has been accorded his valued inventions, it is doubtful if a name can be selected, considering everything, that has the wide scope of apparent familiarity as Thomas A. Edison.

Plans are being made for a convention of Edison travelers to be held at the home offices and factories, Orange, N. J., some time during February. It is expected that everyone will be present for the discussion of ideas and the development of promotive ideas for this year. C. E. Goodwin, manager of this energetic staff of Edisonists, is keeping the force active and is a firm believer that 1912 will show some interesting records of sales.

F. K. Dolbeer, sales manager, is optimistic in his reports for the present year, and no doubt, under his particular care, the book marked "Sales" will show some interesting figures when next December rolls around.

Some of the recent visitors to the Edison works

were: F. K. Babson, of Babson Bros., Chicago, Ill.; L. L. Goodman, Philadelphia, Pa.; W. O. Pardee, and H. L. Ellenberger, of the Pardee-Allenberger Co., New Haven, Conn.; J. A. Popp, Philadelphia, Pa.; Wm. Toennies, of the Eclipse Phonograph Co., Hoboken, N. J.; F. E. Bolway, Oswego, N. Y.; W. A. Myers, J. A. Myers and Mr. Metzger, of W. A. Myers, Williamsport, Pa.; O. R. Moulton and W. A. Moulton, of the American Phonograph Co., Burlington, Vt.; C. B. Haynes, of C. B. Haynes & Co., Richmond, Va.; S. J. Francis and D. R. Harvey, of the Iver Johnson Sporting Goods Co., Boston, Mass.

A NEW PATHE FRERES CORPORATION.

Capitalized in Delaware at \$3,000,000—Details of Contract with the Parent House in France—Will Import Matrixes—Will Make the "Up and Down Cut"—To Use All of the Pathe Freres Processes in Machines and Records in This Country—An Important Move.

Pathé Frères Phonograph Co., Wilmington, Del., has been incorporated with capital stock of \$3,000,000. The incorporators are: M. L. Rogers, S. E. Roberson and H. W. Davis.

This corporation has been formed in the State of Delaware by some men who have under consideration a contract with the famous house of Pathé Frères, Paris, France, which is contingent upon the fact that the incorporators raise the money as shown by their capital stock. It is said there is hardly any doubt about the latter, as the men interested claim to have sufficient funds.

Assuming that the contract with Pathé Frères, of France, is closed, the Pathé Frères Phonograph Co. will import its matrixes for the making of records, producing what is known as an "up and down cut" record in the various compositions and selections as are made abroad. This new corporation will have, if the contract is closed, all the rights and privileges of using Pathé Frères processes of manufacture in both records and machines, the latter being constructed from the European models.

The Pathé Frères Phonograph Co. is only incorporated at this writing, and while the above is said to cover their plans to a certain degree, it is impossible to go into minute details. It is said that the French concern has nothing to do at all with the American concern, other than in the sale of the American privilege of making and marketing their goods.

The offices of the new company will be located in New York City, while the factory will be either there, or across the rivers in Brooklyn or New Jersey.

Don't shoot into the air—aim right at the particular people who must constitute your possible customers. Let the advertising critics and all the rest go hang.

BUSINESS OPENING.

An excellent opportunity is offered a young man of experience in the Talking Machine business to take a part interest and assume full management of one of the oldest Talking Machine jobbing houses in one of the best locations in the Eastern States. No other jobber carrying the same line within one hundred miles.

For particulars address Jobber, care Talking Machine World, 1 Madison avenue, New York City.

Experienced Phonograph, Musical Instrument and Sewing Machine man, with few hundred dollars to invest, is looking for opportunity to go into business; New York location preferred. Inducements and information solicited; all propositions considered. Address E. Z., care Talking Machine World, 1 Madison avenue, New York City.

Swap 3,000 Edison 2-Minute for Zon-o-phone, Columbia, Star or Peerless Records, or machines, disc or cylinder. Deninger, 335 North St., Rochester, N. Y.

ENLARGE SALES DEPARTMENT.

Views of the Enlarged and Improved Retail Record Sale Department of Lyon & Healy, Chicago, the Subject of Some Comments and Commendation—New Feature Consists of Four Additional Record Rooms and Large Reception Room with Novel Accessories.

(Special to The Talking Machine World.)

Chicago, Ill., Jan. 10, 1912.

The accompanying illustrations show views of the enlarged and improved retail record sales department of Lyon & Healy, brief mention of which has already been made in these columns. The entire front half of the fifth floor of the main building of the big store is given up to this department. There are sixteen record demonstrating rooms, averaging 10 by 12 feet each in dimension. The large L-shaped space enclosed by the inner walls of these rooms and the record sales counter is devoted to record stock. A beautifully furnished reception room is situated directly in front of the elevators.

The architectural design is modified Colonial, and the woodwork is all in mahogany finish. Aside from this the decorative color scheme is in varying shades of browns, tans and greens. Each demonstrating room is equipped with a double signaling system. If a saleswoman is not present when a customer enters the room he simply presses a button which simultaneously turns on a light over the inner door, showing that the room needs attendance and sounds a buzzer over the desk of the cashier, who thereupon calls a young woman to take care of the customer. All of the Victor rooms are equipped with No. XVI Victrolas for demonstrating purposes, while the Edison rooms have Triumph machines with Cygnet horns. Each room, besides settees and chairs, has a small table, under the glass top of which appears the monthly bulletin for three months past. At the back of the table is a vertical pigeonhole rack containing record catalogs, supplements and other literature.

The long counter shown in the illustration is for

the benefit of people who know what they want and, therefore, buy without demonstration. The entire top of this counter is glass paneled, and beneath the crystal top are placed monthly bulletins for a period of six months.

A word about the record stock. This is kept in handsome horizontal shelved cabinets, so disposed as to make them accessible in the highest degree to the record room. On each compartment of each cabinet or case is a small metal slot holding a small card with the number of the record on both sides. When the red side is out it signifies that there is a reserve stock of the record in the wholesale department. When the white side is out it shows that the wholesale stock of that record is exhausted. Two young women are kept busy all the time keeping up the stock of Victor and Edison records. At the top of each record case is a line of incandescent lamps under a continuous reflector. The room lighting consists of Tungsten lamps in holophane globes. The light is thus diffused and reaches almost daylight efficiency.

The really new features consist of the four additional record rooms and the large reception room and its equipment. This reception room, like the whole department, has cork flooring. It is beautifully furnished, with a large center table, on which is arranged trade literature, and artistic chairs and settees, all in art mahogany. One function of this reception room is to furnish a convenient waiting place where relatives and friends may meet in order to select records together. Another interesting feature is a silent salesman showplate, in which are displayed samples of about every accessory and supply of merit. Here are shown fiber cutters, needle cases, oils, graphites, record albums, polish, envelopes, indices, carrying cases, etc. Handsome ferns dot the landscape o'er and on the walls are portraits of famous artists.

A new feature which will probably be solved by the time this issue of The World is out, will be a series of small tables, presided over by saleswomen and at which customers may sit away from the rush of the record counter and receive suggestions

in making up lists of records to be sent home on approval. It should be stated that the large force of over twenty young women is under the direction of B. B. Blackman, a man of former professional

ANOTHER LYON & HEALY VIEW.

experience as a musician, but who has adapted himself with rare success to business life. Manager L. C. Wiswell, of the talking machine department, deserves much credit in the work of arranging the enlarged department. Dealers visiting the city should not fail to inspect it, as they can obtain many ideas which they can either reproduce or adapt to their own needs.

THE PETIT PATENT AGAIN.

In the United States Circuit Court of Appeals this week, Thursday, before U. S. Circuit Judges Lacombe, Cote and Ward, the case of infringement on the Petit patent for making double-disc sound records, brought by the Victor Talking Machine Co., Camden, N. J., against the American Graphophone Company, Bridgeport, Conn., was argued, the judges reserving decision. The above case is an appeal taken from the decision of U. S. Judge Hazel, who held that the patent was invalid for want of patentable invention and dismissed the bill in United States Court.

WILL MEET ON JAN. 28, 1912.

(Special to The Talking Machine World.)

Chicago, Ill., Jan. 10, 1912.

E. H. Uhl, of Chicago, chairman of the press committee of the National Association of Talking Machine Jobbers, announces that a meeting of the executive committee of that organization will be held in Chicago, Sunday, January 28, 1912, at 10.30 a. m., at the Chicago Athletic Club, or one of the leading hotels.

PLAYRITE NEEDLES IN TIN BOXES.

The well-known brand of Playrite needles is now furnished by the Blackman Talking Machine Co. packed in an attractive tin box holding three hundred needles. Prices remain the same and this style of package is given an option to fill a demand that has been evident for some time.

VIEW OF LYON & HEALY'S RECORD DEPARTMENT.

EDISON REVIEWS GREAT EVENTS OF 1911.

Wizard Compiles Most Interesting List of Events That Mark World's Progress—Says Inventors Deserve Fairer Treatment During Coming Years—Something Regarding the New Concrete Furniture—Fitting Up the Home of the Poor Man at a Minimum Expense—Some Hopes That Are Not Dreams—Year's Best Message, "Jack Up the Men Who Produce."

In quest of opinions of prominent men regarding the greatest events of 1911, a reporter for the New York Times visited Thomas A. Edison at his laboratory in Orange, and the following was printed as the result of the interview, in part:

There have been printed in the Times, was suggested, a series of views upon the great events of 1911 by the Pope, a King, a Queen, and a President; also, by a score of great leaders of thought in widely diverging directions. What are your views on the subject?

Mr. Edison's List of Great Events of 1911.

Mr. Edison picked up a pad of paper, wheeled around from his desk to a table that sat behind his chair, and started to write. He put down two items:

"1. Attempt toward a Chinese Republic.
"2. Discovery of Ehrlich of salvarsan for the treatment of blood disease."

Mr. Edison hadn't anything in mind to add quickly to these two events as his estimate of those that were of chief importance. He paused for a little while and then wrote:

"3. Improvements in aerial navigation.
"4. Unexpected rapidity in the construction of the Panama Canal.

"5. Great improvements in surgical technique at the Rockefeller Institute for Medical Research.

"That's the group of the most important things. I suppose somebody named each one of them. Oh, yes, there is one more I want to put down."

Mr. Edison reached for the paper and penciled this:

"6. Proof of the efficiency of typhoid vaccination."

"And what do you think of woman suffrage?" was suggested, and the answer came very quickly: "Not a word, not a word. I told you I would not mention the estimates except as to those I thought of the greatest value."

Mr. Edison then stepped over to a moving picture machine on a nearby table. A cartoon had been pasted on the wall above it showing the machine at work, with Edison as operator, grinding up in the hopper which fed it, volume after volume of history and all the arts and sciences.

A schoolboy was grinning at a picture on the screen, while all the seats about it seemed to be filled. The caption was, "No Truants Then."

"And the cartoon isn't so far off," said Mr. Edison as he gave the machine a twist.

"I'd like to see every last school book thrown out of the schools, and they'll do it some time. They'll do all the teaching by moving pictures. Every bit of it. That machine is especially for schools. It's going to do what the funny cartoon says."

—Give Producers a Chance in 1912.

"What do you think is the best promise of 1912?" was asked by one mindful of the purposes which had brought him by train and trolley to the laboratory.

"That depends on whether they quit starving the inventors."

"Starving them?"

"Yes, certainly. The worse thing about 1912 is the number of hoggish men it will have to tolerate. Men, I mean, who are so greedy that they'll starve an inventor so hard he can't work."

"That's just what we suffer from now. The inventors can't produce. Why, there is no end—absolutely no end—to these things that 1912 could produce to make life easier and better and happier. But the inventor's can't produce. They're starved down. The men that handle their inventions starve them. That's why the greedy men are the year's worst blight. That's why 1912 won't do anything near what it might be able to do in producing things for the world's good."

"What should we do this year? Jack up the man who produces—the man who works, That

is, support that man and make his job easier. I tell you there is something wrong—deeply, sadly, fundamentally wrong with our social system when so many greedy men ride the backs of the men who are producers. The men whose opinions of 1911 I thought best of were the men who can produce. Jack up that kind of man. That's the year's best message."

Back to the Concrete Furniture.

"And how do you like the year from the standpoint of what you have in mind to do?"

"I won't talk about that—that's a guess. Now look at this fine mahogany music cabinet."

Mr. Edison walked to a phonograph stand in a corner. It was like others in the room except that one seemed to be of gold-finished wood and another of gold-trimmed white enameled wood.

"The mahogany one seems to be solid mahogany from its weight," was suggested as a push at the piece of furniture failed to move it from its position.

"Solid—sure—" said Edison, "but solid concrete. There you have it—the concrete furniture. Oh, we're going to have a lot of it. You can take your choice—gold finished, gilt trimmed; mahogany, oak, maple—any of the woods. The paint brush does that. The concrete makes it cheap. What do you think this cost?"

"Forty dollars," was the guess hazarded as a memory of wooden music cabinets came to mind of twice that price."

"Four times too much," said Edison. "It cost \$10."

It was as beautiful to the eye of one not trained especially to the fine points of such matters as any of the music cabinets one sees in the shop windows.

"Yes, sir," said Edison, "at prices cheaper than he can do business at any Bowery second-hand shop we are going to furnish the poor man furniture that will not be surpassed anywhere on Fifth avenue."

"Our factory isn't built. But it's building. Everything's going to be made in it."

"But can this be bought for \$10?"

"No, sad to tell. But we can sell it for that—and mighty little more. Now don't ask me to say anything more on that line. I won't tell you

who is to blame, for I have to deal with 'em myself."

"But run a yard of cloth out from its form as wool on the back of a sheep to cloth on the back of a man and see where the money sticks. See who gets it. Then figure who'll get the money on this. I hope it sells cheap. I want it to sell as cheap as it can be made to sell. But—well, if anybody changes the method of distribution for created products in this country, I'll deal with the new man, and quickly."

A model of a concrete house was on a table near by. "For that," said Mr. Edison, "for the finished house the molds are done for the basement and the first story up to the second-story window. We are working on the second-story molds. After they are done—then the working-man's house, too, will be on the market. I hope he builds lots of them, with lots of playground around."

"And this starving of the inventors," was suggested in concluding the interview—"the plant hereabouts—it seemed like a city of buildings when viewed in the twilight with its windows aglow the other evening—does it indicate that you have a way of keeping the greedy men from grabbing all your wealth?"

"Now, I'll say this much about that—at least I'll say I'm not going to take any of it with me or leave much behind; I'm having an awful good time blowing it in in my own way, and I blow it as fast as I want to to get my work done."

And with that Mr. Edison turned to chuckle a bit over a fresh cartoon from the morning's mail while his secretary explained to him that he must give a hearing to an experimenter from his battery works.

EDISON BUSINESS PHONOGRAPHS

Used by the Vast Establishment of the Curtis Publishing Co. of Philadelphia.

The Curtis Publishing Co., of Philadelphia, widely known as the owners and publishers of the Ladies' Home Journal and the Saturday Evening Post, two of the most celebrated and widely circulated magazines in the world, carry a complete equipment of Edison business phonographs in their extensive business departments, which employ an immense army of people to attend to the requirements of this vast business. In a later issue we hope to print an illustration showing the interior of the Curtis plant with the Edison business phonographs in use.

The DITSON Pledge

Is to see that our clientele has a better service than ever—setting a new standard in Victor jobbing deliveries. The demands of alert Victor dealers—the kind that grow—are many and varied, and we furnish the "first-aid" in every instance.

We believe this year's Victor business will be of tremendous proportions, and it will pay you to have

The Fastest Victor Service

which is a requisite in this hustling age. We possess the largest stocks, the best organization and most up-to-date equipment in the Eastern half of the country.

This covers Victor machines, records and supplies of every kind, not to mention cabinets, needles and trade-marked accessories.

Will you let us tell you more about Ditson co-operation? A postal gets this information!

OLIVER DITSON CO., Boston, Mass.

ENTHUSIASM IN SAINTLY CITY.

A Most Satisfactory Year Closed by Talking Machine Men in St. Louis—Aeolian Co. Had Tremendous Trade on Victrolas—Mark Silverstone Cleaned Out of Edison Machines and Records at Christmas—Manager Robinson, of Thiebes Co. Tells How Player Piano Helped Talking Machine Business—Enormous Columbia Business—Some Attractive Christmas Windows—Other News of Interest.

(Special to The Talking Machine World.)

St. Louis, Mo., Jan. 10, 1912.

Every talking machine dealer in St. Louis asserts that the recent Christmas business exceeded all records and all express the belief that the business is entering upon a good year—a year of development and extending trade such as the business has never known. They base this belief upon the growing popularity of talking machines and the ever increasing record business.

Mark Silverstone, the Edison jobber and retailer, says that the holiday business at his store was excellent and that while the record trade prior to Christmas was hardly what he expected, that since the gift day the records have jumped forward wonderfully and he is very well satisfied with results. The popular Edison machines for the holiday trade were the Amberola, the new hornless machine, which is listed at \$200, and the Opera, the \$90 pattern. There was, of course, the usual demand for cheaper machines, but the best demand centered upon these models.

Harry Levy, talking machine manager for the Aeolian Co., says that the holiday trade at that store was surprising and the record business fooled all of them. The great trade that developed in records for gifts was not anticipated, and consequent upon the heavy sale of machines for the holidays the new customers for records are a legion and despite the Christmas machine sales he gave it as his opinion that the record sales would prove the greater for December. "The jobbing business," said Mr. Levy, "was immense and held on until late Saturday night. We had a wagon running from our wareroom to express offices until the Saturday night trains had departed, to care for late emergency business. One thing that pleased me," he added, "was our clean-up on the XIV model. I thought that machine would prove a winner and stocked heavily on it and some of the trade thought I had overdone it, but results show otherwise. We had about the only ample stock of that machine in the West and we found new customers through it. We are in good shape to take stock and begin over again with the new year."

Manager Robinson, of the Thiebes Piano Co. talking machine department, is very enthusiastic over the year end business and points to empty pigeon holes in his record rack to show results of the business. "We found Victor styles IV, VIII, IX, X and XVI the popular models. We were out of the IVs at times and cleaned up on the other styles. In fact, deliveries were delayed several times on other models and the Christmas business in St. Louis on popular models was practically limited to the stocks in the city. A surprising feature was the cash business, which ran heavily to high priced models, showing that a better class of buyers is coming in than ever before. My experience shows me that the player-piano is helping the talking machine business. It is a fact that the success of the talking machine was a great help in introducing the player piano, as it had convinced many persons that good mechanical music could be good. But the player-piano introduced itself to another class of trade and when it won them to the merits of mechanical music they were ready to consider a talking machine as a companion to their player-piano. We notice this fact in the store especially because we sell both talking machines and player-pianos." The Thiebes store handles a large amount of sheet music and enjoys a large professional musician trade. Manager Robinson found the record business an excellent gift trade and packages of records put up in holly boxes proved great sellers. And the trade in filling

Out she goes!

THE dealer didn't have what she wanted, but said he would get it for her.

Then his jobber fell down on the delivery and when she came in again Mr. Dealer was still without the goods.

The next time she comes in—but ten chances to one there won't be any next time, for more than likely she's through with that dealer and will take her trade to a store where she gets "real service."

The store that gives real service is the store that has a real jobber—the kind that ships all goods the same day the orders are received.

That's us—every time.

Let us know what you want in V i c t o r s, Victor-Victrolas, Victor Records, record cabinets, fiber cases, horns, repair parts and other accessories, and we'll give you a true-to-life demonstration of how quick we are on the trigger.

At any rate, let us send you our newest catalog, together with our booklet, "The Cabinet That Matches." Drop us a line to-day.

New York Talking Machine Co.

Successors to
Victor Distributing and Export Co.,

83 Chambers Street

New York

libraries for gift machines has kept the force busy during and since the holidays.

Manager Ramsdell, of the Columbia Phonograph Co., reported December business very satisfactory, one of the best months in the history of the local store, he says, and better than December of last year. The business of the last day of the year made the biggest total on the books of the store, which was pleasing to the force. The special feature of the holiday trade was the cash business, which indicates a better class of trade for December business.

Two large dictaphone orders came at hand recently through supplying additional departments of the Missouri Pacific and Frisco railroads, which had previously installed some dictaphones. The office of the Aeolian Co. in St. Louis also was a dictaphone customer during the month.

An advertisement that attracted considerable attention during the holidays was that of the Home Phonograph Co., a South St. Louis retail store, which offered both Columbia and Victors at cut prices through an involved combination order with records. The advertisement stated certain styles of machines but the fact seems to be that none of the styles of machines mentioned were in stock when the advertisement was printed. At least none was sold, according to trade reports. Aside from the cut price, some wonderment was expressed over the ad from a record standpoint, as records could easily have been selected that would in themselves have exceeded in price the total of the price asked for a \$15 machine and the number of records stated. Yet it positively stated "choice of records."

S. H. Rash, jobbing salesman for the Aeolian Co.'s talking machine department, has had the unpleasant experience of spending his holiday vacation in bed, a victim of sciatic rheumatism. He was able to start over his territory the first week in January.

Miss Helen Addis is a new record saleswoman at the Thiebes Piano Co. store, succeeding Miss Margaret Owen, who had been with the firm three years. Miss Owen resigned to become the bride of George Crisp, formerly connected with the Aeolian Co.'s talking machine department.

Mark Silverstone, of the Silverstone Talking Machine Co., Edison jobber, but who also handles Victor machines at retail, recently turned his ingenuity that has heretofore found an outlet in window displays, to the advantage of a Victor customer. The customer came into the store accompanied by her mother and explained that the elder woman was quite deaf and was not able to hear the records as played on their Victor and asked Mr. Silverstone if he could not provide a device that would enable her to enjoy the music. She remarked that he or any one who could perfect the window displays he had produced, ought to be able to do so. It was a new proposition to Mr. Silverstone, but he went into the Victor room for an inspiration. As he looked at the machines it flashed upon him that he could remove the tap at the end of the metal tube that connected the reproducer with the horn and attach an ear tube. He did so and invited the women in. The experiment was a success. The elder woman, who could not hear the sounds from the horn at all, could hear perfectly through the tube and the change made no difference with the volume of sound from the horn. They quickly reached an agreement as to the price for the device and departed satisfied.

Davies Brothers, Edison dealers at Vandevester and Delmar avenues, attracted shoppers' attention to their windows during Christmas holidays with the fish and bird globe. The globe is so hollowed that the bird has a space in the very center, but the glass that forms this is invisible and the crowd cannot see but that the bird is fitting about in the very center of the gold fish laden water.

The Silverstone Talking Machine Co. presented the only distinctly Christmas talking machine window along Piano Row. The set Edison fixtures were used, but Mr. Silverstone had trimmed the picture with the tiny Christmas tree electric lamps and arranged them on intermittent currents so

The idea of an "understudy" for Mary Garden would spoil the whole program. Also a Mary Garden *record* has no substitute.

Columbia Phonograph Co., Gen'l, Tribune Building, New York

that they flashed here and there, adding greatly to the general attractiveness of the display.

Harry Levy, of the Aeolian Co., celebrated the new year by starting on a successful business trip to Danville, Peoria, Chicago and Indianapolis.

John J. Gaffner, of St. Jacobs, Ill., an Edison dealer, was a recent caller at the Silverstone Talking Machine Co.

HOLIDAY TRADE BROKE RECORDS

In Cincinnati According to the Reports of the Leading Dealers—High Priced Columbia Grafonolas Favorites—Arnold's Big Edison Trade—Victrolas Favorites at Aeolian Co.

(Special to The Talking Machine World.)

Cincinnati, O., Jan. 8, 1912.

The trade's reports of last year's operations, particularly during the holiday season, are very gratifying, and the dealers all look forward to 1912 in a somewhat optimistic manner. The Christmas sales in most instances exceeded the records for December, 1910, and those firms who were off in the year's aggregate, now point with pride to the total of the twelve months.

R. J. Whelen, manager of the Columbia Phonograph Co., advises that December business broke all previous records in the history of Cincinnati store, this gain running up into many thousands of dollars. He states: "While we had prepared our stock for the largest trade we had ever had, we did not fully anticipate the great rush of business that came, and were caught without certain types of Grafonolas, graphophones and double disc records, but by being considerate and with the co-operation of our customers, not one of our patrons were disappointed, and every one of them were made happy Christmas morning with their 'Columbia.' In some cases we had to send other types of instruments, but this was all by special consent of the customer, and they were promptly replaced after Christmas. The Grafonolas we had the greatest demand for were the \$150 Nonpareil, the \$200 De Luxe (new style), the \$125 Mignon, the \$100 Baby Regent and the \$50 Favorite.

"On Friday before Christmas we were all made happy by the receipt of an express shipment containing Olive Fremstad's latest well known selection, "Stille Nacht, Heilige Nacht," No. 30708, which is undoubtedly one of the most beautiful records that has ever been offered to the public, and every one hearing it has been enthusiastic over its beauties. We all went home the Saturday night before Christmas tired but happy, ready to enjoy our Christmas turkey. The demand this December was for the higher grade Grafonolas and Symphony records, and the large number of sales on these high grade goods was very gratifying. The wholesale trade, as well as the retail, was wonderful, and we enjoyed the visits of many of our dealers throughout the territory who came in personally to select their last minute stock of Christmas goods. We enjoyed the visit of Ben Feinberg, from our New York office, early in December, and we are expecting him to return this month to close up some large deals which he has pending in true 'Feinberg style.' The year 1911 just past has been a most interesting one

from the Grafonola and Symphony point of view, but the year 1912 will be the banner year in the talking machine business, and when Christmas, 1912, rolls around, 1911 figures will seem very small in comparison, although now they loom up in good round substantial figures."

J. E. Poorman did better with his supply of Zonophones during 1911 than in 1910, and looks for a rush in the record line during the early part of this year. Poorman is in the position of a man with no kick to make.

John Arnold, Elm street dealer, is trying to figure how he can prepare for an increased business during 1912. He claims he is justified in doing so by reason of the showing during the year just closed. Arnold's Christmas business exceeded last year's record, and points to the new Edison Amberola as being the cause. The demand for records is exceptionally good, and Arnold claims to have enough prospects in sight to keep him busy during January and part of next month.

The Aeolian Co. makes the following interesting report regarding business conditions:

"December came with its usual thunder and a general clean-up on Victrolas and records was the result. We experienced more trouble in getting our supplies than any previous time," remarked Victor Department Manager L. H. Ahaus. "There seemed to be a real shortage in several style machines, especially the Styles 9 and 10 Victrolas. The demand was really vicious, and in several instances we had two and three customers for a single machine. The rush on records was equally large, but exceeded our expectations by a big margin. The popular double-faced records were at a premium and unobtainable; however, as we will have some records in January, we will have the best month ahead of us; a heavy stock is coming in to supply every want of our new and deeply interested Victrola patrons, as we find they can be loaded up heavy, and the process will be pushed to the limit here. Our prediction is that this January will eclipse any month previously recorded.

DRAWING TRADE TO THE STORE.

Pays to Imbibe Some of the Drummer's Enthusiasm and to Take a Lively Interest in Local Affairs—Keep the Store in Good Shape and Advertise—Where System is Necessary to Achieve Success.

How to draw trade is one of the greatest problems of any commercial undertaking. You may have plenty of capital and the best of facilities, but the product must be disposed of at a profit, or failure will result. I like an optimist—the fellow who dreams and has the faculty of making them come true. I do not like to come in contact with the man who looks upon the dark side always. It takes away the snap and ginger. When I was "on the road" I did not like a hard luck story that business was dull, crops needed rain and farmers in the grass. Place your desk at the front door and tell everybody that asks you that business is good and that you are happy and it will make it so or will go a long way

towards it. This is new thought philosophy.

Imbibe some of the optimism of the drummer when he calls on you as his prospective customer. How many orders would you give him if he told you business was dull and no one wanted to buy because crops need rain and the weather was hot and dry? Take a pointer from your banker. You will note that his desk is at the front now, while a few years ago it was in the rear, behind closed doors, and it made you choke and your knees shake when you wanted to interview him about extending that note.

Now he makes friendly calls upon you at your office and takes an interest in your affairs. These are methods of to-day and this is what I have termed vitalization. Take an interest in everything for the upbuilding of your town. It is a duty every man owes to himself and to his community. It will make it grow and enable you to sell two dollars' worth of goods where you sold only one before. It will put you in line to partake of the great prosperity that awaits the people of this country within the next few years.

Get your share of the trade of the half million people who are coming into your state in the next ten years. Be a leader in your town, and stand for progress, but in order to keep ahead and retain your position in the front ranks, you must keep moving. Clean up the old store, rearrange the goods, put up new signs so that your customers can find you. Make your store so attractive that it will be recognized a block away.

Advertise in your home papers, so when a stranger moves into your town or county, he will see your invitation to trade with you. Some of you who have been in business for over thirty years, at the same old stand, may think you do not need to advertise. If there is any such among you, I simply wish to refer you to the merchants who pay the biggest advertising bills, as they are generally the ones who are best able to do it. This is an age of publicity and airship methods, and we must square ourselves with the times.

Nothing can be done successfully without system. If your business is too small to systematize, sell it and get a bigger one. The time has passed when one man can do it all, and keep pace with the world's business. You must delegate duties and authority to others if you succeed in the broad acceptance of the word. You may keep the sheriff out, but you won't ride in airships. It is needed in buying to see that we do not over-buy or fail to buy. The public will not excuse the store, and will withdraw its patronage, if frequently told "we are out of it to-day, but have it ordered."

How many times have you heard that excuse? This is not according to to-day's methods—system will prevent it. You will not deal with a house that continually disappoints you in shipping your orders. Therefore, you should not expect to hold your customers unless you make prompt deliveries. Promptness should be placed at the mast head of every business. Quit talking prices and talk promptness and quality. I would not have the reputation of being the cheapest man in town, but rather the most prompt and the best quality.

EDISON BUSINESS PHONOGRAPHS IN HOUSE OF REPRESENTATIVES

Interesting Particulars Regarding Use of the Phonograph by Reporters in Transcribing Proceedings of This Great Legislative Body in Washington—The New Steel Cabinet Machine.

The year just closed has marked a large increase in sales in the business phonograph department of the great enterprise of Thos. A. Edison, Inc. In the business office, in the courts and in the law offices it has proven a wonderful time saver and is keenly appreciated. In State legislatures the Edi-

terest. In this connection I. M. Pechin, writing in *Tips*, says:

"The House corps of official reporters of debates consists of six members, ranking the same and doing the same amount of work. They use the Edison business phonograph exclusively; each re-

HOUSE OF REPRESENTATIVES, WHERE EDISON BUSINESS PHONOGRAPH IS EMPLOYED.

son business phonograph is a factor of importance, as it is in the House of Representatives at Washington, D. C., where eighteen of these machines are now and have been in active use for the past five years. So many people ask how the work is gotten out in the House of Representatives and the phonograph seems to be of so much interest that a few words of the *modus operandi* is of in-

porter has a dictating machine and a transcribing machine, the two being used in order to expedite the work. Each reporter has a transcriber who does his work exclusively. When the house meets at the beginning of a session the dean of the corps, who is Mr. Welch, and who has held his official position for over 20 years, goes first on the floor and takes, in notes, what will amount to one printed column of the Congressional Record. He is succeeded by Mr. Irland, who takes up the report without any break and takes a similar amount of work. He is in turn succeeded by Mr. Small, then Mr. Cochran, Mr. Lafferty, and Mr. Gray, until it is around to Mr. Welch again, and so on through the day. Mr. Welch, the first man on, as they say, has in the meantime gone to his room and dictated to the Edison business phonograph everything that has been said on the floor of the House during his "turn"; his secretary has transcribed it, and by the time he is down with his second turn, after dictating it, he reads over the first, revises it, and it then goes to any members who have made a speech or to all that have been in a colloquy who have a right to revise their remarks before it goes to the printing office. Each reporter is going through the same process, and it is one man's duty (Mr. Cameron, assistant to the reporters) to keep the copy straight, get extracts or books that members read from, etc., etc., and keep the whole day's work in order and see that it gets to the printing office in proper shape. Each "turn" consists

of some seven or eight typewritten pages (long sheets); an average day's work is seven or eight of these turns, though at the close of a session and when some important bill is up for consideration and the colloquy is fast and furious, a much bigger day's work is done—one day recently, for instance, we had 23 turns, or 560 typewritten pages of average court size legal pages—over 90 pages that each transcriber wrote. No matter how hard the day or how much talk there is, 30 or 40 minutes after the last word is said everything is in typewriting and ready for print.

"Of course, there are a great many days when the House sits only for a short time and the work as far as quantity is concerned is light indeed. But it is the character and quality of the work that make the positions of the transcriber hard to fill and make the reporters rank with the very best in the country. Printed bills, of course, are not reported; roll calls, which take 30 minutes, give some additional time, and occasionally there is a member who has what we call a 'read speech'—that is, he notifies the reporters that he has manuscript from which he reads—but there is always a reporter on guard for interruptions, which may occur at any time, and to catch interpolated remarks of the speaker. The Edison machines have made it possible to get the work out in this wonderfully prompt manner, and effect a great saving of time and labor to both the reporters and their assistants."

To readers of *The Talking Machine World* this description of the use of the Edison business phonograph in the House of Representatives is certainly most illuminating. In this connection we present the photograph of Fred Irland, one of the official reporters of debates, dictating into the phonograph. He is one of the several clever men who virtually makes history, for the reports of the sessions of the House of Representatives form a permanent record of the nation's legislation covering all matters of national concern which is handed down to posterity.

One of the latest developments of Thos. A. Edison, Inc., in the line of business phonographs is the new steel cabinet machine—a standard model in a new business suit, of which an illustra-

FRED IRLAND, OFFICIAL REPORTER, DICTATING.

NEW STEEL CABINET MACHINE.

tion appears herewith. The steel cabinet has the appearance of a much smaller machine. This is due to the usual compact machine design being surrounded by metal instead of wood. Considering a probable desire to place the smaller steel cabinet on the user's desk, the manufacturers have

Style No. 40

Style No. 50

Style No. 60

adopted a rubber cloth cover to save space. A pneumatic desk device is provided for starting and stopping the machine several feet away with the fingers. Detachable support arms are connected to the steel cabinet with a universal friction joint, holding either the flexible speaking tube or the steel dictating horn, which allows the hands to be free; the support arms are also desirable to elevate the tube or horn similar to an adjustable telephone bracket.

The pedestal, however, is recommended wherever floor space will permit. It is made so as to "knock-down," the top and middle platforms detaching from tongues in the legs. The middle platform is convenient for holding the cylinders and rack. When the cabinet is placed on the pedestal top a steel strip projects over the molding to prevent any tendency to tipping when the top of the machine is raised.

The steel cabinet is hinged at the back to allow convenient examination of the mechanism under the machine, and handles are provided on the sides. While these features have made the cabinet more expensive to manufacture, the manufacturers believe they are necessary and will be appreciated as essential parts of good design.

In this age, when economy in time and "service" are the dominant factors in commercial life, the Edison business phonograph is playing a very important part.

GREAT ADJECTIVES!

Workman's Ode from Edison's "Lab" Is Truly Inspired.

In Thomas A. Edison's library at Llewellyn Park hangs one of the inventor's cherished possessions. It is a piece of white cardboard on which is printed an "Ode to the Horseless Carriage." There was discussion a while ago as to the inventor's greatest creation, and one of the workmen at the "lab" deemed Edison's greatest his batteries for the "horseless carriage." At once behold the ode prized by Mr. Edison:

Noiseless and odorless, safe and reliable,
Gentle and tractable, docile and pliable,
Perfectly fearless and free from duplicity,
Easily managed, run by "Electricity."
Gliding along through the country's cool byways,
Traversing safely the city's broad highways,
Ready and willing, stylish and beautiful,
Always responding, faithful and dutiful,
Simple of parts, so a child can manipulate,
No special requirements that one needs to stipulate,
Meeting the wants of a restless humanity,
The very perfection of reason and sanity,
Adapted to pleasure as well as utility,
No restrictions to limit its great versatility,
The perfection and type of a modern miracle—
There is none can surpass the electric vehicle.

SUCCESS AND ACHIEVEMENT.

Success is in the blood. There are men whom Fate can never keep down—they march jauntily forward and take by divine right the best of everything that earth affords.

They do not lie in wait, nor scheme, nor fawn, nor seek to adapt their sails to catch the breeze of popular favor. Still, they are ever alert and alive to any good that may come their way, and when it comes along they simply appropriate it, and, tarrying not, move steadily on.

Good health! Whenever you go out of doors draw the chin in, carry the crown of the head high and fill the lungs to the uttermost; drink in the sunshine; greet your friends with a smile, and put soul into every handshake.

Keep your mind on the great and splendid things you would like to do, and then, as the days go gliding by, you will find yourself unconsciously seizing upon the opportunities that are required for the fulfilment of your desire, just as the coral insect takes from the running tide the elements that it needs.

Picture in your mind the able, earnest, useful person you desire to be, and the thought you hold is hourly transforming you into that individual.

Thought is supreme, and to think is often better than to do.

Preserve a right mental attitude—the attitude of courage, frankness and good cheer.

To think rightly is to create.

We become like that on which our hearts are fixed.

Many people know this, but they do not know it thoroughly enough so that it shapes their lives. We want friends, so we scheme and chase 'cross lots after strong people and lie in wait for good folks—or alleged good folks—hoping to attach ourselves to them.

The only way to secure friends is to be one.

And before you are fit for friendship you must be able to do without it. That is to say, you must have sufficient self-reliance to take care of yourself, and then out of the surplus of your energy you can do for others.

BUSY TIMES IN SAN FRANCISCO.

Talking Machine Business for December Broke All Records—Outlook for New Year Reported to Be Most Auspicious—New Model Edison Phonograph "The Opera" Highly Praised—New Stores and Changes—While Call for the Popular Priced Hornless Machines Was Enormous, the Higher Priced Victrolas, Grafonolas and Amberolas Were Greatly in Demand—Other News of Interest.

(Special to The Talking Machine World.)

San Francisco, Cal., Jan. 6, 1912.

A. R. Pommer, manager of the Pacific Phonograph Co., 818 Mission street, states that the talking machine business of his firm was better in December than in any other month in the history of the concern. November was a dull month, and in view of that fact a restricted holiday trade was naturally expected; yet it seems that the retailers were merely delaying their Christmas orders to the last moment. Business at the first of December opened with a rush and kept up right along. Some inconvenience was experienced through delays in shipments caused by the railroads, but on the whole the trade of both jobbers and retailers was handled most satisfactorily. The Pacific Phonograph Co. has just received a new model Edison phonograph called the "Opéra," which is said to be the finest instrument yet made by the Edison Co. Already a big demand has sprung up on the Coast for the new machine. This machine has 50 per cent. less working parts than any of the older models, and has an automatic stop. By the first of March, Mr. Pommer says, the long-promised Edison disc machine will be put on the coast market.

New Stores and Changes.

Charles M. Miller has succeeded to the talking machine business of Tormey & Co. at Chico, Cal.

A. J. Harvey, the phonograph dealer at Chico, Cal., has sold out his business to Schindler & Schuler.

F. W. Medlin, of Riverbank, Cal., has opened a talking machine business in Riverbank.

Miss Della B. Rogers, of Hughson, Cal., has just opened a phonograph agency.

A new phonograph agency has been opened at Patterson, Cal., by J. W. Kerr.

Embarks on Sea of Matrimony.

Miss Margaret Russell, of the office force of the Pacific Phonograph Co., San Francisco, is the latest member of the local talking machine fraternity to hazard the perils of matrimony.

Heavy Victrola Business.

Peter Bacigalupi & Sons, the Market street jobbers of talking machines, report a very good holiday trade. With them the Victrolas sold ahead of anything else. Mr. Ackerman, manager of the Edison business phonograph department of the company, has just received a shipment of the new Edison steel cabinet machines, which embody all the latest improvements in this class of instrument. The company will inaugurate a special selling campaign after the first of the year for the business phonographs.

Large Increase in Business.

The business of the talking machine department

of Benjamin Curtaz & Son has trebled during December, says Mr. Curtaz. By special advertising and modern store methods this firm has succeeded in landing a big share of the local business. Frank L. Sharp, formerly manager of the Kohler & Chase talking machine department, is now the manager of the department of Benjamin Curtaz & Son in the place of W. Gardner, who resigned recently.

Big Holiday Trade in Columbia Goods.

Manager Wortley, of the talking machine department of Kohler & Chase, announces that the holiday trade in his department surpassed all records for the department in selling the Columbia phonographs. Due to the concerts held here by David Bispham and Kubelik, an extra interest was inspired in the Columbia records of these two artists. Among the best selling records at present time are "Oh, My Beautiful Doll," and "That Mysterious Rag." The best seller in phonographs for Kohler & Chase during the holidays was the Columbia Favorite, the \$50 machine.

Run Short of Stock.

The Hauschildt Music Co. ran short on \$15, \$25, and \$50 Victor machines during the rush last week. This company has just received a shipment of Salter record cabinets, for which there is a big demand.

The talking machine department of the Wiley B. Allen Co. experienced its usual difficulty this month in not being able to get enough Victrolas from the factory to supply the demand. The talking machine business of this firm for the year, both in San Francisco and all their branch stores throughout the Coast territory, was much better than for 1910.

Pianos Taken in Trade.

W. S. Gray, Coast manager for the Columbia Phonograph Co., is very well satisfied with the extraordinary success of his company's machines in the Coast market. He says the number of pianos and other musical instruments being traded in at retail stores as part payment for high-class talking machines is something to marvel at. The Dictaphone trade is holding up well, despite the usual holiday lull in this class of business. After New Year's this branch of the business will pick up as it always does when business firms have laid out their plans for the year.

Personal Items of Interest.

H. C. Warden, formerly a phonograph dealer in Los Angeles, has been appointed manager for the Dictaphone in the Los Angeles territory.

A. G. McCarthy, treasurer of Sherman, Clay & Co., reports an unusually fine holiday business in his talking machine department. This season the sale was especially large for the big types of machines.

On December 17 A. G. McCarthy became the proud father of a nine-pound boy.

L. F. Geissler, manager of the Victor Talking Machine Co., Camden, N. J., spent the holidays in California resting up and shooting ducks.

J. S. Baley, of the Chicago house of Babson Bros., is now the manager of the local store. S. E. Babson, formerly in charge, is about to return East.

THE SMILE THE KEY TO NATURE.

A Study of the Various Permits of an Accurate Measure of the Man.

Laughing and smiling are keys to human nature. Study a man's laugh, watch him smile, and you will know more about him than you could know by listening for hours to his talk. There are frank smiles, sour smiles, crafty smiles, cruel smiles, tired smiles, sickly smiles. Study them and learn to know them. Laughter describes character. The loud laugh sometimes does betray a vacant mind, but sometimes it tells of superabundant health or of another nationality. A laugh natural and pleasing in an African might surely indicate intoxication in a certain type of white man, and the charming laughter of Italy or Southern France might mean insanity in some cold Northern being. Remember also that smiles and laughter tell not only of different characters in different men, but tell also of the condition of the individual.

TALKS ABOUT BUSINESS BUILDING

By F. A. Sheldon, Formulator of Science of Business Building and Editor of
The Business Philosopher.

TALK No. 6.

The second success injunction is, **KNOW THE OTHER FELLOW.**

Thousands of dollars have been made by knowing how to handle the other fellow.

Thousands of dollars have been lost by not knowing the other fellow and by putting him in the wrong place.

Thousands of dollars have been expended by fond parents in their attempt to make doctors and lawyers of sons that nature never intended for such professions.

Thousands of hours of honest effort have been wasted by those who have been advised to go into lines of business for which they had no ability.

Thousands of lives have been ruined by persons of jarring temperaments marrying.

Thousands of parents have quarreled with their children and turned them adrift—simply because they did not understand their children.

Thousands of children have quarreled with their parents for the same reason.

Thousands of men on the road fail as salesmen simply because they don't understand the other fellow.

Thousands of merchants become bankrupt because they do not understand men and women. Instead of securing and retaining patrons, through their want of tact they lose those who come to them with their trade.

I put the question to you, Mr. Employer, How can you handle the men under you if you do not understand them?

I put the question to you, Mr. Salesman, How can you sell goods to persons you do not understand?

Since the greatest statesmen and the greatest

professional men owe their success largely to their skill in handling men and women, can you afford to be without this knowledge?

Can directors of banks and railroads and corporations, in whose power it lies to select men for executive offices, afford to put the wrong man in the high place?

Such a mistake may involve a railroad or corporation in bankruptcy because of the incompetency of the man selected. A man may be elected president of a bank who is by nature a defaulter.

There was an excuse for this before character analysis had become a science. Now, however, this science has been formulated and developed to a high degree of accuracy by Dr. Katherine M. H. Blackford, of Boston. The man who would be progressive must master it to keep up with the age.

There is a story told of a doctor being called to treat a shoemaker who was thought to be dying. The shoemaker craved salmon. The doctor thought the man was in such a desperate state that he might as well let the fellow have what he wanted, as at the worst the salmon would kill him a few moments earlier only. However, to the doctor's surprise the salmon cured him.

Later the doctor was called to cure a blacksmith suffering from the same complaint. As the salmon had been so efficacious in the case of the shoemaker the doctor thought it would be equally so in the case of the blacksmith. The result, though, was different. The blacksmith died. So the doctor wrote down in his memorandum book, "Salmon cures dying shoemakers, but not dying blacksmiths."

"What is sauce for the goose is sauce for the

gander" is not true in the business world. You can't cure the blacksmith with the same medicine that cures the shoemaker.

Different temperaments must be treated differently. Different methods of appeal must be made to them. The same things strike them differently.

If all men were alike salesmanship would not be an art.

You know you must handle the quick-tempered man with gloves; the lethargic person you must urge to action. This much the novice knows. But mankind is not divided simply into the quick and the slow. There are many types and variations.

The art of analyzing character scientifically is not as simple as the alphabet. Before you can judge a person you must take into account his coloring, the shape of his features, his manner, the tone of his voice. In fact, quite a few little points that only the student of human nature can know must be remarked. You must be able to do it quickly, too.

The value of such study I am sure you must feel. If you are looking for commercial or professional success master it. It will repay you largely.

Know Your Business.

Equally important is the third success injunction, **KNOW YOUR BUSINESS.**

This means more than know your job, though you should make sure you know that first. After that, however, you should get busy, and know the job above yours. Yes, even the job above that. For the fellow just above you may not be able to fill the job above him. If you can, there is your chance.

While it is **THE DOING** that counts in the **BATTLE FOR SUCCESS**, it is not **The Doing** that starts the **BATTLE FOR SUCCESS**. It is your preparation to do the things that should be done when the opportunity arrives that makes you "make good" at the supreme moment.

BECOME A POST-GRADUATE IN THE EFFICIENCY SCHOOL.

Make the world need your service, and the world will pay you for your service. The more you make the world need it, the better it will pay you.

Who is the man who is always looking for a job?

The efficient man or the inefficient man?

Is it the fellow who brings in the weather report or the salesman who hustles and gets the orders? Is it the bookkeeper who strikes his balance "first pop," or the fellow who adds the year of our Lord in his columns and then takes a week to discover the result of his mind wandering? Is it the aspirant for histrionic honors who thought "shuffling off this mortal coil" in Hamlet's soliloquy meant "to take off your clothes," or the actor who has mastered his art to perfection—the Garrick, the Siddons, the Booth, the Bernhardt, the Irving, the Mansfield—that takes the world by storm?

The man who takes the world by storm must be able to **DO SOMETHING WORTH WHILE.**

Is it the railroad clerk "who gets his traffic charges mixed" and charges you passenger rates on a carload of pigs, or the Harriman or the Hill, who masters railroad technique to perfection, that becomes the president of the road?

Is it the one-hundred-and-fifty-word-a-minute stenographer or the graduate of the "four weeks' course in shorthand," whose notes are as undecipherable to him as a chop-suey bill of fare in original Chinese would be to us, who is always looking for a job?

Why are so many men always looking for a job? Why are not more filling **THE** job?

I will tell you the reason. It is because the world is always looking for **COMPETENT SERVICE**. It is not going with a searchlight looking for the man who wants a job—but the man who can **FILL THE JOB** is always **SURE OF THE JOB**. The job wants him—more jobs than he can fill. Job-hunters are not job-fillers, and job-fillers are not job-hunters.

To be a **JOB-FILLER** you must be a man whose positive or success qualities are developed. The world doesn't want sick men, but well men; not moral wrecks, but reliable men; not timid men, but bold men.

(Continued on page 30.)

Won't You Have a Lesson in Spanish?

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

No talking machine equalled the 1911 record of the Columbia Phonograph

These twelve record-supplements of the Columbia Phonograph Company make the year 1911 the tallest mile-stone ever set up in the talking machine business.

January—*Reed Miller*. February—*Margaret Keyes*. March—*Mary Desmond*. April—*Xaver Scharwenka*. May—*Olive Fremstad*. June—*Lillian Nordica*. July—*Mary Garden*. August—*Josef Hofmann*. September—*Cecil Fanning*. November—*Lydia Lipkowska*. Besides the first records of *Rosa Olitzka*, announced for January, and the first by *Zenatello*, *Ellison Van Hoose*, *Bernice de Pasquali* and *Carolina White* coming right along.

Obeys the Laws of Health; develop the Powers of your Mind, "YOUR THINKER, YOUR FEELER, YOUR REMEMBERER." Give these three the proper exercise, and the world, because of the EFFICIENT SERVICE you can render, will recognize you as a competent man. Then develop your "IMAGINER" and your "WILLER" and it will recognize you as an exceptional man—a man of INITIATIVE.

You will stand on the threshold of Success.

In TALK No. 7 I will take up the last injunction, the obeying of which will lead to Achievement.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York for the Past Four Weeks.

(Special to The Talking Machine World.)

Washington, D. C., Jan. 9, 1912.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

DECEMBER 16.

Antwerp, 3 pkgs., \$290; Berlin, 35 pkgs., \$751; Buenos Ayres, 28 pkgs., \$3,970; Callao, 7 pkgs., \$157; Cape Town, 5 pkgs., \$169; Colon, 11 pkgs., \$719; Guayaquil, 7 pkgs., \$429; Havana, 3 pkgs., \$114; 26 pkgs., \$2,260; Manila, 111 pkgs., \$4,469; Montevideo 69 pkgs., \$4,100; Moscow, 1 pkg., \$800; Savanilla, 4 pkgs., \$285; 2 pkgs., \$250; Singapore, 27 pkgs., \$1,102; Stockholm, 2 pkgs., \$525; Trinidad, 8 pkgs., \$179; Valparaiso, 4 pkgs., \$160; 11 pkgs. \$678.

DECEMBER 23.

Barbadoes, 9 pkgs., \$196; Berlin, 160 pkgs., \$3,026; Bremen, 4 pkgs., \$200; Callao, 9 pkgs., \$759; Cape Town, 8 pkgs., \$292; Chemulpo, 4 pkgs., \$169; Genoa, 21 pkgs., \$1,727; Guantanamo, 39 pkgs., \$875; Havana, 2 pkgs., \$152; Havre, 9 pkgs., \$455; London, 450 pkgs., \$6,555; 185 pkgs., \$7,655; Maracaibo, 1 pkg., \$163; Montevideo, 22 pkgs., \$1,540; 45 pkgs., \$7,067; Punta Arenas, 3 pkgs., \$144; Riga, 13 pkgs., \$1,300; Rio de Janeiro, 9 pkgs., \$284; 213 pkgs. \$5,958; Vera Cruz, 89 pkgs., \$2,660.

DECEMBER 30.

Buenos Ayres, 9 pkgs., \$495; 3 pkgs., \$175; Chemulpo, 22 pkgs., \$1,477; Colon, 2 pkgs., \$115; 16 pkgs., \$678; 3 pkgs., \$306; Corinto, 5 pkgs.,

\$146; Guayaquil 2 pkgs., \$101; Hamilton, 3 pkgs., \$103; Havana, 4 pkgs., \$188; 5 pkgs., \$872; Havre, 10 pkgs., \$260; La Libertad, 3 pkgs., \$136; Limon, 18 pkgs., \$665; London, 245 pkgs., \$5,309; 13 pkgs., \$224; Manila, 63 pkgs., \$5,073; Mollendo, 2 pkgs., \$203; Puerto Cabello, 4 pkgs., \$194; Singapore, 18 pkgs., \$759; Soerabaya, 50 pkgs., \$145; Vera Cruz, 68 pkgs., \$2,072; 90 pkgs., \$2,508; Yokohama, 7 pkgs., \$383.

JANUARY 6.

Buenos Ayres, 148 pkgs., \$2,658; Callao, 9 pkgs., \$692; Cartagena, 4 pkgs., \$156; Guayaquil, 13 pkgs., \$608; Havana, 5 pkgs., \$171; Havre, 10 pkgs., \$964; Liverpool, 2 pkgs., \$275; London, 1 pkg., \$225; Mazatlan, 5 pkgs., \$229; Montevideo, 5 pkgs., \$111; Nassau, 3 pkgs., \$109; Pernambuco, 23 pkgs., \$886; Porto Cabello, 4 pkgs., \$174; Port Limon, 16 pkgs., \$722; Valparaiso, 4 pkgs., \$216.

THE ART OF ANTICIPATION.

A New Plan for the New Year—Some Suggestions Worthy of Consideration.

Mr. Dealer, the dawn of another year is breaking athwart the business sky. May the sun rays of prosperity dissolve the clouds of care in a sea of gold. May the winds continue fair and the good ship "Trade" plough her stately way onward toward the harbor of another great success.

Here's to you and to your ship! May she drop anchor on the last day of the year 1912 with even a more valuable cargo aboard than she brought you at the end of the season just closed.

What new plans have you formed for the new year—original plans that the other fellow has not thought of?

In these strenuous times, Mr. Dealer, you must be forever on your mettle, using your head and your hands simultaneously if you do not wish to be left at the tape in the Marathon for trade supremacy.

When you have a minute of leisure, employ it in thinking. It is the best possible exercise for your brain, and then again there is always a chance of it meaning money to you. To illustrate: I chanced to be in a talker shop the other day where a very obliging clerk was waiting upon an extremely attractive young lady. What struck me most forcibly was the ease with which he was able to satisfy her wants without the long preliminary concert and suggestions which usually precede record sales. He evidently knew her favorite artists by heart and was in a position to satisfy her

craving for good music intelligently and promptly.

After the lady had purchased to the extent of her pocketbook, she was handed a catalog of the current month's records and informed that the selections which would most appeal to her were marked therein.

"Stop in when you are downtown, and I will be very glad to play them for you," he remarked courteously as he bowed her to the door.

"Kind sir, pray tell me," quoth the writer, pulling the aforesaid clerk by the sleeve, "why is it you are able to sell the fair one \$10 worth of records without receiving a suggestion from her as to her musical tastes? It would appear to the uninformed that you are a mental telepathist as

well as a salesman. Please unbosom yourself that The World may know of this marvelous accomplishment."

The young man grinned a spacious grin. "Sure thing!" he cried. "The World shall know; I am no monopolist. The secret of my marvelous accomplishment, as you are kind enough to term it, is simply making a close study of *anticipation*. By *anticipation* I mean being able to absorb our patrons' likes and dislikes the first time they call, so that when they come again we know what they want and are saved the time usually consumed by dealers who do not avail themselves of this trade bringing method in playing records that customers do not like and would never purchase.

"All dealers who have not tried this means of enhancing business should listen to my little tale. Take pad and pencil, friend, and I will unbosom further."

He grinned again, and seeing his command promptly obeyed continued: "I found that we were wasting valuable time in preliminaries while playing records for patrons. We did not seem capable of holding their attention from the start, even though they had visited our hearing room many times before, so I immediately sought for a solution of the problem. After some hard thinking, I finally hit upon the *anticipation* stunt, about which I have told you.

"Of course, you understand that a new customer has to be initiated and his tastes determined, but when this is done my plan proceeds at once to make good. After I have gained a very fair idea of my patron's wants, I do not forget all about him until he comes again, as most dealers would do, but instead I enter his name in my little red book and opposite it a letter designating the kind of selection he liked best.

"If he is fond of sentimental selections, the letter S will be in evidence. If his desires should run along humorous lines, the letter H would appear, etc.

"It's a cinch, old man, to keep such a record, and you just saw for yourself how it helps a fellow out.

"I believe every dealer should endeavor to keep posted on his customers' needs, as it will to a large extent do away with the long concerts that generally accompany record sales."

Now, Mr. Dealer, here is a new plan for the new year. Do with it as you will.

HOWARD TAYLOR MIDDLETON.

The Happenings of the Year Just Closed Interestingly Reviewed by Our London Correspondent—Important Matters Which Came Up for Consideration and Which Were Satisfactorily Adjusted—What the New Year Will Unfold in the Disc and Cylinder Field—Trade During the Christmas Holidays Was Phenomenal, and Despite the Most Earnest Efforts It Was Difficult to Supply Demands with Alacrity—The Copyright Bill Passes House of Lords and Is Now a Law—Further Proof That Advertising Pays—Lower Parcels Post Rates to United States—Some Interesting Talking Machine Recitals Show Popularity of the "Talker"—The News of the Month from Across the Pond.

(Special to The Talking Machine World.)

London, E. C., Jan. 6, 1912.

The festive season must have been considerably gayer this year than ordinarily, owing to the enormous number of machines and records sold during December. It proved a most phenomenal rush time for everyone engaged in the industry, and it is noteworthy that pretty well all the makers and factors had to install night shifts the last week of the month. I am beginning to think that the average British dealer, while in many respects live enough at his work, is slow in appreciating the real possibilities of the talker trade at Christmas.

Many failed to gauge the demand beforehand and the consequence was that they found themselves somewhat short of actual requirements. Perhaps they are not so much to blame after all, for even some of the factors were caught napping. However, all worked like Trojans, and although an occasional difficulty was experienced in keeping up with orders, the dispatch and delivery arrangements were excellent.

A Review of the Past Year.

Perhaps no more opportune time than the present could be taken for a discursive retrospect of talking machine conditions and developments during the year which has just closed, and I propose, therefore, to disclose to those who will bear with me a panoramic view of the trade situation during 1911.

Let it be at once admitted that, despite the many clouds which gathered from time to time upon the political and industrial horizon, the mechanical musical industry enjoyed a period of unexampled prosperity and steady progress throughout. Moreover, when one considers the phenomenal activity of the boom season 1906-1907, and the enormous decline in trade during the two years which followed, the position to-day is all the more satisfactory because of the splendid recovery of an industry which even now certain pessimistic people persist in regarding as ephemeral in nature. We are on the high road to proper understanding with such people, for it is generally conceded by manufacturers that sales during the past twelve months will be found to have exceeded in many instances the figures of 1907. While I do not seek to discover any explanation of this pleasing situation, some little credit must be ascribed to the educational value of liberal expenditures on that which oils the wheels of commerce as nothing else can—advertising. Never before in the history of this trade has so much publicity been indulged in as during the last three months or so, and even away back through the whole summertime its sales creative force has been so clearly manifest that even the smaller firms were moved to add their quota in this direction, the cumulative value of which is inestimable. But all the advertising in the world will not continue to sell a bad article, no matter how cheap. In the talking machine field the buying public discriminate to-day as never before. Not so very long ago—to be precise, about five or six years—when the cylinder held sway, anything which could reproduce recorded sound was eagerly snapped up, and so hard pressed were the manufacturers to keep the

two great forces of supply and demand anywhere near level that the inventive side of the business came to be somewhat neglected. A position of things which soon resulted in a gradual growth of dissatisfaction in the public mind, educated as it quickly was, to appreciate the relative values centered in different kinds of talking machines and records. It soon became apparent that the manufacturers should do something to conciliate the public, and it was about this time that the disc record began to make headway. Competition began to be really felt, and each record maker put forth his best efforts in the direction of better quality. To-day we see the value of that competition reflected in the various monthly lists of records, and an exacting public demand will conduce to keep them always at a high standard of quality.

The Influence of the Copyright Act.

The year 1911 will go down to posterity as an historical year fraught with several issues of a nature likely to exercise a great influence upon the future of our industry.

First and foremost, perhaps, the greatest revolutionary influence is that engendered by the new Copyright Act. It has been fully discussed in this journal from time to time and my readers are by now tolerably familiar with its provisions. There is no occasion to go over the ground again here, but a word or two as to its likely effect may not be out of place, especially now that the bill has completed its parliamentary career and will come into operation in a few months' time. As dealers are aware, the tax imposed is, for the time being, fixed at the rate of 2½ per cent. on each selection with a minimum of one half-penny. That is to say, on the popular price half-a-crown disc a levy of one penny is exacted for the two selections and proportionately more in the case of a record containing excerpts of a number of pieces. Now, the question is, Who will pay this extra amount? The tendency is against increasing the price to the public, and so we have only the trade to fall back upon. Little definite information is available, but it is not unreasonable to assume that the burden of this penny royalty will be borne equally by the whole trade. Doubtless it will be divided into proportions among the manufacturer, factor and dealer. In any case, we incline to the belief that the public will not be called upon to pay it, having especial regard to the competitive interest involved. Healthy competition—even a certain amount of friendly jealousy—is always to be encouraged in every phase of commerce, because it spells progress, but we cannot blind ourselves to the fact that in the talking machine business to-day competition carries with it a sickening tale of deplorable methods of rivalry and intimidation scarcely to be met with, we should think, in any other similar or allied industry. But this is an aspect of the situation which we shall descant upon later; it is only briefly referred to here in order to emphasize the unlikelihood of manufacturers increasing the public price of records even to the extent demanded of them under this new Copyright Act.

Litigation an Unknown Quantity.

Looking back upon the past year and comparing it with 1910, appeals to the law were few and far between. With the exception of one or two minor encounters of a legal nature, litigation was more conspicuous by its absence. This fact is thrown into bold relief by the black background of the previous twelve months, during which period many questions of a far-reaching character in connection with patents were finally decided, and which to-day exert a powerful influence for the good of the industry as a whole. In the light of these remarks the meaning of the above paragraph caption, more especially to the uninitiated, might appear somewhat obscure. But it is literally correct, for it may not be generally known that more than one patent action has been mooted, and even yet

stand as a possible revenue-producing element for the lawyers. That is why we are forced to describe 1911 litigation events as being of an unknown quantity. We do not attempt to weigh the pros and cons, because it is quite possible that nothing will eventuate and, moreover, the trade will appreciate the importance of our silence at a time when perhaps delicate negotiations are pending for a settlement. With that we will pass on to the consideration of other happenings during the year.

Amalgamation of Important Concerns.

The fusion of the British Zonophone and Twin Record Companies, away back in the early part of last spring, furnishes an instance of the value of concentration. As the trade is aware, the immediate result was widely beneficial. All the best Zonophone titles were repressed on the Zono-Twin double record, and one cannot overestimate the sales value of the magnificent and extensive repertoire which the company now offer. The union of these two concerns was not without its lesson, for we may fairly assert, we think, without fear of contradiction, that it finally sealed the doom of the popular priced single-sided record. From this viewpoint we judge its significance, although at that time the move was determined as much by certain other minor considerations as the fact that, given two records of average merit, one single and the other double-sided, priced proportionately cheaper than the former, there could be no question but that the double record must eventually have won out. Anyway, from the moment the new company got to work sales simply forged ahead at a remarkably accelerated speed and to-day a wonderful increase is to be noted.

Another Important Fusion.

Later on in the year, during the early part of August, another important amalgamation was announced by that go-ahead house of Carl Lindstrom, Ltd. Following upon their absorption of the Beka Record, Ltd., and Fritz Puppel (talking machines), at the time mentioned they also took over the whole of the interests hitherto controlled by the Fonotipia Co. (London), Ltd., which included the management of the Odeon, Jumbo and Fonotipia records distributed by the International Talking Machine Co., Ltd., of Berlin, with branches in different continental centers, and in this country and other places abroad by Messrs. Barnett Samuel & Sons, Ltd. For the purpose of acquiring the majority of the capital stock of Fonotipia, Ltd., the Carl Lindstrom joint stock company increased their capital by 1,500,000 marks.

Under the capable management of Barnett Samuel & Sons, Ltd., the sales of the Fonotipia, Odeon and Jumbo records have reached to splendid proportions and they will continue the agency for these products as heretofore.

This gigantic move on the part of the Carl Lindstrom administration, embracing as it does so many interests, is evidently fraught with a very great significance. It is a far-reaching policy, not only affecting this country but practically the whole world, and its influence on the future of this industry must exert a tremendous degree for good or evil. Obviously they are out to capture the world's markets, and whatever their success may be in this respect a big responsibility rests upon them to uphold, as far as may lay in their power, the stability of the trade. Given that, its progress will rest upon a secure foundation.

The Maintenance of Prices.

To a considerable extent the welfare of this industry is vested in the large corporations. They have the capital to beat the small concerns, who are tempted to their doom by a specious method of price cutting. The events of the past eight or nine years more than confirm our statement. During any given twelve months in the latter part of that period we have seen a number of attempts by small firms to undermine the stability of the

FROM OUR LONDON HEADQUARTERS—(Continued.)

trade by offering impossible wholesale and retail discounts. They overlooked the cost, and that has invariably resulted in an interview with the official receiver in bankruptcy. Looked at in the right light, such methods, in nine cases out of ten, are pure philanthropy, because it is quality, not price, that tells in the end. The public want a certain selection or a song by a certain artist, and, speaking broadly, the difference of sixpence or a shilling even will not act as a deterrent to the sale. That is the position in a nutshell, and on reflection our readers will appreciate that it stands more than good in these days of exclusive artists.

During the past twelve months one noticeable feature of the trade situation has undoubtedly been the prevalence of price-cutting. It is no uncommon thing to see disc records listed retail at 1s., 1s. 3d. or 1s. 6d., and cylinders at anything from 3½d. upwards. It must be admitted that this is not always the fault of the manufacturers, but in some instances it is.

Can Price-Cutting Be Abolished?

In the consideration of this question it seems to us that under present circumstances no answer but a negative one is possible. And why? Merely, in our opinion, because of the simulated dignity of some manufacturers and the petty jealousy of others. One can only hope to eliminate price-cutting by sinking all such feeling and putting up a united fight. All manufacturers must adjust their policy in accordance with the exigencies of the present conditions. The aloofness of even one would probably result in the failure of any agreement arrived at by the others. There is urgent need for agreement to-day. It is more than urgent; it is imperative. But the whole foundation of any scheme must rest with the manufacturers and factors. The former should, firstly, agree upon a uniform rate of discount to the factor or dealer and fix the wholesale and retail prices. Every factor and every dealer found underselling should be blacklisted and all further supplies to the delinquent refused by all. There should be quite an independent bureau with a capable man in charge

whose duties would be to keep an accurate register of all complaints, notify all the firms interested, and take the necessary procedure to put the trade ban into effect. This rough outline may serve to convey an idea of what is not only possible, but necessary. Certain it is that something must be done, and that soon.

Scientific Aspect of 1911.

As in 1910, from a scientific point of view, no very radical departure was noticeable during the past year. One or two old ideas were resurrected and proclaimed as being original, but they soon passed into the limbo of the forgotten. Of the hundreds of inventions patented few were placed on the market, and scarcely any of these are of sufficient importance to warrant mention here. Of those which call for some reference we would direct our readers' attention to the fine-cut disc, of which, however, we have heard but little, issued under the direction of the National Gramophone Co., Ltd., London. The cut of this disc, which, by the way, is played with an ordinary steel needle, is somewhat uncommon. It may be described as a combination of the phonograph and needle-cut discs and, by reason of its fine thread, will play in the case of the 10-inch record for about six minutes and proportionately longer with a 12-inch. For such a record there should be a great future, and the sooner the manufacturers get active the better.

The flexible disc record, to which reference has been previously made in these columns, is still a thing "in prospect." According to our information, it is easily and cheaply produced, will be capable of the most elastic contortions, and can be rolled up, placed in a cardboard carton and sent through the post for one halfpenny without fear of damage. A useful innovation! As far as we can gather, it is just possible that this flexible disc, which, by the way, our friend Seymour knows something about, may see the light during 1912, but more it would not be advisable to say at present time.

In the Domain of the Disc.

Under this heading we will refer to both ma-

chines and records. To competition we must certainly ascribe the wonderful value now offered in disc machines. In this respect the past year has seen some really surprising reductions, more especially so on machines "made abroad." As an example we might state that what would have cost, say, £2 in 1910 can now be bought for about 25 shillings. And when we say that a not always unsatisfactory instrument (there are good and bad) has reached the level of anything from 12s. 6d. to 17s. 6d. wholesale it will be recognized that it is possible to have too much of a good thing, for there can be little profit in handling goods priced so low.

We are glad to observe, however, that the demand for really reliable instruments continues to improve. Quality tells in the long run, as is clearly evidenced by the increased sales of instruments priced at £5 and upwards. Beyond saying that better all round value is offered, either in quality or price, no very special improvement of the ordinary machines was to be observed during the past year.

A feature of the machine trade, however, which cannot be overlooked is the remarkable increase of the hornless type. Practically every company now catalogues a series of these instruments, which, it must be admitted, have been wonderfully improved upon since their introduction two or more years ago.

Coming to records, it will be generally acknowledged that great progress has been made in the matter of recording. Without exception, each and every company has developed and put into effect new ideas for the harnessing of nature, and their success is reflected in the lifelike reproductions of vocal and instrumental sound, as interpreted by the leading artists of the day.

Broadly speaking, the average record of to-day is clearer and more pure in tone than those issued twelve months ago. And it is obvious that in this respect manufacturers are fully alive to the discrimination which the public are not slow to exercise.

FROM OUR LONDON HEADQUARTERS—(Continued.)

Another aspect of the year was the increased demand for the popular priced 12-inch double record. Evidently there is a clear call for records carrying something like four minutes of music, and quite a number of manufacturers now pay greater attention to the cultivation of this class of trade.

Competition Forces Price Reduction.

Keen competition in the disc record field has forced a reduction of prices in several instances, one notable example being the issue of the 10-inch double Jumbo record at 2s. 6d., as against 3s. in 1910. There is certainly a growing tendency to reduce prices, and this exists in more than one quarter. Of course the temptation to cut below one's competitor is often very strong, but, to our mind, it is really a suicidal policy, for under the present system of trading and the increased yearly working expenditure the present margin of profit to the maker, factor and retailer is none too ample. In view of the many records on this market, one or two price reductions might have the effect of stimulating the demand for those particular makes, but only for a time. Looking facts in the face, it is apparent that other record prices would be forced down and in a short time the trade would find itself on much the same competitive plane as before, only with this difference, that the public, and it alone, would be getting all the milk out of the cocoanut by benefiting solely over the difference in price. Where, then, is there any concrete advantage in upsetting the stability of the industry by lowering present prices?

The exclusive artist proposition is certainly a much more effective way of meeting competition than trying to get a lead on prices. We must bear in mind that in nine cases out of ten it is the artist that sells the record, not the price. At least, the former is the greater consideration apparently, for during the year under review the services of practically all the prominent recording artists have been exclusively secured by one or other of the big companies. The full effect of this will be more noticeable during 1912, and we shall then be in a better position to judge of its value.

With that we pass on to the consideration of the cylinder side of the business.

The Phonograph Trade.

Taking as broad and impartial a view of it as we possibly can, there can be no doubt that, as a commercial product, the popularity of the cylinder is on the wane. Our inquiries in different authoritative quarters fully endorse the unfortunate fact that the sales of machines and records leave much to be desired, and the reason given is that the public invariably show a marked preference for the disc. We do not propose to enter

into a discussion upon their comparative tonal merits, but the popularity of the disc must to a great extent be regarded as due to the more extensive repertoire offered on that class of record, and one must not overlook the great influence exercised by the fact of there being an enormously greater number of discs on the market than cylinders. The disc is predominant everywhere, it is true, but we seriously commend to the notice of those dealers who have, not unnaturally perhaps, shown an inclination to neglect their cylinder trade the fact that cylinder goods will enjoy a very real and substantial demand. Remember that there are thousands upon thousands of phonographs in use to-day and every owner is a constant buyer of new records from time to time. Someone has to meet this demand, and it is the dealers who display energy and enterprise in conjunction with enthusiasm that win out. The bulk of the cylinder business remains, of course, in the hands of the National Phonograph Co., whose effective and widespread advertising demands the support of all live dealers. The various attachment propositions offered by these people have perhaps done more to promote sales than anything else, not to mention the recent lowering of prices for certain of the attachments, which has brought them within the reach of many who otherwise found their enjoyment confined to the standard or two-minute records. These price reductions very considerably widened the trade field for dealers, and we hope that during the present year they will make special efforts to push these attachments, for every one sold means an almost unlimited demand for Amberol records.

Other Aspects of the Year.

Of new firms there were few opened up during the year. Considering the state of competition, this is perhaps just as well, for there can be little scope for the successful marketing of more records.

As far as we can gather from official statistics, the commercial failures were not so numerous during 1911 as in the previous year, and this pleasing condition of things was even more noticeable in the wholesale field.

To Sum Up.

We think it is clearly manifest that the year 1911 has been a most progressive and prosperous one for the talking machine industry. Never before in the history of the trade has there been such general cause for satisfaction, despite the many setbacks in the shape of railway, shipping, transport and other labor troubles. With the exception of the great cotton lockout, which is likely to seriously affect talking machine trade in the disturbed areas for some time, at the moment there seems no occasion to anticipate other trade-disturb-

ing elements to mar the opening month of the new year. And if business proceeds as merrily as it did last January, there will be cause for no complaint on the score of falling sales. For, judging by last year's conditions, the tendency is to prolong the season well into the spring. That it may be even more prolonged this time will be the earnest wish of us all.

The Copyright Bill Becomes Law.

Just prior to Christmas the House of Lords further considered the provisions of the new act, and, after making some unimportant (as far as we are concerned) alterations, finally reported the measure to the Crown Ministers as agreed. Having received the Royal assent (by deputy, His Majesty being in India), the act duly forms part of the statute and will become operative next July.

The question as to who will pay the royalties exacted under the measure would appear to be in no great doubt. It is fairly certain that the public will not be mulcted in this tax of one penny on a two-and-sixpenny double disc, for in that branch of the business competition is so keen that manufacturers would be very loath to increase prices, especially having regard to the fact that there is a strong tendency in some quarters to lower existing prices. But no definite information is available at present. In regard to the ninepenny cylinders, it is expected that these will be increased—possibly a penny retail. No decision has yet been arrived at in respect of the shilling cylinders, but I am in a position to say that with regard to the discs in all probability the penny royalty will be borne proportionately by the manufacturer, factor and dealer.

In the Upper House, clause 17, which relates to posthumous works, was, on the motion of Lord Gorell, amended by the addition of a new subsection providing that the proprietorship of an author's unpublished manuscript after his death should be prima facie proof of the copyright being with the proprietor of the manuscript.

It is not expected that any great amount of royalties will be received by the publishers or composers during the first year or so, at any rate, but after that period the tax must total quite a substantial sum of money.

Bill to Amend Bankruptcy Law.

The text has been issued of the bill introduced in the House of Lords by the Earl of Granard on behalf of the Board of Trade to amend the law with respect to bankruptcy and deeds of arrangement. The most important amendments are as follows:

1. Prosecutions for bankruptcy (and debtors' act) offenses must at present proceed by indictment and be conducted by the Public Prosecutor. While maintaining this procedure for use in the

1912 Season's Catalogue JUST OUT

London, E. C.

FROM OUR LONDON HEADQUARTERS—(Continued.)

graver cases, it is proposed to give courts of summary jurisdiction power to dispose of these offenses, and to enable the Board of Trade to undertake prosecutions before such courts through their solicitor or through the official receivers.

2. Failure to explain disappearance of assets and insolvency brought about by gambling are made criminal offenses. Failure to keep trading accounts is made criminally punishable only in the case of a "trader who has on a previous occasion been insolvent."

3. At present all after-acquired property of an undischarged bankrupt is claimable by the trustee in the bankruptcy. Under the bill (a) protection will be given to bona fide purchasers of real (as is now the case with personal) property of this nature; and (b) if an undischarged bankrupt, his assets acquired since the earlier bankruptcy will be distributed pro rata between the new and the old creditors.

4. All married women engaged in trade are made amenable to bankruptcy proceedings upon a bankruptcy notice following judgment.

5. In regard to marriage settlements, additional restrictions are imposed on the power to place property out of the reach of creditors in case of bankruptcy, by means of covenants in such settlements.

6. General assignments of book debts are to be void against a trustee in bankruptcy unless registered.

7. Numerous safeguards are proposed with a view to secure, as far as possible without introducing official control, honest administration by trustees under deeds of arrangement (outside bankruptcy). Various other provisions are included; it is also proposed to extend the control of bankruptcy courts over foreigners trading in this country through agents or partners, and to take away the power of landlords to distrain after bankruptcy for rent payable in advance.

Pasquariello Makes Pathé Records.

Pasquariello, the popular Italian comedian, who appeared at the London Hippodrome with great success, has, we learn, made some really excellent Pathé 11-inch records.

A Souvenir from T. Edens Osborne.

An exceedingly useful calendar reaches me from Thos. Edens Osborne, of Belfast, and for which I am duly grateful. It is illustrated with the face of a sweet lady, known as Doröthea, reproduced by color photography from an original painting by Henri Roudel.

Big Advertising Produces Results.

Having noticed the extensive amount of advertising which "His Master's Voice" Co. indulged in during December, we were prepared to learn that they had experienced a record month, but this scarcely conveys an accurate idea of the enormously increased demand for their goods. We understand that both machine and record sales far exceeded any corresponding period in the firm's history, and when we received a cartoon depicting the staff in various stages of exhaustion it is clearly evident that "His Master's Voice" had enjoyed a most prosperous time. This was doubtless in part due to the excellent seasonable fare with which the company's dealers were provided, and we notice that the same wise policy of studying the demands of the moment, so to speak, is again manifest in the latest list of records (January) to hand, and which are as follows: "Leonora," overture (No. 3) Part I; "Leonora," overture (No. 3), Part II, and "Leonora," overture (No. 3), Part III (Beethoven), by New Symphony Orchestra. "Pink Lady," Selection I, and "Pink Lady," Selection II (Caryll); "Pink Lady," valse (Caryll), and Haydn's "Toy Symphony," by Mayfair Orchestra. "Drury Lane Pantomime," overture, Part I, and "Drury Lane Pantomime," overture, Part II (arranged by Glover), Glover's Orchestra. "Polonia," overture (Wagner); "Il Conte d'Essex" (Merdante), and "Gaiety Echos" (Monckton and Caryll), by the Band of H. M. Coldstream Guards. "Serenade" (Widor), Renard Trio; "Hush, Dear Heart" (Behrend), Evan Williams; "Morning Hymn" (Henschel), Gervase Elwes; "For I Do

Love You So" (Leoncavallo), John Harrison; "The Farmer's Pride" (Kennedy Russell), Chas. Tree; "A Chip of the Old Block" (Squire), Harry Dearth; "The Birds Go North Again" (Chas. Willeby), Mme. Edna Thornton; "I'll Sing Thee Songs of Araby" (Clay), Miss Ruby Helder; "Beautiful Lady," waltz song ("Pink Lady") (Caryll), Miss Lucy Marsh; "The Harmonious Blacksmith" (Handel), The Minster Singers Quartette; "The Children's Harlequinade" (Robert Hale), Robert Hale (of the Gaiety Theater), and "Christmas in a Mining Camp," also by Robert Hale; "Plumstones" (Worlock), Miss Margaret Cooper; "Nurse, Nurse" (Lee and David), Miss Clarice Mayne (acc. by "That"); "Future Mrs. Hawkins" (Chevalier), Albert Chevalier; "A Fishy, Fishy Story" (Hanray) Tom Clare; "The Hairdresser" (Fred Rome), Alfred Lester (assisted by Miss Buena Bent), and "The Three Trees; or, There, There, There" (Spring Maid") (Dudley Powell), Mark Sheridan.

Lower Parcels Post Rate to States.

H. Samuel, postmaster-general, replying to C. Roberts in the House of Commons recently, said: "I am aware that the postage on parcels sent from the United Kingdom to the United States of America is at present somewhat higher than the postage charged on parcels sent from Germany to the United States of America, and I have been in negotiation with the United States Post-Office Department for some time past with the view of effecting a reduction of the rates from this country. I am glad to announce that the negotiations have been successful, and that, as a result, the rates on parcels sent from the United Kingdom by the official service have been reduced as from Dec. 1. The past rates were: Up to 3 pounds...1s. 6d. Up to 7 pounds...2s. 6d. Up to 9 pounds...3s. 6d. Up to 11 pounds...4s. 6d. The future rates will be: Up to 3 pounds...1s. 3d. Up to 7 pounds...2s. 3d. Up to 11 pounds...3s. 3d.

These new rates compare favorably with those of Germany. With reference to this announcement it is notified that the postage on parcels sent from this country by the semi-official service carried on in the United States through the agency of the American Express Co. will remain unchanged.

Excellent List of Edison Records.

Particular attention is drawn in the Edison Record Supplement for February to three special Amberola records by the very best talent, which have been recorded at great additional expense. To this, and to the fact that the quality of the records are in every way superior, the company has decided to price them at 2s. 6d. each, feeling confident that the trade and public alike will welcome this new departure. The titles are: "Ave Maria" (Bach-Gounod) (soprano solo with violin obligato), Marie Rappold and Albert Spalding; "The Last Rose of Summer," Marie Rappold, and prize song, "Die Meistersinger" (Wagner, Wilhelmj) (violin solo), Albert Spalding. Amberol records: Selections from the "Mousmé" ("The Maids of Japan"), National Military Band; "Let's All Go Mad" (Godfrey and Williams), Billy Williams; "Hearts of Oak" (Garrick and Dr. Boyer), Peter Dawson; "There's Plenty of Room in the Park" (Harrington and Neal), Miss Florrie Forde; "Dreaming Waltz" (Archibald Joyce), Alhambra Orchestra; "The Hymns My Mother Used to Sing" (F. Langford), David Brazell; "It Was Three o'Clock in the Morning" (R. Penso), Jack Charman; "Les Deux Magot's Overture" (Bouillon), Alex Prince (concertina solo); "Kathleen Mavourneen" Crawford and Couch, Ernest Pike; "Baby's Box of Toys" (R. Penso), Stanley Kirkby; "The Em-

peror Passes" (Patrol) (Vollstedt), H. M. Irish Guards' Band; "I Wish I Had Someone to Love Me" (Lauder), Harry Lauder; Three quotations, No. 3, "Nigger in the Woodpile" (Sousa), Sousa's Band; "If All My Dreams Were Made of Gold, I'd Buy the World for You" (G. Evans), Irving Gillette; "That Mysterious Rag" (Berlin and Snyder), Premier Quartette; "Chimes of Normandy Airs," No. 1, Edison Light Opera Co.; "Prelude," Calace op. 45, No. 1 (mandolin solo), Demetrius C. Dounis; "Trust in the Lord," Nevada Van der Veer-Miller; "Kamenoi-Ostrow," American Standard Orchestra; "Come to the Ball" ("The Quaker Girl") (L. Monckton), Joseph A. Phillips and mixed chorus; "Polonaise de Struensés," Garde Republicaine Band; "Kathleen Mavourneen" (F. W. N. Crouch, Venetian Instrumental Trio; "Kil-larney, My Home O'er the Sea" (F. K. Logan), Frank X. Doyle and chorus, and "I Love to Tell the Story" (W. S. Fischer), Edison Mixed Quartette. Special foreign selection, price 1s. 6d., "Fra Diavolo," overture (Auber), Johann Strauss' Orchestra. Standard records: "Won't You Waltz 'Home, Sweet Home' with Me for Old Time's Sake?" Bryan G. Harlan; "That Mysterious Rag" (Berlin and Snyder), Premier Quartette; "The Gendarmes' March" (J. Brandt), H. M. Irish Guards' Band; "Why Can't We Have the Sea in London?" (Godfrey and Williams), Billy Williams; "Just a Wee Deoch-au-Dous" (Morrison and Cunliffe), Miss Florrie Forde; "On the Road to Gagg-a-Zig" (Herman Finck), Alhambra Orchestra; "Sing Something Irish to Me" (F. Godfrey), David Brazell; "O'Brien" (C. W. Murphy), Stanley Kirkby; "Down by the Old Mill Stream" (Tell Taylor), Albert Crawley; "Cap't'n Ginjah, O. T." (Leigh), Jack Charman; "Viva la Joba" (Spanish dance) (P. Marquina), National Military Band, and "The Coulin," W. N. Andrews.

New Companies.

Wolsey & Wolsey, Ltd., musical instrument dealers; capital, £5,000; 15-16 King street, Great Yarmouth.

Music Typewriter Co., Ltd.; capital, £25,000.

Rayflex Co., Ltd., phonograph manufacturers; capital, £32,000. No address given.

Auxetophone at Children's Matinee.

At the annual children's matinee of "Wonderland," given at the Royal Hippodrome, Belfast, T. Edens Osborne gave selections of popular music on the auxetophone, which, we understand, was very greatly appreciated. By this method Mr. Osborne obtains much useful publicity apart from his consistent representation in the local journals.

An Edison Smoking Concert.

R. P. Wykes, of the Arcade Emporium, Northampton, recently conceived the idea of giving an Edison smoking concert and exhibition. Held at the Stagg's Hotel, Northampton, on December 14, an exceptionally strong program was provided.

The decorations of the room were excellent. Garlands of flowers crossed the ceiling in all directions, and a photograph of Mr. Edison, framed in oak, was surmounted by English and American flags. Although the large room had seating accommodation for 200 people there was not even standing room available for the late comers.

Although one or two artistes appeared in person, the phonograph was the principal fun provider, and it got through an extensive program. The most successful selection of the evening seemed to be the "Golden Wedding," which evoked storms of applause. The Edison "Standard" phonograph was used, fitted with Cygnet horn and "O" model reproducer. The first record heard was a "Phonogram" from Paul H. Cromelin, managing director of the National Phonograph Co., Ltd., explaining his inability to attend in person, owing to pressure of business in London, and deputing W. Dunville

MR. RECORDER, do you know my **WAX "P,"**

bei Apolda i. Th., Germany

Simons, the company's sales manager, to preside over the proceedings on his behalf. This record quite took the audience by surprise, owing to its novelty, strikingly clear reproduction, and the explanation that it was an ordinary Edison cylinder made on an ordinary machine with an ordinary recorder, and with no special preparations.

Mr. Simons spoke at great length on the advantages to be derived from home recording. A review was given of the recent developments made in Edison products, the Edison policy being at all times one of progression, and that many new developments could be expected.

A telegram was received during the evening from Mr. Edison's representative wishing the concert every success, the reading of which created an excellent impression.

Mr. Wykes and his committee were thanked by the chairman on behalf of the company present and the Edison Co. for their good work in carrying out the concert. Mr. Simons suggested that a society be formed called the "Northampton Phonograph Society," the chief object of which would be to encourage home recording—contests being held from time to time to judge results obtained by its members, and advised them that the Edison Co. would be pleased to co-operate and give every encouragement in that direction.

We are sure it is very pleasing to the trade generally to see the splendid work that has been done by these few enthusiasts. The enterprise of Mr. Wykes is certain to result in increased business.

Dealers could with advantage follow the example set by Mr. Wykes in organizing concerts and "home recording" contests, and thus realize to the full the big advantages to be gained from the sale of blanks, recorders, etc.

Recording Pantomime Hits.

An extraordinary number of really good popular songs are available for the coming pantomimes, and many are certain to become prime favorites during the pantomime run, all over the country. The Edison Co. have been making special efforts this year to include every possible pantomime hit on their Amberol and Standard lists, and the result is that they have produced one of the strongest lists of pantomime numbers ever issued.

Edison Phonograph Equipments Standardized.

In view of numerous suggestions received from dealers the National Phonograph Co. propose to simplify the sale of Edison phonographs by omitting some of the combinations that have been possible in the past.

By this means dealers will be saved the necessity of constant reference to price lists and will be able to reduce to a great extent the varied assortment of stock which they are at present obliged to carry.

Catalogues, giving full and complete description of the new outfits will shortly be supplied to factors.

The machines themselves, we understand, are being rushed through with as much despatch as possible.

The advantages of standardizing Edison equipments will be plainly evident to all dealers. Factors have assured the company that the move is one of the wisest made in recent years and feel that it will go a long way toward counteracting the delay in getting out our new disc line.

New Zonophone Records.

The January list of Zonophone records is an exceedingly strong one, for the titles are all good, and rendered by artists of the first rank. Those to hand include: "Life's Little Troubles" and "Sunny Seaside," Joe Elvin; "Belfry Serenade" and "Carillon in E B," Black Diamond Band, with bells; "Stick to Your Mother, Tom" and "Wanted a Harp Like the Angels Play," Ernest Pike; "Many Happy Returns of the Day" and "The Vacant Chair," Peter Dawson; "If You Should See a Dandy Coon" and "Little Luna Loo," G. H. Elliott, and "I'm Not One That Wants to Say 'Owt'" and "If We Live to Be Ninety-nine," Tom Foy.

The Power of Advertising.

Thomas Edens Osborne, the well-known Edison factor of Belfast, in a recent letter to the company

recounts a distinctly humorous anecdote as follows: "The principal of a very well-known and important educational establishment in Belfast telephoned me on Saturday that he would like to see me to-day, so I waited on him this afternoon, and I was immensely amused, as he was, when he told me that at an examination held last week in one of his class rooms a student had given my name as the answer to (f) of question 8, copy of which I append at foot. The gentleman referred to would not give me permission to specify the school or mention his name in connection with the matter. That is why I am not doing so in writing you. Evidently my advertising the phonograph for so many years is creating an indelible impression upon the minds of the young generation."

8. Whose name is connected with the introduction of each of the following: (a) The printing press, (b) the penny post, (c) the steam engine, (d) wireless telegraphy, (e) the pneumatic tire and (f) the phonograph.

More Music Hall Sketches on Records.

"Five Great Music Hall Sketches" is the endorsement written across the front of the Columbia-Rena January supplement. One is of Lew Lake and his company presented in their latest comic sketch, "In the Bull Rushes."

Another Columbia-Rena disc comprises two of Harry Tate's most famous sketches, to-wit, "Flying" and "Motoring."

In "Matrimonial Bliss" we have two pictures of the blessed state. One depicts "hubby's" return home from the club in the early morn "with the milk," while the other portrays a damsel's position in the breach of promise action.

The fifth sketch is an idyll on coster life as presented to music hall audiences by those popular characters, Duncan and Godfrey. It is the "Coster's Courtship," and the fads and foibles of Jim and his "Liza" are beautifully reproduced in a delightful comedy vein.

An Exceptional List of January Titles.

Other fine Columbia issues are as follows: 12-inch—"Nirvana" (Stephen Adams) and "Mother o' Mine" (Frank E. Tours; words, Kipling), Morgan Kingston; "A Soldier's Song Waltz" and "Dream on the Ocean Waltz" (Jos. Gung'l), Haydn Orchestra, and "Rosamunde," overture, Part I, adante, and Part II, allegro, vivace (Schubert), Court Symphony Orchestra. 10-inch—"Sue" (W. Hargreaves and Sam Poluski) and "Misunderstood" (Poluski Bros.), Poluski Brothers; "In the Shadows" (H. Finck) and "Pretty as a Pink" (bells solos), Wm. H. Ross; "Hush, Here Comes the Dream Man" (Maurice Scott), Charles Holland, and "I Used to Believe in Fairies" (Spink), Edwin Greene; "Billy" (Kendis and Paley), and "All Alone" (H. Von Tilzer), Miss Beth Tate; "Belle of Brittany," waltz (Talbot and Korn) and "Dreaming," waltz (Archibald Joyce), Casino Orchestra; "Bohemian Boys' Lancers" (arranged by Warwick Williams), figures 1, 2, 3 and 4, King's Military Band; "Bohemian Boys' Lancers," figure 5, King's Military Band, and "L'Amour qui rit," polka march ("She Only Started Giggling," with vocal effects, Casino Orchestra; "1912 Panto Hits," Parts I and II, and "1912 Panto Hits," Parts III and IV (arranged by A. W. Kiteley), King's Military Band.

New Columbia-Rena Scottish List.

For a long time Columbia-Rena records have had a strong hold over the border with their repertoire of all-Scottish titles, and now comes the announcement of another twenty-five new Scottish records; this list comprising new titles by every one of those artists who have been the biggest successes of the past.

New "Cadet" Machine a Success.

The success of the Columbia "Cadet"—the hornless graphophone introduced this season—has been so great as to render quite unnecessary any undue flourish of trumpets concerning it. All who have heard admire its breadth and openness of tone, and declare that its principle of construction in which the taper of the tone-arm is gently continued right out to the grille is the correct one.

Don't Buy Needles That Damage Records

Bad Needles

Cleopatra Needles

When a needle is running a record, the friction causes the polished surface of the needle to be taken off, while its interior (grain) is exposed and touches the sound waves.

Consequence:

The poorer the polishing and rougher the grain, the more the sound waves are injured!

Only *Cleopatra Needles* are warranted to have always the highest and most perfect polish, smoothest grain. Using them means:

**Finest Reproduction,
No Ruin of Record.**

Sole Manufacturer

Needle and Pin Works

AACHEN, GERMANY

**It's safe to say because it's easy to prove
—that the musical product of the Columbia record laboratory maintains an unparalleled high average.**

Columbia Phonograph Co., Gen'l, Tribune Building, New York

DETROIT A BUSY CENTER.

Talking Machines Now Sold to People Who a Few Years Ago Looked Upon Them with Disfavor—Columbia Business for December Forty Per Cent. Greater Than Any Month Since They Engaged in Business in Detroit—Max Strasburg of the Victrola Shop Anxious to Get More Room—Work Nights at Grinnell's to Supply Demands—Many Furniture Stores Handling Talking Machines.

(Special to The Talking Machine World.)

Detroit, Mich., Jan. 11, 1912.

"We are selling talking machines now to men who wouldn't have them in their houses as gifts half a dozen years ago," said city sales manager S. E. Lind, of the Columbia Phonograph Co. today. "In that fact is revealed the secret of why the business is growing in such a truly remarkable manner. It is in the improvement, we might say the perfection, of the talking machines themselves, and in the records. They now are practical musical instruments, not novelties or toys. They are the poor man's piano-player and the rich man's variation of the player-piano, in that they furnish him vocal music as well as instrumental, and do it so perfectly that there no longer is any criticism of quality.

"Our business for December of this year was 40 per cent. larger than that of any month since we have been in business in Detroit—nine years. And our cash receipts were 75 per cent. of our gross business. From that you can get some idea of what the talking machine business has developed into in Detroit. Our trade continually trends to the high priced machine. People come in to look at fifteen dollar ones and buy fifty dollar ones, or go even higher."

The Columbia branch to-day received its first sample of the new "Mignonette," the hundred dollar machine. It gives the Columbia branch a range of prices that will suit any pocketbook and any frame of mind. There also is a style suited to every temperament.

The Columbia branch received a godsend a couple of days before Christmas in the shape of a shipment of nearly seventy-five machines. Orders were on hand for the whole lot, and more, and salesmen were at their wits ends to keep the disappointed patrons smiling. There was quite a run on the \$150 and \$200 machines.

The demand for Columbia records is so great that some of the sub-agencies here are putting in full catalogues. Agents of other lines also are putting in Columbia records.

Fancy cases are beginning to put in an appearance and are attracting much attention, but the good old mahogany remains the favorite in the high grades of instruments.

Max Strasburg, chief of the Victrola Shop, is trying to induce his next door neighbor to move. The Victrola Shop needs the room. "We need just about twice as many demonstrating rooms as we have now," said Mr. Strasburg. "We have taken a long lease on this corner and cannot very well get away from it. It's a first-class corner and we don't want to get away from it, for the location is constantly improving. So we are try-

ing to lease the store next to us and connect the two places. If we had about twelve demonstrating rooms we would be all right." Mr. Strasburg reports that the \$200 Victors are selling best just now. Holiday business was most satisfactory at the Victrola Shop.

Grinnell Brothers, Victor jobbers for Detroit and vicinity state: "We did three times as much business during the holidays as we ever did in a similar period before, and I think if we could have received the machines we could have done a third better still."

"In our wholesale house the men worked until 10 and 11 o'clock at night," said Harry Rupp, "sometimes later, shipping the jobbing orders. A day or two before Christmas we were entirely out of everything priced at less than a hundred and fifty dollars. Right now we have on the floor only one machine between the fifteen and the hundred and fifty dollar prices. We are expecting some big shipments soon, however, that will ease up the situation."

Mr. North, one of the traveling representatives of the Victor Talking Machine Co., dropped in this week.

In Detroit the talking machine is coming to be recognized as a piece of fancy furniture and the furniture stores are making a specialty of them. They advertise them. Victors and Columbias especially can be seen in the windows of many of the suburban stores. While furniture stores play the game the strongest, commercial houses of all kinds carry talking machines as a side line. In some cases the talking machine business does so well it makes the rest of the business the side line. Detroit's suburban growth is very rapid, and generally as soon as a subdivision has been built up and some stores scattered around in it, some one puts in talking machines.

Most of the smaller piano houses also are carrying talking machines now, but the large ones, except Grinnell's, who make a special department of the business, fight shy of them—too much competition for player-pianos, perhaps.

HONESTY IN BUSINESS.

The Raising of the Moral Standard in the Treatment of the Customer—Underhand Methods Usually Result Unprofitably.

It is an old saying that honesty is the best policy, but modern commercialism is supplementing a new practice, honesty is the only policy. That it pays to be honest is meeting with recognition everywhere, and there is a fast growing tendency among the great industrial companies, public service and transportation corporations, as well as private and individual interests, to treat the public fairly and deal honestly, prompted by financial as well as moral reasons.

The raising of the moral standard in the individual has advanced it correspondingly in the commercial world. People never do anything unless they think it for the best. Every action is justified. Customs have prevailed in business to obtain advantages which in the light of an enlightened

conscience nowadays are not only considered uncommercial, but dishonest, and it is becoming a business axiom that to do anything unjust, underhand or dishonest is not only wrong, but will result unprofitably in the end.

There can be but one standard of right and wrong and that applies alike to the individual, firm or corporation, employer or employee, buyer or seller. New laws are making it easier for people to be honest. Stealing has long been under the ban, smuggling and grafting are becoming unpopular, and with a new tax law so all will pay their just share, there will no longer be an excuse for dodging taxes, and universal honesty will be possible. The time is also not far distant when it will be necessary to meet our obligations on time or pay interest. When this custom is enforced it will remove much of the correspondence, evasion and bad feeling now engendered by forcing collections.

The practice of plain honesty will settle contentions between capital and labor, help both debtor and creditor, bring employer and employee together, make life sweeter, and success quicker. Lack of honesty, like other evils, is the result of ignorance, and the enlightenment of conscience through education is the remedy for all humanity.

U-S PHONOGRAPH CO.'S NEWS BUDGET

Wholesale Business Steadily Growing in Volume—Recent Visitors to the Factory—Whaley-Royce & Co., of Toronto, and Winnipeg, Report Big Sales of U-S Machines—Full Force of Salesmen Now on Road.

(Special to The Talking Machine World.)

Cleveland, O., Jan. 9, 1912.

The U-S Phonograph Co. reports business moving along prosperously at the factory, with bright prospects ahead.

Mrs. W. H. Bade, of Battle Creek, spent two days at the U-S Phonograph Co.'s factory last week. She expressed herself as well pleased with the U-S machines and records and confidently expects to quadruple her business during 1912. Mrs. Bade possesses the unique distinction of being the best Phonograph "repairman" in Battle Creek, and it is doubtful if her equal can be found in the whole State of Michigan. She fairly bubbles over with energy and enthusiasm. There are thousands of dealers who could well afford to take Mrs. Bade as an example for up-to-date business getting.

Mr. J. J. Bennett is spending a week at the U-S factory, after a very successful trip through Manitoba and Saskatchewan, and will shortly return to Ontario.

The Hudson's Bay Co. has vigorously taken up the sale of U-S Phonograph Co.'s machines and records.

Whaley Royce & Co., of Toronto and Winnipeg, distributors for U-S Phonos and records, reports a fine holiday trade and prospects for 1912 as most promising.

Manager of Sales G. M. Nisbett, of the U-S Phonograph Co., entertained all the salesmen during Xmas week and the boys have all started out with renewed vim for the ensuing year.

To Business Men

Business men
in every line admit
the value of good
trade papers.

A trade paper must be
original—it must contain a
variety of matter including news
service—technical information—in
fact it must crystallize the entire news
of the special business world, and be a
helpful adjunct to every department of trade.

Scan the columns of the Talking Machine
World closely and after you have completed an
analysis of the contents of this publication see if you
can duplicate its value in any other trade!

The World is a help to the talking machine
business.

It exerts an healthful optimism.

It wields an influence for the good and every man
who sells talking machines, no matter in what part
of the universe he may be located, should receive
this publication as regularly as it is issued. He is
missing a vital business point if he fails to do this.

Thousands of dealers not only in the United
States but in every country on earth consult the
pages of the World regularly.

They draw from the World pleasure and profit.

The talking machine business has a brilliant
future, and this publication is doing much to enlarge
the business horizon of every retail talking machine
man in the world.

To receive this paper annually costs but \$1.00.
All foreign countries \$1.25.

EDWARD LYMAN BILL

1 MADISON AVENUE, NEW YORK

All the way from Demand to Dealers' Discounts, the Columbia line is Decidedly Desirable.

Columbia Phonograph Co., Gen'l, Tribune Building, New York

A JOBBER'S VIEWS FOR 1912.

The Possibilities, Opportunities and Needs of the Industry Are Outlined from the Viewpoint of J. Newcomb Blackman, President of the Blackman Talking Machine Co., New York.

It is fitting at this time of year to make resolutions, predictions and plans to improve conditions in general. The talking machine industry during the past year has been remarkable in many ways, but chiefly to my mind in the respect that it has constantly forged ahead in spite of general business conditions. With the example of the manufacturers in constantly improving their product and advertising incessantly, those jobbers and dealers who have adopted similar policies have, without doubt, profited accordingly.

One of the greatest accomplishments during the past year and one which the writer feels, holds forth a wonderful opportunity for the business, has been the success in introducing talking machines with suitable educational records in public schools throughout the country. It simply shows the broad, almost unlimited variety of accomplishments, and clearly demonstrates to the public that the product moves onward and upward and is deserving of the respect of all as a great educational factor.

Back of this, of course, is the great advertising value, the use of the machines in schools surely produces, and dealers will do well to think deeply on this subject, even though it may be at first extremely difficult to introduce the machines in their local schools.

The grand opera records have done much to educate the ordinary people to better music. The kind that produces a lasting pleasure and becomes a part of, what might be termed, your permanent library of selections. The recognized difficulty in recording and reproducing with remarkable fidelity the voices of the greatest artists is but another evidence of the elevation in the art. It is easy to tear down, but hard to build up, and yet our industry is an example of a steady and successful effort during the past years to sell the higher priced goods because of their merit.

I might mention many other evidences of constant advancement, but will call your attention to a few apparent features of the business that should be looked into with a determined purpose to correct an existing evil.

That old subject, the "Cash and Installment Problem" is becoming more serious, and I predict, must be handled in a manner that will encourage cash purchases, whereas the situation is distinctly otherwise at present.

The talking machine business was founded on a one price system, the essence of which was, "one price to all," and discounts, rebates or anything that would tend to give the benefit of a cut in price was prohibited. This seemed fair for all and placed everybody on an equal footing. Review the competition of the last few years, however, in the sale of the higher priced instruments and a broadcast advertising, asking the purchaser to buy one, making the first payment after a two months' trial, with twenty months to pay in equal amounts

the balance. In other words, the buyer has been told to keep his \$200 and buy the machine on a two years' time at the cash price. Figure the interest that this money will earn during that period, the cost of handling the credit, and depreciation through bad debts. Does this represent anything other than a discount on the outfit? The trade are required, under penalty of suspension, to make all cash sales at the full price, and yet all these inducements are offered to the man who will not pay cash.

The terms quoted above, under the most favorable conditions, make the dealer wait two-thirds of the period before he gets his cost. Indebtedness on these machines run into large amounts quickly. The ordinary dealer simply cannot afford to sell on these terms, and he, therefore, is either compelled to cut the price to get cash, or try and get along on record business only. Unfortunately, many dealers attempt to follow the big department stores and dealers, and expect the jobber to carry their accounts and furnish the capital to do it with. This a jobber not only cannot afford to do, but is prohibited from doing.

I do not cite this condition as a criticism of the large dealer or department store, for it has come about by unrestrained competition in the matter of terms, and I know that several of those who are offering those inducements would prefer some system that would place a limit on terms, making a reasonable distinction that would encourage some cash business.

Dealers and jobbers are allowed a cash discount. Money placed in a bank or borrowed, carries an interest credit or charge.

Every talking machine company that has ever discussed this subject has been fair enough to admit the above facts, but simply threw up their hands and said they could not regulate it. More difficult problems have been handled by these same companies when they arrived at a point where they decided the problem must be solved, the situation must be met.

I feel this time has arrived, and if not soon regulated, price cutting will increase. Dealers will be unable to get the credit they need from jobbers; jobbers deeply entrenched in the business will be forced to go into the retail business until such time as they can discontinue.

It is the ordinary dealer multiplied by thousands, who is constantly a "plugger" and a "producer," and has made big results possible. We must have these thousands of dealers in order to give local record service. We need the "big fellow," and I believe we can adopt a system that will correct the above evil and suit all.

Is it not true that prosperity may have overshadowed, at least temporarily, a proper analysis as to whether the present system is suitable for all times and all business conditions with the future before us to be considered.

Before concluding, I want to impress upon the manufacturers as a whole, that my remarks are not directed to anyone in particular, "unless the shoe fits," and I have avoided specific reference.

Dealers and jobbers for some time have had a feeling of unrest regarding "future policies" of the manufacturers. Many remarks have spread

regarding future restrictive policies which certainly would, at least temporarily, work a hardship and loss upon many of those most vitally interested in the trade and who are large assets to the business.

The present business, its policies, agreements and conditions were not made over night, but represents an evolution. Would it not be well to "make haste slowly" on drastic moves that seem necessary or advisable to meet new conditions?

So far we have been fortunate in avoiding any "trust" action on the part of the Government, and our success in this respect in the future will be best assured through a policy of reasonable harmony, without forgetting the rights of all parties. Every dealer and jobber has a common interest with the manufacturers to work for harmony and with a harmonious organization, strife does not kindle well.

In conclusion, let me say that I have been identified with this industry for fourteen years, giving my entire time and attention to the sale of talking machines, and hope to continue at least that much longer. Past success, however, should not blind us to defects or a proper caution against unfavorable conditions that might arise.

The various makes of goods have sold on "merit" and can do so in the future, and "to lead the nag" rather "than drive him," is often the best plan. After all is said and done, I believe that the talking machine industry of to-day, as a whole, is far ahead of anything similar, that is an article of luxury, although it is becoming more of a necessity, but do not let us "stand pat" when we can "stand improvement." There is some "food for thought" in this article that should not be considered "digested" and "forgotten" at this portion, because it is easy to consider it the end.

J. NEWCOMB BLACKMAN.

THE INTERNATIONAL PHONOGRAPH CO.

The International Phonograph Co., Newark, N. J., has been reincorporated with a capital stock of \$1,000,000, divided into one hundred thousand shares of \$10 par each. Thirty-five thousand shares are preferred stock, while the balance, 65,000 shares, are common. The former capitalization of the company was \$5,000,000. The officers of the company are William Rotter, president, and Louis Hanooh is secretary.

TALKING MACHINE FOR SANITARIUM.

The tuberculosis patients at the St. Louis Quarantine Hospital, known as the Koch Sanitarium, will hereafter have the pleasure of hearing talking machine music. In a recent investigation of the city hospital system it was brought out that the Quarantine Hospital patients had little in the way of amusement, and this so impressed G. H. Larkin that he presented the institution with a machine and a start for a library of records. It is predicted that the library will be quickly added to by friends of the patients.

You cannot get the price unless you have the courage to ask it.

1912 TO BE GREAT YEAR FOR TALKING MACHINE BUSINESS.

Is the Opinion of George W. Lyle, General Manager of the Columbia Phonograph Co., as Expressed in an Interview with *The World*—What Liberal and Judicious Advertising, Good Faith with the Public and an Honest Effort to Improve Its Record Product Accomplished for the Columbia Phonograph Co. During 1911—Review of Plans for Present Year.

George W. Lyle, general manager of the Columbia Phonograph Co., when asked by *The Talking Machine World* to express his views on the business done during 1911, and his opinion as to the prospects for 1912, said he was always pleased to address our readers, and especially so at the close of such a phenomenally successful year as 1911 had proved to be.

He recalled his prediction that 1911 would prove a record breaker for business, and certainly his faith and judgment have been amply justified.

Speaking of his own company, Mr. Lyle said: "From the beginning to the end the year just past had proved a succession of successes. From January to December each month closed with a substantial percentage of increase over corresponding months of the previous year and an aggregate total increase of phenomenally large proportions. It was anticipated that as the summer approached there would be the customary decrease in monthly totals, but as the months slipped into the discard the gratifying fact developed that so far as 1911 was concerned the so-called 'dull' season was a myth. The business continued lively, active and highly profitable, with no symptoms of 'that tired feeling.' As the fall drew nigh it became apparent that ordinary preparations would prove inadequate; that it would be necessary to place the factories on 'capacity' basis months in advance of the usual period. Double shifts of factory force was an old story long in advance of any previous record. The year terminated with the greatest December in the company's history.

"The assuring fact is that the 1911 showing was not accidental or fortuitous, but the direct and logical result of carefully considered and matured policies; quality in product; liberal and compelling advertising judiciously placed; faith in the public's willingness to support the manufacturer in efforts to raise the standard of musical excellence in sound records, and open, frank, good faith and reasonableness in all dealings with the trade.

"The company consistently adhered to its policy of preserving to its exclusive representatives the territory ceded to each; of referring to each all inquiries and prospects from such territory, without any unreasonable or arbitrary restrictions or interference.

"The quality of product was scrupulously maintained and improved upon. The 'Regent family'—hornless machines of the table type, already firmly established in public favor—was increased by several new members, all preserving those same elements of uniqueness, utility and adornment which characterized the original models, which put them in a class by themselves, for which no substitutes could be offered. The 'Favorite' type was also a pioneer and a winner from the start. The great question and the only one with respect to all of these has been 'How fast can you deliver?'"

Mr. Lyle says he is a firm believer in advertising, judiciously placed, because he has tested it. The most convincing copy ever written, he says, will not be productive if your circulating medium be unwisely chosen, and that is one of the many reasons why Columbia ads. are always a feature of *The Talking Machine World*. They always bring results. In this connection Mr. Lyle remarked:

"During 1911 the Columbia advertising was of a character to compel the notice of the public, and the public being interested, the dealer was not long in getting wise to the fact.

"The addition of a number of stars in the grand opera firmament to the Columbia roster of exclusive artists; the fidelity with which their voices were recorded by the recording experts, and the avidity with which these records were seized upon by the talking machine users and the public early stamped the company's progressiveness in this particular with approval.

"It is a significant and gratifying feature of the

Columbia Co.'s 1911 business that it was not confined to any section of the country, but was general. Every branch of the service, including also Europe, the Orient, South America and Mexico, contributing its due proportion."

As to 1912, Mr. Lyle is extremely optimistic. He has been looming ahead and forecasting results. He sees prosperity for all. To put it in his own way: "The talking machine business is coming into its own. It has outgrown the earlier prejudice against it; is now firmly established in the esteem of the musically critical, not alone as a means of distraction and entertainment, but as a very potent, helpful and faithful instructor and educator. The sale of machines and records is now conceded to be a profitable, desirable and in every way unexceptionable business, so much so that the most ultra-respectable music and piano houses are so impressed by its class and distinc-

GEORGE W. LYLE.

tion, to say nothing of its profitableness, that they are vieing with each other in the costliness and the tastefulness with which they equip their talking machine departments. This condition can mean only one thing—continued and augmented success and prosperity for everyone identified with the talking machine industry."

Asked about the Columbia plans for 1912, Mr. Lyle said: "The company will maintain its policy with respect to dealers, assuring them fair and liberal treatment at all times and no unreasonable restrictions or interference in the conduct of their business. They would adhere to this policy because it is fair and right and because it has been demonstrated to the company's satisfaction that it pays.

"The quality and variety of product will be maintained and added to. The company has in course of production at the present time some new models of machines which will create a sensation when announced and constitute selling propositions of irresistible magnetism. Due and timely announcement of these will appear in *The Talking Machine World*.

"Additional contracts have been concluded with grand opera artists of great renown, and records have been secured which will be announced in due course. These records are of a quality and character to insure enormous sale. The public and the user will be kept in line for Columbia production 1912 by an advertising propaganda that for scope, compelling force and power has never been equaled

in the history of the industry. Contracts for part of this publicity have already been placed and others will be placed later."

Mr. Lyle concluded his talk by reiterating his conviction that 1912 is going to be a great year for the talking machine business; by the assurance that Columbia products are going to be right to the fore for twelve months in the year, and that Columbia dealers are going to have their share, and a little over for good measure, of all the good things of 1912.

1911 WILL BE DWARFED BY 1912.

Says the Rudolph Wurlitzer Co. in Speaking of the Enormous Trade of the Past Year and General Conditions in the Talking Machine Business Throughout the West.

(Special to *The Talking Machine World*.)

Cincinnati, O., Jan. 11, 1912.

"Reviewing the talking machine business during the year 1911, we find it was by far the most eventful year in the history of the talking machine business," said the manager of the talking machine department of the Rudolph Wurlitzer Co., of this city, when seen by *The World* correspondent, who added:

"Not only did the sales rapidly increase each succeeding month until they reached their climax in the wonderful business of December, but developments of a far more important nature than the immediate increase of profit took place. These will make the year 1911 go down on record as the beginning of a new era that will stretch into the future with no termination in sight.

"We are at last seeing the consumer gradually awake to the realization of the fact that the talking machine is more than a source of light entertainment, and it is beginning to exercise in a small way some of the tremendous possibilities which must have the appreciation of the public before they can be exercised.

"Those in close touch with the situation have noted this progress and the great volume of business which came as a result. Take for instance the educational feature as applied in the use of the Victor in connection with school work. We have hardly touched on this subject and great results have been obtained.

"What a volume of business can we expect in this field when thoroughly cultivated! Then consider that the educational feature of the talking machine covers a field far more vast than its mere use in connection with school work.

"The future of the talking machine business is so vast in its field of operation as to amaze those who can see the trend of the business and appreciate the possibilities which are just beginning to unfold themselves.

"The year 1911 was a big year, but it will be dwarfed by 1912. The outlook is so good that it ought to make everyone in the talking machine field enthusiastic."

THE COLUMBIA AT PANAMA.

The store of W. P. L. Fellingier at Panama, an exclusive Columbia dealer, and also the Columbia Phonograph Co., General, representative for the Republic of Panama, is producing a gratifying volume of sales. Mr. Fellingier has initiated a system of instalment payments and the returns have been more than encouraging. An idea of its growth may be gained by the fact that it has been found necessary to devote all of one man's time to that side of the business. The "Grafonola Favorite" has been particularly successful with Mr. Fellingier.

CALESTHENICS TAUGHT BY PHONOGRAPH.

Two Pennsylvania schools have discovered a new use for the phonograph. Finding great difficulty in teaching calisthenics to their many foreign pupils who were not proficient in English, these schools have decided to install phonographs with records in foreign languages. While these records are being operated the teachers will perform the proper exercises, thus securing the desired harmony in the drills.—*Edison Phonograph Monthly*.

That little "Pronouncing Dictionary" of ours is making a continuous hit. One dealer sent 400 with his compliments to 400 buyers of high grade records, and has been hearing from it ever since, by letter, in person, and even by telephone.

Columbia Phonograph Co., Gen'l, Tribune Building, New York

THE MAN BEHIND THE GUN.

H. B. McNulty, Who Is Responsible for the Development of the U-S Combination Phonograph, a Man of Broad Experience in the Mechanical Side of the Talking Machine Field.

(Special to The Talking Machine World.)
Cleveland, O., Jan. 10, 1912.

No man in Cleveland has given more earnest attention to, or had larger experience in, the talking machine business than Harry B. McNulty. During his fifteen years in the business he has been

H. B. McNULTY.

salesman, repairer, manager, and all the while devising and working on an invention, which culminated in the production of the U-S Combination Phonograph. This unique inventive achievement was the result of years of studied experiment along original lines of development, Mr. McNulty's object being to produce an instrument conspicuous for its simplicity of construction and operation and perfection in the quality of tone production. Since the inception of the U-S Co. he has been "the man behind the gun," and ever since has been directing and watching the details of manufacture at the factory, where he is in constant daily attendance, supervising and directing in the various departments. Justly he takes great pride in the success of the company in having permanently established the business, and the favor with which the machines and records have been received by the public throughout the United States and Canada.

FIGHT FOR RECIPROCITY.

Exporters Want Retaliation on Countries Barred Against Us.

"Combative Reciprocity" is the new slogan of the American Manufacturers' Export Association, 200 Broadway, which has undertaken a campaign against all discriminators and prohibitory duties that are, or may be, laid upon American-made products by foreign countries. Henry T. Wills, secretary of the association, said:

"The members of our organization represent \$1,000,000,000 of capital and export goods worth over \$100,000,000 a year. A large part of this goes to South America, but Brazil and Argentina especially discriminate against us heavily. In some instances duties have been levied on American specialties by these countries that exceeded 300 per cent. Our association will demand that Congress pass retaliatory tariff legislation against all countries that treat us in this unfriendly way, so that we shall impose on their goods the same discrimination which they impose on ours, extending this even to the free list if necessary."

Among the big exporting firms that have written to the association indorsing this "combative

reciprocity" movement are: The Aeolian Co., Victor Talking Machine Co., The Remington Arms Co., Horlick's Malted Milk Company, Baldwin Locomotive Works, H. J. Heinz Co., American Laundry Machinery Co., and the Westinghouse Electric Co.

SHIPPING AND SALES DATES

Issued as is the Custom Annually by Thos. A. Edison, Inc., for 1912.

In accordance with the usual custom of Thos. A. Edison, Inc., they have just issued the shipping and sales dates for advance records from January, 1912, up to and including December, 1912:

Shipping Dates, 8 A.M.		SALES DATES, 8 A.M.	
January	Wed., 24th	January	Thurs., 25th
February	Fri., 23d	February	Sat., 24th
March	Sat., 23d	March	Mon., 25th
April	Wed., 24th	April	Thurs., 25th
May*	Fri., 24th	May	Sat., 25th
June	Mon., 24th	June	Tues., 25th
July	Wed., 24th	July	Thurs., 25th
August	Fri., 23d	August	Sat., 24th
September	Tues., 24th	September	Wed., 25th
October	Thurs., 24th	October	Fri., 25th
November	Sat., 23d	November	Mon., 25th
December	Mon., 23d	December	Tues., 24th

*Canadian jobbers, May 23.

Any jobber or dealer who makes shipments of records, or places them on sale in advance of the hour specified herein, violates the terms of his agreement, and will be dealt with accordingly.

THE EVIL OF DATING.

A Thorn in the Side of the Credit Man—How Salesmen Can Aid in Checking the Trouble.

Says a merchant of wide experience: "The evil of dating is a contagion which baffles and absorbs the attention of credit men throughout the entire United States. Where it will end and what is to be the remedy is a problem yet unsolved by the brightest commercial minds. Reference to the proceedings of the trade conferences which take place throughout the country from year to year will show, I think, that of all matters brought up for discussion no one thing is so vexatious and so difficult of remedy as that of indiscriminate dating. It is generally conceded that the custom should be abolished, but no one has been able to suggest a way that would bring about this good result. Some credit men go so far as to say that the salesman in his insatiable desire to secure orders very frequently suggests a dating and is principally to blame for the continuance of this evil practice. I am not prepared to say, nor do I believe that this is true, but I am firmly convinced that the salesman is in a position to aid materially in checking the custom if he will but co-operate with the credit office. The salesman should ascertain the policy of his house respecting terms and dating and in his dealings with the customer should adhere to them strictly under all circumstances."

"Yes," said Miss Pasay, "I found a very nice boarding house to-day, but the only room they had to offer me had a folding bed in it, and I detest those things." "Of course," remarked Miss Pert, "one can never hope to find a man under a folding bed."—Catholic Standard and Times.

THE FIRST SLEEPING CARS.

Why the Present Day Traveler Has Much to Be Thankful For.

The first sleeping cars ever designed were used on the old Cumberland Valley Railroad between Harrisburg and Chambersburg, in Pennsylvania. They were built in 1838 and ran on this line for several years before other roads thought it necessary to provide accommodations for their passengers. In these first sleeping cars one-half of the space was arranged as an ordinary day coach, with its cross seats. The other half was fitted up with eighteen sleeping berths, or, rather, bunks they were in these antique cars. In daytime the bunks were shifted and stowed so as to convert them into omnibus seats on the side of the cars. Our ancestors bunked in them at night and rode in them in great state in the daytime, considering themselves true aristocrats. There were three lengths of berths and three tiers on each side of the car. The top tier hoisted on a hinge and was secured by rope supports to the ceiling of the car. The middle tier consisted of the back of the omnibus seat, hinged and supported in the same manner. The lower tier was the day seat. In those happy days there was no extra charge for the sleeping accommodations.

NEW COLUMBIA DEALERS.

H. A. Yerkes, of the wholesale department, Columbia Phonograph Co., General, announces A. N. Winstandley, Bedford, Ind., and A. J. Meyer, Madison, Ind., as new dealers to handle the Columbia line exclusively. Mr. Yerkes states that business is excellent at all branches. The Regent Table line, an exclusive Columbia feature, is enjoying exceptionally heavy sales.

Now to break last year's sales records.

Echo Record Albums

FITS DISC RECORDS

EVERY MAKE AND SIZE

Patent applied for
L. J. Gerson.

If you send your name and address, a sample 1911 Album Booklet, illustrating the latest style Echo Albums for both single and double-faced records, with discount sheet, will be mailed you. Echo Albums are indexed 1 to 16 with index in front and fit all record cabinets after slats are removed. Also, can be substituted for the old-style filing cases in Victrolas. If your jobber does not carry Echo Albums remit \$1.00 to us for a sample 10-inch Echo Album, mailed postpaid. Regular discounts to dealers.

ECHO ALBUM CO., 926 Cherry St., Philadelphia, Pa.

PREDICTS 25 PER CENT. INCREASE IN VICTOR BUSINESS.

Louis F. Geissler, Upon Return from Trip to Pacific Coast Announces That He Looks for That Percentage of Increase During 1912—Conditions in 1911 Summarized—Wage Earners the Real Spenders—Worry Little of General Conditions—Many Opportunities Open for the Live Talking Machine Dealer—New Year Greetings Extended to World Readers.

(Special to The Talking Machine World.)

Philadelphia, Pa., January 10, 1912.

Louis F. Geissler, general manager of the Victor Talking Machine Co., arrived to-day at his desk, after a restful two weeks spent in San Francisco, his old home, where he went exclusively for a few days' rest from the rather trying exactions of the most strenuous business year in the company's history, among old friends and duck shooting partners, and in a chat with The World on the general business situation, he said:

"Our company predicted in the early spring of 1911 that it would prove our banner year. We

conditions, strong American financial conditions and the further strength to be added by crops and exports, will give them plenty to do and an excellent scope for their enterprise to bring their wares to the attention of millions of people well able to buy them, for, through a condition that prevails in all new or comparatively new countries, the enterprising man has an enormous average—very much the largest percentage of people—to deal with, who are willing to spend all they earn for the luxuries and necessities of life—with an accent on the luxuries.

"These are our wage earners—money makers and spenders—most of whom take little note of influences at work to change their financial conditions. Therefore, why worry about the Sherman law or the interpretation of it; how much money J. P. Morgan can sway, or whether the Standard Oil Co. is a good or bad thing.

"Very large manufacturers must, of course, consider these things, but let the ordinary talking machine merchant attend to his business; advertise; carry the stock and work hard to sell same; to see the opportunities lying around on all sides of him and not be so ashamed of his job that he cannot go outside and solicit trade, either at wholesale or retail, and he will soon make money enough to join the classes of men who have to worry about the Sherman Anti-Trust law and assume other troubles which prosperity invariably brings.

"I wish a very Happy New Year to all your readers and firmly believe that a very prosperous one is in store for them."

ALPHABET FOR SALESMEN.

Attempt just as much, or more, than you can well do.

Be careful not to overestimate the fine points of your line.

Count well the cost of a night "out with the boys." Don't make personal remarks about your competitor.

Endeavor to have each month's sales show an increase.

Find the weak spot in your man, and then attack it. Get down to business the moment you meet your man.

Hold your word as sacred as your oath.

Indifference is not independence.

Jump at conclusions only when the conclusion is in sight.

Keep close to the trade.

Let nothing shake your faith in yourself.

Make friends, but no intimates, in the trade.

Never practice deception—it will be found out.

Observe rigidly every rule of your house.

Place your confidence cautiously.

Question not the wisdom of houses's orders.

Repeat strong points of your selling talk occasionally.

Study your prospects before beginning your argument.

Talk earnestly and always to the point.

Utilize every peculiarity of your customer to appeal to him.

Venture suggestions cautiously.

Watch your customer's face while you talk to him. X-tend to all a friendly greeting.

You must be ever on the watch for new schemes. Zeal and industry will surely be rewarded.

—F. E. Boden in the Macey Monthly.

CLEANRITE BRUSHES FOR COLUMBIA DISC MACHINES.

The popularity of the Cleanrite brushes has caused a considerable demand among Columbia jobbers, dealers and users, for this brush to attach to Columbia machines. A new model known as the No. 20 is now ready for delivery and attention is directed to the advertisement of the Blackman

Talking Machine Co., who manufactures this brush, which will be found on page 19. Free samples will be supplied to any dealer or jobber who writes on his business letter head.

VICTORS IN LAUTER BRANCHES.

Has Met with Such Success with This Line in Its Newark Store That Victor Departments Have Been Opened in All Branch Stores.

Piano dealers who at first were rather indifferent to the value of the talking machine as a trade promoter are now giving serious consideration to these very popular products and during the past year there is hardly a section of the United States where piano dealers have not fallen in line and taken the agency.

The Lauter Co., the well known manufacturers and retailers, has been so well pleased with the success of its venture as Victor dealers at its headquarters in Newark, N. J., which is in charge of E. B. Potts, formerly of the Greenville Talking Machine Co., that it has now been decided to open talking machine departments in Jersey City and the other various Lauter branch stores, in which the Victor line will be handled exclusively.

In view of the splendid equipment of the Lauter Co. it goes without saying that this latest venture will be a decided success.

RE-ELECT SAME OFFICERS.

The American Graphophone Co. Hold Annual Meeting on January 8.

The annual meeting of the stockholders of the American Graphophone Co. was held at the office of the company in the city of Bridgeport, Conn., on Monday, January 8, at 1.30 p. m. The board of directors elected for the ensuing year is the same as that which served in 1911. Routine business was transacted. Officers to serve the ensuing year are: Edward D. Easton, president; George W. Lyle, general manager; Marion Dorian, treasurer; C. W. Woodop, secretary and assistant treasurer.

LOUIS F. GEISSLER.

made all the preparations to take care of the largest business that it was possible for us to consummate. The predictions were more than fulfilled, and we pass into 1912 with the largest unfilled order list, in both machines and records, that it has ever been our good fortune to have on hand.

"I predict an increase of 25 per cent. in 1912 over 1911, and am unable to predict more for our company, simply because that will be about all we can increase our capacity.

"We, as a company, are indeed grateful—as should be all Victor distributors and dealers—for the degree of prosperity that is not only gratifying but bids fair to be surpassed by that which we shall enjoy in the future.

"The year 1911, as most of your readers have observed, carried throughout in general among merchants, away up over their heads, the spirit of uncertainty and dissatisfaction with political, legislative and financial conditions, which was not pleasant; still, for the year past, totals have been brought forward, and we find again, as usual, that it was a better year for most everybody than pessimists thought it would prove.

"The year 1912, I fear, will pass through an atmosphere charged with many of the same elements, but to our merchants selling talking machines I can only say that my belief is that the fundamental

SUCCESS OF GRAFONOLA "REGENT."

Three Models of Table Grafonolas Arouse the Enthusiasm of the Dealers and Public—Some of the Real Advantages of the "Regent" Model—A Recent Letter to the Trade Containing a Warning Against Possible Patent Infringements in Connection with the Grafonola "Regent."

The Columbia Phonograph Co., General, Tribune building, New York, is enthusiastic over the immediate success of the "Columbia Grafonola Regent," the table type of talking machine. The instrument is built in three styles, shown by the accompanying illustrations, "Regent," at \$200, the "Regent Junior" at \$150, and the "Baby Regent" at \$100. It is a complete library or living-room table for every-day use with the additional attraction of being a complete musical instrument of unexampled versatility and matchless tone. The musical and mechanical equipment is entirely concealed, and the instrument presents as its table-surface an unbroken expanse of clear mahogany, the top measuring 29 by 46 inches. To insert a

GRAFONOLA "REGENT."

record, a smoothly sliding drawer at the end is opened—bringing the turntable, tone arm, reproducer and needle trays into convenient access. After moving the starting lever, one can close the drawer or leave it open—the operation of the instrument is not interfered with. Extending to the other end of the table from the tone arm in this drawer is the tone chamber through which the tone waves are led and poured in magnified volume out of a grille, and increased or decreased at will. At both ends of the table, and forming an integral part of the complete instrument, are the record compartments, where space for an extensive repertoire of 10-inch and 12-inch double-disc records is provided. A handsome loose leaf index book, alphabetically arranged and leather bound, is furnished with the "Regent" to enable the keeping of records properly indexed. The motor mechanism is exceptionally powerful and very silent. The speed is regulated from a graduated dial.

The Regent family have rapidly grown in popularity and the demand has assumed huge proportions. General Manager George W. Lyle has forwarded the letter herewith appended, under date of December 29, 1911, to the various Columbia store managers with the idea of forestalling any possible infringements of the "Regent" patents: "Our 'Regent' Grafonolas are an unqualified success.

So firmly are they now established in public favor that non-Columbia dealers have been forced to recognize their merits not only as unique, useful and

"REGENT JUNIOR."

highly ornamental sound reproducing machines, but as a line for which no substitutes will be accepted. They have been powerful advocates in converting many dealers to the Columbia faith, and they will prove more effective in this respect as a result of our great advertising propaganda for 1912.

"We originated and control these table types of Grafonolas. We are protected by valuable patents granting us the exclusive rights. We intend to enforce these and protect ourselves in every lawful manner.

"Like every other good and successful article, these tables will be imitated and copied if we do not prevent it. We do not propose to permit any infringements of our patent or other rights.

"Keep a constant lookout for anything in the nature of a table Grafonola not of our manufacture and promptly report to us all the information you

"BABY REGENT."

can secure, including name of manufacturer, for whom made, by whom sold or offered for sale, name or type designation, price, etc. Take no steps involving legal expense until authorized by this office."

"DOING BUSINESS" HERE.

Foreign Corporations Must Keep Stock Books Open Here if They Sell Things.

The law requiring a foreign corporation other than a moneyed or railroad corporation doing business in this State to keep its stock book open daily in its office here has been construed by the Appellate Division of the Supreme Court to in-

clude a corporation which merely has a selling force here and keeps only enough money for stamps and petty expenses.

The question was raised in a suit of Leroy F. Hovey against the De Long Hook and Eye Co., a Pennsylvania corporation, to recover penalties because he wasn't permitted to see the company's stock book in its office here. In directing a judgment for the plaintiff the Appellate Division ruled that a corporation coming into the State to do business can be made subject to the same regulations which the State imposes on its own corporations.

In a dissenting opinion Justice Miller said that the mere employment here of salesmen and an agency incident to conducting its business in another State does not constitute "doing business" within the meaning of the statute.

GOOD YEAR FOR U-S PHONOGRAPH CO.

Says George N. Nisbett, Manager of Sales for That Company—The Outlook for 1912.

George N. Nisbett, manager of sales of the U-S Phonograph Co., Cleveland, O., in summing up business for 1911 and the prospects for 1912, said to The World: "The past year has been one that has caused us considerable gratification, not only on account of the marvelous growth of our business, but because we have been able to make great strides in the quality and quantity of our product—the growth of our business is therefore but a natural reward for our efforts.

"The prospects for 1912 look good to us, and we can see no reason why it should not prove to be our banner year. To all of our jobbers and dealers the U-S Phonograph Co. extends best wishes for a happy and prosperous New Year."

ANENT THE EDISON COMPANIES.

All of Them to Be Under the Control of One Holding Concern.

(Special to The Talking Machine World.)

West Orange, N. J., Jan. 2, 1912.

A step in the process of merging all of the companies which have developed here out of the enterprises given birth by Thomas A. Edison's inventions was announced at the factory to-day. It was given out that the capital stock of the Edison Manufacturing Co. has been reduced in nominal value from \$100 to \$2 a share, cutting the aggregate capital stock from \$500,000 to \$10,000.

Thomas A. Edison, Incorporated, is the name of the holding company. It was formed nine months ago when the Edison Phonograph Works and the National Phonograph Co. were absorbed. Ultimately one company will control all the Edison output, including the storage battery, moving picture and phonograph.

Do not forget that you are "in business for yourself," even though you are on the payroll. You are building up your own character and developing your own powers. If you do this conscientiously you are sure of "recognition."

FROM OUR CHICAGO HEADQUARTERS

ROOM 806, NO. 37 SOUTH WABASH AVENUE, E. P. VAN HARLINGEN, MANAGER.

Interesting Review of Trade Conditions by Leading Members of Jobbing Trade in Chicago.

(Special to The Talking Machine World.)

Chicago, Ill., Jan. 10, 1912.

The World representative decided to let the trade review the past year and prophesy the future for itself. A letter was therefore sent out to Chicago jobbers with this end in view and also asking for comment on specific problems or tendencies that might occur to the recipients. The replies are here printed in full:

The Talking Machine Co., A. D. Geissler, General Manager.

"There is no doubt in the writer's mind that a very pertinent influence on the increased talking machine business of this winter has been the inability of the factory to supply the goods.

"This sounds paradoxical; however, let the demand for any article of national reputation be increased to the point where the factory can't take care of its orders, and it is a fact that the customer is made that much more anxious to get that particular thing.

"The distributor sees his orders piling up fast; he is only able to take care of a certain portion of that increase in business; he feels he is losing business; however, a good portion of that distributor's increased business is caused by his receiving orders from all over the country. These same orders may have been placed with several other distributors.

"While, during the latter part of 1911, it was hard to be seemingly losing business, at the end of the year, when we figured up the net results, our business in general showed an enormous increase over 1910.

"Undoubtedly the new Victrolas have proved a stimulus to business. Many complaints were heard at first against giving the name 'Victrola' to any machine less than the \$200 instrument. However,

results have proved it an excellent idea. The new Victrolas seem to have opened up a new field for themselves. The sale of the \$200 Victrola has shown the same percentage of increase as the Victor business in general.

"Another innovation is the interesting of the educational department of the public schools in the Victor. Mrs. Clark's work in this department has been successful. Thousands of machines have been put out in public schools, and when you consider that each machine plays to its fifty or one hundred pupils; that the entertaining qualities of that machine are impressed firmly on the mind of those pupils, and thence carried to the home, one begins to realize the immense advertising value of this innovation.

"The dealers are also just beginning to appreciate the Victor Co.'s window display department. The window—the eye of one's store—is the most valuable asset connected with the property we pay rent for. Location determines our rent. Location is good or bad as compared with the number and class of the people who pass one's door. Why should we neglect that portion of the store which borders on the space we pay rent for? The Victor Ready-made and Automatic Window Displays have made it easy to use this space advantageously.

"The ruling which has put us all on an even basis is the new dictum put forth on the matter of terms—goods to be sold for 2 per cent. ten days, net thirty days from date of statement. This, in the main, has been received cordially by the trade at large, and removes that old bugbear the dealer used to have that possibly his competitor was able to grant better instalment terms and more inducements to a customer on account of longer terms he was receiving from his distributor.

"You ask me what I think of the prospects for 1912. Big—no doubt of it. It is true I have talked with some merchants who offer crop conditions, election year, etc., as excuses for being pessimistic. The talking machine trade must feel confident.

"The Victor factory has thousands of machines and records in its unfilled order files. Distributors can't clean up their back orders on machines for months. The main feature is that the factory, instead of following the usual precedent of manufacturers in cutting down its advertising appropriation when the factory reaches a point where it is running full tilt and has orders ahead, it seems to be increasing its appropriation. This, after all, is the most important influence of our business.

"Personally, the Talking Machine Co.'s business was over 30 per cent. ahead of 1910, and with the continued co-operation of our dealers we expect to show a like increase for 1912."

Lyon & Healy, L. C. Wiswell, Manager.

"Nineteen hundred and eleven was a period of striking irregularity in trade and industry, but despite evidence of a widespread caution and repression, a fair volume of business was done.

"Relative to the talking machine business, a record business was done, the year starting out auspiciously, and as the summer months came on, the trade declined only to recover strongly, reaching a climax in the closing months. The volume of business done during December everywhere surpassed any other December in the history of the talking machine industry.

"A number of piano and music merchants who also handle the talking machine line stated to me personally that their talking machine business was far greater than the business done in their other lines. One merchant remarked that he only sold two pianos for Christmas delivery, where he sold more than fifteen high-priced—\$150 and \$200—talking machines.

"One of the most notable features as the year closed was the air and conservative cheerfulness in evidence. While there is testimony as to this having a solid basis in actual improvements already registered, it is plain that some of it has had its rise in the feeling that there has been many worse years in the country's past history, and in the apparent belief that some of the year's doubtful questions have been settled.

"Regarding the present year—1912—let us view it optimistically.

"Stocks of talking machines in the dealers' hands everywhere throughout the year, as well as the stocks of other merchandise have been down to hardpan. This fact cannot be denied. Now, any change after the years of depression, 1908 and 1909, with a steady slow recovery in 1910 and 1911, is more than likely to be in the direction of expansion. This should especially be true of the talking machine industry for many reasons—one is that the manufacturers are ever on the alert to stimulate the business by constantly improving their product. Manufacturers who have accomplished wonders; yes, miraculous things, during the past years, still have the ability and resources to keep apace with the times, bringing out innovations from time to time as conditions warrant.

"So I say, problems have been met and there are still many more to be met and solved. Still, the present cheerfulness of the trade at large as well as the people augurs well for safer methods of trade expansion, which means large and increasing business.

"Summing conditions up, I predict that the present year, 1912, will produce the largest volume of talking machine business of any other year in the history of the trade."

Columbia Phonograph Co., Chas. F. Baer, Manager.—"This has been a great year in the talking machine industry. Commencing with January, 1911, it and each succeeding month has shown an increase over the same month in the previous year. Our December, 1911, sales in retail doubled those of December, 1910, and there was a 75 per cent. increase in the wholesale sales. I will predict that business in 1912 will show even a greater increase than that of 1911 over 1910.

FROM OUR CHICAGO HEADQUARTERS—(Continued from Page 43.)

"The disc talking machine of to-day and the player-piano rank side by side as the leading musical instruments, and I look for a closer association of the two instruments than ever before, for the reason that I believe that the player-piano manufacturers will shortly see the great advantage to be gained by cutting the music rolls to conform with the Columbia records, the association of the two instruments in this way will be of great benefit to both the player-piano and the talking machine industry. It is needless to expatiate further, for anyone in the trade can see the advantage that the public will derive in the form of entertainment from such an association."

Babson Bros., F. K. Babson—"All that we can say is that the past year has been satisfactory as far as we are concerned, but we do not feel capable of even making a good guess as to what the future has in store for us."

Rudolph Wurlitzer Co.—Chicago Branch: "The year just passed has been one of varying conditions as to business. It started off briskly and continued so for three or four months, then came a season of inconsistency for five or six months with its occasional spurts and setbacks."

"About the time the new hornless machines were introduced a general increase in business was immediately noticeable. The demand for the new types became greater and greater and several weeks before the holidays we were simply overwhelmed with orders and without stock, excepting possibly two of the higher priced types. While it was thought for a time that the less expensive machines would upset the demand for the higher priced types, it did not prove so; indeed, these higher priced machines sold remarkably strong as the holiday season drew to a close. Whether the general business conditions were responsible for it or not is a hard matter to determine, but it has been noticed that there have been a greater number of time sales this year than heretofore, although the machines were bought by responsible parties who in all probability could have paid cash had they felt inclined to do so. When conditions are anything but normal it is a well known fact that the public tightens up its purse strings. The fact, however, that talking machines have been bought under these conditions speaks well for their popularity."

"As to the future of the talking machine industry, there can be no question as to its permanency. It has been founded along substantial lines governed by well defined policies and should continue to increase and prosper."

U-S Phonograph Co.—Chicago Branch:

"The talking machine business is humming in at our big store at 219-225 West Washington street and a careful review of the conditions in the entire Central West forecasts a tremendous demand during the present year."

"The many exclusive features and points of superiority in construction and operation of the U-S combination phonographs and indestructible everlasting records have hit a popular chord with the great public, and despite our immense facilities for the manufacture and distribution, we have found it utterly impossible to meet the enormous demands for our product. It is pleasing and satisfying to state, however, that arrangements have been completed whereby we will now be enabled to make prompt deliveries."

"Our line successfully appeals to all the people from the humblest to the most opulent and for that reason it is in a separate class."

"We produce strong, sturdy well finished instruments capable of the most perfect detail and expression, appropriate in price to the possibilities of the day laborer and cover the whole field of phonograph desires, including the most fastidious millionaire. By marketing instruments in handsome plain cases and in cabinets of the most exquisite design and architecture to be sold at a wide range of prices, we thus meet every possible requirement."

"For every one, everywhere, we manufacture the U-S indestructible and everlasting records which are a marked improvement over any cylinder or disc record ever offered. Our records produce a purity and brilliancy of tone absolutely devoid of

artificiality or mechanical suggestion. Our present list of records represents great scope in entertainment possibilities and we are constantly in closest touch with the musical and entertainment world to procure new subjects. This record feature particularly appeals to all the people, as our dealers sell the two and four-minute standard records at the fair price of 35 and 50 cents each, respectively, and also a great repertory of beautiful grand opera selections at the modest price of 75 cents each. Such a combination of facts in connection with instruments and records has been fairly irresistible."

"The dealers were quick to recognize the reasonableness of our unique selling plan and they are all enthusiastic."

Opens Tenth Floor Store.

George Vining, formerly retail manager for the Schaeffer Piano Manufacturing Co., has leased crystal front quarters on the tenth floor of the Republic building, and will go into business for himself specializing on Victor machines and records and on perforated music rolls. He will also handle pianos and player-pianos.

Encourages Monthly Bulletin Recitals.

V. B. Taylor, Victor salesman for Northern Illinois and Southern Wisconsin, is doing good work in urging dealers with whom he comes in contact to hold regular recitals on the 28th of each month, the opening day of the following month's records. Acting in accord with Mr. Taylor's suggestions a number of the dealers sent out invitations announcing two Victor recitals, one for the afternoon and one for the evening of the 28th. The monthly records are played at both concerts and good results accrue.

"This system," said Mr. Taylor in a chat with The World, "saves the dealer much time in playing over the list to various individuals at different times. It also obviates the necessity of sending many records on approval. Further than this it results in sales that would otherwise not be made. This is particularly true in the case of the 'fair sex.' Mrs. So-and-So, for instance, hears the records and was impressed with certain ones, which she buys. But this is not all. She hears other mesdames, who are a little above her, at least so she imagines, in social position or wealth, express their liking for certain numbers. She immediately echoes their exclamations of admiration and adds the subjects thereof to her collection. Therefore the dealer in holding these recitals plays legitimately on the foibles of the gentler sex. I may add that this is not theory on my part, but cold facts, and has been demonstrated as such time after time."

"I can heartily recommend monthly record recitals to dealers everywhere as being time and labor saving and productive of good business results."

Worked a Skin Game.

The following letter written by H. H. Niehaus, talking machine dealer at Quincy, Ill., to C. F. Baer, manager of the Chicago office of the Columbia Phonograph Co., is self-explanatory. The letter is reproduced as written with the exception of one or two minor but justifiable expurgations and modifications:

"Friend Baer—Just want to say that I had a terrible experience. The wife of a young friend of mine had the misfortune to be terribly burned, and it was up to some of their friends to come across with a quantity of skin. Well, I was one of the pikers and maybe you think I ain't sore. The doc peeled me for thirty pieces. This happened last Saturday, and while it didn't trouble me much then it is causing me much woe to-day. When you see Everly tell him that I have been up against a skin game and that we cut up to beat the band."

It should be stated that the martyr above referred to has and is recovered. He is now resting serene in the consciousness of "duty well done."

New Local Accounts.

I. S. Purcell, piano dealer, 10 North Western avenue, has added Victor talking machines.

A. P. Miller, formerly in charge of a graphophone department in the store of B. F. Carr & Son on 63d street, has resigned and is now in business for himself on 63d street, about three blocks from his former location, opening Decem-

ber 16. His store, which is known as Miller's Grafonola Shop, is advantageously located, being near a station of the South Side "L" road and directly across the street from the Jackson Park Post Office. He has opened to fine business. He carries Columbia goods exclusively.

B. F. Carr & Son, pianos, etc., 848 East 63d street, is going into the talking machine game more extensively than hitherto. In addition to Columbia goods the firm has just signed up with the Victor Co. and will put in a good stock of the latter's goods.

The Horner Piano Co., 705 West North avenue, has added the Victor line.

T. M. Co.'s Travelers Confer.

H. S. Conover, who travels Iowa and Illinois for the Talking Machine Co.; B. C. Wilt, covering Wisconsin and the Northern Peninsula, and George P. Cheattle, who makes Michigan and Indiana, were "in" all of December helping to handle the big business with which the company was blessed. Of course, they conferred at odd moments with General Manager A. D. Geissler and Sales Manager R. J. Keith regarding the things that were past and the things that are to come. On the evening of Monday, January 1, the three travelers were entertained at dinner at the College Inn by Mr. Keith, and afterward were tendered a box party at the Colonial, where they heard Christie McDonald, who has made some fine records for the Victor. And the next day they left.

Some Columbia Notes.

Everly, Cooke and Zerkle, the triumvirate of youth and beauty, who, which, or what covers surrounding territory for the Chicago office of the Columbia Phonograph Co., were in during the holidays, conferred, enjoyed themselves and got. W. C. Fuhri, district manager, is now on a trip among the company's Southern branch offices.

Rosa Olitzka, who has made some mighty good records for the Columbia Co., has long owned a Mignon. She bought a Mignonette and a Favorite as Christmas presents for friends from the local office.

Caroline White, who is appearing with the Chicago Opera Co., has been added to the Columbia list of artists. Her first records will arrive at the Chicago office in a few days.

History via Talking Machine.

The new year was made noteworthy for the Chicago Historical Society by the adoption Tuesday evening of this week of the talking machine as a means of supplying interesting historical data to posterity. There was no opposition when the plan was presented to the board of directors at the regular monthly meeting.

The society first considered the advantages of the talking machine as a part of its equipment last November. At a monthly meeting held December 9 it was decided to learn what the venture would involve. A report was made last evening by the committee, consisting of Dr. O. L. Schmidt, chairman; George Merriweather, and Seymour Morris. The action of the directors was the authorization of the special committee to add the talking machine equipment to the society's properties during the present month. It appears that Mayor Harrison is to be asked first to talk into the reproducer an interesting part of one of his messages to the council. Miss Jane Addams will be the second to be invited. Then there will be a health talk by Dr. W. A. Evans and short sermons by Archbishop Quigley, Bishop Fallows, and Dr. Gunsaulus.

The society also gave approval to proposals for an all-Chicago celebration of the one hundredth anniversary of the Fort Dearborn massacre, August 15, 1812. The Cook County Real Estate Board also has favorably considered the centennial.

The outline of the centennial includes a great parade and an accurate re-enactment of the massacre. All the members of the Fort Dearborn garrison were slaughtered by Indians.

Lyon & Healy After the Coast.

L. V. B. Ridgway, who has traveled Illinois as special talking machine salesman for Lyon & Healy for the past three years, has been promoted and will hereafter cover far Western territory begin-

(Continued on page 46.)

"BEST WISHES for NINETEEN TWELVE"

¶ We made money last year—our business was great—immense!

¶ We've certainly appreciated the co-operation of our Dealers.

¶ It's a fact the shortage was keen and we realize how many more machines could have been sold, had there been enough to go around, but in spite of that our business so far this Winter has doubled.

¶ Mr. Dealer, this increase is because of our service. When the market goes short, the man who needs the goods naturally turns to the **EXCLUSIVE WHOLESALER.**

¶ We've reaped a wonderful harvest and for it we're grateful. We're going after your Victor business—**all of it**—this year harder than ever before. You give us half a chance and we'll "make good."

¶ May the year Nineteen Twelve hold much in store both for you and ourselves.

THE TALKING MACHINE CO.

137 N. Wabash Avenue *Chicago Illinois*

FROM OUR CHICAGO HEADQUARTERS—(Continued from Page 44.)

ning at Denver and embracing the entire Pacific Coast. He is a popular man among the dealers of this State and commands the respect of the trade. He is well known on the coast and will no doubt make a big success in his new deal.

J. B. L. Ryde, who has been with Lyon & Healy since boyhood, in the small goods department, succeeds Mr. Ridgway as Illinois traveler.

Recent Visitors.

Mr. Wookey, of the Wookey Piano Co., Victor and Columbia dealers, Peoria, Ill., was in Chicago the latter part of last week, accompanied by his wife. They came up primarily to attend the production of the "Messiah" by the Apollo Club at the Auditorium.

O. M. Keyes, manager of the Wookey talking machine department, and well known in Chicago, was a local visitor a fortnight ago.

Among recent visitors of the Talking Machine Co. are Mr. Ostebrook, manager South Bend (Ind.) branch of the Straube Piano Co.; R. G. Chappell, secretary and manager O. T. Johnson Co., Galesburg, Ill.; C. F. Wilkenson, Wilkenson Piano Co., Joliet, Ill.; C. F. Collins, of D. D. Young, Aurora, Ill.; S. N. Swan, Freeport, Ill.; O. A. Gressing, Indianapolis, Ind.; Joseph Potts, Kenosha, Wis.; C. G. Schulz, Kenosha, Ill.

Also Martha Louise.

Wafted and enwrapped on and in clouds of love-laden incense so thick and warm she felt not the cold of the December air through which she passed on her journey earthward from the realm where all is good, including the babies, little Martha Louise Geissler made her advent into the home of A. D. Geissler. The little lady awoke to the earth life with something of a jar, it is true, as she found her newly-discovered brethren, Allen Moore Geissler, aged five, and Kenneth Duval, three and a half, engaged with boxing gloves in an interesting sparring match. Now, Martha at the moment of her terrestrial debut, weighed exactly ten and one-half pounds net, NET; consequently she possessed an inherent sympathy with all things athletic. Did she cry? Did she wail? Did she even twist up her mouth and pout? She did NOT. She simply cooed a little coo, which to the ears of the Victrola in an appropriately shined corner of the Geissler apartments sounded much like the strains of "Ich Liebe Dich." The whole Geissler family, including Arthur D. and his beautiful wife, are doing well.

L. F. Geissler, general manager of the Victor Talking Machine Co., spent last Sunday in Chicago on his return home from a trip to the Pacific Coast. He O. K'd his new granddaughter.

THOMAS A. EDISON IN CHICAGO.

Makes Trip West for the Purpose of Attending Dinner Given in His Honor and Is Eulogized by Leading Men in Many Lines of Business.—Responds to Toast by Presenting Note to Be Read to Guests—Arranges for Use of New Storage Batteries in New Illinois Central Terminal—Leaves Some Epigrams Behind Him—Given Much Space in the Newspapers.

(Special to The Talking Machine World.)

Chicago, Ill., Jan. 9, 1912.

Thomas A. Edison spent about thirty-five hours in Chicago the latter part of last week. In that time he did fully as much work as he ever did in a similar period in his life. That means that Mr. Edison was very, very busy. When he was not being feted and eulogized by leaders in the electrical world he was being interviewed by various and divers reporters on all sorts of sane and insane and scientific subjects. When he was being neither interviewed or dined he was proving himself a benefactor to Chicago by making arrangements for the electrification of railroad terminals.

Mr. Edison's visit to Chicago was primarily for the purpose of attending a dinner arranged by H. M. Byllesby in Mr. Edison's honor in the Congress Hotel Friday night. This dinner was held in connection with the celebration of the tenth an-

niversary of the founding of H. M. Byllesby & Co. Mr. Byllesby was an employe of Mr. Edison years ago and has always had a helpful and loyal friend in the wizard of Menlo Park ever since.

At one end of the banquet hall was a fully equipped wireless telegraphic apparatus which from time to time snarled forth a fictitious message, while real letters and telegrams were read from some of the best known men in the country expressing their regret that they could not attend the banquet.

Mr. Edison adhered to his determination, long since formed, not to speak at a banquet, but when Mr. Byllesby, acting as toastmaster, proposed a toast to Mr. Edison, every diner was on his feet like a flash with upraised glass, and the cheers fairly waved the flags that swung around the banquet hall.

When Samuel Insull, president of the Commonwealth Edison Co., rose to respond to the toast for Mr. Edison, the latter put into his hand the following note, which was read to the four hundred attentive guests:

"To the young men here to-night I would say: When you get a job, pitch into your work and pay no attention to the clock or to time. Think of nothing, talk of nothing but shop, and when the boss comes around pay no attention to him, but to your work, and my word for it, when you want to leave for some other job the old man won't let you go, but will likely take you in as a partner."

Mr. Insull then said: "I am proud to do honor to the greatest citizen of the race, to tell briefly of the marvelous fidelity and capacity of the man who has done so much for the world that his name will go down through the ages."

"From his early days, when he astonished the electrical world with his perfection of telegraphy, down to the present wonderful development of electrical energy, he has surpassed every one, or, at any rate, nearly every one in that line."

"Long before many of you were born, when he was but twenty-six years old, forty years ago, by his development of the phantom telegraphic circuit he had done enough to assure for himself a niche in the hall of fame, and to-day he is working with the enthusiasm of youth, despite his wonderful activities in the intervening time."

"Let it suffice for me to-night to say that he has done the most marvelous work of the generation in the line of electrical illumination. One cannot install a lighting plant, one cannot install any plant, whether of lighting or motive power, without going back to some principal developed by his engineering ability."

"In the Patent Office at Washington are the plans and specifications prepared by him many years ago. To-day when you wish to enter the field of electricity, when you start to institute a power plant, you must take those same plans and specifications as your basic groundwork."

George M. Reynolds dwelt upon the benefits that have accrued to the world through the inventions of Mr. Edison and declared that the wealth resulting from those inventions has benefited every one.

"Every invention that has been the product of this master mind," said he, "has resulted not only in bringing light and joy and pleasure to mankind, but has also been the means of providing employment to thousands."

"Everywhere, in doors and out, in the home, the factory, the office, on the street, in the mountains and on the plains; above, on and under the water, are to be seen the results of this tireless energy, this wonderful ingenuity, this endless capacity."

The other speakers were Governor Eberhart, of Minnesota; C. A. Coffin, of New York, president of the General Electric Co.; Charles G. Dawes, and the Rev. Herman Page. Among the guests were J. M. Klingelsmith, manager of the Western business of the storage battery department of Thomas A. Edison, Inc., with office in Chicago, and H. G. Thompson, in charge of the railway department of the storage battery department at Orange, who happened to be in Chicago at the time.

Circling the edge of the balcony were the names, spelled in letters of incandescents, of twenty-three of the world's greatest electricians, among them being those of Ohm, Faraday, Volta, Franklin, Shallenberger, Morse, Westinghouse, Ferranti, and in the center, surmounting all, in a reproduction of his own signature, were letters of fire, spelling the name of Thomas A. Edison.

Mr. Edison was given vast space in all the dailies, and the articles and interviews were embellished with photographs of the great man, showing him in about every attitude he could possibly assume. Reporters seemed particularly interested in concrete houses and furniture, and the new talking pictures and, of course, the new battery and motor construction. Following are excerpts on the various interviews:

Tells of "Talk" Pictures.

His new invention of talking pictures was discussed by Mr. Edison with great enthusiasm. "We are making 200 of them now," he said. "It has been an extremely difficult proposition, but at the rate of progress we are making I will have them ready for use in the Presidential campaign in the event Taft, La Follette, Wilson, Harmon and the other proposed candidates care to employ them at meetings which they cannot personally attend. "Within a few days we will give a demonstration of the talking picture at Menlo Park. It will create a sensation."

When asked about his recent trip abroad the inventor said that he admired the French people more than many others with whom he came in contact.

"They know how to live," he said. "They do not practice the Roosevelt theory of having large families of children regardless of whether they can support them. It was Napoleon's idea to encourage large families among the French in order to provide troops for his armies, but the nation is wiser now. I suppose Roosevelt got his idea from Napoleon."

The culmination of Mr. Edison's visit to the city as viewed by the public was found in the conference Saturday afternoon between the inventor and officials of the Illinois Central Railroad. As a result of this conference the announcement was made that the I. C. would proceed to electrify its Chicago terminal. No deadly third rails will be used in the electrification of the Illinois terminals if present plans are carried out; no unsightly trolley poles and trolley wires, either.

To Use Storage Battery.

The Edison new storage battery, one of the latest products of the busy and fertile brain of the greatest inventor of the age, will furnish the motive power for the electrified road.

"I can and I think I will be able to electrify this line with the battery system," said Mr. Edison. "I have just completed a conference with three men representing the railroad and they are about ready to go ahead with the experiments."

Mrs. Edison and Miss Madeline Edison, daughter of the inventor, came to Chicago with Mr. Edison. They stopped at the Blackstone while here and left Sunday morning for the East.

The wizard's fame as an epigram maker is almost on a par with that he enjoys as an inventor. Among the crystallized bits of wisdom to which he gave utterance while in Chicago were the following: "It pays to be a live wire. All the dead ones are made up into door mats."

"Don't worry over loss of money. It plays a very small part in our lives. I've made a couple of millions several times and lost it. Keep doing something worth while and your life will be happy."

"Chicago is an unprepossessing place to look at, but a good place in which to do business."

"No one should be such a fool as to believe in atheism. Every person who thinks must believe in a supreme intelligence."

A three dollar record is as easily sold as a sixty-five cent one if you go at it in the right way, and ten chances to one will give better satisfaction to the purchaser.

THE LYON & HEALY FIBRE NEEDLE-CUTTER

SIMPLE
AND
EASY
TO
OPERATE

CORRECT
LEVERAGE
FOR A
PERFECT
CUT

FINEST TOOL STEEL

GUIDE
WHICH
SAVES
ALL
WASTE

The L. & H. Needle-Cutter or Fibre Repointer we now offer to the user of Fibre Needles is the result of four years' exhaustive experiments and we feel safe to assert, NONE BETTER CAN BE MADE.

The lover of GOOD music will find this cutter invaluable. The upper blade being pivoted above and back of cutting edge insures perfect contact with lower blade. Both of these blades are made from finest tool steel and properly tempered and with ordinary usage will last for years, without sharpening or renewal.

The cutter has a self-acting stop, which prevents cutting away more than enough, thus a pin can be played twelve or fifteen times before becoming too short.

We give our absolute guarantee with every cutter sold.

MUSIC AND NEWS BY PHONE.

**New Company in Newark, N. J., Preparing to
Start Unique News Service for Telephone
Subscribers—Special Music Programs Pro-
vided For—A Sample Daily Program—
Demonstration Proves a Success.**

The New Jersey Telephone Herald Co., Essex building, Newark, N. J., are launching something new and unique for the amusement and entertainment of busy New Yorkers and Jerseyites. In the quiet of your home, in any room or in every room, you may receive news by telephone, music by telephone, sermons by telephone, vaudeville by telephone, lectures, theatrical performances, operas, happenings of all sorts and the general news of the world. Not in squeaky, nerve-jarring sounds, but clear and melodious tones, the human voice itself reaching you over the wires. In fact, information, inspiration and amusement are continually on tap—at night by your own fireside.

In the editorial department of the company there is installed a complete staff, editors, sub-editors, reporters, etc., collecting and receiving by telephone, telegraph and investigation, the news of the world. This news, instead of being printed, will be carefully edited and told over the wire circuits to subscribers by men called "stentors," speaking into specially sensitive microphones. There will be fixed hours during the day for each class of news.

The amusement department is in charge of a competent director, who will bill all attractions, for instance, lecturers, noted travelers, musicians, vocalists, etc., who will speak, sing or play to the subscribers from a sound-proof concert room which is equipped with a concert grand piano, a Mason & Hamlin organ, and microphones for the perfect transmission of sound. Arrangements have also been made with various theaters, opera houses, churches, concert rooms and lecture halls so that when desired their music, dialogues or sermons may be heard by patrons. To make this possible microphones are installed in the pulpits, on the lecture platforms and stages which catch every sound, even to a footfall or the applause of an audience, transmitting them directly to the subscribers in their homes.

The above is not an experiment, for it has given universal satisfaction in the intellectually critical cities of Europe—London, Paris, Budapest. In Budapest, its original home, the system is to be found in the rooms of the better hotels, in doctors' and dentists' waiting rooms, barber shops, etc.; in fact, everywhere that people have to wait and want to be amused while waiting. It comes with a message of cheer for the hard working housewife and the invalid, for it immediately puts them in touch with the big, hustling outside world.

The first demonstration of the Telephone Herald was given in the rooms of the company at 110 West 34th street some time ago. A large audience enjoyed instrumental and vocal music, bulletins of news and a brief lecture, all by telephone.

The cost of The Telephone Herald is five cents per day, with no additional charge for installation.

Following is a copy of the daily program, which apparently covers most every thing to be desired:

DAILY PROGRAM.

Noiseless—disturbs nobody. When you wish to hear, you take the receivers in hand and hold them to the ears.
8:00—Exact astronomical time.
8:00-9:00—Weather, late telegrams, London and Paris exchange quotations, chief items in the morning press.
9:00-9:30—Special sales at the various stores. Social program for the day.
9:30-10:00—Local personals and small items.
10:00-10:30—N. Y. exchange quotations and market letter from W. B. Franklin & Co., 111 Broadway, New York.
10:30-11:30—Foreign news.
11:30-12:00—New York miscellaneous items.
Noon—Exact astronomical time.
12:00-12:30—Latest general news, naval, military and congressional notes.
12:30-1:00—Midday New York exchange quotations.
1:00-2:00—Repetition of the half-day's most interesting news items.
2:00-2:30—Foreign telegraphic dispatches.
2:30-3:00—Trenton and Washington news.
3:00-3:15—New York exchange closing quotations and market letter from W. B. Franklin & Co., 111 Broadway, New York.
3:15-3:30—Weather, theatrical, fashion and sporting news.
3:30-5:00—Music, readings, lectures.
5:00-6:00—Stories, talks for the children.
8:00-10:30—Vaudeville, opera, concert.
11:00-1:00—Orchestral music.
NOTE.—(a) 8:00-10:30 p. m.—News will be given between the numbers.
(b) Two buzzing sounds on the receivers will indicate that a News "Xtra" is about to be given out.
(c) A special program will be arranged for Sundays. (Subject to change.)
NOTICE.—Twice a week, Tuesdays and Thursdays, 5 to 6 p. m., language lessons, French and German.

EVERY LITTLE HELPS.

Little drops of water poured into the milk
Give the milkman's daughters lovely gowns of silk.
Little grains of sugar mingled with the sand
Make the grocer's assets swell to beat the band.
Little bowls of custard, humble though they seem,
Help enrich the fellow selling pure ice cream.
Little rocks and boulders, little chunks of slate,
Make the coal man's fortune something fierce and great.
Little ads. well written, printed nice and neat,
Gives the joyous merchant a home on Easy street.

ISSUE TWO POPULAR HITS.

"That Mysterious Rag" and "When Sunday Rolls Around" are two recent popular hits recorded by the Columbia Phonograph Co. on a 10-inch Columbia double disc record and sold under the catalog number A1086. The first-named is sung by Albert Campbell, tenor, and Arthur Collins, baritone, orchestra accompaniment. The

second by Ada Jones, soprano, and Walter Van Brunt, tenor, orchestra accompaniment. Both songs are catchy and already favorites with the public.

GREETINGS IN ORIGINAL FORM.

**J. C. Roush Favors Friends with Characteristic
Christmas Card.**

One of the original of the many cards bearing holiday greetings that have been received at the office of The Talking Machine World is that from Joseph C. Roush, whose clever work as secretary of the National Association of Talking Machine Jobbers is well known to the trade at large. The text of the card is characteristic and reads as follows:

My Dear Brother Outlaw:

'Twasn't such a bad clean-up after all—1911.

The books show a fairly good getaway for the year—

Therefore—

As Partners in Crime, let's congratulate each other.

Here's wishing you a Restful Christmas and a Busy New Year!

And while we're soliloquizing—laying plans—scrambling for a seat in the water wagon—while the Victor Band plays "The Outlaw," let's both join in the chorus. Yours sincerely,

Pittsburgh, 12-25-'11. JOSEPH C. ROUSH.

The card also bears the following poem:

The Outlaw.

When my loop takes hold on a two-year-old,
By the feet or the neck or the horn,
He kin plunge and fight till his eyes go white,
But I'll throw him as sure as you're born.
Though the taut rope sing like a banjo string
And the latigoes creak and strain,
Yet I've got no fear of an outlaw steer
And I'll tumble him on the plain.

For a man is a man and a steer is a beast,
And the man is the boss of the herd;
And each of the bunch, from the biggest to least,
Must come down when he says the word.

When my legs swing 'cross on an outlaw hawse
And my spurs clinch into his hide,
He kin r'ar and pitch over hill and ditch,
But wherever he goes I'll ride.
Let 'im spin and flop like a crazy top,
Or flit like a wind-whipped smoke,
But he'll know the feel of my rowelled heel,
Till he's happy to own he's broke.

For a man is a man and a hawse is a brute,
And the hawse may be prince of his clan,
But he'll bow to the bit and the steel-shod boot
And own that his boss is the man.

When the devil at rest underneath my vest
Gets up and begins to paw,
And my hot tongue strains at its bridle-reins,
Then I tackle the real outlaw;
When I get plumb riled and my sense goes wild,
And my temper has fractious growed,
If he'll hump his neck just a triffin' speck,
Then it's dollars to dimes I'm throwed.

For a man is a man, but he's partly a beast—
He kin brag till he makes you deaf,
But the one, lone brute, from the West to the East,
That he kaint quite break is himse'f.

TRADE NOTES FROM INDIANAPOLIS.

Musical Echo Co. Take on the Columbia Line in Addition to the Victor—This Company Extends Its Business and Opens a New Store on Virginia Avenue—Chas. Koehring's Success—Udell Works Closes a Great Year—New Designs in Cabinets for 1912—Kipp-Link Co. Reports Large Edison Business—Trade Reports From Leading Houses Most Satisfactory—The Outlook Is Excellent.

(Special to The Talking Machine World.)

Indianapolis, Ind., Jan. 9, 1912.

One of the most important deals in the talking machine business in Indianapolis in some time, was the taking on of the Columbia line by the Musical Echo Co. This change, made within the last month, gives this company two lines of machines—the Victor and the Columbia. Heretofore the Musical Echo Co. has been a jobber and retailer for the Victor line; now it will retail both the Victor and the Columbia. The advantage of this is seen when it is known that no other jobber or retailer in the city handles more than one line of machines.

With its added line of machines, the Musical Echo Co. will extend its business. Already the company has established a new store in Virginia avenue, where it has even more selling and storage room than it has in its downtown store in North Pennsylvania street. The new store was opened during the Christmas week, and a number of further improvements are to be made. It is not known who will be the permanent manager of the new place.

Charles Koehring, of Charles Koehring & Bro., proprietors of the Musical Echo Co., is one of the most experienced talking machine men in the city. Several years ago he had the temerity to open up in the talking machine business in the down-town section when there were no other dealers there. His business has prospered since then, and the North Pennsylvania street store is now one of the best equipped in the city.

Mr. Barringer, manager of the talking machine department of the Wulschner-Stewart Music Co., reports that the Christmas business of the store in his line was the best in the history of the company. This company handles the Victor line exclusively, and it was reported that the feature of the Christmas trade was the sale of high priced machines. "The trade for Christmas was good," said Mr. Barringer, "and in fact the trade for the entire year has been good. Next year we expect to double it. The trade since Christmas has been good."

The word at the Udell Works is that the music cabinet business is to be pushed hard this year. The factory was shut down between Christmas and New Year's for the annual invoice. During the present year the company expects to put out some new designs in cabinets. "It shall be our purpose during this year as last year to protect our jobbers," was the statement made by the manager of the department. "We expect to send out a lot of literature to the retailers, but they will all be referred to the jobbers in their respective localities. If we sell direct to any retailer, the jobber in the district of that retailer shall have the credit for the sale." The cabinets manufactured by the Udell Works are suitable for the records of any kind of talking machines and a good demand has been found for them.

Thomas Devine, of the Columbia Phonograph Co., reported an unusually heavy sale of high-priced machines at Christmas time. Mr. Devine believes the more modern equipment of machines and the improved records are contributing to the increase in the sale of the high-priced machines, and he believes the big business of the future will be in the better class of machines. The Columbia Co. before Christmas sold machines to a number of prominent people of the city and the State.

The Columbia Co. arranged an attractive window for the holidays. Two large columns covered in white and lighted with many electric lights were placed in the rear of the window, and these were used to display the table machines and also the cabinets. The window was designed by C. P.

SOLID WOOD (NOT VENEERED)

Mr. Dealer:

**THE OWNERS OF THE SOLID
WOOD HORN TALK**

**MUSIC
MASTER**

Solid Wood Horn

**All the
Name
Implies**

We step aside and let those who are fortunate enough to own the **MUSIC MASTER SOLID WOOD HORN** talk.

Because—they are satisfied; they have proved our claim that this Horn produces a better and clearer reproduction of sound waves than any Wood Horn or Hornless Machine manufactured. The lover of **GOOD** Music will find the Horn invaluable.

The Trade Mark you see Marked *Music Master* is your safeguard.

It is the **ONLY** Horn Guaranteed.

Should your jobber be unable to supply you, write us.

SHEIP & VANDEGRIFT, Inc.
PHILADELPHIA, PA.

Herdman, assistant manager of the Indianapolis store of the Columbia Co.

Claude Cunningham, who sang at the New Year entertainment of the Maennerchor, makes records for the Columbia Co., as does Pasquale, who appeared here recently in the People's concerts. The Columbia Co. are featuring the Nordica records, as Mme. Nordica will appear here at the Shubert Theater this week. Her appearance in this city has been widely advertised in the newspapers.

The Kipp-Link Co., which handles the Edison line, reports a good business both in a retail and a jobbing way. As has been the case with most other companies, this company has had a good demand for machines even since Christmas. The company is getting ready to establish more agencies in all parts of the State.

THE CREED OF OPTIMISM.

"Have a cheery creed. The people who believe that this world is a splendid place, that the majority of mankind is on the up grade, that the present minute affords us as good chances as

ever were found, that success is sure to the fellow who keeps at it, have a fountain of inspiration right in their own hearts. It is not necessary nor wise to indulge in fanciful dreams. We are not in a Garden of Eden, but in a workaday world. Success is not to be picked up on the street like pebbles, nor is it always safe to trust the disinterested professions of a new acquaintance who wants you to buy mining stock. But after all, this world is a good enough place so that you may formulate a cheery, optimistic creed, without violating the truth."

"THE BOY'S LIFE OF EDISON."

William H. Meadowcroft, a member of Thomas A. Edison's laboratory staff, has just issued "The Boy's Life of Edison," citing hitherto unpublished facts concerning the great inventor's life, through Harper & Bro., New York City.

Wealth—What all men seek and few acquire; and which consists, not in having great possessions, but in having few wants.

A talking machine store with no records by Mary Garden, or Bispham, or Nordica, or Fremstad, or Nielsen, is like a cigar store with only one brand of cigars. That one brand may be good cigars, but what's the sense in limiting your income?

Columbia Phonograph Co., Gen'l, Tribune Building, New York

BRISK TRADE IN WISCONSIN.

Trade Most Satisfactory—Enormous Demand For Victrolas of All Styles—Discount for Cash Proposition—Clever Window Displays—Auxetophone at People's Concerts—Talking Machine Jobbers to Meet in Chicago—Victor Machines in Public Schools—New Branch for Wisconsin Talking Machine Co.

(Special to The Talking Machine World.)

Milwaukee, Wis., Jan. 13, 1912.

Wisconsin talking machine men were more than pleased with the holiday business this season. Sales came up to expectations in both the retail and wholesale field, and, best of all, cash payments seemed to predominate more than had been the case a year ago. Conditions in a general way about the State have been improving since November, and while business in some lines is still far removed from the normal, the situation might be a great deal worse. Money is more plentiful in the country districts and smaller cities and towns of the State and trade reports from these sections of the State have been highly favorable.

Although the rush of the holiday trade is over with, the predictions of several dealers that business would be good during January are being fulfilled to the letter and sales are expected to far exceed the similar period a year ago.

"The holiday business was more than satisfactory," said J. H. Becker, Jr., manager of the talking machine department of the Hoeffler Manufacturing Co. "Sales in Victrolas XIV and XVI were in the lead and I believe that dealers will meet with a big business in these machines during the coming year. There still seems to be considerable demand for horn machines and we sold quite a number of these in the Victor, Edison and U-S lines. Record sales were also unusually heavy during the holiday period this season and we had to order daily to keep pace with the demands of the trade.

"I believe that the Victor Talking Machine Co. should establish a time and cash proposition on machines," continued Mr. Becker. "There ought to be a 5 per cent. discount for cash and I believe that such an arrangement would work out favorably for both the dealer and the company. There is one practice that dealers ought to be careful about and that is in giving too long trials on machines and records. I have found that this abuse may in time make a prospect skeptical and tend to make him think that he is securing a second hand outfit."

The Hoeffler Manufacturing Co.'s display window during the holiday season was, as usual, the most attractive. Manager J. H. Becker had a large Christmas tree, electric lighted in the center, surrounded by Victrolas, Edison and U-S machines and records, while scattered about were various original display cards, such as the following: "This home made happy; why not yours. A Victor did it—75 cents per week." Another card conveying the information that several styles of the Victrolas could be purchased at the rate of \$1 per week brought in the prospects.

Lawrence McGreal, Edison jobber for Wisconsin

and president of the National Association of Talking Machine Jobbers, was probably the happiest man in Milwaukee on Christmas as a result of his having played the role of Santa Claus to fifty deserving families in the Fourth ward, that portion of the city in which the McGreal retail and wholesale stores are located and where he has been acquainted for the past ten years. With the aid of the Milwaukee Journal, Mr. McGreal remembered fifty families, each home securing a basket containing a hefty chicken, a peck of potatoes, half a dozen oranges and two pounds of candies. And with each basket went Mr. McGreal's best wishes for a Merry Christmas and a Happy and Prosperous New Year.

The Sunday afternoon People's concerts which are being held in the Auditorium during the winter by Prof. Christopher Bach's orchestra are proving more popular and are drawing larger crowds this year, largely as a result of the attraction offered by the Auxetophone, which Lawrence McGreal is allowing the committee in charge to use. At a recent concert the program included the sextet from "Lucia" and the Rigoletto quartet, as sung by Caruso, Scotti and Mmes. Abbott and Homer.

Following the suggestion made recently by Jeremiah Quin, a prominent Milwaukeean, the voices of well-known citizens of this city, members of the Old Settlers' Club, have been preserved for future generations. About fifty of the leading pioneers of Milwaukee spoke into a phonograph on New Year's day, the records then being laid away in the club vaults. Every New Year's day in the years to come these voices will be produced for the edification of future members of the organization. Frederick Layton, millionaire philanthropist; Geo. W. Young and Jeremiah Quin were among those who spoke into the phonograph. Although several short addresses were made, most of the remarks made were of a jovial nature.

Emil O. Schmidt, 310 Grand avenue, well known piano dealer, who installed a complete Victrola line on December 1, has placed Otto F. Leidel in charge of his talking machine department. Mr. Leidel has had considerable experience in the talking machine field. During the month of December he succeeded in disposing of twenty-six Victrolas, a rather unusual record, considering the fact that the line had just been taken up by Mr. Schmidt.

Miss Gertrude Gannon, head of the Wisconsin Talking Machine Co., jobbers of the Victor line, reports that the holiday trade was the best which she has experienced since her connection with the talking machine business. Miss Gannon will spend a portion of January in the East, where she will visit the factories of the Victor Talking Machine Co. and the Thomas A. Edison Co., Inc.

The new Opera style Edison made its appearance at the McGreal store recently and is meeting with a brisk demand. Edison dealers all over the State are anxiously awaiting the appearance of the new Edison disc machine.

Lawrence McGreal, president of the National Association of Talking Machine Jobbers, has announced that there will be a meeting of the executive committee of the association held in Chicago on January 28, probably at the Congress Hotel.

A. G. Kinde, proprietor of the Columbia store, 516 Grand avenue, did a large holiday business with the several new styles of Columbias. An unusually fine January business is now being secured by the Columbia store.

A fine list of sales of Victor V machines to the Milwaukee School Board for installation in the various city schools is reported by L. C. Parker, manager of the talking machine department of Gimbel Bros. Business is proving so good with the Gimbel department during January that the increased sales force, taken on before the holidays, is being maintained. The daily Victrola concerts given in the Victor recital hall by Mr. Parker and his assistants during the holiday season proved decidedly popular. The Angelus player was used as an accompaniment.

J. G. Erwin, Milwaukee representative of the Edison business phonograph, has been making some good sales in his line. The J. B. Bradford Piano Co. has just added two of the machines to its office equipment.

Lawrence McGreal, Mrs. McGreal and family, together with Miss Gertrude Gannon, head of the Wisconsin Talking Machine Co., spent the Christmas holidays at Dixon, Ill., with relatives.

Frank Hochmuth, 311 Chestnut street, a music dealer, who also carries a talking machine line, was made the victim of a daring hold-up in his store recently. After binding and gagging Mr. Hochmuth and leaving him lying in the rear of the store, three young men rifled the cash drawer and safe of over \$300. No arrests have been made as yet.

Announcement will be made next month by Miss Gertrude Gannon, head of the Wisconsin Talking Machine Co., jobbers of the Victor line, of a new branch store which will be opened in Milwaukee within the next week or so. The company now maintains some remarkably successful branch stores, which have done much in increasing the Victor business.

Several good Victrola sales are reported by Joseph Flanner, head of the Flanner Music House, who recently spent several hundred dollars in enlarging and remodeling his talking machine department. Florian F. Flanner, son of Joseph Flanner, and secretary of the Flanner-Hafsoos Piano Co., will now devote considerable of his time to the talking machine and musical merchandise departments of the Flanner store.

SCIENTIFIC SAVING OF WASTE.

"Scientific management," says an expert, "or the development of efficiency, has just one end to attain and this end is the prevention of waste. Most of the active development of the efficiency idea, during the past ten years, found its application to the providing side of business where wastes are most apparent and where savings are most readily computed. It is safe to say that the distributing side is far behind the other activities in bringing about the development of that kind of efficiency based primarily upon the elimination of waste, and hence, at this time it holds promise of large rewards for those constructive spirits who are willing to devote their efforts to this class of conservation work."

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for the Talking Machine World.)

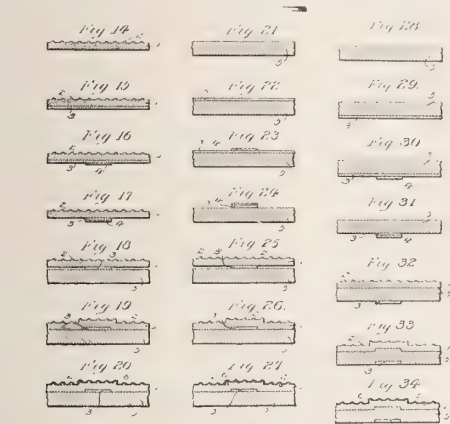

WASHINGTON, D. C., Jan. 7, 1912.

METHOD OF MAKING SOUND RECORDS AND THE MATRICES FOR FORMING SOUND RECORDS. James W. Owen, Philadelphia, Pa., assignor to the Victor Talking Machine Co., Camden, N. J. Patent No. 1,011,838.

The object of this invention is to produce a commercial sound record which cannot easily be duplicated or dubbed without either impairing or injuring the sound record formed thereon, or indicating the source of origin of the original record.

A further object is to produce a sound record or a matrix from which sound records may be pressed having identification marks distinct from the record groove or ridge located upon the recorded portion of the record. A further object is to form the said marks in the matrix, from which records may be pressed, by an etching process.

In the drawings forming a part of this specification in which like characters are used to designate the same parts throughout the various views, Figs. 1 to 7 indicate diagrammatically various steps formed in carrying out the invention; Figs. 8 to 13 indicate in a similar manner a modification of my process; Figs. 14 to 20 indicate a further modification of the process, and Figs. 21 to 27 another modified method of forming marks upon

the recorded surface of the matrix, and Figs. 28 to 34 a still further modified method of carrying out the improved method. Figs. 35 and 36 are fragmentary plan and sectional views respectively of a sound record formed in accordance with the invention.

PHONOGRAPH RECORD AND PROCESS OF MAKING THE SAME. Thomas Eynon, Chicago, Ill. Patent No. 1,011,421.

This invention relates to phonograph records or records for any similar mechanism for the reproduction of sounds here grouped under the head of phonographs, and it is to be understood that the term "phonograph" is intended to embrace any form of talking or sound-reproducing mechanism employing wax or similar records.

An object of the present invention is to produce means whereby an unlimited number of records may be produced from a master record by transferring the record produced upon the master record to the wax record.

A further object of the invention is to employ a hard metal master record coated for the purpose of production only with a thin layer of wax, the wax being removed at places by the action of the needle of the phonograph and the parts uncovered by such action being etched out of the metal by or-

inary etching process whereby the record is produced in the metal which is later transferred to the wax record.

A further object is to provide a hard metallic record and to employ a soft metal to produce a negative from the hard metal record, which negative is adapted to reproduce the record upon a wax body.

A further object is to provide means for employing a pencil of heat rays for removing the wax from the coated metal instead of employing a metallic needle for mechanically removing such wax.

A further object is to provide an apparatus adapted to employ the wax covered hard metal and to move the same in position for being acted upon by the phonograph and later to transfer the record from such metal to a soft metal, from which the record is finally produced.

In the drawings: Fig. 1 is a view in side elevation of an apparatus for carrying into effect the present invention, and showing the wax covered metal ribbon being operated upon by the phonograph. Fig. 2 is a view in side elevation of the mechanism showing the completed master record

ribbon being run through a machine when associated with a soft metal ribbon to produce the negative. Fig. 3 is a vertical, sectional view through the rolls of the devices as on line 3-3 of Fig. 1. Fig. 4 is a top plan view of the rolls with part of the framework broken away as on line 4-4 of Fig. 1. Fig. 5 is a view of part of the framework in side elevation. Fig. 6 is a transverse sectional view through the bed and horn supporting member as on line 6-6 of Fig. 1. Fig. 7 is a transverse sectional view of the bed as taken on line 7-7 of Fig. 1. Fig. 8 is an enlarged view in side elevation of the phonograph needle engaging the master record ribbon. Fig. 9 is a conventional view in side elevation showing the employment of the sun's rays and a burning glass to remove the wax from the master record ribbon. Fig. 10 is a view in side elevation of a roller employed for transferring the record from the master record to the negative. Fig. 11 is a

view in transverse section of a master record tape etched with three records. Fig. 12 is a view in transverse section of one of the negatives with three records transferred thereto. Fig. 13 is a view in plan of either the master record ribbon shown at Fig. 11 or the negative shown at Fig. 12. Fig. 14 is a view in end elevation of a conventional means for transferring the record from the negative to a wax cylinder. Fig. 15 is a view in side elevation of the transferring means shown at Fig. 14. Fig. 16 is a conventional view of an apparatus for transferring the record from the negative to a disc record.

NEEDLE RECEPTACLE FOR TALKING MACHINES. John C. English, Camden, N. J., assignor to Victor Talking Machine Co., same place. Patent No. 1,011,420.

This invention relates to receptacles for holding needles, and particularly to receptacles adapted to be attached to talking machines. One of the objects of the invention is to construct a needle receptacle which will facilitate the separate storage of used and unused needles, and which may be easily attached to a talking machine in such a position as to be at all times accessible to the operator.

Further objects of the invention are to provide a needle receptacle adapted to be attached to the supporting bracket of a talking machine, having a readily accessible compartment for the unsold needles, and also a compartment for worn needles, and having a convenient means for the removal of worn needles; and to provide other improvements as will appear hereinafter.

In the accompanying drawings, Fig. 1 is a perspective view showing a needle receptacle constructed in accordance with this invention, secured in convenient position on a talking machine; Fig. 2 is a perspective view of said needle receptacle detached; Fig. 3 is a central vertical longitudinal section of said needle receptacle taken on the line 3-3 in Fig. 2; Fig. 4 is a transverse vertical sectional view of said receptacle taken on the line 4-4 in Fig. 2; Fig. 5 is an inverted plan view of said receptacle showing the swinging door or closure for the receptacle in its closed position; and Fig. 6 is a view similar to Fig. 5, but showing the swinging door in its open position and the locking screw removed.

No musical organization with such an active authority as Mr. Henry Russell, of the Boston Opera, associated with it, could stagnate. The Columbia list hasn't had a dull month.

Columbia Phonograph Co., Gen'l, Tribune Building, New York

TALKING MACHINE. John C. English, Camden, N. J. Patent No. 1,011,419.

This invention relates to talking machines, and particularly to those parts of talking machines known as the sound reproducing and sound conveying apparatus, and has for its object to provide means for modifying the quantity of the sound reproduced by the talking machine.

In talking machines such as herein shown and described it is well known that the intensity of the vibration of the diaphragm of the reproducing apparatus is always substantially constant and variations thereof cannot be obtained by manipulation of the sound box, record, or record carrier.

This invention supplies means in connection with the sound conducting portions of the reproducing apparatus which will enable the quantity of the sound passing therethrough to be varied at the will of the operator.

Briefly, this invention comprises the combination with a sound conducting tube of a talking machine, of means for reducing the amplitude of the vibrations passing longitudinally therethrough, by al-

lowing free lateral communication between the interior and the exterior of the tube, whereby a part of the energy of the vibrations within the tube will escape and be absorbed by air surrounding the tube, and consequently the amplitude of the vibrations within the tube will be diminished, resulting

in a diminished intensity of the sound issuing longitudinally from the tube.

In the accompanying drawing illustrating one form of the invention, Fig. 1 is a side elevation of the main parts of the usual parts of the usual talking machine showing the invention applied thereto. Fig. 2 is a longitudinal sectional view of the sound conducting mechanism employed in this form of the invention on a somewhat enlarged scale; Fig. 3 is a transverse sectional view taken substantially upon the line 3-3 of Fig. 2; and Figs. 4 and 5 are detail views of the parts of the invention detached from the other parts of the talking machine and showing the parts in two different positions relatively.

SOUND REPRODUCING AND RECORDING INSTRUMENT. Henry G. Wieder, London, England. Patent No. 1,011,298.

This invention relates to improvements in sound reproducing and recording devices such as gramophones, phonographs and the like, and especially relates to the sound box and tone arm employed in such devices.

The main objects of the invention are to improve the swivel connection of the sound arm

which carries the diaphragm, to provide improved support for the carrier of the diaphragm lever and needle and to provide an improved resilient mounting for the element which carries the diaphragm and needle support.

The invention further consists in pivotally connecting the portion of the sound pipe which carries the sound box to the rest of the sound pipe in such a manner that the two portions of said sound pipe are coaxial at the joint in their normal working position, and whereby the gradual taper of the sound pipe may be continued to the sound box itself.

According to another part of the invention the needle carrier and diaphragm are mounted on a bar having two projecting knife edged arms bearing in suitable grooves formed one on a pin extending from the sound box, and the other on a pin carried by a bracket attached to said sound box, said knife edges and their corresponding grooves being oppositely turned with respect to each other, and so arranged that the movement of the record against the needle tends to hold the bar more firmly in its bearings.

The invention further consists in mounting a diaphragm and needle carrying element upon the end of the sound tube resiliently in such a manner that it may move somewhat relatively to said end in a circumferential direction but may not move out of its normal plane. By this method of mounting the entire movement of the needle in the direction which affects the diaphragm is transmitted to the diaphragm instead of some of the movement being absorbed in moving the diaphragm carrier out of its proper plane, as occurs in apparatus of this character at present in use.

The invention further consists in an improved diaphragm for sound reproducing and recording instruments consisting of a thin disc of wood, composition or the like, with a circular flange or ridge some distance within the periphery, the portion of the diaphragm within this flange or ridge being thickened.

Referring now to the drawings, Fig. 1 is an elevation of a sound pipe having a continual taper; Fig. 2 is part section of Fig. 1, showing an improved swivel joint; Fig. 3 shows an enlarged view of an improved needle mounting; Fig. 4 is an elevation of an improved diaphragm carrying element with part of the back cover removed; Fig. 5 is a section on the line C-C of Fig. 4; Fig. 5a is a section on the line D-D of Fig. 4. Fig. 6 is a section through an improved diaphragm.

TALKING MACHINE. Julius Jetter, Camden, N. J., assignor to the Victor Talking Machine Co., same place. Patent No. 1,013,170.

The main objects of this invention are to provide in a talking machine an improved sound-box arm and mounting therefor; and to provide other improvements as will appear hereinafter. In the accompanying drawings Figure 1 is a side elevation of a talking machine embodying this form of the invention. Figs. 2 and 3 are views illustrating details of construction, certain parts being shown in section.

STYLE BAR FOR PHONOGRAPHS. Edward E. Meadowcroft, Hobart, Tasmania, Australia. Patent No. 1,013,198.

This invention has been devised for the purpose of utilizing two styles on the same style bar in phonographs and like machines, so that it may be possible to play ordinary two-minute and also the long four-minute records without altering the bar except to bring the required style into contact with the record.

Referring to the accompanying drawings, Figure 1 is a perspective view of the style bar, according to the present invention, showing an additional style bar attached thereto and in open, inoperative position. Fig. 2 is a side elevation of the same showing the additional style bar in closed operative position. Fig. 3 is a perspective view of the additional style bar, detached, and Fig. 4 is an end view of the same.

Fulfill promises no matter what they cost. The buyer who can rely upon your pledge thinks more of your promise than he does of your price list.

GIMBEL DEPARTMENT MOVED.

Talking Machines Now Shown on Eighth Floor of Building and Adjoining the Piano Department—Some of the New Features.

The talking machine department in the New York store of Gimbel Bros., formerly located on the balcony, is now settled in new quarters on the eighth floor, adjoining the piano department, the small goods and sheet music departments being placed in close proximity. An even dozen of handsomely fitted up demonstration rooms have been placed in the north side of the space originally given over to an auditorium and the stock of machines, which includes a complete assortment of all the various styles of Victrolas, takes up a large section of floor space. The new line of Pooley disc record cabinets is featured in the department and is meeting with much success. A special device in the form of a wheeled box is used for delivering the larger styles of Victrolas, the instrument being

covered with a flannel-lined waterproof case and strapped into the box in the department. The covering and box are not removed until the Victrola is placed in the home of the purchaser, and thus all danger of scratching the case or otherwise damaging the instrument is obviated.

"TALKERS" IN OUAKER CITY SCHOOL

To Be Used in Instruction of Foreign Children in Philadelphia—How Plan Is Developed.

(Special to The Talking Machine World.)

Philadelphia, Pa., Jan. 6, 1912.

The talking machine is the latest innovation to be placed in the public schools of Philadelphia to assist in the instruction of foreign children. The School Committee of the Board of Education, at a meeting held in Room 296, City Hall, recently, decided to install talking machines and records in the new Southwark public school, Tenth and Reed streets, and the night school at the Falls of Schuylkill, to instruct the pupils who cannot understand English, the orders in learning the art of calisthenics.

Records in foreign languages will be run off on the machine and the teachers will go through the proper exercises, the children following and listening to the orders from the machine at the same time.

WHERE LOYALTY COUNTS.

Means That a Man Really Works for His Employer and Is Paid Accordingly.

How often have you heard in the social hour a remark passed by some young person derogatory of the firm that employs him:

"I work for that skinflint company—Brown Bros. They're as hard on you as they can be. I believe they'd split a cent in two, rather than add it on your salary."

And the crowd titters over the jesting judgment passed upon Brown Bros. by one of the young men who pretends to work for them.

We know not what salary the jester is receiving, but almost any sum is a little too much for him. Unless he has a clear understanding of his own situation, with reference to the financial interests of his firm, he should refrain from passing any such kind of public judgment, and least of all when he is the only representative of his firm in the society. The difference between the ten-dollar-a-week men and those whose salaries are double and treble is as much a question of loyalty as one of ability.

No workman can do a good job for a master he hates.

The greatest good that exceptional men do for their fellows lies not in the actual accomplishments of such men, but rather in the example they afford and the proof they give that human power is not so limited as most of us think.

TALKING MACHINE CHEERS LEPER.

Mrs. Eldridge R. Johnson, Wife of President of Victor Talking Machine Co., Sends Machine and Big Supply of Records to Exiled Chinaman in Pennsylvania—Gift Proves a Revelation and Great Source of Pleasure.

Yee Sui, the Chinese leper, knelt in his little shack on the pesthouse reservation one day recently and poured forth to his new-found Christian God a prayer of thankfulness.

A little box rested on the bare table in the one room in which Yee Sui eats, sleeps and—lives, if life to him until now has been living. The little box was a present to Yee Sui, and there is a long story about it. As was his habit, Yee Sui had daily watched Yee Tang trudge up the hill. But last week a boy accompanied Yee Tang, and the boy bore a package. Yee Tang made greetings and spoke a word of comfort. Then he laid aside the wrappings of the package.

The little box with polished sides and glistening trimmings was revealed. Yee Sui wondered, for Yee Tang had not spoken of that which he brought. From a smaller package Yee Tang drew a black disc. Anyone but Yee Sui would have seen that it was a talking machine, but Yee Sui knew not of such things. With increasing wonderment he saw Yee Tang turn a handle.

The record was one made by the choir of Trinity Church of New York, and the famous old hymn was exquisitely rendered. Yee Tang said afterward that the beauty of the hymn had seemed to transform the bare, little room into a thing of beauty, for both had stood as in a trance, as men in a higher realm.

Yee Tang had the song sung again; he translated to Yee Sui, and Yee Sui chanted in his native tongue to the accompaniment of the singers. The next selection was one of Sousa's marches. To Yee Sui it was a sort of shift from the sublime, but it enraptured him. As the music would wax softer until there was scarcely a murmur, Yee Sui would look anxiously, child-like. As it flowed swiftly into a crescendo, finally ending in a magnificent crash, Yee Sui smiled: "It is like a beautiful flower suddenly bursting into bloom," he said to Yee Tang.

Though these two pieces were a superlative delight, there still was a climax waiting, thanks to Yee Tang and a new found friend of Yee Sui's. It was Mrs. Eldridge R. Johnson of "The Chimneys," Merion, Pa., and wife of the president of the Victor Talking Machine Co., who brought this sunshine into the life of the outcast Chinaman, says the Pittsburgh (Pa.) Gazette-Times.

Not only was there with it excellent variety of records—hymns such as "Oh Come, All Ye Faithful," "Joy to the World," "Praise Be the Father" and "Onward Christian Soldiers," and Sousa concerts, comic operas, quartets, duets, solos and the like—but there was a score of records in Chinese.

These records—though often they are kept in stock—were made specially for Yee Sui. They are chants and songs with stringed accompaniment. They arrived at the company's store last week and were turned over to Yee Tang.

It was one of these records that Yee Tang had saved for the climax of his entertainment. Suddenly he started the machine and there rolled out a song favorite with China's sons. Perhaps it brought memories of more happy days, days among loved ones in a faraway land, perhaps many things—but the shock was almost too much to be borne. Yee Sui cried; but Yee Tang's comforting finally prevailed. Yee Sui wanted it played again, and he seemed to grow wonderfully young. He danced about in delight as Yee Tang played the others to him. Then Yee Tang played them all over again. Afterward Yee Sui learned how to adjust the machine and then he played one all by himself.

PHILADELPHIA DEALERS MEET.

For the Purpose of Forming an Organization Composed of Handlers of Victor and Edison Machines—Permanent Officers to Be Elected.

(Special to The Talking Machine World.)

Philadelphia, Pa., Feb. 8, 1912.

An association composed of dealers handling Victor and Edison talking machines has just been organized in this city at a meeting held in the Parkway building, 119 North Broad street. A fair attendance of dealers attended the initial gathering. After a long discussion temporary officers were elected, and it was decided that the next meeting shall be called for the evening of February 14, to which most of the dealers of Philadelphia and vicinity will be invited and when, it is expected, the election of permanent officers will follow.

TALKING MACHINE EXPORTS.

The Figures for December Presented—Reports Show Falling Off for the Month.

(Special to The Talking Machine World.)

Washington, D. C., Feb. 9, 1912.

In the summary of exports and imports of the commerce of the United States for the month of December (the latest period for which it has been compiled), which has just been issued by the Bureau of Statistics of the Department of Commerce and Labor, the following interesting figures relating to talking machines and supplies are set forth:

The total exports of talking machines, records and supplies for December, 1911, amounted to \$215,262, as compared with \$254,085 for the same month of the previous year. The twelve months' exportation of talking machines, records and supplies amounted to \$2,847,573.

THE POPE AND THE TALKING MACHINE

A Delightful Story Showing How a Record of the Bells of San Marco Brought Memories to His Holiness of His Old Home in Venice.

A report from Rome tells of a visit made to the Pope by a parish priest from Venice, where the Pope was formerly a Bishop. For the entertainment of his visitor, the Pope placed in a talking machine a record made from the sound of the bells when first they rang from the reconstructed Campanile of San Marco. "Close your eyes," said he, "and listen; you will feel that you are back in dear Venice."

It is, of course, the familiar human story of the millionaire who would like to hear the tinkling cowbells on the farm again; of the far-wandering mariner that longs to hear across the water the sound of the port bells of his native town. Not always in the Vatican is the weariness of the Pope to be cheered by the mighty music of organs and trumpets and the voices of tuneful choristers. There are times when he would like to be a parish priest and listen to the bells of his old home town, as a writer in the World says. Dr. Holmes used to insist that memory is more responsive to perfume than to anything else; that old songs, old drums and old joys are brought back to us on the invisible wings of the odors of jasmine and rose and violet. Against that dogma stands a great array of poets bearing witness to the compelling power of bells. Every literature has its bell songs and bell stories, every heart its Venice to be recalled by them.

C. E. GORE JOINS DE MOLL & CO. FORCES.

(Special to The Talking Machine World.)

Washington, D. C., Feb. 5, 1912.

C. E. Gore, who for the past seven years has been manager of the wholesale talking machine department of the E. F. Droop & Sons Co., this city, has severed his connection with that company to

take over the management of the Victor department of O. J. DeMoll & Co. at Twelfth and G streets, N. W. Before becoming connected with the E. F. Droop & Sons Co. Mr. Gore spent nine years in the factory of the National Phonograph Co. in Orange, N. J.

TEAM WORK IS ESSENTIAL

To the Success of Any Business—Developing the "All-Together" Spirit—United Effort Lightens All Labor and Has a Good Effect Upon Customers.

Team work is that element of co-operative force that enters into every organization, making for success. It is the cement between the blocks that makes the structure "stick together" and stand strong 'gainst the battering power that tests for good, for fair, for indifferent and weak! Team work must prevail in every line of work; the harmonious development of any project demands that "all-together spirit"—the faithful execution of each individual's work so as to fit perfectly into that of those "above and below" to bring on the perfect working out of the whole!

There's no place for dry rot when team work is on tap—its powerful and "make good" influence creates the standing of any enterprise! Team work and "making good" are blood relations; they are dependent upon each other and either would be an invalid without the strong arm of protection of the other. Team work means more than the mere doing of one's work—yes, indeed, millions more. It signifies the whole-hearted effort of the individual employe, a personal application of his or her efforts so as to leave no "bad taste" or "unpleasant after-effects"—it means the leaving of a clear, clean right-of-way to the fellow employe following and the pleasing, perfect execution of his or her share of the work as a prideful deposit in the Bank of Intelligent Service!

Team work must not be superficial; the employe's attitude toward each other in the accomplishment of their work must be deep-seated, sincere, pleasant, with a realization that "the all-for-one-and one-for-all spirit" brings all over the tape in a grand finish to the goal of mutual results! Team work must reflect action; every effort to each employe, representing a unit, must ring with that cheerfulness and good nature which alone can demonstrate the good intent and sincerity of the doer! Team work, like the waves of the sea, must be ever-moving, "always on the job," as inaction means stagnation and the bone yard!

The spectacle of a team trying to make a steep grade, one horse pulling steadily and the other jerking indifferently, is distressing! Such lack of concerted effort, such wasted energy is the strongest sermon on the lack of "pull-togetherness" so often apparent when intelligent, harmonious team work is so essential for "making the hill!" It is an everyday exhibition of team work backwards! Team work and "make good" play leading parts in the drama of merchandising; the perfect performance of one must be supported by the keen exhibition of the other—there must be no distinguishing lines; the "audience" (the great critical public) must not know where the one starts and the other stops; their interlocking must be a perfect union to make for a happy and successful finish!

The existence of team work is made known to the customer as soon as the doorway is passed on the way in—it starts with the pleasant co-operation between each employe in each department, from the doorman's agreeable "make-yourself-comfortable" greeting right down and up the line through the department salespeople, managers, officers and management! The customer must be able to sniff and be made to feel the team work and "make good" throughout the store; it must be in the air and carry with it that soothing salve of courtesy and intelligent service to cover "bad impressions" that might exist in the customer's imagination!

WITH THE TRADE IN CINCINNATI.

Demand for Talking Machines of All Styles Keeps Up in Excellent Shape Throughout January—Trading Small Instruments for Victrolas—Columbia Manager Pleased with Conditions—Can't Keep Some Styles of Machines in Stock—What the Various Dealers Are Doing to Attract Attention.

(Special to the Talking Machine World.)

Cincinnati, O., Feb. 8, 1912.

The immense amount of business done during the month of December by Cincinnati talking machine dealers had a direct bearing on the volume of the January record and machine sales. Every Victrola sold during December apparently is in active use and is doing its missionary work in promoting the further sales of Victor Victrolas.

The record sales have been very large and both retail departments of the Rudolph Wurlitzer Co. have been crowded with record buyers every day, irrespective of the weather conditions.

A great portion of the smaller style instruments have been traded back on large Victrolas, and this trend of the business is all the more satisfactory on account of the shortage of the cheaper Victrolas. Trade conditions are extremely bright with every outlook for a record-breaking spring business.

Rudolph Wurlitzer spent Sunday of last week in Chicago, attending a meeting of the executive committee of the Talking Machine Jobbers' Association. Arrangements were made for the annual meeting, to take place at Atlantic City on July 1, 2 and 3.

R. J. Whelen, manager of the Columbia Phonograph Co., reports a very interesting business in January and is highly pleased over results, there being a substantial increase over all previous Januarys, and this steady climb every month is very gratifying. He states: "Business was very good in all departments, the leading proposition of the month being the 'Favorite' outfit, with a supply of double-disc records, for \$59, which was featured in local newspapers and created a sensation among prospective buyers both in the city and in the surrounding States, many deals being closed. We are looking forward to a very interesting grand opera season this month, when the Chicago Grand Opera Co. will be here, among its artists being Mary Garden and Carolina White, who both sing exclusively for our company, and the demand for their records will be enormous.

Harry Brower, of C. F. Brower & Co., Lexington, Ky., exclusive Columbia dealers, spent a day with us in the store talking over prospects for the coming year and ordering goods to replenish his stock, which was literally sold out during Christ-

mas. He lodged one very serious complaint against the \$150 'Nonpareil,' and upon our asking him what it was he stated, 'We can't keep it in stock, our customers insist upon buying them as fast as we can get them.'

J. "Dictaphone" Westervelt, of our New York Dictaphone department, spent a couple of days with us in January, giving every one some of his Dictaphone enthusiasm; after being in Cincinnati several days, he took a trip through different Ohio cities visiting selling agents in the field, giving every one of them a real Dictaphone "boost."

J. E. Poorman was in New York City last month, attending the annual meeting of bicycle dealers. While there he met John MacNabb, of the Zonophone Co., who came over from Philadelphia for the purpose of having a chat with Mr. Poorman relative to local conditions. The record business at the latter's place has been exceptionally good since the holidays.

John Arnold, Fifth avenue and Elm street, makes the surprising statement that his machine and record business during January excelled December's volume.

A beautiful mosaic Victrola XVI, artistically displayed in one of the windows of the Milner Musical Co., has been attracting a great deal of attention during the past week. This is the first Victrola of this most expensive type that has been exhibited in this city.

Cyrus Lawson, who has been with the Milner Co. some time has been placed in charge of the talking machine department. He is very enthusiastic over the results this month. One week he specializes on the higher priced Victor and Edison goods; the next he endeavors to attract the bargain hunters and those interested in less expensive machines. "Business is O. K. with us," said Mr. Lawson. "We are right after the November and December customers for prospects; I make a special effort to get a list of their friends, the ones who have enjoyed an evening's entertainment at their homes, and then the friends hear from us."

TO CLEAN OUT PRICE CUTTERS.

In The Voice of the Victor for February the Victor Co. take the opportunity of emphasizing the necessity of dealers not only observing the clauses of their own contracts, but of keeping their eyes open for violations of the clauses on the part of competitors, especially the sections governing price-cutting and the giving of discounts. The company reiterates its intention to aid the dealer in fighting cut-throat competition in every instance where such a state of affairs is brought to its attention, either by its own employees or by the dealers. Special attention is also called to the "misleading advertise-

ment" clause in the contracts and examples given of what advertising is considered as coming under that head and the reason why it works against the interests of the dealer.

TALKER AIDS PULPIT SPEAKER.

St. Paul Preacher Dictates Sermon to Talking Machine to Judge Proper Speed for Delivery to Congregation.

(Special to the Talking Machine World.)

St. Paul, Minn., Feb. 8, 1912.

Determined not to remain a "pulpit chauffeur," his congregation unable to understand him because of the rapidity of his delivery, Rev. Ernest A. Oldenberg, pastor of the East Presbyterian Church, has slackened his speed, to the delight of himself and parishioners by the use of an ordinary phonograph. It came about this way:

Rev. Mr. Oldenberg realized that the never a stop, never a variation, never a paragraph manner of his address was one that was not wont to please his hearers. In the quiet and undisturbed recesses of his study at the home, 730 Earl street, he struck upon the ingenious idea of using a phonograph.

Purchasing several blank records Rev. Mr. Oldenberg, by listening to his own voice in an andante tempo, has been able to improve his oratory, and with the phonograph running as slowly as was practical has succeeded in producing a record in the more entertaining style used by William Jennings Bryan.

The pastor's invention has served a two-fold purpose, being both a benefit to himself and to his parishioners, who at times are unable to attend any of the regular sermons. After the record is made any one who asks may borrow it for his own use and then pass it on to another so that the sermons can be heard right in the home.

POOLEY CABINET POPULARITY.

The fame of the Pooley talking machine cabinets is constantly growing and their merits are the subject of commendation in many forms. In the Furniture World of recent date we noticed the following reference in its Philadelphia letter: "The Pooley Furniture Co. is advertising the music record disc cabinet manufactured by that concern by window demonstrations in many of the important local stores. An attractive young woman is now demonstrating the good points of this cabinet in the large show window of Weymann & Sons, 1010 Chestnut street. In the system of this cabinet each record is numbered and placed in a separate compartment, while an index is kept of each disc. By the pulling of a lever opposite the number of the record desired the disc slides out from its compartment right to the hand of the user."

The influence of the Victor-Victrola

The Victor-Victrola has accomplished wonders in arousing interest in music throughout the United States.

It has given to the people a thorough understanding of the world's musical masterpieces.

It has made classical music and grand opera as easily accessible as the lighter forms of music, and has stimulated the best musical taste.

It has injected new life into the musical instrument industry.

Dealers everywhere reap the benefits and the Victor-Victrola is today one of their biggest assets.

Victor-Victrola XIV
Mahogany or Oak, \$150.

Victor-Victrola XVI
Mahogany or Quartered Oak, \$200.

Victor Talking Machine Co., Camden, N. J., U. S. A.

Berliner Gramophone Co., Montreal, Canadian Distributors.

Always use Victor Records played with Victor Needles—there is no other way to get the unequalled Victor tone.

TALKS ABOUT BUSINESS BUILDING

By F. A. Sheldon, Formulator of Science of Business Building and Editor of "The Business Philosopher."

TALK No. 7.

The fourth and last success injunction is, Apply your knowledge of yourself, of the other fellow, and of your business.

In other words, **USE YOUR WILL. GET ACTION.**

Since health is a requisite of success, keep well. To do this you must obey the laws of physical well-being.

Since knowledge of human nature is a big success asset, acquire it.

To do this you must study.

Since knowledge of your business is an essential, master its technique.

To do this diligent application is necessary.

If you have done this you are ready now to enter the business or professional world. Its rewards will be yours, if you **APPLY THE KNOWLEDGE ATTAINED CORRECTLY—GET THE RIGHT KIND OF ACTION.**

Thousands of books are written that will never be published.

There are thousands of inventions will never bring aught to their makers.

There are thousands of industrious lives that will end in despair and defeat.

Why?

Because, while many people act, they do not act in the right way to succeed.

Edison says, "Genius is not inspiration, but perspiration."

Edison is partly right—but partly wrong.

It is more than perspiration—hard work.

It is hard work and plus and plus.

Is it hard work plus knowledge?

Is that a satisfactory definition to your mind?

It is not to mine.

My definition would be, Genius is hard work,

plus knowledge, plus initiative. It is a combination of energy, acquisition and constructive imagination.

Hard work only never made a man a genius or a success.

Knowledge only never made a man a genius or a success.

Initiative only never made a man a genius or a success.

So Edison did not utter a real truth, but a half truth only. We forgive him because of the humor of his remark.

You can work hard, and waste your energies, because you lack the knowledge to apply your energies in the proper channels.

Your mere knowledge may make you a book-worm, and a book-worm is not a success.

You may have initiative, but lacking the proper knowledge and the energy to acquire this knowledge, your initiative will be impracticable.

You must know what to do—how to do it—and then know how to do it in a better way than the other man—that is, in a new, more original way—if you want to make a **BIG SUCCESS.**

Keep on the beaten track and you will attain only **MEDIOCRITY.**

Get off the beaten track too much and you will be **ECCENTRIC.** The world might be amused at you, but it would distrust you.

Do not desert the beaten track entirely, but add new branches—open up new avenues for achievement—and you will be a **SUCCESS—A GENIUS.**

The world is always looking for a better way to do things.

The world is willing to pay—and pay high—if the new way proves the better way.

Don't dress your window like your competitors Brown or Green. Find a novel way to place things—some way that will make the passer-by stop and draw near your window.

Why so many men fail to make successes of their business is because they are afraid of a new idea. They refuse to use their imagination in new combinations. They hold to the old, while the world is crying for the new.

Novelty! novelty! novelty! cries the bored world, and you display your goods in your window in the same old way that you did five years ago; do you wonder that the world passes you by?

Do you know your intellect does three things?

It thinks.

It remembers.

It imagines.

Since it can do three things, don't you think you had better use it in three ways?

Since memory is a law of success, are you not wronging yourself by having a poor memory, especially when there are methods of improving it?

Think how important a memory of faces and names is. What patron does not like to be recognized by you—especially by name—when he calls the second or third time.

Great men like Caesar, Napoleon and Grant owed a part of their success to their accurate memories for faces and names.

There was a time when it was thought that imagination was useful to poets and artists only. Now, however, the professional and commercial world is awakening to a sense of its value.

It is Edison's powerful imagination that makes him the wonderful inventor he is—his power of combining one idea with another in a new way.

The phonograph, the vitascope, the electric car, the flying machine were at one time mere mental pictures of the imagination in the inventors' minds. They would have remained so yet had they not used their initiative to make the picture real.

The sewing machine at first stood a confessed failure. There seemed no way to stop it from breaking the thread. But a man of genius came along in the person of Howe. He applied his imagination—figured out a way to bring the thread down to the shuttle and back again without having it cut. His imagination pointed out to him that if a slit was made along the side of the needle this could be done.

Wasn't this use of the imagination on a practical triumph?

The great fortunes of the Rockefellers, the Vanderbilts and the Goulds, and many other of our millionaires, are the results of practical imaginations.

There are great fortunes yet to be made by the men with the right kinds of imagination.

Get busy; use your imagination more than you have done in your profession or in your business. See if you cannot hit upon better ways of doing things.

Do not let such splendid gifts as your power to acquire knowledge, your memory, your imagination grow rusty for lack of use.

Exercise is the secret of strength for both the mind and the body.

It takes work to keep well—either mentally or physically.

But does not the glorious health that gives you an appetite to enjoy the good things of the world; that makes the sunshine seem brighter, the air seem purer, the people you meet "good fellows, despite their faults"—does it not, I say, repay your toil a hundredfold—a thousandfold?

What splendid reserve power a healthy man has! The happy view he takes of things is a "MOTOR POWER" for **SUCCESS.** He feels braced for the battle. He feels he can do what is to be done—and more, too. That is half of the fight for success.

The reserve power of knowledge, what a power that is, too! How splendid it is to feel that you have more than the occasion demands; that you have mastered your technique; that you are ready to grasp the opportunity!

Start the Battle for Success with the proper reserve power of knowledge and strength and you will win.

Won't You Have a Lesson in Spanish?

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

International Correspondence Schools

Box 918, Scranton, Pa.

Think of a list of great singers without Mary Garden, Lillian Nordica, Olive Fremstad, Alice Nielsen, David Bispham, or any one of the others in the "exclusively Columbia" series!

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

You will if you start with the right kind of Action, and keep up the right kind of Action.

A word in conclusion: I trust I have made you see that to be a success the composite man must be a success.

You must nourish and use your mind.

You must nourish and use your body.

You must nourish and use your feelings.

You must nourish and use your will.

Do those four things and you will be a success.

YOU ARE GOING TO DO THEM. I FEEL SURE OF THAT.

ACTIVE TRADE IN BIRMINGHAM.

Columbia Phonograph Co. Store Destroyed by Fire—Fresh Stock Installed in Attractive New Quarters—Little Loss of Business—Edison Line for Department Store—Weekly Concerts Serve to Attract Business—Columbia Machines for Public Schools.

(Special to The Talking Machine World.)

Birmingham, Ala., Feb. 8, 1912.

On January 14 fire destroyed the Cable building, entirely wiping out the Columbia Phonograph Co.'s Birmingham store. The Columbia people who were occupying quarters with the Cable Piano Co., had only a few months previously opened this store, and had gone to big expense in handsomely fitting up their demonstrating rooms and in generally equipping the store. The loss was about \$15,000, fully covered by insurance. Manager William Parks, who is in charge of this end of the Columbia business, nothing daunted by the set-back he had received, began over again. Splendid quarters in the heart of the retail section were secured, stock ordered out by express, and now business is proceeding as if nothing had happened. The promptness with which business was resumed shows that Mr. Parks is not to be put out of business by a little thing like a fire that wipes out the first six months of his efforts here.

The Talking Machine Co. has just succeeded in landing an order from Drennen & Co., one of Birmingham's largest department stores, for a complete line of Edison machines and records. This is one of the largest talking machine orders taken in the South in some time. Manager Woolf, of the Talking Machine Co., reports that business in January proved most satisfactory, both in the retail and wholesale departments. Sales showed a large gain over the corresponding month of last year.

Loveman Joseph & Loeb, who recently put in complete lines of Victor and Columbia goods, are giving weekly concerts that are drawing large and appreciative audiences. The concerts afford the opportunity of hearing only the higher class music, and at other times, the numbers are all lighter music. Since taking on these lines, this concern has had big success, and no expense has been spared in fitting up the talking machine department. Manager Broyles, an experienced talking machine man, is determined to set a sales mark for the older houses to shoot at.

The Columbia people have sold several machines to the public schools in Birmingham. Mov-

ing picture machines have also been secured by the schools, showing that both of these marvelous inventions are taking important places in educating the young folks of the country.

SONGS AND LEGENDS OF THE INDIANS

Successfully Perpetuated by Means of Records, Which Are Now Being Used to Illustrate Lectures of Rapidly Disappearing Race.

At the Hudson Theater in New York recently Edward S. Curtis gave a very interesting lecture on the primitive race of the Western world, the interesting feature of which was the presentation of Indian themes taken by means of the talking machine direct from the lips of the red men and subjected to artistic arrangement by a Boston musician, Henry F. Gilbert. In speaking of his music of "A Vanishing Race," Mr. Gilbert says: "The music which I have composed to accompany Mr. Curtis' stirring pictures is entirely based upon melodic fragments derived from the songs and ceremonial music of the various Indian tribes. Most of the Indian themes have been transcribed from original phonographic records which have been made by different members of the field staff of the North American Indian in the Far West. In certain numbers, as in the prelude, Sitting Bull's war song, the Cheyenne sun dance, the music which accompanies the series 'On the Shore of the North Pacific,' and that of the 'Woman Dancer with the Skulls,' the Indian tune has been quoted verbatim.

"Sitting Bull's war song is especially interesting. It was sung, or rather yelled, by Chief Sitting Bull when the mounted warriors sat awaiting the word to charge. Riding back and forth along the hill line, he would repeat the song in a high, shrill voice, concluding with these words rapidly spoken: 'Earth-all-over they name me, I am doing all I can; you must do your best.' In the 'Woman Dancer with the Skulls' I have simply used the original tune with which the Indians accompany the dance. I have not even harmonized it, in order that it might be heard in all its native barbarism."

A solemn Iroquois song opens and closes the series. It is typical of the sadness and pensive melancholy which come to an old man in reviewing his past life filled with glorious action. The warlike motive is taken from the Omaha invocation to the god of war. The religious motive is one of the ceremonial songs of the Sioux.

If the talking machine had done nothing else than perpetuated the songs and legends of the now rapidly disappearing Indian race it should occupy a place of distinction. These records cover the various tribes and form permanent and valuable records of the Indian races.

TALKING MACHINES FOR CONVICTS.

(Special to the Talking Machine World.)

St. Paul, Minn., Feb. 3, 1912.

According to a local attorney who has just returned from a visit to the State prison at Marquette, Mich., that institution is more on the order of a pleasant hotel run with strict regard to the comfort and convenience of the prisoners than a place for confining law breakers. The attorney

states that talking machines are freely distributed among such prisoners as desire them, each convict is supplied with an oil stove in his cell so that he can do light housekeeping, and that there is a co-operative store within the prison enclosure where the prisoners may make purchases with special money issued only for circulation in the prison.

PREPARING FOR LARGE BURDENS.

Shouldering small burdens strengthens the bearer for larger ones. Many young men who are working in large establishments resent what they term the unloading of the bosses' burdens upon their shoulders, when in reality the cheerful shouldering of these burdens fits them for better things. Many lazy managers, who want to shirk their own work, do shift their duties to other shoulders, and this same thing is often done by the hardest working and most competent managers, who want to bring out the strong qualities in the young men under their charge, and see what they amount to when weighed in the balance.

MOVING PICTURE SECRETS.

Many persons are puzzled by the endless variety of illusions to be seen at a living picture hall. Quite a common picture is the airship rising rapidly in the clouds; but few know how this picture is procured. The airship is really a tiny model suspended on a thread in front of a canvas painted to represent clouds. This sheet is attached to two rollers, one of which has a handle. When the handle is turned to the left or right the sheet moves up or down. The cinematograph camera is placed in position and started; at the same time the sheet is wound downward, the airship remaining stationary on its thread. The picture thus obtained when produced gives a realistic representation of a monster airship rising rapidly in the clouds. If a picture is required of an airship falling to earth the roller is reversed to wind the sheet upward.

HOWARD TAYLOR MIDDLETON MARRIED.

Howard Taylor Middleton, whose contributions to The Talking Machine World have enlightened and interested readers for many years, has fallen a victim to Cupid's dart, and on Saturday, January 27, Miss Marie Louise Heydorn, of Moorestown, N. J., became his bride. After a short honeymoon Mr. and Mrs. Howard Taylor Middleton took up their residence at Hainesport, N. J. The World extends sincerest congratulations and good wishes to the happy couple.

Kansas was in a decline. A famous prescription was ordered: "Raise more corn and less h—." The Kansans took the hint and to-day are the greatest agriculturists in the world. Let the business man who complains about trade take this advice: "Advertise more and complain less," and the result will be the same as with Kansas.

You can't enlarge your business when you are carrying a needless burden.

Pushing the Edison Phonograph

is like rolling a hoop down hill.
The hoop is already started—
all you have to do is to keep
it going in the right direction.

Everybody in your territory knows what the Edison is—everybody wants it. The real missionary work has been done and is being done all the time by the hundreds of thousands of Edison Phonographs already sold and by our persistent advertising in the great national publications.

We are constantly telling **your own people** about the Edison's great advantages—how it carries all the best, the greatest and the latest music and other entertainment right into their midst—how its sapphire reproducing point never needs changing, doesn't wear the records, and brings out the very life of the tones in exactly the right volume for the home. We are reminding them of the fact that with the Edison they can play both Standard (two minute) and Amberol (four minute) Records—and explaining the delights of making records at home.

We are doing everything to send these people to you. Don't let them **wonder where** they can get an Edison Phonograph. Hook up your local advertising and selling campaign with our national campaign by using the ready-made newspaper ads that we furnish free, by taking advantage of the window displays we have prepared, and by working your mailing list to the limit.

Keep the hoop rolling—steer it for your store.

Thomas A Edison
INCORPORATED

59 Lakeside Avenue, Orange, N. J.

Don't be satisfied with making the Edison Phonograph

a mere present profit producer. Every Edison you sell is an income producer, and the size of the income depends entirely upon you.

As long as the world is creating good music and clever vaudeville—as long as there is a Sousa, a Slezak, a Sylva, a Lauder, a Stella Mayhew—or any star of magnitude in any line—the people to whom you have sold Edison Phonographs will look to you for a steady stream of Edison Records.

But if you're only selling Edison Standard and Amberol Records you're not getting all the income the Edison is capable of making for you.

Go out after the rest of it—the home recording end. See to it that every Edison Phonograph in your vicinity is equipped with a Recorder, and keep the interest in home record making right up to the bubbling point. See that a Recorder and supply of blank Records go with every sale you make.

Play the game from every angle and the Edison will pay you bigger dividends every month.

Your Edison Jobber is a good man to keep in constant touch with. Look over your stock and write him today.

NEW YORK, FEBRUARY 15, 1912.

ADVICES from correspondents in widely separated sections of the country regarding business conditions for the first month of the new year are most gratifying.

January has made a splendid showing taken as a whole, and instead of the customary quiet month there has been a larger output of machines and records than in the same month for many years.

This is due largely to the fact that dealers and jobbers have been more persistent in their sales campaign; they have not been resting on the laurels of the closing months of the year, particularly the holiday trade, but have pushed on for new conquests during 1912.

This is the proper spirit, the spirit that wins. The policy of persistency, combined with goods of merit, is always a winner in the battle for trade. It is now the general opinion that 1912 will make an excellent showing, in a business way at least, as far as the talking machine industry is concerned.

The approaching Presidential campaign will not have the usual detrimental effect as some people feared; as a matter of fact the business men of the country have had so many problems to face for the past four years that such a thing as a Presidential election has been discounted.

Fundamental conditions to-day are sound throughout the country. There has been a very thorough readjustment of credits everywhere. Liquidation and retrenchment in every direction have strengthened the underpinning of nearly every industry and commercial enterprise. Merchants are practicing conservatism in their undertakings and the crop prospects are decidedly better than they were this time last year because of the great amount of moisture in the soil.

Moreover, the banks of the country have never been in a stronger position. Their funds are in such liquid shape that not only can they meet all emergencies in the way of demands for money to meet immediate needs, but they have been able to loan large amounts abroad, which can be recalled on short notice to encourage the awakening of business activity at the first sign of the dawn.

Viewed from any standpoint the situation is healthy.

The future is in the hands of the talking machine merchants themselves. They must not relax activity in any department of their business. They must force the issue at all times. Advertising, recitals, attractive windows, keeping after public schools, hotels, churches and other public institutions, must be ever kept in mind to the end that the talking machine business will show even a still greater record during the year just opened than it did during 1911.

TIME and time again we have referred in the columns of The Talking Machine World to the tendency, particularly of the writers, in the daily papers and in the magazines, to belittle, to cartoon and misconstrue the talking machine.

The policy of these people seems to be destructive rather than constructive—a desire to condemn without knowledge or understanding of the advancement and wonderful mission of the talking machine.

We hear little about the joy it brings into the home through the ability to hear the world's best artists, both vocal and instrumental, as well as the greatest orchestral organizations—of its tremendous educational influence in the school—of its uplifting influence in inculcating a love for the very best in music—of the pleasure derived from its use in the smaller towns, in the backwoods by people who never would hear or know anything of music or the famous operatic and concert singers, were it not for the talking machine—of how it has made the entire world akin by bringing within the home, even the humblest room, the music and songs of all nations—music that uplifts, stimulates and refines.

It is gratifying to chronicle within a recent date a more favorable attitude on the part of the writers in the daily press. Somebody is exercising intelligent supervision, and the ridiculous stories which have appeared in the past are becoming pleasingly few.

This change, however, has been brought about through the tremendous increase in the use of the talking machine in the homes, in the schools and in concert halls. Its very merits have forced a tardy recognition of its tremendous possibilities for good, and its mission in awakening the American public to a greater appreciation of the best in music.

This lampooning of the talking machine started many years ago when the machine was in its earliest stages—when it was never imagined that it would occupy such an important place in the musical world—when it was considered more of an amusement device than a stimulator of musical knowledge—before the great artists or great orchestral organizations made records.

It is a reflection certainly on those writers who still see only humor in the talking machine, that they should be connected with such a live institution as the press and yet not keep in touch with the wonderful progress made in the improvement of the talking machine and the talking machine records within recent years.

This phase of the situation should appeal to them, because ignorance of the merits of the modern talking machine is a reflection on their intelligence, and the wonder is that they could be connected with a newspaper or magazine, and write such nonsense as sometimes appears when discussing the talking machine.

It is only fair to state that there are some magazines and papers that appreciate the tremendous possibilities of the talking machine as an educator, as a means of disseminating a wider knowledge of real music, as well as its enjoyment in the homes, in the schools and in the public places generally.

The attitude of these publications emphasizes that they are wideawake and in touch with modern developments.

Talking machine dealers everywhere should watch their local papers and when blunders or absurd assertions are made regarding the talking machine, or talking machine records, they should make it their object to get in touch with the editors and set them right.

No dealer reading The Talking Machine World can be ignorant of the wonderful accomplishments of the talking machine, and its achievements in various lines of effort, and it should be the duty of such men to educate the managers of their local papers on this subject.

IN a recent issue of The Music Trade Review there appeared an interesting article on the growth of the talking machine business with those piano merchants who have taken on this adjunct to their line within recent years. It is worth reproducing because it furnishes an idea how the talking machine department can be made to pay a profit and work to the general advancement of the business in which a merchant is regularly engaged:

During the past year a great many piano merchants have taken on talking machines, and, fully realizing the importance of giving this branch of their business the closest attention in the matter of management and advertising, have realized a handsome profit.

With some merchants the talking machine sales for the year made up the deficit in the piano department. The increased sales of talking machines is due, in a large measure, to the production of hornless talking machines priced as low as \$15. While the output of these instruments has been enormous, the higher-priced styles were also in great demand, so much so that the manufacturers have a vast number of unfilled orders on their books at the present time.

The sales for these machines have resulted in an increased call for records, and to-day the leading record manufacturers are working to their utmost to catch up with the demand, which is simply overwhelming.

The success of the talking machine business is an illustration of the advantages of fixed prices. Indeed, the conditions which exist are a credit to the men who control the destinies of this new and important branch of the music trade industry.

From the very first they realized the importance of educating the public. They conducted a campaign of publicity that has amazed many, but which has demonstrated that advertising is a profitable investment. In this way they have created a home demand for their product which has accrued to the dealers' interests.

They have educated the dealers handling their goods in the matter of window display, of salesmanship, and other essentials toward an intelligent comprehension of the requirements of the business. As a result of this progressive policy the talking ma-

chine industry has grown to such a degree that few, unless posted on the internal conditions, have any idea of its extent.

THE sales of talking machines by some of the large houses handling pianos in this country have reached a sum that may be termed remarkable. It goes without saying that those who have won the largest measure of success have given the talking machine adjunct of their business the attention which it deserves. The departments are in charge of experienced men who believe in getting results by means of advertising, by special display rooms, recitals and other forms of artistic exploitation, realizing that the talking machine is in the truest sense a musical entertainer and educator, and that when it is handled properly it forms a most valuable asset for the music trade merchant.

There is a lesson to be drawn from the advertising policy of the large manufacturers of talking machines.

Despite the talk about hard times and contracted trade, and many other topics which are brought to the front by pessimists when trade conditions are discussed, the conductors of these enterprises brush them aside and proceed to spend even more money in dull times than when business is active.

As a result, during the past year the manufacturing end of the talking machine business showed an increase of more than thirty per cent., thus emphasizing the fact that it is the persistent advertiser that succeeds.

NEW VICTOR RECORD CATALOG.

Some of the New Features Announced in Connection with New Volume.

The Victor Talking Machine Co. announces, in the February number of *The Voice of the Victor*, a new alphabetical and subject catalog of Victor records, which is expected to result in a material increase in the sale of Victor records. In the new catalog the names of the composers, the prominent artists and selections are all arranged in alphabetical order and in sequence, while the selections are also listed under subject headings, such as Scotch songs, etc. In the case of double-sided records both titles are given, that in alphabetical order being in heavy type with the name of the selection on the back of the record to prevent confusion, the reverse being the case in the alphabetical listing of the selection on the back of the record. In the last pages of the new catalog will be found a list of Victor singers and players, under whose names all records made by them will be listed in the catalog. List of subject headings under which records will be classified. Pronunciation table of singers names and pronunciation table of operas and composers.

BRINGS SUIT FOR INFRINGEMENT.

American Graphophone Co. Takes Action Against the Boston Talking Machine Co. for the Purpose of Protecting Its Rights to the Important "Graphophone Grand" Patent of Thomas H. Macdonald.

Always on the alert to protect its interests and patent rights, the American Graphophone Co. has filed suit in the United States Circuit Court for the District of Massachusetts against the Boston Talking Machine Co. and others for alleged infringement of the important "Graphophone Grand" patent, issued to the late Thomas H. Macdonald in 1902, and which covers in a very broad way, it is claimed, all the so-called high-speed records, both disc and cylinder, and whether the recording is of the zig-zag variety or vertical. The patent was granted after prolonged litigation with those prominent in the talking machine field to test its validity, and was pronounced by the United States Patent Office, Alexander Graham Bell and many others to represent one of the most important forward steps in talking machine manufacture. So valuable was the invention considered that the Franklin Institute of Philadelphia presented Mr. Macdonald with an award of merit. Thomas A. Edison, Inc., and the Victor Talking Machine Co. have been granted licenses under the patent in question, and the American Graphophone Co. is confident that its position in the present case will be promptly sustained by the courts, both on actual merit and in view of precedents.

WHAT REAL SERVICE MEANS.

Merchant Should Study and Cater to the Requirements of His Particular Community.

Look into any retail business, large or small, and it will be found that it is governed by either one or the other of two basic ideas, "the bargain idea or the idea of service." The bargain idea is put first because it is so old historically. It goes back to dim centuries when the merchant was a peddler, selling from a pack at markets and fairs. His profits depended largely on the gaudiness and apparent cheapness of his goods and his skill at double-dealing. Of course, his methods were such that nothing but improvement was possible. Yet the merchant of to-day who is wedded to his bargain idea still underrates public intelligence. He assumes that penny-saving is the chief object of people purchasing goods. He centers effort on buying merchandise that will be tempting by reason of the bare prices he can mark upon it. Value and quality are taken into account last of all—sometimes never. This sort of merchant offers the public a disconnected string of "price sensations."

Everything is haphazard and stocks have little relation to the wide needs of the modern family.

But a merchant guided by the service idea, on the other hand, has a broad conception of the public's intelligence, sees his community's needs as a whole, and understands his own function in it. He knows that customers weigh points of value as well as prices—purity, durability, appearance, convenience, originality. Even though he has but a small establishment, his stocks will be complete, representative, adequate to meet the whole demand of the average family in his line, and they will be maintained with a view to progress in that line. Shopping is made agreeable. Growth and reputation come from customers' satisfaction after goods are in use and price forgotten.

There are just as many kinds of salesmanship as there are salesmen, just as many methods of buyings as there are buyers—the weak, strong, the bluffer or bulldog, the quick and alert—and the Rip Van Winkle. Some salesmen seem imbued with the idea that buyers are simply perfect; others, that they are perfectly simple.

The DITSON Pledge

Is to see that our clientele has a better service than ever—setting a new standard in Victor jobbing deliveries. The demands of alert Victor dealers—the kind that grow—are many and varied, and we furnish the "first-aid" in every instance.

We believe this year's Victor business will be of tremendous proportions, and it will pay you to have

The Fastest Victor Service

which is a requisite in this hustling age. We possess the largest stocks, the best organization and most up-to-date equipment in the Eastern half of the country.

This covers Victor machines, records and supplies of every kind, not to mention cabinets, needles and trade-marked accessories.

Will you let us tell you more about Ditson co-operation? A postal gets this information!

ROLIVER DITSON CO., Boston, Mass.

The Talking Machine Trade in New England

G. E. SEAVEY REMODELING STORE

In Haverhill, Mass., to Accommodate Rapidly Growing Business in Columbia Line.

(Special to The Talking Machine World.)

Haverhill, Mass., Feb. 9, 1912.

The Columbia business of George E. Seavey has grown so rapidly of late that he has been obliged to remodel the interior of his establishment at 50 and 52 Emerson street, and one of the conspicuous features of the improved surroundings are the new racks for records. A large photograph which he has had taken of his store clearly shows his large show windows filled with a well arranged assortment of machines and records calculated to quickly catch the eye of the passer-by. Mr. Seavey has made quite a reputation for disposing of many of the \$200 Regent grafonolas.

EDISON OUTFITS IN STRONG DEMAND.

(Special to The Talking Machine World.)

Orange, Mass., Feb. 7, 1912.

G. M. Pratt, who has a fine establishment here, is doing an excellent business in talking machines. The new opera style of Edison machine is finding high favor.

Another Orange concern, E. B. Miller, had the pleasure of selling eleven Amberolas last season, a record of which he is immensely proud. He says that he is going to equal that in the successive sales of the new opera instrument.

FINDS DEALERS OPTIMISTIC.

(Special to The Talking Machine World.)

Boston, Mass., Feb. 7, 1912.

H. R. Skelton, who is one of the successful Edison travelers through New England, reports that business is very satisfactory in his field, though he has encountered some pretty tough weather, in spite of which dealers are most enthusiastic over the spring prospects.

GETS RESULTS WITH WAGON.

(Special to The Talking Machine World.)

Gardner, Mass., Feb. 6, 1912.

F. L. Gilson, who is a hustler in the talking machine trade, canvasses his field with a wagon which the Thomas A. Edison, Inc., provides him

with. He says that it is a splendid medium with which to get about and he can cover considerable territory in the course of a week. In the same town is located J. Griffin, who has lately partitioned off a part of his store, and one part of this he is devoting to exploiting the virtues of the Edison products, each machine being demonstrated in a separate compartment so that a neighboring one cannot be heard.

WHY BUSINESS SHOULD BE GOOD.

Some Interesting Figures That Tell Why Machines, Records and Needles Should Be in Demand During Year So Recently Opened.

(Special to The Talking Machine World.)

Putnam, Conn., Feb. 8, 1912.

Charles E. Dean, of John M. Dean, of this city, makes some optimistic remarks to The World correspondent anent the business possibilities for 1912. It covers not only the status of the needle market, but the talking machine field, and while brief, aptly sums conditions. Mr. Dean says: "With 100,000,000 people in this country alone it is evident that there are many who would be talking machine buyers but they cannot get the goods; then, too, can be found thousands of families who would be purchasers if they were told of the pleasures to be secured; the number in the foregoing classes might be as high as fifty million. On the needle end, the low priced machines have given a big impetus to the business; the record business has rushed ahead tremendously and there will be more instead of less business.

"Our business fits in with the dealers in the matter of extra needle sales, as our Puritone brand is of such quality as to be universally well liked and are sold on a reasonable basis. To those who will order in sufficient quantities, we will have the buyer's name and address printed on the envelopes at no extra cost. In the jobbers list of The World is a special announcement that explains what we will do in this line."

WELL PLEASED WITH THEIR LINE.

(Special to The Talking Machine World.)

North Adams, Mass., Feb. 10, 1912.

Hunt Bros. are now handling the Edison machines exclusively, and they state that no com-

plaints are being heard from their customers. A number of the homes in this city are being equipped with Edison machines.

"DUPLEXTONE" GREATLY IN FAVOR.

(Special to The Talking Machine World.)

Lowell, Mass., Feb. 10, 1912.

A talking machine needle that is destined for a glorious future is the "Duplex-tone," just introduced by W. H. Bagshaw, the long established needle manufacturer of this city. In existence only a short time, the early requests for information prompt a little prognosticating that the "Duplex-tone" will be "some seller."

Here is the way the Duplex-tone looks when playing a "loud" record.

LOUD.

Just a little shift of position and the Duplex-tone plays "soft," as indicated below. This needle, so it seems, is fine for band records and excellent for the soft effects of violins and voices.

SOFT.

Any dealer or jobber wishing a sample envelope may secure same by writing to W. H. Bagshaw, Lowell, Mass.

VERMONT DEALER TO EXPAND.

(Special to The Talking Machine World.)

Bennington, Vt., Feb. 9, 1912.

M. A. Griswold is preparing to make extensive improvements in his store so that he will be better able to handle talking machines. The house is getting any number of inquiries about machines and records.

There is no luck in the game of selling. It is governed by a code of rules as strict as the laws of mathematics. Some good men violate the laws of buying and selling without courting immediate failure, but they cripple their capacity; they greatly discount their ability.

THE KEYSTONE

OF OUR

BUSINESS BUILDING

IS P-E SERVICE

Built with rocks of Edison Completeness cemented by P-E Quickness.

Edison dealers who are supported by this massive structure find business easier and more profitable.

EDISON JOBBERS EXCLUSIVELY

THE PARDEE-ELLENBERGER CO.

66 Batterymarch St.
BOSTON, MASS.

96 State St.
NEW HAVEN, CONN.

FROM OUR BOSTON HEADQUARTERS

324 WASHINGTON STREET, JOHN H. WILSON, MANAGER.

(Special to The Talking Machine World.)

Boston, Mass., Feb. 10, 1912.

The Eastern Talking Machine Co. has lately been getting many inquiries from schools scattered throughout Greater Boston as to the merits and virtues of machines. This in a large measure is due to the active campaign which is now being carried on setting forth the educational possibilities of the talking machine in the schools.

Inquiries at the Eastern Co.'s Tremont street quarters have developed into actual sales, and recently, according to A. W. Chamberlain, who is quite an enthusiast over the idea, six separate outfits have been installed in schools in Brookline, Newton and other near-by places. In making a selection of records, for instance, great care is exercised, for the prime reason that due thought must be given to the grade of the school. In the lower grades catchy, simple pieces, such as are more or less familiar to the young, are desirable; but when it comes to high schools music of a more classical order is demanded. Marches in the lower grades are much sought after, for the children always respond to the inspiration of catchy, martial airs. Mr. Chamberlain sees a great chance of a logical development of the idea of installations of talking machines in schools, and believes that the company has a big business ahead in this particular field.

E. F. Taft, the secretary and general manager of the Eastern Talking Machine Co., has just returned from a most successful and enjoyable trip out West as far as Chicago. He returned to Boston by way of New York, where he paid a visit to the Victor and Edison factories and found business being rushed to the limit.

Business with the Eastern Talking Machine Co. from the first of January has been very big, and in the Victor line the present demand equals that of the holiday season, and as for records, there is a tremendous demand and goods can scarcely be shipped to Boston fast enough to supply the needs of the trade.

Honors Cardinal O'Connell.

The Columbia Phonograph Co. did honor to the arrival of His Eminence Cardinal William O'Connell January 31 by elaborately decorating the front of the store with the Stars and Stripes. The decorations were much admired by those in the procession which passed through Tremont street.

Dictaphones in Harvard University.

The Columbia Phonograph Co. has lately installed a number of dictaphones at Harvard University, where they daily are getting to be immensely popular with the professors, instructors and lecturers. The Boston & Maine Railroad has had shipped a large consignment of these machines to be especially used in the freight claims department. Officials at the railroad who have become acquainted with their extreme usefulness have been widely advising their use by their associates.

Some Resignations.

Much to the regret of his fellow associates, S. Harry Brown has severed his connection with the Eastern Talking Machine Co., having accepted a fine position with the Waltham Emery Wheel Co. He will travel for the concern, and while he will be missed by the customers of the house as well as those inside, everyone is glad that he has got a splendid position—one that may mean rapid advancement.

Owing to the retirement from the Columbia Co. of Louis Retzel, who has been the bookkeeper of the Boston store for the past five years, the customers will not see quite as much of "Jack" Shaughnessy, who has been a salesman for the company, and who now will take Mr. Retzel's place. Mr. Retzel is going with the United Drug Co. in the position of assistant auditor. R. L. Perrett, of the dictaphone department, will take "Jack's" place on the floor.

Excellent Demand for Edison Machines.

The Pardee-Ellenberger Co. is finding a ready call for the Edison goods around in Greater Bos-

ton, and Manager F. H. Silliman is getting all sorts of inquiries every day, some coming into the Batterymarch street store in person, some calling over the 'phone, and still others writing in for the literature of the concern. President W. O. Pardee of the company spent three days at the Boston headquarters the first of the month, and was well pleased at the business that is piling up.

The Pardee-Ellenberger Co. manufacture and sell a number of specialties for talking machine dealers and owners, including the Linoid recording horn and its system of keeping records.

Attracts Passers-by.

One of the exhibits in the windows of the Columbia Phonograph Co. is the revolving double-disc records which so aptly serve to inform the passers-by of the style of records carried by the house. The device is so ingenious that any number of people stop in front of it.

Mary Garden Compliments Miss White.

There is quite a demand locally for the first records made by Carolina White, who, as mentioned in a previous issue, is a Boston girl, and now connected with the Philadelphia-Chicago Opera Company. An interesting and unusual feature of her singing for the company is the high endorsement given her by Mary Garden, who has written the Columbia Co. as follows: "I am so delighted to know you have Miss Carolina White with the Columbia Phonograph Co. Her voice is so brilliant and her talent so immensely charming that she is becoming, very fast, one of the world's big artists."

Effective Victor Display at Millers.

Ubert Urquhart, in charge of the Victor department of the Henry F. Miller Piano Co., reports that business is far beyond normal, and that there is much difficulty experienced in getting a sufficient supply of goods. His staff of salesmen is kept busy all day with machines which, by the bye, are exhibited in most attractive quarters on the second floor of the Boylston street establishment. Just now the show window devoted to Victor goods is unusually well arranged, so as to quickly compel attention.

Oscar Junge in Charge at Providence.

Fred R. Erisman, after an absence of several week in Providence, whither he was called to

take charge of the Columbia's establishment in that city, is back at the Boston office, much to the delight of not only his brother, Arthur C. Erisman, the Boston manager, but all the staff as well, for he is popular with all the boys. In the meantime the Providence store has found a manager in the person of Oscar Junge, who has been brought east from Louisville, where he was in charge of the Columbia interests.

Manager Erisman reports that the January business of the Columbia Co. showed a seventy-five per cent. increase over the same month in 1911. There is every indication that the February business will be a very large one. During January Mr. Erisman was able to consummate several very large deals.

The Columbia Phonograph Co. gave a fine and most enjoyable exhibition of its machines for the benefit of the members of the National Shoe and Leather Association at the Hotel Lenox a short time ago. The dinner was tendered to the officers and delegates, and the Columbia feature was one of the most prominent of the program.

Expansion at Steinerts.

Herbert L. Royer, manager of the Arch street Victor department of the M. Steinert & Sons Co., says that wherever he goes he finds a difficulty in supplying the demand for both machines and records. This is particularly true of his own department, the growth of which has necessitated an increase in his office force and a rearrangement of his own private quarters to better facilitate the handling of business.

Good Demand for Edisons.

Chester J. Sylvester, who is in charge of the talking machine department of the C. E. Osgood Co., finds a good demand for the Edison machines ever since the first of the year. He had a very good January and the second month of the year has started off most promisingly.

"We are not sent into this world to do anything into which we cannot put our hearts. We have certain work to do for our bread and that is to be done strenuously; other work to do for delight and that is to be done heartily; neither is to be done by halves or shifts—but with a will, and what is not worth an effort is not to be done at all."—Ruskin.

"As Good As Bagshaw Needles"

When you hear this statement, make up your mind to have THE BEST. If Bagshaw Needles are considered the best by someone trying to sell you "something as good" they openly admit the Bagshaw quality.

The comparison is the best boost that Bagshaw Needles can get; the remark should prompt you to use your own GOOD JUDGMENT to buy the "standard talking machine needles."

Magazines spend thousands educating readers to secure the best value in commodities; we are buying this space to insure the same purpose for talking machine needles. Remember that the "just as good" excuse makes Bagshaw Needles the BEST.

W. H. BAGSHAW, Lowell, Mass.

Think of offering the interested public a line of musical instruments without the Columbia Grafonola "Favorite" at \$50, for instance!

**Columbia Phonograph Company, Gen'l

BIG DEAL IN ST. LOUIS.

Silverstone Talking Machine Co. to Become Edison Jobber in That Territory While Koerber-Brenner Music Co. Will Handle Victor Line Exclusively—Decide That Best Results Are Gained by Handling Only One Line of Goods—Some of Those Interested in the New Arrangement—Excellent Record Made by Columbia Co. Branch—Opera Season Helps Record Sales—News of the Dealers

(Special to The Talking Machine World.)

St. Louis, Mo., Feb. 9, 1912.

A deal whereby the Silverstone Talking Machine Co. becomes the sole Edison jobber in St. Louis and the Koerber-Brenner Music Co. will handle only the Victor line has been completed by Mark Silverstone and E. C. Rauth, the latter secretary of the Koerber-Brenner Co. Mr. Silverstone, who also conducts a retail business, has transferred his entire stock of Victor-Victrolas and Victor records to the Koerber-Brenner Co. and will hereafter handle only the Edison line at retail.

"Our company felt," said Mr. Rauth in speaking of the deal, "that a firm could only do justice to one line of merchandise like talking machines. The trade is so nearly alike that to handle two lines brings one into conflict with himself at times. Also we felt that perhaps when the Edison disc machine is put on the market that there is a likelihood of exclusive contracts being asked from jobbers and that we would rather get from under first. We liked the Victor line best, hence our selection."

Mr. Silverstone, who now controls a splendid territory for the Edison line, has been in the talking machine business for eight years. He came into it rather by chance, which in itself is an interesting story, considering the results. He was in other business and had leased one-half of his store room to a talking machine retailer and through a disagreement his tenant left him unexpectedly. Mr. Silverstone did not want the space for his other business and looked about for a line he could put in to pay rent. Talking machines naturally suggested themselves as the location already had a reputation in that line. He put in a line of Columbias and the results were so satisfactory that he sold his other business and stayed with the talking machines, although he has not handled Columbias for a long time. When he began business the jobbers in St. Louis were the Western Talking Machine Co., Conroy Piano Co. and O. K. Houck Piano Co., and he has bought part or all of the stocks of each of these as they retired from this field.

"I like the Edison line," said Mr. Silverstone, "and I believe the time is coming for a dealer to handle one line. I thought I could better my business by taking this line exclusively, hence my giving up of the Victors. I had a nice business with the Victors, but felt that the 'one line' advantages would offset the profits from the other line. Also with the larger Edison stock I will carry I need all of my space."

Mr. Silverstone is an excellent mechanic and does or oversees the expert repairing that comes to his store and is famous among talking machine men of

this section for his ability to overcome mechanical difficulties that come up in talking machine work. His jobbing territory is southern Illinois, Missouri and a part of Arkansas.

The joint letter of the two firms sent to the trade offers combined shipments of Victor-Edison goods on small orders. This arrangement is made because of the number of retailers handling both lines and will be continued as long as there is demand.

"Distribution of the machines we receive from the Victor factory is our big problem," said Harry Levy, manager of the talking machine department of the Aeolian Co. "The trade is running very heavy of VIIIs, IXs. and XVIs. We have much less difficulty in getting orders for these numbers than we do in supplying the trade. Records, too, are a source of worry. 'Casey Jones' is still giving us problems in division and 'My Beautiful Doll' is almost simple subtraction. But I spotted 'Billy' on the first call and had 'Billy' records to run through the big demand when others were short. Business has picked up well since the after-holiday lull and I look for big things this spring."

Manager Ramsdell, of the Columbia Co., smiles over the January record for that company. "We thought the setback received during the very cold weather was going to make a black mark in our monthly report," he said, "but when we got a chance toward the latter part of the month we went on famously and we closed ahead of last year, which we thought was doing very well. Trade has been well balanced, records and machines alike showing improvement. During the very cold weather our collections were excellent, which is about as good a business pointer as one could ask."

The St. Louis grand opera season, which began February 2, gave local dealers an opportunity to push special records and all were working at the job and report an excellent demand, both before and following the appearance of Mary Garden, Fremstad and others of note. Some persons bought records to familiarize themselves with the operas before the company arrived, others bought them as souvenirs after the operas had been sung at the Odeon. And still another class of custom came from persons unable to go to the opera, but who invested in records to have the principal songs at their fireside. The Columbia window was notable as an advertisement of these records, showing the stars had made records for that company.

Joseph Schindler, an Edison dealer of St. Charles, Mo., was a recent visitor in the city. Ferand Bros., of Madison, Ill., were also at the Silverstone Talking Machine Co. on business.

S. H. Rash, traveler for the talking machine department of the Aeolian Co., was in Texas the latter part of January and had a real exciting time dodging the meningitis quarantine lines. He found it impossible to follow the route as mapped and dodged hither and yon, getting to a town from where he could and selling whom he could see. His only satisfaction from such a course was that in cultivating the open fields he opened some new accounts.

On a recent trip to this city Joe Dvorak, who has handled only the small musical line for Lyon & Healy in this city, called on the talking machine trade.

Retail Manager Byars, of the Columbia Talking Machine Co., reports excellent business in machines, with the "Favorite" leading. "We are making a special effort to co-operate with the national advertising campaign from the home offices on that machine," he said, "and we are getting excellent results. Our sales are about keeping up with the machines we are able to obtain from the factory."

E. O. Rauth, secretary of the Koerber-Brenner Music Co., who has been giving considerable attention to the talking machine end of the business, says that in his opinion retailers are seriously at fault in not telling customers more about running their machines. "The average of them, in fact most dealers, I think, lead the customer to believe there is nothing to do but put a record on the machine and let it go," he said. "But the simple matter of the use of needles will make a big difference with many customers. Recently I saw a musician, who is in love with his talking machine, put his handkerchief in the horn to soften the sound when playing certain high pitched voices. I gave him a half-tone needle and he was delighted. It was exactly what he wanted. Within a few days he had tried each of his records with loud, medium and half-tone needles and had decided which was suited to each. This man had never heard of the different tone needles before, which is the fault of a dealer. Satisfied customers are the best advertisement and this little intelligence is cheap advertising. The economy of steel needles is not at the expense of the quality of the music when their use is understood."

Mr. Bryd, of the Columbia Talking Machine Co. wholesale department, was in southern Illinois and southeastern Missouri during the January blizzard and his stories of adventure rival any that were printed in the newspapers. He gave up the effort to make some towns and once, after being two days on a train with two engines, welcomed a carriage that came to the rescue by an upland road and carried the passengers the last five miles. He was on a train that took the first mail in five days to one Missouri town.

Spokesmen for St. Louis jobbers agree as to the rapid development of trade from this city in the southern Mississippi Valley and the Southwest. This field is being cultivated energetically by the local trade and is repaying the effort.

Manager Robinson, of the talking machine department of the Thiebes Piano Co., reports the demand for high class machines holding steadily to the high standard of the close of the year. "Piano Row," he said, "because of the large stock carried, sells a great part of the records in St. Louis. Our record stocks bring us in touch with almost all of the machine owners, so we need not worry much about small machine sales because, when the owner of the tiny machine becomes a convert and wants a better machine, we will likely be the ones to profit."

L. A. Cummins, who recently was moved to the Colorado and Utah territory for the Koerber-Brenner Co., because of Mrs. Cummins' health, is giving a good account of himself in his new field. He has opened a number of good accounts and reports excellent prospects. He is having his first experience with the small musical line, his experience having been that of a Victor specialist.

U-S Junior—\$30

Good Business and Good Profit with the U-S Line

WITH U-S Phonographs and U-S Everlasting Records the dealer has an unsurpassed combination of advantages. The selling points make a distinct appeal to customers—and performance backs them up!

U-S Phonographs

The line is graded in price to suit a great variety of desires. It begins with the smallest concealed-horn machine that practice has proved to be mechanically correct, and ends with the magnificent mahogany cabinet machine. And every style represents a distinct advance in sound-reproduction and mechanical perfection—evidenced in part by the following features:

Instant automatic change from two-minute to four-minute records.

A balance wheel that maintains constant speed and musical pitch.

A simple, noiseless, long-running motor whose speed is not affected by winding while playing.

The "voicing" superiority of an unusually large and sensitive diaphragm.

Sapphire reproducing-points that never wear out, and cannot injure the U-S records.

U-S Everlasting Records

Ten thousand playings cannot wear them. They do not break, chip or crack. Consequently the most delicate notes are permanently recorded for a lifetime of enjoyment.

The repertoire is large and constantly growing—instrumental and vocal successes, both classic and popular; vaudeville hits; grand opera; in short, a complete range of speaking and musical entertainment.

And all records are sold at popular prices!

A Splendid Opportunity for Dealers

The many advantages of the U-S line give the live dealer every opportunity to build up a profitable, safe and growing business—with no broken or worn records on the dealer's shelves. You will be interested in our proposition to dealers. Write for it to-day. Address the main office or the nearest branch listed below.

BANQUET FOR HAUSCHILDT STAFF.

Henry Hauschildt Takes That Means of Celebrating Close of Successful Business Year.

(Special to The Talking Machine World.)

San Francisco, Cal., Feb. 8, 1912.

The close of a most successful year for the Hauschildt Music Co., with "talker" departments in this city, Oakland and Haywards, was celebrated last week by a banquet given by Henry Hauschildt, the energetic proprietor of the business, to the employes of the different stores.

Mr. Hauschildt presided, assisted by Mrs. Henry Hauschildt; Hugh Foley acted as toastmaster. The guests from the country were J. J. McBride, of Vallejo; John Swanson, of Crockett, and Campbell Pomeroy, of Santa Rosa and Petaluma, who were appreciative of the courtesies shown them.

of employer and his large army of employees.

One of the hits of the evening, because unexpected, was a clever talk by Miss Anna Metten, one of the office force. Two good closing addresses were made by Mr. and Mrs. Hauschildt, both of whom ably maintained the keynote of the evening, good-fellowship and mutual interests.

Among those who attended the banquet and who appear in the accompanying photograph are: 1, Henry Hauschildt, proprietor; 2, Mrs. Hauschildt; 3, Hugh Foley, San Francisco sales manager; 4, J. G. Ramer; 5, R. A. Leavitt, manager Oakland phonograph department; 6, Anna H. Metten; 7, Geo. Faulkner; 8, Irene Murphy; 9, W. A. Craven; 10, J. J. McBride, of Vallejo; 11, A. P. Cautua; 12, Wm. Ringen, San Francisco phonograph and music goods department manager; 13, Genevieve Conroy; 14, Clarence Moran; 15, Elmer Doidge; 16, Louis Schroeder; 17, Clarence Cuthbert; 18, Edgar

But the business situation to-day seriously demands the classing of the deliberate slow-payer with the cheat. His reformation would free the involuntary slow-payer from a plight that is none of his choosing, and would make the wheels of business hum with prosperity.

You who can, pay up. Then those who now can't pay will be able to do so. Money will flow faster through the arteries of the country's life and all the people will be benefited.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York for the Past Four Weeks.

(Special to The Talking Machine World.)

Washington, D. C., Feb. 8, 1912.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

January 13.

Autofagasta, 9 pkgs., \$722; Berlin, 130 pkgs., \$5,300; Callao, 1 pkg., \$103; Cape Town, 135 pkgs., \$2,338; Cienfuegos, 3 pkgs., \$152; Corinto, 2 pkgs., \$184; Hamburg, 22 pkgs., \$512; London, 264 pkgs., \$7,139; Montevideo, 10 pkgs., \$520; Santo Domingo, 10 pkgs., \$136; Valparaiso, 3 pkgs., \$197.

January 20.

Berlin, 133 pkgs., \$1,220; Callao, 10 pkgs., \$117; 18 pkgs., \$1,000; Chemulpo, 9 pkgs., \$460; Cork, 2 pkgs., \$200; Grenada, 6 pkgs., \$337; Guayaquil, 3 pkgs., \$230; Hamburg, 11 pkgs., \$200; Havre, 17 pkgs., \$338; Kingston, 4 pkgs., \$121; La Guayra, 4 pkgs., \$135; London, 21 pkgs., \$1,350; 264 pkgs., \$8,212; Rio de Janeiro, 29 pkgs., \$4,299; Valparaiso, 27 pkgs., \$1,370; Vera Cruz, 21 pkgs., \$2,442; Yokohama, 30 pkgs., \$1,620.

January 27.

Antwerp, 16 pkgs., \$275; Berlin, 17 pkgs., \$339; Callao, 3 pkgs., \$147; 12 pkgs., \$620; Colon, 3 pkgs., \$107; 8 pkgs., \$267; Curacao, 2 pkgs., \$100; Guayaquil, 2 pkgs., \$105; Hamburg, 43 pkgs., \$2,347; Havana, 2 pkgs., \$535; 13 pkgs., \$143; 5 pkgs., \$179; La Guayra, 18 pkgs., \$1,018; Liverpool, 23 pkgs., \$1,760; London, 175 pkgs., \$5,105; Macoris, 5 pkgs., \$196; Para, 1 pkg., \$194; Rangon, 4 pkgs., \$228; Rio de Janeiro, 12 pkgs., \$521; Savanilla, 9 pkgs., \$1,000; Tampico, 11 pkgs., \$105; Vera Cruz, 80 pkgs., \$1,959; Vienna, 34 pkgs., \$1,082.

February 5.

Antwerp, 1 pkg., \$200; Bahia Blanca, 17 pkgs., \$1,760; Buenos Ayres, 734 pkgs., \$29,680; 1 pkg., \$175; Havana, 40 pkgs., \$1,647; Havre, 18 pkgs., \$1,136; London, 29 pkgs., \$4,742; 18 pkgs., \$530; Milan, 13 pkgs., \$497; Montevideo, 7 pkgs., \$841; Puerto Mexico, 9 pkgs., \$234; Rio de Janeiro, 4 pkgs., \$511; Santos, 20 pkgs., \$2,556; Savanilla, 3 pkgs., \$159; St. Petersburg, 8 pkgs., \$267; Sydney, 50 pkgs., \$715; Valparaiso, 24 pkgs., \$349; Vera Cruz, 263 pkgs., \$5,509.

If you do not possess that share of the world's material things you feel you ought to, no one is to blame but yourself; no one will get it for you but yourself, so go after it and get it.

Most of the speeches were along business improvement lines, but the music of Prof. Damasus Gallur and Wm. Craven, and the singing of Antonio Fodera, Miss Irene Murphy and Miss Genevieve Conroy banished all careful thoughts and carried everyone to the clouds.

The happy gathering did not disperse until a late hour, and assumed the aspect of a thoroughly agreeable social gathering rather than a banquet.

PROMPT PAYMENT OF BILLS

A Habit That Should Be Cultivated—What Holding Back Payments Means in the Long Run—Undermines Credit Standing.

The man who can pay his bills and doesn't is one of the public enemies who are responsible for the slow recovery of business. He cripples industry, restrains trade and creates a long line of debtors who cannot pay. He is a brake upon prosperity, a drag upon humanity.

He has been a deterrent factor in business the past five years, ranking in depressive effect next to the financial flurry of 1907. The habit of deferring payment, contracted anew in 1907, has become chronic with individuals, firms and corporations

and has served to harass business to an extent appreciable only to the bankers who carry the accounts of the retailers and smaller manufacturers.

By withholding payment of one bill a procession of difficulties is formed. A hoards his cash and embarrasses B, who has to put off C, and D is pressed to the wall. The chain of evil, started by the prosperous, reaches down through the ranks of industry, commerce and labor, cramping enterprise, confining trade and galling most of all the men at the bottom of the business structure.

This survival of panic times has become engrafted upon our business system to such an extent that in some circles the pride in being considered "prompt pay" is now regarded as old-fashioned, and skill in putting off one's obligations has come to be reckoned a desirable acquirement.

TRADE IN SOUTHERN CALIFORNIA.

Record Sales Show Great Increase During the Past Month—What the Various Managers Have to Report—All Lines in Demand—Sold Outfit on Way Home from Theater—Frank Moreno Married—Personal Items of Interest—Fitzgerald Music Co. Carrying on Extensive Advertising Campaign.

(Special to The Talking Machine World.)

Los Angeles, Cal., Jan. 27, 1912.

The month of January starts the new year with a most promising outlook for the coming year. All the dealers are very much encouraged over the past year's business and therefore are going into the field with more energy than before. Record trade for the past month has been most gratifying to all. The Edison opera is being sold with tremendous success; in fact, it is the largest seller of its kind in this section.

Chas. S. Ruggles, manager of Sherman, Clay & Co., reports business in a very good condition, there being a steady demand for Victrolas XIV. and XVI. practically in all finishes.

Medland's Pharmacy, exclusive Columbia dealers for Redlands, is, as usual, selling a number of machines and records. "Jim" Medland's energy is only exceeded by his immense popularity.

The Talking Machine Shop, of this city, is conducting a very successful business in both Victor and Columbia goods, especially a sale worthy of note is that of the first. Victrola XVI. to be sold in southern California.

Stubbs & Bohnert, of San Bernardino, have recently taken over the Baldwin Piano Agency and this popular line, combined with their Columbia agency, gives them every encouragement for a big 1912 trade.

The S. E. Purser Talking Machine Co., of this city, is having splendid success with the Victor, Edison and Columbia lines, which is largely due to the method of constant demonstrating an instrument at the door.

Wm. Hobbs Richardson, department manager of the talking machine department of the Southern California Music Co., is very much gratified at the success achieved during the past year and is very much encouraged over business prospects for this year.

Schireson Bros., the well-known Columbia dealers on North Main street, of this city, gave a very wonderful example of their "stick-to-it-iveness" a few days ago. Closing at 6 p. m., one of the partners returned, after attending the theater, at 11 p. m., just to see if all was locked up. Perceiving a gentleman apparently much interested in their show windows Mr. Schireson courteously asked him if he could show him anything, receiving a reply in the affirmative, the two entered the store and Mr. Schireson commenced a long and patient demonstration of the beauties and perfection of the graphophone. At 3 a. m. the next morning this demonstration ceased and the gentleman left the store, leaving an order for a machine and a number of records to follow, and Mr. Schireson carefully locked in his safe \$50 for the former and \$114 for the latter.

The friends and associates of Frank Moreno were surprised to learn of his marriage to Miss Evelyn Bach. The couple are well known in musical circles in Los Angeles. Miss Bach is one of the Bach Sisters, who have been on the Orpheum circuit for many years, while Mr. Moreno is the junior member of the Talking Machine Shop.

The Fitzgerald Music Co. is having splendid results from special advertisements which it has been featuring in the last few days. Advertising principally the Columbia Favorite, with a certain quantity of records, putting the outfit out for three days' trial. The majority of the sales were replaced by the more expensive instruments.

The J. B. Brown Music Co. has been most successful in the sale of the new Grafonola Mignonette. Mr. Hinman, the able manager of the talking machine department of this well-known firm, makes a specialty of his window display, every week bringing forth something new and novel.

O. A. Lovejoy, manager of the talking machine

department of the Southern California Music Co., reports business very good in the wholesale line, especially in the new Amberol concert records; also splendid run on the new Type B Amberola.

Mr. Jaggard, of Lovin & Wither, of Kingman, Arizona, was in the city a few days and states the Edison is the popular machine in his section.

The Colton Hardware Co. has been enjoying a good trade in Columbia goods, both locally and from its large mail order clientele.

W. J. Raynard, the traveling representative of the Southern California Music Co., is the proud father of a ten pound baby boy.

It is, of course, well known that the Thos. A. Edison, Inc., does not grant exclusive territory for the sale of phonographs, hence all dealers are in equal standing. In the Los Angeles letter of December 15 it was stated that W. A. Manson, of San Bernardino, has the exclusive sale of Victor and Edison goods. This is not quite correct. L. D. Houghton, an Edison dealer in the same city, has called our attention to the matter, and in fairness to all concerned we wish to emphasize that there is no "exclusive" territory granted to any dealer by the Edison Co.

AMBITIOUS VICTROLA RECITALS.

H. Schmidt & Son Co. Give Series of "Faust" Recitals with Orchestrelle, Orchestra and Colored Views from the Opera to Add to the General Effect.

(Special to The Talking Machine World.)

Davenport, Ia., Feb. 5, 1912.

The H. Schmidt & Son Co., the oldest piano and talking machine dealers in this city, and who maintain a large branch store in Muscatine, Ia., have been featuring strongly and with great success the Victor line of talking machines and Victrolas, which they handle exclusively. During the present season the house has been conducting a special series of "Faust" recitals, using the Victrola and records made by Geraldine Farrar, Enrico Caruso, Marcel Journet and Louise Homer for the purpose of illustrating the vocal numbers. The records are accompanied and incidental music furnished by the Schmidt Orchestra, composed of the following: Herman Schmidt, Sr., mellophone; Julius A. Schmidt, flute; Carl C. Schmidt, violin; Edward A. Schmidt, pianist and operator; Herman Schmidt, orchestrelle and accompanist.

The thoroughness of the effort to make the recitals interesting and successful is best appreciated through a glance at the following program, the situations in the opera revolving around the various musical numbers being explained in the accompanying text:

PROGRAM.

1. Faust Polpourri (Arr. by Ketterer).....Gounod
Aeolian Orchestrelle-Pianola Piano—Duet
Messrs. Edward and Herman Schmidt.
2. Heavenly Vision (French).....Caruso-Journet
3. Flower Song (Italian).....Homer
Accomp. by "Schmidt" Orchestra.
4. All Hail, Thou Dwelling Pure and Lowly (English)
Hamlin
Accomp. by "Schmidt" Orchestra.
5. Jewel Song (French).....Melba
Accomp. by "Schmidt" Orchestra.
6. But Why So Lonely?—Part II (French).....
Farrar, Glibert, Caruso and Journet
7. Forever Thine—Part II (French).....Farrar-Caruso
8. Let Me Gaze on Thy Beauty (Italian).....
Neilsen-Constantino
Accomp. by Orchestrelle, Violin and Flute.
9. Soldiers' Chorus (French).....
New York Grand Opera Chorus
10. Serenade Mephistopheles (French).....Journet
11. Church Scene—Part I (French).....Farrar-Journet
Accomp. by the Aeolian Orchestrelle.
12. This Is the Fair (French).....Farrar-Caruso
13. Then Leave Her (French).....Farrar, Caruso and Journet

Special interest and life is added to the recitals through throwing views of the various scenes in the opera on a large screen by means of a post card projector. It would seem as though this feature might be adopted with profit by talking machine dealers in other localities who make a practice of giving recitals of operatic music by means of talking machines. The post card projector may be purchased and operated at a fraction of the expense involved by a stereopticon, and in most ways is just as effective.

Be a live wire and you won't get stepped on. It is the dead ones that are used for door-mats.

The test comes with the lull—anyone can get business when trade is good.

**We don't let
the sun set**

on an unfilled order. No sir!

**Every order we get we ship
the same day it is received.**

That's why our customers stick to us and more come to us all the time, and the same thing applies to your business, if you give your customers the right service.

There are only two factors in the right service—to get *what* you want *when* you want it.

It sounds simple but does your jobber do it?

We do.

Anything you want in Victors, Victor-Victrolas, Victor Records, record cabinets, fibre needles, repair parts and the entire Victor line.

A card brings our booklet, "The Cabinet that Matches" and an interesting catalog.

REVIEW OF THE TRADE SITUATION.

Excellent Summary of the Progress of the Development of the Talking Machine and the Patents That Cover the Principal Processes Published by the Scientific American Recently—The Five Great Patent Fights Interestingly and Technically Described.

The Scientific American, which is recognized as an authority on matters affecting patents, recently published an interesting summary of the situation in the talking machine field, both past and present, which is worthy of reproduction herewith:

"The Berliner patent, which was granted February 19, 1895, and which the courts have upheld as valid and finally decided would not expire until the end of its full term of seventeen years, has had a history involving points interesting to both laymen and patent experts.

"The patent covers what may be called the fourth decided step forward in the development of the modern talking machine; the invention being that of Emile Berliner, who was also the inventor of what is known as the 'loose contact telephone transmitter,' a decided step forward in the development of the telephone art.

"The first step in the talking machine art, like the first step in many other arts, was rather scientific than practically useful. Leon Scott in 1857 published his discovery that if sound waves be projected against a diaphragm having a hog's bristle glued thereto, and the end of the bristle be held against a moving paper covered with lampblack, so long as no sound is heard the bristle remains at rest and traces a straight line on the moving paper, but when a sound is heard the diaphragm and bristle vibrate in unison, and the line traced on the moving paper is no longer straight, but undulating.

"The second decided step in the development of the talking machine was taken by Mr. Edison, and is disclosed in his patent, No. 200,521. Mr. Edison utilized Leon Scott's scientific discovery of the fact that sound produced the undulatory motion of the diaphragm and bristle, and constructed an apparatus which consisted of a cylinder on a shaft, the cylinder being covered with tinfoil. A diaphragm having a needle fixed thereto was used to produce the undulatory lines. Mr. Edison found that when a reproducer needle, fastened to the diaphragm, was made to track along in the undulating line made by the needle it would reproduce the sound that produced the undulations.

"The third great step forward in the talking machine art is disclosed in the Bell and Tainter patent of May 4, 1886, wherein among other things the record instead of being indented, as by the Edison needle, cut the record groove with a cutting tool or recorder.

"Both in Edison and in Bell and Tainter the grooves are of different depths or what are called 'hill and dale' record grooves. One disadvantage of such a record is that the reproducer, in afterward tracking a 'hill and dale' record, when it passed over a 'hill' was liable to jump over into the next groove. Mr. Berliner in his fourth great step in the development of the talking machine kept the depth of his groove always the same, and caused his recording stylus to cut sidewise.

"This Berliner record groove obviates the liability of the reproducer jumping from one groove to another, and feeds the reproducer stylus along without the aid of a separate feed screw.

"Mr. Berliner called his machine a 'gramophone,' to distinguish it from the 'graphophone' or 'phonograph,' the marked difference between them being that in the 'gramophone' the reproducer is fed along by the groove itself, whereas in the 'graphophone' or 'phonograph,' the cut groove being a 'hill and dale' groove requires a separate feed screw.

"As in nearly all cases of patents for valuable improvements, the owners of the Berliner patent were soon compelled to go into the courts to maintain their monopoly, and in their first big fight it was alleged that because Berliner had exhibited his machine before the Franklin Institute in 1888, more than two years before he applied for his patent, this use of his machine invalidated his patent, since a patent must be applied for before it has been in public use more than two years. The courts held

(140 Fed. Rep., 860) that such use as the exhibition use, which was free and not for gain, was a mere experimental use and did not invalidate the patent.

"Before the second big suit began Berliner had allowed his Canadian patent, granted February 11, 1893, to become forfeited for non-payment of a tax thereon. The question arose whether or not the American patent expired when the Canadian patent lapsed under R. S. 4,887, then in force, limiting the term of all United States patents where the same inventions were patented abroad to expire at the same time with the foreign patents. The court held (146 Fed. Rep., 534) that since the Canadian patent was originally granted for a term of eighteen years from February 11, 1893, the United States patent did not expire when the Canadian patent lapsed.

"The court should have stopped there, since that decided the only question before it, viz.: Did the United States patent expire under R. S. 4,887 when the Canadian patent lapsed? But the court went on and decided something not before it, namely, that the United States patent would expire February 11, 1911, which created considerable confusion, as will be seen later.

"The third great fight in the courts was over a question whether or not a device whereby a spring attached to the arm carrying the horn and which was at full tension when the reproducer was in the center of the record, untwisting as the record rotated, was an infringement of the Berliner patent, which in effect calls for a talking machine reproducer which is moved along the record by the sound grooves alone.

"It was held (177 Fed. Rep., 248) that the device claimed did infringe Berliner's claim, even though the reproducer was not moved entirely by the record, but was assisted by the spring 5.

"The fourth fight in the courts involved the question whether a maker of the records alone infringed a claim calling for a sound reproducer moved along the record by the sound grooves alone. The court held (150 Fed. Rep., 147) that where the record was evidently intended to be used to so move a sound reproducer it was a clear case of contributory infringement.

"The fifth and last big fight in the courts arose over the question of the time when the patent would expire. In the second suit above mentioned it was unnecessarily decided that the patent would expire at the expiration of the Canadian patent, namely, February 11, 1911, but its owners raised the point that the Canadian patent was for a different invention from the United States patent and therefore should not limit the seventeen-year term of the United States patent.

"The claim of the United States patent was: 'The method of reproducing sound from a record which consists in vibrating a stylus and propelling the same along the record by and in accordance with the said record.'

"The claim of the Canadian patent was: 'A rotating record tablet, a reproducing stylus mounted to have a free movement over the surface of the record tablet.'

"The Court of Appeals of the Second Circuit (not yet reported) held that although this question had been decided years before it should not have been, since its decision was not necessary to the matter then before the court, and also held that the Canadian patent was for a different invention from the United States patent and therefore the United States patent would not expire until February 19, 1912, the end of its seventeen-year term.

"Besides the foregoing, numerous other suits have been brought to restrain infringements of this patent, involving matters that have been settled in accordance with the foregoing five major decisions, which have cleared up many legal points heretofore unsettled in the patent practice.

"The patent has been a veritable gold mine to its owners, and as is too unusual, Mr. Berliner, the inventor, has shared largely in the financial rewards which result from the monopoly given inventors."

Know the important things in your business and concentrate on them. Leave the less important things to others.

PROGRESS THE RULE IN BALTIMORE.

Dealers Report That Business Has Kept Up in Remarkable Shape During January and That Prospects Are Excellent—Handsome Window Display at Cohen & Hughes Store—W. C. Roberts Now in Charge of Talking Machine Departments of Both Stores of E. F. Droop & Sons Co.—General Review of the Situation in the Monumental City.

(Special to The Talking Machine World.)

Baltimore, Md., Feb. 9, 1912.

All of the talking machine dealers in this city are reporting progress for the month of January. In fact, the word progress seems to be the slogan right along here, for the dealers never fail to state, when questioned about trade conditions, that business in the talking machine world continues to increase. The smaller talking machines as well as the records seem to be more popular than ever with Baltimoreans and the dealers to a man declare that they have every reason to look forward to the year 1912 being the best ever. While similar reports have been recorded for many months past the dealers say that they are justified in saying that outside of December, January has gone the other periods one better from a sales standpoint.

Cohen & Hughes have a beautiful window display of talking machines. It consists of a huge clock formed from talking machines, the dial of which is composed of Victor records. The design is the work of M. Silverstein, who has charge of the talking machine department. Mr. Silverstein reports that he is swamped with orders and finds it hard to get hold of enough stock to keep up with the demand. The firm has just filled a large wholesale order for Victors which was sent in from New York.

Manager W. C. Roberts, of the local store of E. F. Droop & Sons Co., has been placed in full charge of the wholesale and retail departments of both the Washington and Baltimore stores of the company. One of Mr. Roberts' first official acts in his new capacity was to introduce into the Washington store the up-to-date stock system which has made his management of the local store so successful. With this system in vogue it will be possible for the firm to supply the wants of the customers in Washington with the same degree of promptitude as is the case here. It is also possible with this method for the salesmen and other employees to know within a moment just what records and styles of machines are in stock and all other information necessary in the government of the business.

Columbia business has been in excellent shape all during January both in regard to records and machines. Manager S. A. Denison of the local branch has placed a number of new agencies throughout the State and in parts of the South to handle the Columbias. A visitor at the local branch store was Marion Dorian, treasurer of the Columbia Phonograph Co., who has been looking over the accounts and investigating the conditions from a trades standpoint as prevail in this section. Mr. Denison declares that the holiday trade has had nothing on the January output and that indications are great for a fine showing during the present month.

Tommy Gordon and Joseph Fink, the hustling youngsters who operate the talking machine end of the Kranz-Smith Piano Co., are a happy pair this month and all because they have had such great results with the Victors since entering the business. While December was a dandy one for them, they declare, like the other local dealers, that January certainly held its own, indicating that the sale of talking machines is the coming business.

William Knabe & Co. report a good month with the Columbia machines, while Manager Albert Bowden, of Sanders & Stayman, makes similar statements regarding the Victor and Columbia trade of his firm.

At Hammann & Levins' it was stated that the January business with the Victors was such as to cause no complaint.

CONDITIONS ROSY IN CLEVELAND.

Chief Complaint Among Dealers and Jobbers Is Shortage of Goods—Phonographs and Records for Entertainment of Inmates of Prison Farm—Recent Trade Visitors of Note—Victrola Recital in School—N. H. Cook's Clever Catch Phrase—Instrument to Photograph Sound—What the Various Dealers and Jobbers Are Doing to Stimulate Trade.

(Special to The Talking Machine World.)

Cleveland, O., Feb. 10, 1912.

Conditions of the most rosy character exist in Cleveland talking machine circles. Dealers, both jobbers and retailers, with scarcely an exception, report trade thus far in the new year to have been unusually good. Some dealers claim that if they could have got shipments of goods as desired, and as ordered from the factories, the volume of their business in January would have been quite as large as it was in December. Many have orders booked for delivery when the goods arrive. There has never been a season when more interest in talking machines was manifest than at the present time.

Charles James, of New York City, who is associated with the Prison Reform Association and the National Committee on Prison Labor, was a recent visitor to the Cleveland Prison farm, where are to be assembled all the city prison and charitable institutions. The department owns two phonographs, and a citizen has just donated 200 records for the enjoyment of the city charges. Mr. James was favorably impressed with the policy of installing talking machines, and will commend it to other institutions in the country.

Geo. W. Lyle, general manager of the Columbia Phonograph Co., General, on his way home from the West, stopped over and spent the day with Geo. R. Madson, manager of the company's store in this city. He expressed himself pleased with conditions and the prosperous outlook here and throughout the country, generally.

C. H. Denslow, recently with the Eclipse Musical Co., of this city, and for a number of years engaged in the talking machine business, has accepted a position with W. C. DeForeest & Son, at Sharon, Pa., and is in charge of the talking machine department of that firm. Mr. Denslow is an enterprising, active young business man and will prove a valuable acquisition to his employers as well as to the city of Sharon.

Warren L. Kellogg, representative of the Victor Talking Machine Co., was in Cleveland interviewing dealers the first of the month. He stated business with talking machine dealers generally, was in a highly prosperous condition in all localities he had visited.

Ben. Feinberg, special wholesale representative of the Columbia Phonograph Co., was in this city February 2, a guest of the local manager of the company, Geo. R. Madson.

Frances Elliott Clark, of the Victor Educational Department, gave a lecture and Victrola recital at the Brownell School, February 5. A large audience was in attendance and both the lecture and recital were listened to with closest attention and highly appreciated.

The Eclipse Co. recently sold a XIV Victrola, and \$100 worth of records, to John D. Rockefeller, who made a present of them to the Euclid Avenue Baptist Church.

Norman H. Cook, manager of the talking machine department of the W. F. Frederick Piano Co., is a man of ideas. In a recent large display Victrola advertisement he advised people to "Buy a Theatre on easy payments," and that "in a few months, with less expenditure than you are now spending for pleasure each week, this magnificent theatre is yours, with the continuous right to such headliners as Caruso, Scotti, Melba, Tetrassini, Lauder, Sousa, Christie and many others of equal fame." The advertisement was attractive and has resulted in a number of additional theatres in the city.

Mr. Thomas, of Thomas & Co., Findley, O., Victor dealers, was a visitor at the Eclipse Musical Co.'s store a few days ago. He reported business was good and prospects bright.

A late and important development in motion picture projection is the Diamond Screen, which is being manufactured in Cleveland by the Craft Curtain Co. The great advantage claimed for this screen is its brilliancy, stereoscopic depth, sharpness of focus and clearness, and at the same time practically relieving all eye strain. A satisfactory picture is produced with all the lights in the theatre lit.

Professor Dayton Miller, of Case School of Applied Science, has perfected an instrument known as a phonodeik, which photographs sound. Recently he gave a lecture at the school and threw pictures of flute and trombone notes on a screen, and showed a fragment of a record made of a quartet's rendition of "Rigoletto." He is now working on an instrument to analyze tones, and thinks that the two instruments will eventually perfect the phonograph.

The Wickens Co., of Lorain, O., is doing some very good concert work in the schools, churches and clubs of that city. The earnest efforts of Mr. Wickens have proved very effective and the company is doing a fine business.

T. E. Rice, of Wooster, Moore & Meade, of Coshocton, D. W. Wile, of Ashland and J. E. Lightner, of Painsville, all of Ohio, have recently put in large Victor stocks, purchased of the Eclipse Musical Co., of this city.

Miss Blanche Hill, who, for the past six years has been with H. E. McMillin, is now in charge of the Edison department of the establishment. Her long musical experience and exceptional treatment of customers, has endeared her with a host of friends.

Conditions with the Eclipse Musical Co. are of the most pleasing kind. Manager Towell, of the wholesale department, is very optimistically inclined, and believes "that all things will come to him who pushes business." He said: "Trade is fine. Especially good is our wholesale business which is increasing all the time. The demand for VIII and IX Victrolas is especially large—in fact all types of Victrolas are in big demand. Our record trade is very large, and only handicapped by our inability to obtain a sufficient supply."

The retail department of the Eclipse Musical Co. is flourishing, as it has been since moving on to Euclid avenue. "Our retail business," said Miss I. A. Johnson, in charge, "has been steadily increasing during the new year, many more sales being made than was anticipated. There has been and still is, a great demand for records, and the only fault to find is the impossibility to get the goods needed." The company has had a specially designed automobile manufactured for its use.

Business is very good with the Collister & Sayle Co., Phil Dorn, manager, said he could sell many more Victrolas, but that he couldn't get them. He stated the January wholesale trade was good, very much better, considering the inclement weather, than he had anticipated, and that the retail sales were very satisfactory. The company has a large record trade which is steadily increasing.

The talking machine department of the May Co. is a busy place. Miss Ethel M. Volk, who has had the management for several months past, has systematized and greatly improved the department. She said: "Business is fine and has been unusually good since last November. There is a great demand for Victor IX machines and our record trade is very satisfactory. The only trouble is in obtaining a sufficient supply of machines and records. Especially good are the sales of higher priced machines. There is also an excellent demand for Edison machines and records."

The W. H. Beuscher & Sons Co. says its volume of business is limited by reason of its inability to obtain the desired quantity of goods. Sales were said to be largely of the higher priced machines and records. Mr. Beuscher stated prospects were of the most encouraging character.

The Columbia Phonograph Co. had a remarkably fine run of business in January and it has kept up well into February. Geo. R. Madson, manager, said: "The year 1912 started in with a rush with us. Our elaborate advertising of the

Favorite Grafonola brought an astonishing number of sales, and all the Columbia dealers in the city, and in this territory, report that business is rushing. Our record sales are large, and cover the entire list, from the cheapest to the most expensive and in all the various languages. If the factory had been able to supply us with machines, our retail business during the past month would have been fully equal to the volume in December."

Under the efficient management of F. B. Guion, the talking machine department of the B. Dreher's Sons Co. is rapidly assuming proportions of considerable magnitude. Mr. Guion's long, practical experience in the business, coupled with his extensive acquaintance and popularity, make him a valuable Dreher asset. Speaking of conditions, Mr. Guion said: "Business is fine—away ahead of expectations—and it would be 100 per cent. better if we could obtain a sufficient supply of machines and records from the factory. Our present quarters are inadequate for the business, but when on April 1 we occupy our new location on Euclid avenue, one entire floor will be devoted exclusively to Victrolas. It is now being fitted up and finished in fine style and will be one of the finest talking machine stores in the country."

A. O. Peterson, of the Lucker Edison jobbing house, is pleased with conditions. He said: "Business is very satisfactory. The new Opera machine has created such a demand that we can't get a sufficient supply. There is also a good demand for the other types of machines as well as for records. Mr. Madison, of the legal department of the Edison Co., and W. H. Hay, traveling State representative, were visitors here on February 1. Mr. Hay reported the Edison business good throughout the State." Mr. Peterson attended the meeting of the Executive Committee of the Jobbers' Talking Machine Association at Chicago. He stated that all the jobbers who were present expressed themselves satisfied with present conditions and that the future looked very promising.

Business with the Caldwell Piano Co. continues unusually good, according to H. D. Scroton, manager of the talking machine department. We have several orders booked for Victrolas, and are awaiting shipments. We have one of our new parlors in operation. Our weekly recitals in the large audience hall are attracting large crowds.

Mr. Friedlander, of the Bailey Co., also expressed himself well satisfied with conditions.

The W. F. Frederick Piano Co. is doing well in the talking machine department and highly pleased with results. N. H. Cook, manager of the department, said: "Within the past few days I have had a number of fine Victrola sales—in fact, every day shows a good substantial growth in our department."

"Business is very good," said O. E. Kellogg, manager of the talking machine department of the H. E. McMillin & Son Co. "The great trouble with us at present," he said, "is how to get the goods, not how to sell them. The Victor and seal record business is way ahead of any previous year. There is a particularly gratifying demand for the \$100 Victrolas. Prospects for the rest of the Winter and Spring are good. H. E. McMillin & Son Co. has been incorporated, with a capital of \$100,000, and purchased the business of H. E. McMillin. The officers of the company are: H. E. McMillin, president; H. E. McMillin, Jr., vice-president; W. S. Hale, treasurer; O. E. Kellogg, secretary, and with George N. Papake, constitute the directors."

H. M. Brainard, of the Brainard Piano Co., which took a line of Columbia goods last month, said he was well pleased with the venture.

The Goodman Piano Co. is having a nice trade in Victrolas and Victrola records, and the business was constantly improving.

Charles I. Davis reports business is good and that he is having a very satisfactory trade in both Victor and Edison goods.

The Phonograph Record Exchange, 59 the Arcade, is a new venture, under the management of C. L. Goble. The concern deals in second-hand machines and records.

A company is known by the men it keeps.

SHOW MORE RESPECT FOR "TALKERS"

Newspapers, Realizing the Importance of Those Machines, Now Inclined to Give Them More Serious Attention in Their Columns—An Interesting Article on the Subject Which Recently Appeared in the New York Sun—The Great Sums of Money Involved.

Newspapers nowadays display a tendency to treat the talking machine in a more serious vein than formerly. The merits of the talking machine and its tremendous influence for good have forced this recognition.

Too many newspaper men have been prone to look upon the talking machine as a sort of joke, overlooking entirely its educational importance as well as amusement features. The New York Sun in a recent issue, speaking more particularly of records, made the following reference to the talking machine business:

With the talking machine, as the more expensive machines now are, mounted on cabinets of fine wood beautifully finished, it is common for the purchaser to buy a machine whose case will harmonize with the surrounding woodwork, hangings

or decorations of the room in which it is to be placed. The cabinet of the machine contains racks that will hold a considerable number of records. Some talking machine owners, having a great number of records, now have specially built for them wall cases, like bookcases, except that the shelves are deeper.

Any owner with many records is likely to catalogue them; some owners keep card indexes of their records, and there are many talking machine owners who accumulate records in great number.

Here, for instance, is one owner who has records to the value of \$4,000 and another who has \$2,000 worth. There are many thousands of talking machine possessors whose records mount into hundreds of dollars in value and up into higher figures still, far in excess of the original cost of the instrument.

Once started buying records they rarely stop; with new records coming out all the time their only question is as to selection. People have their ways in buying records. Some buy at irregular intervals whenever something comes out that strikes their fancy; others buy regularly, say once a month, \$30 or \$40 worth or more of things they want or

of selections played for them when they come in to buy.

In buying records people display the varied tastes that might prompt them in choosing other forms of entertainment. Some take mainly opera records, some light opera, some like songs, some hymns, some waltz music, and there are many who take all sorts of things.

And the variety in the records supplied is almost bewildering. There is no musical instrument that does not have its records, most of them in great numbers, and, of course, there are endless records of all sorts of combinations of instruments, as there are of the human voice, of solo singers and of voices in every known combination. There is at least one bird record, that of the song of the nightingale.

Of course there are recitations, speeches, dialogues, minstrel records; there are all sorts of records, with more and more coming all the time. There is nothing worth hearing or that it is thought people would like to have that is not promptly reproduced on talking machine records.

Only a dozen years or so old, the talking machine industry is now a great business. There are now produced in this country many millions of records annually, and one American talking machine concern has factories also in London, Paris, Berlin and Bombay. The talking machine in one form or another, cheap or costly, is sold everywhere on earth.

Many millions of talking machine records are sold at very low prices, while many other millions bring prices comparatively high. The most costly records of single voices are those of Patti and of Tamagno, which are sold at \$5 each. There is a vocal sextet that sells at \$7 a record, and there are quartets at \$6 a record, and quintet, quartet, trios and duets at \$5, and from that at various prices down.

Many singers of note have added very substantially to their incomes by singing for the reproduction of their voices in talking machine records. At first it was the custom to pay for each song thus sung an agreed upon fixed price; but now there are singers who take instead of a fixed price a royalty on the records sold, and in some cases those royalties amount to very large sums. It is said that Caruso's royalties from talking machine records amount to from \$75,000 to \$100,000 a year.

CLAIMS NEW DISCOVERY.

In Letter to the World, John Bailey Browning States That He Has Made the Discovery That Any Resonant Body May Be Made to Reproduce Sound in Co-operation with the Ordinary Tablet Now in Use.

Camden, N. J., Feb. 1, 1912.

Talking Machine World, New York, N. Y.:

Gentlemen—During some experiments I have secured results which I think will be of interest to you and the readers of The World.

A discovery by which any resonant body is made to talk or reproduce sound in co-operation with the ordinary record tablet now in use.

The ordinary sound reproducers, tone tubes and horns used in sound reproducing machines may be dispensed with.

The application of this principle, in co-operation with the ordinary sound reproducing machine, greatly improves the naturalness of the reproduced sound as to quality and timber.

The pitch is equalized to prevent the high tones from suppressing the low tones, giving a more harmonious melody, at the same time eliminating the disagreeable sounds, except in very old or badly worn records and even these are greatly improved.

The limplitude may be regulated as to intensity or loudness, according to desire.

This is not in the nature of a scratch elimination, tone modified or special stylus, but an entirely new method of reproducing sound which can be adapted to any machine.

By the further application of this discovery, as to recording, etc., it is possible for one to hear sound reproduced with all its original attributes as to quality, pitch and amplitude. Yours truly,

JOHN BAILEY BROWNING.

Patented Sept. 26 and Oct. 2, 1906; Sept. 10, 1907.

J. NEWCOMB BLACKMAN, Pres.

"THE WHITE BLACKMAN"

VERNIS MARTIN CABINETS

And Their Liability to Be Affected by Climatic Conditions, Particularly in the Matter of Dulling or Varnish Cracking, the Subject of an Interesting Letter from Superintendent Kieffer, of the Victor Talking Machine Co.

The following interesting statement has been made by the Victor Talking Machine Co., which is of general interest in view of the influence of weather conditions on highly-finished cabinets:

"Although our dealers will always sell comparatively few of the 'Vernis Martin' finish Victrolas, we find it necessary that they should be informed more positively relative to the delicate nature of that finish, and, to that end, we are inserting an exact copy of a letter just received from our cabinet factory superintendent, viz.:

"Mr. Geissler, Executive Building.

"Dear Sir—I desire to bring to your attention the matter brought up by our distributors regarding the condition of some of our Vernis Martin cabinets, brought about by the return of a cabinet from Kansas City, which they claim was checked and in such bad condition that they could no sell it.' This cabinet was returned to me on my personal request, which was based on the claim made by the selling department that the cabinet was defective.

"Upon receipt of it I personally inspected same and found the condition was not due in any way to any defective work, as I found that there was nothing the matter with the cabinet except that the varnish was "crimped," due to exposure to an extremely low temperature, which, judging by the condition of the cabinet, must have been very much below zero.

"The question now arises as to who should assume this responsibility or cost of repairing this cabinet. Should we do so ourselves we practically admit the work defective; at the same time, it may not have been due to any carelessness on the dealer's part, but to the railroad company, and if we charged him for it, may be doing him an injustice.

"The materials and workmanship in these cabinets are first-class, and would live for a lifetime if the proper care were taken of this class of work. I think the distributors and everyone handling these cabinets should have their attention called to the fact that they cannot handle these cabinets the same as they do ordinary finishes.

"My suggestion would be to call their attention to these facts by a circular letter, and in the meantime I will fix this cabinet up and send it out, but if we are to run across this kind of a thing as a steady diet, it would be much better for us to discontinue the manufacture of Vernis Martin cabinets, or only ship them out at a time and in a manner that would insure their safe delivery into the hands of the customer.

(Signed) "E. T. KIEFFER, Supt."

"We never wished to enter into the manufacture of Vernis Martin cabinets, but the insistent demand therefor seemed to make it obligatory. The checking of the varnish on cabinets of this finish is inevitable under certain circumstances, and these circumstances arise at some time during the life of the object, and it makes no difference whether it be a grand piano, finished in Vernis Martin and decorated by an artist of worldwide note, that would cost \$50,000 apiece (and there have been several such made), or a harp, made by the most noted French makers, who should naturally understand most perfectly this French style of decoration, at an expense of \$10,000, or a Victrola made by this company. At the end of a certain period, earlier or later, according to accident, the varnish shows minute checks and other blemishes.

"These blemishes are, in most cases, not apparent at a short distance; are probably no greater than are found in any or almost every other piece of furniture in your possession, if you seek for them, but, on account of the inherent difficulties, we must candidly state that our dealers and the public should be plainly made to assume all responsibilities for this finish.

"If the case is plainly and honestly explained to your prospective customer (people who buy these goods are usually very intelligent people, who have

had experience with other expensive furniture and will admit the truth) a complaint will probably never be lodged."

PHONOGRAPH SURVIVES FLOOD.

Edison Machine Rescued from Ruins of Austin, Pa., Runs as Though Nothing Had Happened—Proof of Durability.

While calamities such as the flood in Austin, Pa., last fall result in untold suffering and financial loss to local interests, nevertheless they have the virtue in many cases of proving the quality of certain products that have survived the strenu-

PHONOGRAPH THAT WENT THROUGH FLOOD.

ous experience. In the case of the Austin flood, for instance, John W. Greenan, a resident of that town, lost all his personal and household effects in the flood, but later found his Edison phonograph in the ruins.

The machine later was shipped back to the factory, where it was wound up and ran as though it had never been in a flood. Thomas A. Edison, Inc., state that the machine offers rather eloquent testimony regarding Edison quality, despite the fact that the machines are not guaranteed to be calamity proof.

No. 600 (Patent Applied for)

AN INNOVATION HOHNER'S REVOLVING DISPLAY

JUST think of receiving a wonderful revolving display stand worth at least \$15, built of thoroughly seasoned wood of 1/4-inch thickness, obelisk in shape, mounted on a metal disk connected by means of a cylindrical bar to a set of durably constructed clockworks of sufficient strength to revolve the obelisk for over 3 1/2 hours just by one winding. ABSOLUTELY FREE OF COST! This will surprise you, but it is exactly what the world-famous HOHNER factories are offering every progressive Dealer to-day. Imagine this beautiful exhibit in your show window or on the display counter—don't you think it would increase by manyfold the sales of your merchandise, and bring great prestige to your store? This cannot be denied.

The entire stand is finished in a deep rich mahogany piano polish with very attractive silver pressings and having the number and retail price of each instrument stenciled in neat design. Its extreme measurements are 32 inches high by 10 1/2 inches square at the base, and 6 3/4 inches square at the top.

On the obelisk is fastened by means of steel clamps and supports a quantity of thirty-six genuine HOHNER Harmonicas in the keys of A, B, C, D, E, F and G, with a variety of twenty different styles. Each instrument is an excellent seller and is bound to meet with instantaneous success.

You secure the COMPLETE STAND FREE OF COST and besides you are the gainer by over 35 per cent. in cash profit on your investment. This is the proposition:

You Receive

12 Assorted Harmonicas to retail for	25c. each	\$3.00

ENTERTAIN THEIR FRIENDS.

Eastern Talking Machine Associates Held Annual Reunion in the Hall on Third Floor of Building at 177 Tremont Street, Boston, February 8—Members of Staff Display Their Ability in Various Ways.

(Special to The Talking Machine World.)

Boston, Mass., Feb. 8, 1912.

The Eastern Talking Machine Associates, composed of the employees of the company of the same name at 177 Tremont street, held one of their successful annual functions to-night in their hall on the third floor of the building. The interior was tastefully decorated with streamers of various colors and Japanese lanterns, and with the bright lights presented a most attractive appearance.

The early part of the evening was devoted to whist, in which the members and their lady friends took keen delight. This was followed by an intermission and light refreshments, and then came that part of the program over which the committee had spent much time, for it was determined to have it quite the best of its kind that the Associates ever gave. And it was.

The talent secured would have done credit to some far more pretentious, professional occasion. Foremost on the program was Mme. Wilhelmina Wright Calvert, dramatic soprano, who had been the chief solo singer at the Apollo Club concert two nights previously in Jordan Hall. She gave several numbers in a most acceptable manner, proving herself the competent artist that she is. Thomas E. Clifford, whose fine baritone voice often has been heard about Boston, was a most agreeable feature, and he and Mme. Calvert were more than successful in duets. Fred Bond, lately of the Quinlan International Agency, and John Smallman, Jr., of the Apollo Quartet, got extended applause for their work, and Percy Edgar, well known about Boston, and at one time with Neil Burgess, the actor, and John W. McElroy, tenor, all added greatly to the pleasure of the evening. "Happy" O'Neil and A. C. Story, known in their professional capacity as O'Neil and Story, got the audience into a high glee over their work, and Ralph Corey, trombone soloist of Sousa's Band, gave selections of an enjoyable character. Others included in the program were Edgar L. Davenport, the actor, a brother of the late Fanny Davenport, who gave selections; Frank E. Doyle, baritone soloist; Adolph Nagle, cellist of the Boston Symphony Orchestra, whose wife also was present; F. W. Kerr, baritone, and Elmer Crawford Adams, violinist, whose playing was a special feature. The program was continued until a late hour, but it was generally agreed it was the best entertainment the Associates ever have given. In the audience were a number of representatives from the other talking machine companies and agencies around the city, to whom invitations had been sent.

The committee having the arrangements in hand consisted of W. J. Fitzgerald, M. L. Reed, E. A. Welch and George A. Reece. The ladies' com-

mittee, which is an auxiliary to the Associates, and which lent valuable aid in making the function so successful, consisted of Miss C. L. Collins, Miss Florence Marble, Miss Mary Sheehan and Miss Anna Davis.

BEECROFT'S NEW MOVE.

Clement Beecroft Becomes Sales Manager for a Well-Known Cabinet Manufacturing Company—A New Line of Cabinets Which Will Interest the Talking Machine Trade.

An announcement appearing in another part of The World will interest the many friends of Clement Beecroft, who, by the way, is a veteran in the talking machine trade, for it was about fifteen

posed that the Hanover talking machine cabinets shall strictly maintain the standard established by this well-known manufacturing house.

Mr. Beecroft, whose headquarters are at 309 West Susquehanna avenue, Philadelphia, is sales manager for this company.

It will be seen by consulting the announcement made in another part of this paper that he has a line of cabinets which will appeal strongly to talking machine men.

Mr. Beecroft also handles talking machine needles made by W. H. Bagshaw, Lowell, Mass., and record envelopes made by Wolff Bros., of Philadelphia.

It is understood that the facilities of this company are excellent and that they can handle with despatch any cabinet orders which may be placed with them.

NEW YORK JOBBERS ENTERTAINED

By Landay Bros. at Dinner, Which Was Followed by Business Talk on Instalment and Cash Terms, on the Night of February 7.

Landay Bros., Inc., gave a social dinner to the jobbers of Greater New York on Wednesday night, February 7, at the City Athletic Club, 48 West 54th street. After the good things provided had been done justice to several matters of importance were gone over and a resolution passed appointing a committee to confer with the Victor Talking Machine Co. in an endeavor to provide some suitable plan whereby the Victor Talking Machine Co. would control the matter of instalment and cash terms. J. Newcomb Blackman was made chairman of this committee. Max Landay presided with his accustomed *savoir faire*. Among those who attended were Charles Bobzin, of the Aeolian Co.; Louis J. Gerson, of John Wanamaker; Nathan Goldfinger, of the Greenhut-Siegel-Cooper Co.; S. B. Davega, of the S. B. Davega Co.; V. W. Moody, of the New York Talking Machine Co.; Oliver Jones, credit man of the Victor Talking Machine Co.; Emanuel Blout; E. A. S. Barkelew, of the Silas E. Pearsall Co.; James B. Landay and Max Landay, of Landay Bros., Inc.; Milton Goldsmith, of Sol Bloom; E. Paul Hamilton, of Frederick Loeser & Co.; I. Davega, Jr.; J. H. Dodin, of Gimbel Bros.; Benj. Switky, and J. Newcomb Blackman, of the Blackman Talking Machine Co.

NEW MODEL CLEANRITE BRUSH POPULAR

J. Newcomb Blackman, in a chat with The Talking Machine World this week, stated that the new No. 20 Cleanrite record brush for Columbia disc machines, which is now ready for delivery, is meeting with much favor throughout the trade. Many inquiries have been received concerning this brush, and the Blackman Talking Machine Co. is now ready to supply all demands made for it. This new model, the No. 20, is the same as the well-known No. 10 for Victor, except with a spring clasp to fit the Columbia concert grand sound box and clamps on the rim of same. It is a veritable *cade mecum* to users of records.

CLEMENT BEECROFT.

years ago when he first became connected with this industry.

Mr. Beecroft has a wide acquaintance as well as a host of friends among talking machine men, for his business has brought him into the most intimate relations with the jobbing trade, where he is widely known and well liked. For a period of years he was connected with the manufacture of horns and horn supports, and has to his credit numerous patents, including one of the best-known horn inventions in Europe and America.

Inasmuch as the horn trade has diminished greatly owing to the steady increase in the manufacture of hornless machines, Mr. Beecroft has now turned his attention to the manufacture of cabinets, and he has made a business connection with the George A. Long Cabinet Co., Hanover, Pa.

The "Hanover" goods have a splendid quality reputation in the furniture trade, and it is pro-

A VICTOR AUTOMOBILE.

Model Made Entirely of Victor Machines, Records and Parts Attracts Much Attention in Show Window of Grinnell Bros.' Store in Kalamazoo, Mich.

There have been models of automobiles made from soap, from hardware and from other materials, but it remained for G. H. Pendleton, connected with the Grinnell Bros.' store in Kalamazoo, Mich., to startle and attract the attention of the people of that city through the medium of an automobile made of talking machines and parts.

A UNIQUE ADVERTISING DISPLAY.

The accompanying illustration republished through courtesy of The Opera News, gives an excellent idea of the display. The wheels of the automobile are made of Victor records, the body of Victor machines, the seat of needle boxes and the other details of cranks, tone-arms and other parts of Victor machines. The Victor dog on the seat gives the final touch to the display. The novel exhibit attracted a great deal of attention and caused much favorable comment in Kalamazoo.

HOW ADVERTISING IS RUINED

By the Salesman Who Lacks Energy to Display the Goods Advertised—Some Instances.

A most attractively displayed advertisement, well written, convincingly written, invited me to a large mercantile establishment the other day. The invitation seemed "aimed" at me. I accepted and went to the store. The windows seconded the invitation and I entered the establishment. This store I have often visited. I like trading there.

Some neckties well displayed in a show case attracted my attention and I asked the serving clerk the price. "Choice 50c.," said he. None being removed from the case for inspection, however, I asked the price of some in another case. "\$1.50 each," said he.

My every other want had been most satisfactorily supplied, and every other visit most interesting. The last one made me feel that I never wanted to go there again. Departing, I visited another store and made my purchases.

Such a man as stood behind the counter at store number one is not only a customer-destroyer but a contaminator. He makes no effort to please and destroys the effort to please that his fellow-employees have. He's an unsafe proposition.

You can't pluck a toadstool from a mushroom patch and have a savory mushroom stew. The single stool contaminates the whole. This salesman is the toadstool in the mushroom patch.

SECURES THE EUFON CO.'S BUSINESS.

The Metallwaren Fabrik-Aktiengesellschaft in Erzsebetfalva, near Budapest, has recently bought the factory of Eufon & Co., and is now manufacturing the hornless Eufon apparatus. The new owners will in the near future place some new models on the market, and are at present reorganizing the firm's agencies in all the countries where they have been working; they have arranged for the establishment of agents-general in Vienna, and have already opened an elegantly furnished

showroom in that city, on the Graben, for retail business. In Budapest the retail business has been taken over by the Harmonia A.-G., which has already started a separate department in its business situated in the In-City.

PRODUCING TIN AND WOODEN HORNS.

(Special to The Talking Machine World.)

Newark, N. J., Feb. 10, 1912.

A concern that is a factor in the talking machine supply industry is the Newark Tinware & Metal Works, maker of talking machine horns.

This corporation has a well-equipped plant at 28-32 Division place for the production of tin and wooden horns, which are furnished in any shade, plain color, or with an elaborate festoon of roses handpainted on the inside of the horn. The latter are known as Flower Horns, and the firm has been congratulated many times upon their beautiful appearance.

W. Miller, the head of the Newark Tin & Metal Works, is admirably assisted in the manufacturing and executive details of the business by his son, J. Miller, who is rapidly acquiring sufficient knowledge to even run the business alone. As far as the handling of tin is concerned, from which the greater number of their horns is made, W. Miller is regarded as an expert and his

skill is reflected in the appearance of the company's products.

COPYRIGHT TREATY SIGNED.

Envoy Kerens Signs Our First Direct Treaty with Hungary.

A copyright treaty between the United States and Hungary was signed at Budapest on January 30. The American Ambassador, Richard C. Kerens, by special authorization of President Taft, signed it for the United States.

This is the first direct treaty between the United States and Hungary, and it is hoped that it will remove the long-standing grievance of Hungarian authors and composers, who heretofore have been unprotected in America.

The shrewd advertiser will place himself in the position of the class of people most likely to buy his goods and direct his appeal to what he believes is their most susceptible point.

I have never seen the man yet that was as big at the job. The reason for this is that the bigger the man gets the bigger the job gets.

FIFTY YEARS IN NEW ZEALAND.

Chas. Begg & Co., Ltd., of Dunedin, and with Branches Throughout the Dominion, Celebrate Semi-Centennial—An Interesting History of Progress.

(Special to The Talking Machine World.)

Dunedin, New Zealand, Jan. 8, 1912.

Chas. Begg & Co., Ltd., of Dunedin, and with branch establishments in several other leading cities of the Dominion, have just celebrated the semi-centennial of the establishment of the business in 1861, and have marked the occasion by issuing a special jubilee souvenir in the shape of a handsome booklet, setting forth the history of the company, with appropriate illustrations of the various stores and portraits of those now in charge of the business.

Chas. Begg, founder of the business, began the manufacture of pianos in Aberdeen, Scotland, in 1849, and his pianos speedily became well known throughout North Scotland. Meanwhile, some of the Northern Scots decided to seek their fortunes in faraway New Zealand, and Mr. Begg decided to cast his future with them, arriving in Dunedin on October 8, 1861, when the gold fever was at its height. Mr. Begg first began by tuning pianos, and soon opened a small shop with four pianos as stock. He also began the manufacture of pianos, but gave up the venture owing to the difficulties encountered through the absence of proper machinery.

Mr. Begg died in 1874, and for a time the business was continued by the trustees, who, in 1877, erected the present substantial building for the accommodation of the growing business. Some ten years later the two sons of the founder, Alexander and Charles Begg, became identified with the concern and subsequently took over the entire management. Alexander Begg is now managing director, and Charles Begg is director in the company and manager of the Dunedin warehouse. In the course of time, branches were opened in Wellington, Timaru, Invercargill, Oamurua and Nelson, with agencies in many of the smaller towns of the Dominion. The company also maintains an office in London, in charge of a home buyer.

Begg & Co. handle chiefly British and German pianos, including the Brinsmead and Bechstein makes, a complete assortment of music, musical merchandise and gramophones and Edison phonographs in large numbers.

That the business of the company is still progressing is evidenced by the recent erection of a large and handsome new building for the housing of the Wellington branch.

He—Why do you call that record the Woolen record?

RECORDS BY WEBER AND FIELDS.

The Famous Team of Fun Makers Sign with the Columbia Phonograph Co., General, to Make Records of Their Original Songs and Dialogues.

Coincident with the renaissance of the original Weber and Fields at the Broadway Theater, where their reunion jubilee is attracting such enormous houses, comes the announcement that this world-famous team have signed to make records exclusively for the Columbia Phonograph Co., General, New York. Weber and Fields, whose reputation is now at its height, have decided that it is good sense and good business to record some of their original fun-making songs and dialogues, and for this purpose of perpetuation have been secured by the Columbia Co. It is their intention to contribute more than an ordinary business attention to the perfection of these records. They will specialize, and the public is assured of some really characteristic hits brought out in the original Weber and Fields manner. The foregoing will be of unusual interest to the trade generally, as the name Weber and Fields is synonymous with real entertainment.

TINFOIL RECORD DISPLAYED

In the Window of the Southern California Music Co. with Photograph of Edison's Original Phonograph a Great Attraction—Old and New Edisons Contrasted—Interesting Data.

(Special to The Talking Machine World.)

Los Angeles, Cal., Feb. 4, 1912.

In one of the display windows of the Southern California Music Co., 332-334 South Broadway, in this city there is at present being exhibited one of the earliest tinfoil records made in Tyrone, Pa., in 1878 by Dr. E. O. N. Haberacker. With this tinfoil record is displayed an enlarged photograph of Mr. Edison's original phonograph, of which Dr. Haberacker's instrument is an exact duplicate. These interesting souvenirs of the early attempts at sound reproduction are attracting much attention in the windows of the Southern California Music Co. As a contrast one of the latest model steel cabinet Edison business phonographs is displayed, with an excellent likeness of Mr. Edison examining the machine.

Dr. Haberacker read one of the first accounts of Mr. Edison's success in producing a phonograph that would talk back, and from the description he made a duplicate, with the assistance of Will L. Ramsey, now of Los Angeles. Mr. Ramsey has been totally blind for twelve or thirteen years, and was forced to drop his official connection with the Title Insurance & Trust Co., of Los Angeles. He recently has mastered the intricacies of the type-writer and now transcribes rapidly to it from dictated matter on the Edison business phonograph, and has resumed active business with the Title Co., with which he was associated for many years.

The tinfoil record now being displayed was presented by Dr. Haberacker as a souvenir to Mrs.

F. E. McCullough, of Los Angeles, and it was through her courtesy that the public is now viewing a rare curiosity. The record recorded the doctor's voice as he repeated "Old Mother Hubbard" and "Mary Had a Little Lamb." He first produced the sound vibrations by the aid of a tallow candle. When the needles struck the paper the smoke would be scratched away, thus showing the sound marks on the paper. It was previously that Mr. Edison announced that he had invented the phonograph, and his model was then followed by Dr. Haberacker.

Mr. Ramsey having demonstrated practically the success of typewriting with the aid of the Edison business phonograph, another blind operator, E. Wherry Curtis, of Tulare, Cal., upon hearing of it, at once ordered a similar instrument for his own use. With this equipment he will transcribe court testimony as dictated by the official reporter of the Superior Court of Tulare County, Cal.

FORM LUNCHEON CLUB.

Talking Machine Men Resolve to Eat Under the Auspices of an Imposing Title.

The talking machine men of San Francisco and the Pacific Coast have formed a new club, a luncheon club, to be known as the Oakland Grafonola-Victrola-Amberola Club. The first meeting was called at the lunch hour Wednesday, January 24, at Pabst Cafe, on Eleventh street. Among those present were Walter S. Gray, Pacific Coast manager for the Columbia Phonograph Co., General; L. V. Hill, manager of the Kohler & Chase store; Charles L. Moore, traveler for the Columbia Co.; Thomas B. Watson, manager of the Oakland Phonograph Co.; James L. Clancy, of the new firm of Clancy & Le Claire, who recently bought out the Kohler & Chase department; and L. Le Claire, the second member of the new firm. A guest at the festivities was Lewis H. Bishop, of Oakland, familiarly known as the "Bishop of Oakland."

Subjects of interest to the trade were discussed, as well as general topics of common interest. Everybody was happy over the past year's excellent business and a very optimistic feeling regarding 1912 was apparent. The club has designated Wednesday of each week, at the same hour and same place, as its official reunion day.

A HOME MADE TALKING MACHINE.

Barber in Michigan Makes Talker Out of a Grindstone, a Soap Box and a Sewing Machine Needle.

(Special to The Talking Machine World.)

Marquette, Mich., Feb. 5, 1912.

John Honka, a barber at Negaunee has blossomed forth as an inventive genius. He has made a phonograph from a razor grindstone, a paper funnel, a sewing needle, a shaving soap box and a piece of thin wood. Oddly to relate, the device actually gives an excellent reproduction from a disc record.

The paper funnel is connected with the soap box, which acts as the reproducer. The needle, stuck into the piece of thin wood, furnishes a diaphragm, and this is placed in the soap box, which in turn is supported over the disc so that the needle touches the surface of the disc. The disc lays on the grindstone, which revolves in a horizontal position and is turned by a handle. Mr. Honka entertains his patrons with this novel device.

VICTOR FOR MUSIC STUDY.

Deeply Appreciated by Music Class of Nineteenth Century Club of Memphis—Special Study Being Made of Grand Opera with Aid of Talking Machine.

(Special to The Talking Machine World.)

Memphis, Tenn., Feb. 10, 1912.

The value of the talking machine for music study is well illustrated in the case of the music study class organized by the Nineteenth Century Club of this city. The object of the class is to familiarize the members with the works of the great composers and their histories, and this year the class has taken up the study of grand opera.

The study has been made specially interesting by the informal talks by C. D. Johnston, librarian of the Cossitt library. Mr. Johnston is a great lover of music and has made a special study of grand opera for his own pleasure. He has what is probably one of the best private collections of grand opera records, which he reproduces on a late model Victor talking machine. These records, by the world's greatest singers, he has used in connection with his talk, so that by exercising the imagination as to the stage settings and costumes, the class members have been enabled to enjoy the full beauty of the different operas.

The opera taken up at the last meeting of the class was Verdi's "Rigoletto," which was sung in Memphis last season for the first time in many years. During Mr. Johnston's talk the soprano solos were sung by Tetrassini, with Caruso as the duke and the celebrated baritone, Ruffo, as Rigoletto, while the famous quartet was sung by Bessie Abbott, Caruso, Louise Homer and Scotti. This number was so much enjoyed by the musicians present that they greeted it with enthusiastic applause. Nearly the whole opera was given, and, with the talk, bringing out the above points, the morning was so much enjoyed that Mr. Johnston has been asked to repeat it on another occasion.

Fay Shoul, of Amsterdam, N. Y., proprietor of the music house in that city which bears his name, was a recent guest at the retail and wholesale Columbia Phonograph Co., General, store at 89 Chambers street, this city. Mr. Shoul stated that business at Amsterdam was excellent and steadily growing. Mr. Shoul handles the Boardman & Gray, Winter & Co., Bush & Gerts, Rudolf, and Laffargue lines of pianos in his music department.

Trained men, under competent direction, working with definite standards in mind—that's scientific management!

NEW VICTOR CATALOG ISSUED.

Imposing Volume Contains Many New and Improved Features of Value to Both the Dealer and the Public.

The new catalog of Victor records just sent out to the trade is especially interesting owing to the number of new features, all making for convenience in finding single records or groups of records, which have been incorporated in the substantial volume. The new catalog is up to date in every particular and indicates the amount of attention that was given to its compilation. In issuing the new catalog the Victor Co. might paraphrase the slogan of a well-known manufacturer of toilet requisites to read, "We couldn't improve the records, so we improved the catalog." Among the new and valuable features that will appeal alike to both dealers and the public are to be included:

Thumb indexes on each page, both right and left hand, to facilitate turning to any desired page.

Every record in alphabetical order under title of selection.

Every double-faced record in alphabetical order under title of both selections.

Every record in alphabetical order under name of singer or player.

Every record by standard author under name of composer, with date of birth and death of composer.

Every record under one or more subject headings for ready reference.

Every opera with place and date of first performance.

Every operatic record under title of the opera. All selections from opera grouped according to acts under title of opera.

All selections from opera in exact order they are sung or played in the opera.

Reference list of Victor singers and players.

List of subject headings.

Pronouncing table of composers and artists.

Pronouncing table of opera titles.

First aid list of fifty selected records for new Victor owners.

SENSITIVENESS TO ATMOSPHERE.

A certain atmosphere characterizes every store. To this atmosphere all customers are more sensitive than employers or employees realize and the atmosphere itself is created entirely by the mental attitude of the clerks toward their customers.

The Columbia Phonograph Co. has filed a general denial in the \$20,000 damage suit filed in this city by Dr. Walter J. Courtney, a St. Paul dentist, who charges that he was falsely accused of the theft of a \$150 Grafonola-Mignon.

HENRY EILERS EAST.

The Prominent Pacific Coast Piano and Talking Machine Man Speaks of Prosperity in His Section—Immense Business in Talking Machines the Past Two Years.

Henry Eilers, head of the Eilers Piano House, with a chain of stores on the Pacific Coast, has been visiting leading manufacturers of talking machines, pianos and other musical specialties in the East for the past few weeks, accompanied by Geo. Heidinger, manager of the Eilers Spokane (Wash.) store.

As far as California is concerned, Mr. Eilers gives some interesting figures. "The per capita wealth of the State is \$3,050, making the total wealth of the State nearly fifty-five hundred millions; looks like this written out—\$5,500,000,000.00.

"The deposits and resources of the banks in California total \$842,969,880, out of which \$567,185,799 represents deposits alone. You can see that this figures down to an average of \$487 per person. This is less than Massachusetts and New York, but is nearly \$200 more than the State of Pennsylvania.

"The population of California put into New York would make this place look countrylike, for the entire State has 1,735,500, while New York, I believe, has about five millions.

"But now compare the average wage of the territory. California has 100,355 wage earners who earn \$64,656,686 every year. This means per worker \$644. New York State's average wage is \$502; Pennsylvania, \$482, with Illinois only \$549. I do not have to comment on this difference. The cost of living, which is the chief topic, is considerably lower in California.

"You will be interested in these publishing figures," he commented, "for California used \$3.86 per capita in her publishing enterprises. This means nearly seven millions of dollars. The weight of newspapers and periodicals mailed for a year would be 18,000,000 pounds.

"About 350,000 pupils are enrolled in the California public schools, and the cost of educating these pupils is about \$15,000,000. In electric and street car lines about \$265,000,000 are invested."

Mr. Eilers concluded with the statement that the wealth produced per worker in the group of States along the Pacific coast, including California, Oregon, Washington, Idaho, Nevada, Utah, Arizona, New Mexico, Colorado, Wyoming and Montana was approximately \$650 in agriculture, \$1,100 in manufacture, and \$1,250 in commercialism. He added that in this territory the wealth production per family—averaging everything—is about \$1,500.

All the foregoing looks very tempting to the Easterner; even the writer came near departing, but by the use of observation and mathematics it is found that the distance from New York to San Francisco, for instance, is 3,230 miles. Walking at the average rate of 25 miles a day, it would take 129 days to return for a look at the bright lights. One hundred and twenty-nine days is over four months, and four months—while said quickly by judges—is nevertheless "some" long time.

In speaking of talking machine conditions on the Coast, Mr. Eilers said: "A large percentage of the business of the Eilers Music House for the past six months has been in talking machines. This industry is making marvelous strides on the Coast. That, together with the automobile business, is largely responsible for the slight laxity in the piano trade. It is my opinion that this condition is only temporary, however, and that the piano will eventually reassert itself. By this I do not infer that the automobile or talking machine trade will suffer, as they both have come to fill a definite place."

Mr. Eilers is emphatic in his belief that the 1915 trade conventions should be held in San Francisco. It is his impression that the exposition of 1915 will be the "greatest ever."

In conclusion, Mr. Eilers said: "The opening of the Panama Canal is going to re-establish the merchant marine of the United States, which has never really been abolished, but has been neglected owing to our concentration upon internal affairs."

A VISITOR FROM LONDON.

John A. B. Cromelin, European Manager for Columbia Phonograph Co., Arrived at Headquarters This Week for Short Visit—Interesting Chat Regarding Business in Great Britain and on the Continent.

The Columbia Phonograph Co., General, New York, has as a guest for the coming two weeks John A. B. Cromelin, the European manager for the company, with headquarters at London, England. Mr. Cromelin arrived in New York February 10 and will devote his time while in this country to business entirely, spending a portion of it at Washington and at the factories in Bridgeport, Conn.

During a chat with The World relative to the industry on the Continent, Mr. Cromelin said: "General business is good. There seems to be a decided revulsion of feeling toward a better class of instruments and records, and the public is every day becoming more convinced as to the value of good machines. Practically all of the cheaper grades are of German manufacture. In England the retail trade is very largely transacted on the instalment basis, and, with the use of a little judgment in putting out goods, the collections are excellent. Sales between the manufacturers and jobbers are for cash, or for what England terms cash, being a settlement in 30 days. The Columbia Grafonola Favorite has made a big hit this season. Foreign trade wants to see a lot for their money, which accounts for the growing tendency toward hornless machines."

Regarding the past year's business Mr. Cromelin said: "We experienced a heavy increase over 1910, nearly doubled, in fact, in actual sales. The present outlook is certainly bright and augurs well for 1912. We have increased our factory facilities in London in anticipation of future needs."

"One feature of foreign business which is to be regretted is the ruinous price cutting methods indulged in by many of the Continental countries. This unclean method places honest competition on an uneven and unsatisfactory basis."

"The demand for records is enormous, popular hits leading in favor. Loud, brilliant records get the call in England in preference to the more moderate ones enjoyed by the American public."

"The dictaphone business," concluded Mr. Cromelin, "is gaining by leaps and bounds. The German nation is buying them extensively. In fact, the Germans are always ready to take up any mechanical contrivance which will prove an aid to efficiency."

Gauge your competitor by what he does rather than what he says and thereby save much worrying. If hot air was music some of the other fellows would be brass bands.

The "man from Missouri" says, "Show Me," but the man from Texas says, "You've got to put it in my hand." The free recital gives the Texan his chance.

Recording Expert

of ten years' experience in recording and manufacturing of matrices for disc records, will be open for engagement after March 1. Correspondence held confidential. For interview address, G. W. H., care Talking Machine World, 1 Madison avenue, New York.

ELECTROTYPY

who can take charge of electrotyping foundry manufacturing matrices for disc records wants position. Expert in making duplicate matrices and backing up. Address C. D. E., c/o Talking Machine World, 1 Madison Ave., New York.

Echo Record Albums

FITS DISC RECORDS

EVERY MAKE AND SIZE

Patent applied for
L. J. Gerson.

If you send your name and address, a sample 1911 Album Booklet, illustrating the latest style Echo Albums for both single and double-faced records, with discount sheet, will be mailed you. Echo Albums are indexed 1 to 16 with index in front and fit all record cabinets after slats are removed. Also, can be substituted for the old-style filing cases in Victrolas. If your jobber does not carry Echo Albums remit \$1.00 to us for a sample 10-inch Echo Album, mailed postpaid. Regular discounts to dealers.

ECHO ALBUM CO., 926 Cherry St., Philadelphia, Pa.

1,800,000 Possible Buyers Are Being Referred to Co

The Saturday Evening Post of February 17th (our advertisement), with this illustration and a definite offer of the Columbia and 2 twelve-inch Double-Disc Records.

No need to tell you much about it because you will see it in the Saturday Evening Post—and the only reason why we mention it in the business yourself. We mention the announcement for business-making for Columbia dealers **is on.**

Watch it right through the season—and if you happen to have a much better view!

Registered U. S. Patent Office

CREATORE RECORDS!

For Immediate Sales.

Here are great records by a great band—the first recordings ever made by a musical organization which has hardly an equal in popularity. It will be worth your while to make a special point of hearing these Createore records, not only because they are excellent examples of what can be done by the Columbia recording process, but also as interesting examples of Createore's work. In all the records are embodied tonal effects which have never before been secured on a record. In order to produce some of these effects nearly double the usual number of orchestral instruments was grouped before the recording horn in our laboratory.

These first Createore records present an interesting variety, offering one double-disc of standard sacred music, comprising Createore's celebrated rendition of "Nearer, My God, to Thee," with the great "Hallelujah Chorus" from "The Messiah"—a two-part record of Von Suppe's most famous overture, "Poet and Peasant," one of the world's greatest and most melodious popular classics, and a third coupling in which strains of Ganne's "Pour la Victoire" are heard in company with Mozart's world-famous "Turkish March."

These are all 12-inch Double-Disc Records—price, \$1.

Columbia Phonograph Co., Gen'l. Tribune Building, New York

To Business Men

Business men
in every line admit
the value of good
trade papers.

A trade paper must be
original—it must contain a
variety of matter including news
service—technical information—in
fact it must crystallize the entire news
of the special business world, and be a
helpful adjunct to every department of trade.

Scan the columns of the Talking Machine
World closely and after you have completed an
analysis of the contents of this publication see if you
can duplicate its value in any other trade!

The World is a help to the talking machine
business.

It exerts an healthful optimism.

It wields an influence for the good and every man
who sells talking machines, no matter in what part
of the universe he may be located, should receive
this publication as regularly as it is issued. He is
missing a vital business point if he fails to do this.

Thousands of dealers not only in the United
States but in every country on earth consult the
pages of the World regularly.

They draw from the World pleasure and profit.

The talking machine business has a brilliant
future, and this publication is doing much to enlarge
the business horizon of every retail talking machine
man in the world.

To receive this paper annually costs but \$1.00.
All foreign countries \$1.25.

FROM OUR EUROPEAN HEADQUARTERS

1 GRESHAM BUILDINGS, BASINGHALL STREET, LONDON, E. C., W. LIONEL STURDY, MANAGER.

Trade for Past Month Has Exceeded Expectations—This Condition Exists Pretty Well Over the Country with Some Exceptions—Price Cutting Continues to Be One of the Great Questions of the Day—This Evil More Pronounced in London Than in the Provinces—Combined Action by Manufacturers to Relieve Trade of This Evil Looked For—Royalties to Be Paid Under New Copyright Law Now Subject to Discussion—An Edison Idea That Wins Favor—J. G. Murdoch & Co., Ltd., Acquire Selling Rights of Klingsor Instruments for United Kingdom and Colonies—News of Trade in Germany—L. Arnaud Resigns—Winner Syndicate Introduces New Specialties—News of the Month.

(Special to The Talking Machine World.)

London, E. C., Feb. 5, 1912.

My forecast last month that January record and machine sales would hold up satisfactorily was a little wrong, inasmuch as that sales are more than satisfactory; they are really unparalleled in the whole history of the trade. And this happy condition is pretty general among manufacturers, and with the exception of a few districts affected by labor troubles is prevalent throughout the kingdom. It is really surprising in a way, because at the time of writing considerable nervousness exists in business quarters as to the attitude which the miners will take up in regard to the minimum wage question. Aside from this there is at present no particular signs of unrest in other trades, but if the miners do strike it means nothing but a national trade stoppage. One can therefore appreciate that some feeling of insecurity is observable, although matters have recently taken a more favorable term.

The Matter of Price Cutting.

Another matter which might have been expected to seriously affect the prosperity of the trade is the unusual amount of price cutting indulged in by certain factors and dealers. In London it is distinctly greater, proportionately speaking, than in the provinces, and while this is rampant to such an extent it must upset trade very considerably. At the moment, when everyone is experiencing splendid business it is perhaps not so noticeable, but presently the season will be on the wane somewhat, and then the full effect of this evil will be strongly felt by those who have directed their energies to maintaining trade on a price-maintenance basis. There is as yet no talk of combined action on the part of manufacturers, but the sooner they get down to business, as they eventually must, to protect their own interests and the trade generally, the better.

Royalties Under New Copyright Law.

The royalties to be imposed under the copyright act when it comes into force next July is not disturbing the minds of record manufacturers particularly. As a matter of fact, they are taking things very philosophically, even indifferently. When the time comes they will foot the bill—not before. There is apparently some little show of reluctance to fully disclose what tactics they will adopt, but as far as I am able to gather their camp is a divided one; more's the pity. Some are in favor of bearing the expense themselves, others favor charging a little more to the factor and dealer, but this much is certain, the public will not be called to pay it, except perhaps in the case of the 9d. cylinder. *Nous verrons!*

Valuable Edison Suggestions.

In view of the fact that many Edison enthusiasts are accustomed to play their records over either too fast or too slow, I notice that on looking through their advance March samples the National Phonograph Co., Ltd.—as concern representing Edison phonograph interests is still termed on this side—have hit upon a splendid idea by which they

cannot fail to come into contact with each and every user. The company has issued a little slip printed upon blue paper and have put one of these into every cylinder carton so that user's attention is attracted immediately he is about to play over the record. Upon this little slip is printed the following: Important notice—"Don't play Edison records too fast. To obtain perfect reproduction the mandrel must revolve at 160 revolutions per minute, the speed at which the records are made. Note—To determine accurately perfect adjustment the reproducer arm should travel from one of the circular rings on the back rod to the other in exactly one minute." This is certainly a brilliant idea to attract the attention of the user.

"Financial" Fun.

One does not expect a paper such as the Financial News to indulge in witticism. Such is usually left to periodicals like Punch. But the aforementioned newspaper, which, by the bye, is considered to be one of the leading "money" papers of this country, recently lent its columns to the following: "A newly registered concern, Long's Wholesale Talking Machine Co., Ltd., should have a vogue among politicians. They are the people who do 'wholesale talking.'"

More Politics.

Talking about politicians, there is a great hubbub in Belfast at the present moment. Winston Churchill, one of the most "liberal" Liberals, is due to speak there shortly on the subject of Home Rule. There seems to be much opposition to him be several "notorious" Tories, who mean to obstruct him tooth and nail. What the outcome of this will be does not exactly concern the talking machine trade in general, though in particular I am confident that Thomas Edens Osborne, the prominent Belfast factor, is bound to make the most out of "political" records which he so strongly featured in the last general election.

Murdoch's Klingsor Arrangement.

An important item of news reaches me from that colossal factoring firm, John G. Murdoch & Co., Ltd., of Farringdon road, E. C. These enterprising people have just acquired sole selling rights of the Klingsor instruments for the United Kingdom and for such British colonies and dependencies as Canada, Australasia, South Africa and India. Considering what a unique machine is the "Klingsor," with its hornless "wire" front, the instrument in the hands of Murdochs should have at least a fair chance to prove its sterling worth. I gather, too, that Messrs. Murdochs have in contemplation several modifications and even improvements in hand anent the machine which, considering its general excellence, is saying volumes.

Decapo's New Move.

Hitherto manufacturers of the Decapo record have confined their energies to turning out only 10-inch records, and with these they have been strikingly successful. No wonder then that they are about to turn their hands to the production of a 12-inch series. These are to be ready for the market in a very short while.

Adieu, Arnaud!

There is a general expression of regret in trade circles over here in consequence of the retirement from the trade of our genial friend L. Arnaud, who has just resigned his position with Messrs. Pathé Frères, Pathéphone, Ltd. Mr. Arnaud, who has occupied the position of sales manager with this company for the past four years, has earned the esteem of all with whom he has come into contact. Mr. Arnaud, who has taken up an important position in a different line of business altogether, will be succeeded by C. P. Sheard, who has been with Pathé's for some few years. To the man who has gone and to his successor I have on behalf of The World wished them both a hearty success. As joint manager with Mr. Sheard, S. P.

Turner remains as before, except that he seems to get busier and busier every day.

A Sound Controller.

One of the latest devices put on the British market comes in the shape of a sound controller which is backed up by innumerable testimonials as to its excellence. The accessory is known as Sanders' "Meltone," and selling at a half crown, offers a substantial and profitable line to all enterprising dealers the world over. The device consists of an apparatus which fixes on the stylus bar of any disc sound box. From what we heard the Meltone certainly makes an appreciable difference in the tone. The manufacturers, by the way, claim that by its use it will eliminate all harsh and foreign noises, and that it mellows the tone without muffling. Full particulars of this little accessory may be had on application to Sanders Meltone Co., Ltd., 71-72 Strand, London, W. C.

New Machines and Accessories.

The progressive state of the trade on this side is exemplified by the introduction of several new machines, records and accessories, and among the records are first and foremost the introduction of the "Winner" disc, a double-faced record of standard type. This is being introduced by the Winner Syndicate, of Camberwell, an organization which has under its guidance and control a stable commodity, as advance numbers show. The first catalog gives a list of some nine dozen titles, containing a representative series of selections which should appeal to peasant and prince, rich and poor, and any other main divisions of the community. Another disc which promises to storm the market is an unbreakable one manufactured, it would appear, somewhat on the lines of the old Nicoler record, only having a few improvements. The inventor is well known in the trade. The basis of the disc is cardboard, over which is a thin coating of shellac. I understand that the disc will retail, when ready, at less than half the cost of the present standard make.

Copyright in Brazil.

I learn that the Brazilian Senate has recently passed a bill, already assented to by the Chamber, whereby foreign authors are placed upon the same footing as are native authors.

An Amusing Story.

An amusing story anent the hostilities between Turkey and Italy came to light just recently. It appears that a decree went forth from the Ottoman Empire declaring an ad valorem duty of 100

STROH VIOLS

VIOLIN, VIOLA, ETC.

The mellow and matured tone of these instruments, which are constructed largely of aluminum, yet possess *none* of the characteristics of the gramophone or wind instrument, is only one of its many points which are fully set out in an illustrated booklet which will be mailed free on request to the sole makers.

One String Fiddle

GEO. EVANS & CO.

OLIVER DITSON Co.

150 Tremont Street BOSTON

NEW YORK and PHILADELPHIA

FROM OUR LONDON HEADQUARTERS—(Continued.)

per cent. upon all goods emanating from Italy, and further that all goods showing no source of origin would be considered to be Italian. The strange part of the story comes from a Constantinople dealer who, when ordering goods, notified a German talking machine manufacturing firm of the state of affairs. However, it transpired that the trying Teutons ignored his advice and forwarded his order without clearly stating the source from whence they came. Consequently the Turkish dealer had to pay some fifty pounds, notwithstanding the fact that he went through each record severally and pointed out to the customs authorities that the goods came from Hannover. He could not, however, obtain a rebate, since Ottoman obstinacy precludes the possibility of error on the part of the Sultan's servants.

Pronouncement of the Holy Russian Synod.

Speaking of affairs in Turkey puts me in mind of the recent pronouncement by the Holy Russian Synod anent talking machine records. It appears that one of its bishops recently presented a plea to inhibit priests from assisting in the production of talking machine records of sacred chants, as it tended to lower the dignity of the church. The petitioner's plea, after much discussion, was adopted and a decree has been issued to the effect that the practice must cease. It seems strange that the Russian church, which is in so many features similar to the Latin, should be so widely different in its pronouncements in this direction. It was only some three or four years ago that Pius the Tenth encouraged the use of the talking machine and saw in it a powerful instrument whereby to further the teaching of the Gregorian chants.

Trade in Germany.

From Germany comes news that during the first eleven months of last year the exports in talking machine goods of the Fatherland amounted to over 16,000 marks, as against 14,000 odd during the same period for 1910. Our German friends are, by the way, rather violent in their attitude toward the new Australian tariff, which shows a preference to goods imported from Great Britain. Hitherto

"talkers" were duty free articles, but with the revised customs duty a tax of 30 per cent. ad valorem has been imposed upon such goods when coming from this country, but of 35 per cent. when from any other country.

His Master's Voice Records.

In the February list of "His Master's Voice" records special attention is directed to the orchestral selections by that famous combination of instrumentalists, the New Symphony Orchestra, personally conducted at the Gramophone laboratory by Landon Ronald. These records certainly represent the finest example of orchestral recording ever issued. They are really superb. The complete February list is as follows: "Peer Gynt" Suite (A), "Morning" (Grieg); "Peer Gynt" Suite (B), "Death of Ase" (Grieg); "Peer Gynt" Suite (C), "Anitra's Dance" (Grieg); and "Peer Gynt" Suite (D), "In the Hall of the Mountain King" (Grieg), New Symphony Orchestra; "Lucrezia Borgia" selection (Donizetti); "Gondoliers," selection 1 (Sullivan), and "Gondoliers," selection 2 (Sullivan), Band of H. M. Coldstream Guards; "Glory of the Yankee Navy March" (Sousa), Sousa's Band; "Drei Romanzen," No. 1 (Schumann), oboe, Arthur Foreman; "Andante Religioso" (Thomé), Renard Trio; "La Precieuse" (L. Couperin-Kreisler), and "La Chasse" (Cartier-Kreisler), violin, Fritz Kreisler; "A Song of Sleep" (Somerset), Mme. Kirkby Lunn; "Beauty's Eyes" (Tosti), with violin obligato, Evan Williams; "Beautiful Land of Nod" (Lehmann), Miss Caroline Hatchard; "Margharita" (Löhr), John Harrison; "I Know Where I'm Going" (arranged by Hughes), Percy Whitehead, and "Johnnie" (Stanford), Percy Whitehead; "Mandalay" (Willeby), Stewart Gardner; "Pilgrim's Song" (Tschaikowsky), Robert Radford; "Charge of the Light Brigade" (Tennyson), recitation, Lewis Waller; "Gems from Erminie" (Jakobowski), the Light Opera Co.; "Dear Little Jappy Girls" ("Mousmé") (Monckton and Talbot), Miss Cicely Courtneidge; "Tempt Me Not," George Robey; "I'm a Married Man" (Crawford), Joseph Coyne; "Lily of La-

guna" (Leslie Stuart), Eugene Stratton, and "My Old Dutch" (Ingle), Albert Chevalier.

An Excellent Record List.

The National Phonograph Co. has hit upon a really good scheme, which it announces to its dealers in this month's Phonograph Monthly. If the reproducer is out of order the best of records may prove anything but musical. In this case the reproducer probably needs some slight adjustment or repair. The company has therefore made arrangements to overhaul any damaged reproducer and put it in thorough order for the nominal sum of one shilling. Another little item of news, by the way, is the engagement of the Band of H. M. Irish Guards to make Edison records. Their first attempt figured in a recent list, and there are now about half a dozen titles recorded and more to follow. Herewith we give the full list of Edison records for March: Edison Amberol concert records, list price 2s. 6d. each—"Agnus Dei," Mme. Marie Rappold; "Meditation—Thais," Albert Spalding. Edison Amberol Records—"The Wanderer's Goal" (overture) (Suppe), National Military Band; "Come Sing to Me" (Thompson), David Brazell; "Strolling in the Gloaming, Dear" (Gaze), John Bardsley; "Mamie May" (Barrett and Darewski), Jack Charman; "The Gift" (Weatherley and Behrend), Miss Violet Oppenshaw; "I Don't Care" (Godfrey and Williams), Billy Williams; "I Never Knew I Loved You" (David and Penso), Albert Crawley; "Queen of My Heart" (from "Dorothy") (Cellier), Peter Dawson; "Memories of Mother" (Morris and Harkness), Wm. McEwan; "Sons of the Brave," march (Bidgood), National Military Band; "Extase—Reverie" (Ganne), Tollefson Trio; "Happy Days," Miss Elizabeth Spencer; "War March of the Priests," "Athalia" (Mendelssohn), Edison Concert Band; "Inflammatus," "Stabat Mater" (Rossini), Miss Agnes Kimball and chorus; "A Dream of Paradise" (H. Gray), R. Fishyr Davies; "Cradle Song" (K. Vannah), Miss Elsie Baker; "Funeral March of a Marionnet" (Gounod), American Standard Orchestra; "Has Anybody Here

Andrews; and "Giggling," polka march (Christine), National Military Band.

Important Columbia Productions.

The Columbia Co. rarely goes wrong in its forecasts as to the popularity of the records it "stars" above the rest, so that when it declares that the 12-inch record this month of vocal gems from "Florodora" will create a sensation, it will be well worth watching.

The issue of the music hall sketch, "The Coster's Christening," on Columbia-Rena this month provides a happy sequel to "The Coster's Courtship" on the last supplement. With this record is presented a printed story of the two sketches, and if there is any reader who (as it may accidentally have happened) has not received this "Story of the Play," he is invited to write to the Columbia advertising department, 81 City Road, E. C., for a copy.

Columbia-Rena records this month provide the completion of the great list of pantomime hits on this make, and enables the manufacturers to say, with justifiable pride, that they have the most complete list of panto songs of the year. A special Pantomime Supplement has been issued and can be had of any dealers or direct from the Columbia Co. In this is listed every big song of the moment in complete and handy form. It is worth getting as a useful reference list.

And it is highly significant of the enterprising policy of the Columbia Co. that they should announce the exclusive engagement of Walter Passmore, of Gilbert and Sullivan fame, for Columbia-Rena, and offer to the masses the singing of the talented artist at popular prices. The first record by Walter Passmore is issued this month.

Among the exclusive additions to the list of Columbia-Rena artists for this month, in addition to Walter Passmore, the famous Savoy comedian, are Billy Williams; Beth Tate, the popular "Californian Girl" whose "All Alone" and "Billy" are the rage of her audiences; George Bastow, the original singer of "Captain Gingham" (in that song); Harry Weldon, the inimitable exponent of the silly goalkeeper, "Stiffy"; the Poluskis, in more cross-talk, and Hector Gordon, the principal comedian in the Theater Royal, Bradford, pantomime, singing new Scotch comics.

Reductions in Cable Rates.

Important reductions in cable rates to the British Dominions and the United States were announced by Herbert Samuel, postmaster-general, in the House of Commons on December 5. The reductions apply to press messages and ordinary messages (not in cipher), which may be postponed for more urgent traffic. The alterations arranged for ordinary messages are: Public messages to Canada and United States "night letters" (for delivery on second morning after being handed in), quarter usual rates (minimum, 6s. for 20 words); "week-

end letters" (handed in Saturday for delivery on Tuesday), one-fifth usual rates (minimum, 6s. for 30 words). In future the post-office will receive these messages and co-operate in forwarding them by post or telegraph, according to rules which will be announced.

BUYERS OF AMERICAN GOODS.

Some Interesting Figures from Government Authorities Bearing on the Distribution to the World of the Billion Dollars Worth of Manufactures Exported in the Year Just Ended—Exports of Manufactures Have Increased One Hundred Per Cent., or Doubled in Value in Ten Years.

(Special to The Talking Machine World.)

Washington, D. C., Feb. 10, 1912.

The distribution to the world of the billion dollars' worth of manufactures exported in the year just ended is the subject of much inquiry among the manufacturers of the United States. The Bureau of Statistics of the Department of Commerce and Labor recently announced that the value of manufactures sent out of the country had for the first time crossed the billion dollar line, the total for the calendar year of 1911 of merchandise sent to foreign countries and to Hawaii and Porto Rico having been \$1,002,000,000, and that this total is practically double that of a decade ago.

These inquiries as to the destination of the billion dollars' worth of manufactures sent out of the country and the various parts of the world in which this increase has occurred has led the Bureau of Statistics to the preparation of a statement showing the distribution, article by article, to the various sections of the world, grouping these for convenience of the study according to grand divisions, showing the value of exports to Europe, North America, South America, Asia, Africa and Oceania, respectively in 1911 and at the earlier period in which the total was but half that of to-day.

Comparing the exports of manufactures in 1911 with those of earlier years, the bureau finds that they have increased 100 per cent., or doubled in value since 1902, and therefore compares in detail the figures of 1911 with those of that year. It finds that in this nine year period in which the value of manufactures exported doubled, the increase, measured by percentages, is: To Asia, 36 per cent.; to Africa, 64 per cent.; to Europe, 70 per cent.; to North America, 158 per cent., and to South America, 248 per cent. The actual gains are as follows: To Africa in 1902, \$11,000,000, in 1911, \$18,000,000, an increase of \$7,000,000; to Asia in 1902, \$44,000,000, in 1911, \$60,000,000, an increase of \$16,000,000; to Oceania in 1902, \$29,000,000, in 1911, \$57,000,000, an increase of \$28,000,000; to South America in 1902, \$27,000,000, in 1911 \$94,000,000, an increase of \$67,000,000; to Europe in 1902, \$234,000,000, in 1911, \$397,000,000, an increase of \$163,000,000 and to North America in 1902, \$109,000,000, in 1911, \$281,000,000, an increase of \$172,000,000.

The share which manufactures formed of the total exports of merchandise to the various grand divisions at the two periods named was as follows: To Europe in 1902, 23 per cent, in 1911, 30 per cent.; to North America in 1902, 53 per cent., in 1911, 61 per cent.; to South America in 1902, 71 per cent. in 1911, 86 per cent.; to Asia in 1902, 69 per cent., in 1911, 71 per cent.; to Africa in 1902, 33 per cent., in 1911, 75 per cent., and to Oceania in 1902, 85 per cent., in 1911, 86 per cent. Of the manufactures exported in the last fiscal year, 43 per cent. went to Europe, 31 per cent. to North America, 11 per cent. to South America, 7 per cent. to Asia, 6 per cent. to Oceania, and 2 per cent. to Africa.

Don't Buy Needles That Damage Records

Bad Needles

Cleopatra Needles

When a needle is running a record, the friction causes the polished surface of the needle to be taken off, while its interior (grain) is exposed and touches the sound waves.

Consequence:

The poorer the polishing and rougher the grain, the more the sound waves are injured!

Only *Cleopatra Needles* are warranted to have always the highest and most perfect polish, smoothest grain. Using them means:

Finest Reproduction,

No Ruin of Record.

CONDITIONS GOOD IN MILWAUKEE.

Talking Machine Jobbers and Dealers Have Finished Taking Annual Inventories and Are Well Satisfied with the Results of the Year—Some Big Gains Reported—Farming Situation Encouraging—Parker in the One-Price System—McGreal Re-elected Privileged Member of the Milwaukee Press Club—Some Personal Items of Interest.

(Special to The Talking Machine World.)

Milwaukee, Wis., Feb. 12, 1912.

Local retail and wholesale talking machine men have completed their annual inventories and some of the figures that have been disclosed are nothing less than startling. It has been the general opinion that business during 1911 had just about held its own, or at least had made only small gains, but talking machine men have been happily disappointed. In almost every case a gain of 25 to 50 per cent. is reported, while in several instances even greater gains are given out. The manager of the talking machine department of one of the largest department stores in the city shows that his 1911 business increased nearly 95 per cent. as compared with 1910, while one jobber and retailer presents figures which prove that his business during the last month of the year made the phenomenal gain of 300 per cent., followed by a gain of 200 per cent. during the month of January. While dealers and jobbers do not expect that similar gains will be made during 1912, they are confident that business will more than hold its own, despite municipal and presidential elections.

Wisconsin crops were good last season and farmers at the present time are receiving record-breaking prices for livestock and all kinds of produce, with the natural result that there is plenty of money in the smaller cities and towns of the State. This is evidenced by the fact that collections are reported as good in all sections of the State. Industrial conditions here in Milwaukee are improving slowly and the outlook is bright in most lines. A record amount of building has been planned for the coming spring, a sure indication that conditions are not as bad as they might be. Talking machine men believe that the year 1912 will at least hold its own with 1911.

A strong stand for the "one price" system of doing business has been taken by L. C. Parker, manager of the talking machine department at Gimbel Bros.' Milwaukee store. Mr. Parker, who has many original ideas as to how a talking machine business should be conducted, believes that price cutting would be done away with if dealers could be made to see the ultimate advantage of such an arrangement. Mr. Parker only recently lost a very good sale because he refused to reduce prices, even though the purchaser agreed to take several machines. Mr. Parker believes that a one price system may mean the loss of some business on the start, but that in the end customers will display

Music Store for Sale.

Only music store in town of 8,000. Well established business. Best location in town, Victor, Edison and Columbia agencies. Pianos, sheet music, etc. Unusually clean stock. Easy terms can be arranged. Address "Splendid Opportunity," care Talking Machine World, 1 Madison Ave., New York.

Position Wanted.

Position as manager, salesman or traveling salesman with a good talking machine house; ten years' experience in wholesale and retail; Columbia, Victor and Edison. Can give reference as manager, traveling or store salesman. Can speak four of the most wanted languages. U. S. and Foreign Dept., care Talking Machine World, New York.

Electric Sign for Sale.

For Sale—A "Victor" V-shaped electric sign, each side two feet high, ten feet long, at a bargain. Musical Echo Co., Indianapolis, Ind.

FOR SALE—2,000 Edison 2-Minute Records; new, clean stock; 1,000 Disc Records; new stock. Deninger, 335 North street, Rochester, N. Y.

more confidence if they can see a machine marked in plain figures and know that no reductions are to be made.

Some good Victor sales are reported by Manager Parker. During 1911 Mr. Parker says that his department made a gain of 94.75 per cent. as compared with the previous year.

Charles F. Baer, Chicago manager of the Columbia Phonograph Co., was in Milwaukee on business recently as the guest of Mr. and Mrs. A. G. Kunde, proprietors of the downtown Columbia store at 516 Grand avenue.

That his retail Columbia business during the month of December, 1911, increased 300 per cent. as compared with the previous period of a year ago is the startling declaration made by A. G. Kunde, Columbia jobber and retailer. Trade during January increased 200 per cent., and Mr. Kunde has hopes of making still more records.

Lawrence McGreal, Edison jobber for Wisconsin, and president of the National Association of Talking Machine Jobbers, has been re-elected a privileged member of the Milwaukee Press Club, one of the oldest and most famous organizations of its kind in the United States. Mr. McGreal has always been a good friend of the Press Club and on special occasions loans some of his machines and a generous supply of records for the entertainment of the newspaper men and their friends. Mr. McGreal, who visits the club regularly, reports that the jobbing trade is showing decidedly more life than at this time a year ago.

William F. Hope, traveling representative in Wisconsin and upper Michigan for the Thomas A. Edison Co., Inc., was in Milwaukee recently, accompanied by Mrs. Hope. Mr. Hope says that the prospects all point to an excellent year, that dealers are optimistic, and that collections are good.

Florian F. Flanner, son of Joseph Flanner, well known publisher, who is now in charge of the talking machine and musical merchandise departments of the Flanner music house, reports some good Victrola sales.

Otto F. Leidel, manager of the new Victrola department opened by Emil O. Schmidt, prominent piano dealer, a couple of months ago, reports that the business of his department has increased nearly 100 per cent. for the month of January.

Among the out-of-town visitors who called upon the Milwaukee talking machine trade recently were Roy J. Keith, with the Talking Machine Co., of Chicago, and Mr. Taylor, of the Victor Talking Machine Co.

OPENS NEW STORE IN MILWAUKEE.

J. H. Becker, Jr., Well-Known Talking Machine Man and Formerly Manager of That Department for the Hoeffler Manufacturing Co., Now Head of His Own Establishment—Lady Manager for Hoeffler Department.

J. H. Becker, Jr., one of Milwaukee's best known and enterprising young talking machine men, has resigned as manager of the talker department of the Hoeffler Manufacturing Co., 306-308 West Water street, and is in charge of a new retail store which has been opened at 1120 Walnut street. The new establishment is located in an excellent business location on the North Side and Mr. Becker is meeting with a brisk trade from the very start. He had been connected with the Hoeffler Manufacturing Co. for five years and during that period has made hosts of friends. The entire Victor line is carried and Mr. Becker is offering an exceptionally large stock to his trade. Neither money nor time has been spared in making the store one of the finest retail establishments of its kind in the city. Soundproof booths and the entire furnishings of the store are of mahogany. While with the Hoeffler Manufacturing Co. Mr. Becker established a reputation for having the finest window displays in Milwaukee, and judging from the exhibit in the windows of the new Walnut street store he will maintain his reputation.

Miss Elsie Meiser, a capable young talking machine woman, who has acted as assistant manager to Mr. Becker for the past two years, is now in charge of the talking machine department of the

Hoeffler Manufacturing Co., assisted by Mr. Hoeffler. Miss Meiser is a well-known vocalist, is prominent musically, and is well fitted for her new position.

EDISON'S SIXTY-FIFTH BIRTHDAY.

Wizard Tendered a Surprise Party at His Home in Llewellyn Park by Some of His Friends—Says He Feels as Young as He Ever Did and Does Not Think of Retiring from Active Life—A Testimonial from His Business Associates—Silver Loving Cup Also Presented.

Thomas A. Edison was sixty-five years old on Sunday, February 11, and so forty of his friends and neighbors Saturday night gave him a birthday eve "surprise party" at his home in Llewellyn Park, West Orange, N. J.

The inventor, seated in a concrete arm chair that he himself had made, presided at the feast. Ducks paddled about one artificial pond in the room, and goldfish swam in another. Many tiny electric lights gleamed in a real hedge around the water. A small cement house—the "house of the future" Mr. Edison calls it—had a place in the fairy-like scene. There was music.

"Oh, yes, I s'pose I'm sixty-five," said the host, "but why remind a man that he is growing old—why congratulate him?" Then he smiled, and added that he has no more sentiment about birthdays than he has about kilowatts or amperes or any of the other strange things that link his life to the electrical energy of the world. He said he was unable to realize that the addition of such a mere thing as a year really added anything to his age.

"I feel," he went on, "as young as I ever did. I eat well and sleep like a log. I guess anybody that can say that can lay claim to good health. Last night I turned in about midnight and I was up and at it again about 4.30 this morning. I don't have to use any alarm clock either, like some of you younger fellows. Six flights of stairs don't mean any more to me than to you."

"Retire, did you say? Nothing of the kind in my mind. It wouldn't do for me to lay aside any of the work that I am on now. There's a lot of inventions that need my attention. There is plenty for me to do."

Robert T. Lozier, of this city, was toastmaster at the dinner. A testimonial was presented to Mr. Edison by T. Comerford Martin, and Edward H. Johnson gave the inventor a silver loving cup. The souvenirs were inscribed bronze paper weights on which were pictures of Mr. Edison, Menlo Park and a storage battery. Also on the souvenir was the Edison motto:

"Everything comes to him who hustles while he waits."

Samuel Insull, of Chicago, responded for Mr. Edison to the congratulatory speeches that were made. The host appeared in the best of health and spirits.

The testimonial from his business associates extended greetings to Mr. Edison on the thirty-third anniversary of the founding of his electrical industries, and stated that the givers felt there could be no higher tribute to Mr. Edison's genius than a simple statement of the facts of his achievements.

Among those present were Schuyler F. Wheeler, of Newark; Charles L. Edgar, president of the Boston Edison Co.; John W. Lieb, Jr., vice-president of the New York Edison Co.; T. B. Shaw, of Williamsport, Pa.; Frank L. Eyer, president of the Edison West Orange Works Co.; Frank J. Sprague, of New York; Arthur Williams of the New York Edison Co.; Mrs. Edison, the inventor's wife, his daughter, Miss Madaline Edison, and his son, Charles.

THE DICTAPHONE MOUTHPIECE.

The Dictaphone Mouthpiece is the title of a new house organ issued by the Dictaphone department of the Columbia Phonograph Co., General, New York. It is in the form of a newspaper, one sheet printed on both sides, and embodies all of the latest Dictaphone news of interest to Dictaphone dealers,

LOOK FOR BIG COLUMBIA YEAR.

Last Year Was Phenomenal but It Is Claimed That This Year Will Surpass Everything; 40 Per Cent. Increase Already—Even Leap Year's Extra Day Useful—G. W. Lyle in Interview Talks with Enthusiasm of Demand for Columbia Machines and Records.

Talking machine circles are beginning to realize that the Columbia Phonograph Co. is not setting any limit to the increase of its business these days. Its forces are geared up to a point where limitations and all things pertaining thereto are condemned, scrapped, abandoned, forgotten.

Last year was a phenomenal year for them. In fact, 1911 made Columbia history and the firm, being intent on doing big things bigly, made up its mind that it would do the same thing all over again this year.

George W. Lyle, the general manager, however, says they are going to leave their 1911 figures a long, long way behind.

Interviewed by The World, Mr. Lyle said: "Yes, 1911 was a phenomenal year for us. Of course, we intend to surpass it, but it looks as if we will surely even surpass our own expectations. We are confronted by an unprecedented demand for Columbia graphophones and Grafonolas and there is a tremendous call nowadays for Columbia double-disc records. We are going to beat the 1911 figures. That much was determined last year. By just how much we shall do it we cannot say, but we are going to leave those figures out of sight. Why, already our January business has been 40 per cent greater than January, 1911.

"We have one limit for 1912, and one only—the limit of our factory capacity. That gives us some room to spread yet; but we will want it all. We are already running up to that limit on full time, and it looks as if the factory is going to run over-time twelve months in the year—including February 29. Yes, we'll want that extra day this year."

Asked how he accounted for the boom, Mr. Lyle said there was nothing new, original or sensational behind it. Merely sound, logical reason. "Our product to-day is of a distinctly high grade and we are letting people know it. We are making it as good as we say it is, and that is just about as good as that kind of thing can be made nowadays. And," continued Mr. Lyle, "you must bear in mind that not only have we improved our machines and records and the whole system of voice reproduction, but we have a great corps of artists singing and playing exclusively for us. Last year we were able to announce the engagement of some new artist of world fame every month, and the new records are great. Madame Nordica, Olive Fremstad, Mary Garden, Alice Nielsen, Carolina White, Olitzka, Margaret Keyes, Zenatello, Josef Hofmann are all now engaged exclusively with us, and some of our newest instrumental records are nothing short of marvelous. So long as we can keep on producing records as good as some we have just made of the Russian Symphony Orchestra and

Creatore's Band, for instance, we shall see nothing of any limit to the business to be done. Whatever limits there may be will be so far ahead that they will be invisible to the naked eye."

From all of which it may be gathered that the fifteenth floor of the Tribune building—the New York home of the Columbia Phonograph Co.—is no place for a rest cure, nor is it likely to be. High hope and hard work are in the atmosphere and the same infection has taken strong hold on their factory forces in Bridgeport, Conn.

RECEIVED ROYAL VISIT.

The Duke and Duchess of Connaught and Princess Patricia Visited Landay Bros.' New Establishment on Fifth Avenue—Max Landay Returns from Bermuda.

During the visit of the Duke and Duchess of Connaught to New York, accompanied by their daughter, Princess Patricia, one of the establishments that caught their eye was the beautiful talking machine store of Landay Bros., Inc., at 563 Fifth avenue. The Governor-General of Canada and party, which included Ambassador Reid, went through the Landay warerooms and were much interested in the various instruments displayed and demonstrated for their approval.

In view of the fact that the visits of the Duke and Duchess of Connaught were confined largely to private people, it is a decided honor to Landay Bros. to be thus singled out, and they are most appreciative of the thoughtfulness of the royal party.

Max Landay, by the way, returned the latter part of January from a three weeks' pleasure trip to Bermuda, which put him in splendid trim for an active business campaign during 1912.

AN ALWAYS BUSY BOSTON HOUSE.

(Special to The Talking Machine World.)

Boston, Miss., Feb. 6, 1912.

The Oliver Ditson Co., by Henry A. Winkelman, manager of the Victor department, reports a strong demand for wholesale and retail goods, which is in keeping with the house's reputation. About five years ago the writer first met Mr. Winkelman, and in response to "How's business?" Mr. Winkelman replied: "Good! we cannot get machines and records fast enough." Since then the writer and Henry Winkelman have met, year in and year out, with weather mild, cold, hot, pleasant, stormy, windy, rainy and snowy, and while there might have been a change of position for talking, the condition of Victor business with the Ditson organization stayed at the "Good! cannot get machines and records fast enough" temperature. This shows hard work by someone.

H. Nathanson, who handles Columbia phonographs exclusively in connection with his line of pianos at 180 Broadway, Newburgh, N. Y., announces that on or about March 1 he will move to larger and more handsome quarters at 74 Broadway.

EDISON GLEANINGS.

Mrs. Edison Gives Dinner to Old Friends on Thomas A. Edison's Birthday—Some Recent Visitors—Those on the Sick List.

A surprise party was given to Thomas A. Edison by Mrs. Edison to mark his sixty-fifth birthday, February 11. The party was held Saturday evening, the 10th, at their home in Llewellyn Park, Orange, N. J. A dinner to which was invited about thirty of his "old cronies"—persons who have been associated with him for many years either in business or pleasure—preceded the reception. Many officials and department heads of the various Edison companies extended felicitations at the reception, which is referred to more fully elsewhere.

Louis Buehn and Edmund E. Buehn, composing the firm of L. Buehn & Bro., Edison jobbers, Pittsburgh, Pa., were seen at the Edison factory wondering what had become of their orders for Edison goods. E. E. Buehn, manager of the Pittsburgh store, reports a very strong demand for the "Opera" model of the Edison line.

John H. Massey, manager of the Edison department of the J. A. Foster Co., Providence, R. I., spent several days at the factory last week. Mr. Massey said that business, while not like a holiday rush, was quite seasonable.

H. C. Hinckley, Edison traveler through Iowa, resigned on February 7. His future plans are unknown.

Thos. K. Dolbeer, the energetic head of the selling organization, has some optimistic reports about the condition of the country that prompts him to believe that this year will show some exceptionally fine Edison sales.

According to what has been said of the therapeutic value of the Edison phonograph, no doubt it will be prescribed for the following members of the sick list:

Carl H. Wilson, general manager, is at home for a few days with a few varieties of a cold.

L. W. McChesney, assistant advertising manager, was taken suddenly ill last week and an operation for appendicitis was performed. This was successful in every way and the patient is rapidly improving. His many friends at the factory and in the trade wish a speedy convalescence.

C. W. Phillips, the Edison traveler in Michigan, was taken sick while en route, which necessitated his immediate return home.

C. A. Briggs, Edison traveler in Kansas and Missouri, has been called to Des Moines, Ia., to care for his father, who is seriously ill.

Meanwhile, with these absentees, C. E. Goodwin, manager of salesmen, is forgetting all about the union working hours for managers and defying a possible dismissal from the M. U., is working energetically to assist the trade in that territory.

Some of us are so afraid that what we have will get away from us that we wrap our one talent up in a napkin and keep it. And we have that always—but we never add to it.

ANY KIND OF HORN FOR ANY MACHINE

We are equipped with a large assortment of dies for the manufacture of all sizes and shapes of Horns, and are able to supply manufacturers with the handsomest and most attractive line on the market. Any horn for any type of machine.

LET US FIGURE WITH YOU

Not only our low prices, but also the workmanship and beauty of our horns will surprise you. Our flower horns are works of art.

We have made many new customers by prompt shipments and efficient service. Prices and particulars upon request.

Newark Tinware and Metal Works

No dealer can claim to carry even a representative record stock if he has to offer "understudies" or "substitutes." Those record buyers who want to hear Mary Garden, Lillian Nordica, Olive Fremstad, Alice Nielsen, David Bispham—must go to a Columbia dealer, and thousands of them are making this discovery every week.

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

NECESSITY OF AN UNDERSTUDY.

In a Well Regulated Establishment Each Man Should Be Able to Take Up at a Moment's Notice the Work of the Man Ahead—Only the Incompetent Who Is Afraid of the Competition of His Fellows—No Man the Only Oyster in the Soup.

No man in a responsible mercantile or manufacturing position should be without an understudy. Personally, he may not favor such an attachment, lest the lieutenant might replace the chief, but that fact should have no influence on the man up at the top. He is looking out for the good of the general establishment, and not the individual interests of the man.

In a well-regulated establishment there is a continuous line of understudies, all the way down. If the man at the top drops out or steps out, or is fired out, No. 2 should be competent to fill his place, and prepared to take it. No. 3 should become No. 2; No. 4, No. 3; No. 5, No. 4, and so down to the bottom where the vacancy is filled by the engagement of a new office boy.

This has been the rule of the Standard Oil Co. for years, and is one of the reasons for Standard success. One of the best department managers of to-day began as Mr. Rockefeller's office boy thirty-five years ago.

There should be no reason for apprehension or jealousy on part of a head clerk or a department manager because he has at his right hand an assistant capable of doing his work in an emergency. If No. 18 is doing good work, such as justifies his engagement and retention in that work, there is no reason why he should be afraid that No. 19 is about to take it away from him. Changes are seldom made without reason.

It is the shirk or incompetent or misfit who is afraid of the competition of his fellow-workers, says a writer in the Hardware Dealers Magazine. The best school of practical business is found in that store or factory where each man is so trained as to be fitted for the next step up when it comes to him. To make this education thorough and to encourage each unit in this army of help, it should be well understood that fitness means promotion when the possible opening comes. The jumping of favorites over the heads of good men, or the bringing in of an outsider when a responsible position becomes vacant, is a discouragement to every worker in the place, and an open advertisement of the fact that good work and merit are liable to go for naught.

The three great factors in business are resolution, energy and persistency. Follow these three and you will arrive.

Have confidence in yourself and in your business, but don't think you are the only oyster in the soup.

PLEASING THE CUSTOMER.

Try and select what music the customer prefers for the demonstration and not the kind of music you yourself prefer. Sometimes there's a difference.

NEW FORM OF COLUMBIA RECORD CATALOG.

Semi-Annual Catalog of Columbia Double-Disc Records Shows Several Changes in Style That Facilitate the Finding of Desired Records—A Special Display of Grafonolas and Graphophones—How the New Catalog Is Divided and Arranged—A Handsome Cover.

In the completion of its semi-annual catalogue of Columbia double-disc records, listed up to and including Jan. 1, 1912, the Columbia Phonograph Co., General, New York, has inaugurated several changes of style which add greatly to the rapidity in finding some desired selections by some particular artist. The catalogue is now ready to be placed in the hands of customers and dealers. The book itself is sixteen pages larger than the previous edition, making a total of 200 pages, which completely covers the extensive repertoire of Columbia artists. Most of the new pages have been used for the new records gotten out since July, 1911, but several pages have been used for the artist's index, making it clear and more accessible, a fact that will be greatly appreciated and immediately noted by record buyers. A most excellent display of graphophones

and grafonolas has been added, which will prove profitable to many dealers in making exchanges that will be stimulated by such a comprehensive showing. The last page is given over entirely to the demonstration record, which is one of the ablest collectors of customers for Columbia dealers that has ever been devised. The accompanying illustrations show the comprehensive manner in which the Columbia Co. have arranged their catalogue pages. An index of classifications on page 145 enables the prospective buyer to immediately turn to the section of the catalog where is listed the style and kind of record desired. For instance, under the classification of instrumental records are the sub-classifications of band records, orchestra records; instrumental solos, etc., with the index of pages on which they are listed in full. The same method is followed with vocal records, sub-classified into the departments of popular songs, standard songs, sacred, oratorio, etc.; talking records, whistling records, grand opera selections, grand opera and concert selections, all sub-classified in a way that is at once plain and easy of access.

The covers of the catalogue are after the usual Columbia design. Printed in colors and illustrating by means of miniature figures the people of all countries, and bearing out the company's slogan of "All the music of all the world."

In this, the last issue of the Columbia semi-annual catalogue of double-disc records the com-

GENERAL ACTIVITY IN DETROIT.

Max Strasburg Co. to Open Another Store—Business Growing Rapidly—Big Record Sales—Medium Priced Outfits Favorites—Grinnell Bros. Place Many Victrola Agencies in Michigan—Auxetophone Illustrates Program of Wagnerian Music.

(Special to The Talking Machine World.)

Detroit, Mich., Feb. 7, 1912.

There will be another new talking machine store presently in the heart of the retail district, which shows that Detroiters are waking up to the vast possibilities of the talking machine trade here. The Max Strasburg Co. will establish "The Victrola Shop," but the location is not announced because the lease has not been signed.

The Strasburg Co. was established only five months ago, but already has so far outgrown its quarters that twice as much space is needed as is available. Mr. Strasburg tried to lease the adjoining store, but was balked after the negotiations were well under way. He has a ten years' lease on his present quarters, so he will have to stay where he is. But the present store will probably become a branch store when the new one is established, for the new one will be larger and more centrally located.

One fault (if it is a fault) of the talking machine business in Detroit, and with the music trade in general, is that it is too greatly concentrated in one district. The Columbia branch store, the Strasburg Co., Grinnell's (who are State agents for the Victor), the American Phonograph Co., the Ludwig Music House and the Cable Piano Co., all talking machine stores, and the Bayley Piano House, J. Henry Ling, the Melville Clark Piano Co., the Starr Piano Co., and the Bush & Lane Piano Co. are all within a scant fifty rods square close to Grand Circus Park. The only phonograph store near Cadillac Square, which is the center of everything, is the Doran Phonograph Co. It reaps the full value of its location, too, doing a good cash business in records. The new Strasburg store will be down near the square.

The sale of talking machine records would make a very respectable sized business all by itself. One firm, the manager preferring not to be quoted, on last Saturday had cash sales of records amounting to \$385. Probably as many more records were sold on credit. This was on records alone. A good many machines were sold besides. The gross profit of that firm for January was \$900 greater than the profit for the corresponding month last year, and January, 1911, was a month of some business.

The chief demand still runs to the medium priced machines, both with the Columbia and Victor lines; there is not much doing in the cheap machines. That demand is helping the sale of the two hundred dollar instruments. It creates a chronic scarcity in the fifty dollar grades and the would-be purchasers do not have to be urged greatly to buy a higher priced machine.

"I could have sold 25 Victrola number nines last week, if I could have obtained them," said Max Strasburg. "I couldn't get them, so I pushed the high priced stuff. It doesn't require a great deal more effort to sell them, and we can get them readily."

Grinnell Brothers now have more than 200 Victor agencies in Michigan and Indiana, and two or three dozen in Detroit, all of them going in a way to make it worth while.

A Victor Auxetophone, the 500 model, was put to a very entertaining use the night previous to the appearance in Detroit of the Boston Symphony Orchestra. The Boston Symphony program was entirely Wagnerian. Professor N. Y. Corey, of the Michigan Conservatory of Music, who is very familiar with everything in the history of music and musicians, took the Boston Symphony program and gave an illustrated lecture upon it, using the Auxetophone in explaining the interpretations he discoursed upon. He would take the numbers piecemeal, playing and explaining alternately their different parts. He had a crowded house. The Victor records lend themselves aptly to such a program, for they give the artists' own renditions.

W. S. Barringer, manager of the talking machine department of the Wulschner-Steward Music

Co., of Indianapolis, was in the city this week on combined business and pleasure. He is a brother-in-law of Max Strasburg. He formerly was with the talking machine department of Grinnell Brothers when Mr. Strasburg was manager there.

1912 WILL ECLIPSE 1911

Says Louis F. Geissler in Discussing Business Accomplishments for the Past Year and the Outlook for 1912—Is Very Optimistic.

Louis F. Geissler, general manager of the Victor Talking Machine Co., has just sent out the following "appreciation" to customers of the house, in which he says:

"Our sales books for the year 1911 are closed, and we desire to extend very sincere and cordial thanks for the assistance which our dealers have rendered as during the past year in the exploitation of the Victor product.

"The year 1912 stands out gloriously before us, and the record of 1911—which was an unparalleled one—will again be eclipsed to the extent of whatever factory extensions and additions we shall be able to make.

"Our factories at present are a veritable beehive, and every available machine and square foot is being operated just as many hours as we dare.

"Plans have been drawn for a six-story extension to our record pressing plant, which will increase our capacity by almost 1,000,000 records a month.

"Our motor buildings will have substantial additions, and throughout our entire organization every effort will be made to take care of our dealers' orders during this year.

"Advertising appropriations have again been increased.

"Increased cost of labor and materials has been only partially offset by operating economies and scientific management. The company would be justified in advancing prices, which have continuously remained unchanged, or reduced, but have re-

(Continued on page 38.)

Demons of Discord in Every Record's Rim

BECAUSE of the screeching, scratching and scraping at every record's end, much of the enjoyment of talking machines has been marred. The discordant, raucous conclusion of every selection has been a matter of deep concern to the manufacturers of the disk record machines.

It has been the problem of every talking machine owner. And each owner has appointed himself to watch the record and lift the needle just at the precise moment of the selection's conclusion. Or he has stationed his mechanically inclined son to keep watch. Then the cure has been more disastrous than the problem. For the mechanically inclined boy has not been satisfied with merely doing his father's bidding, but has done a little experimenting on his own account.

The scratching and scraping have not only puzzled the manufacturer, embarrassed the talking machine owner, but have annoyed audiences. The perplexity, embarrassment and the annoyance are unnecessary now. The Condon-Autostop banishes the discord.

It brings the talking machine to a dead stop at the moment of the conclusion of the record. And the spell of the music lingers.

The Condon Auto-stop is a simple device

which, when once attached, becomes a permanent part of the talking machine. **It is guaranteed for life.**

All talking machines vary somewhat in size, and the Condon-Autostop has been regulated for a standard size of every type. It is only necessary to make a slight adjustment when the record is attached.

Mr. Dealer:

Why not follow up your sales of talking machines by writing to your customers and asking them to equip their machines with the CONDON-Autostop? No talking machine is really complete without this device, which prevents discord at the conclusion of every record. With this attachment there is no screeching or scraping or scratching.

Your old customers will thank you for your interest in their enjoyment of their purchases and will eagerly accept your advice.

The CONDON-Autostop is a great aid to your salesman. He doesn't have to dash madly away from one demonstration to stop other machines that have reached the conclusion of the record. **IT STOPS THE MACHINE RIGHT THERE.**

Don't sell a machine that is incomplete to your new customers. And no machine is complete without a CONDON-Autostop. Write to us for particulars.

Condon-Autostop Company
26 Front Street, NEW YORK CITY, N. Y.

frained from doing so, partly from competitive reasons, but generally as a matter of broad selling policy.

"We solicit your continued and increasing interest in Victor goods, with every confidence that the increased profits which you will derive from special attention to this department will justify all the energy and enterprise that you may put behind our wares in 1912."

EDISON'S HOST ON HOW TO SUCCEED

Henry M. Byllesby Offers Some Vigorous and Interesting Opinions in an Interview in the Chicago Tribune—Advice Based on Actual Experience—Constant Development Necessary to Success—The Value of Cheerfulness—Edison's Message to Young Men Worth Remembering Says the Speaker.

Henry M. Byllesby, the prominent Chicagoan who recently entertained Thos. A. Edison at a banquet during his visit to the Windy City, was the subject of an interview by a representative of the Chicago Tribune, and he uttered some vigorous opinions upon a rather hackneyed and popular topic with millionaires—How to Succeed. He said in part:

"The individual who works simply to achieve wealth is not liable to accomplish his object, and is very likely to fail in all the essential features of his life. Emerson has stated that 'lands and wealth and power, as a general rule, come to and are retained by those who are capable of rising to the responsibilities which are entailed by their possession.' The motto of the scientist and investigator of the twentieth century is and has been for an appreciable period to 'follow truth, no matter where it may lead or to what conclusions it may bring you.'

"So far as my experience has taught me anything, it has taught me there is nothing really worth while in life accomplished through any other avenue than that of continuous, persistent effort combined with an indomitable perseverance; and my experience leads me to the further conclusion that where this path and this procedure are followed there are few cases where success in some form or another does not reward the continuous following of these principles. The success may be relatively of a greater or less degree. It may be the success which leads to the command of power, the wielding of influence, the benefiting of humanity at large, or the possession of wealth, or a combination of any or all of these. But none of these results can be achieved without following the plan and the methods outlined. Granted in any given case the possession of normal intellect and normal health, the results to follow industry, patience, devotion to duty, self-mastery, are as sure to follow as the night the day."

Must Constantly Develop.

"Continual development must be added to the fundamental principles enumerated. The great Napoleon attributed the downfall of the Bourbon family in France to the fact that 'they never learned anything and never forgot anything.'

"From day to day, from experience past to experience of the present, there should be brought to bear an ever-increasing wisdom resulting from the application of lessons learned. The individual who does not progress in ability and in breadth of vision is not profiting from his opportunities and will not reach a large success.

"Every incident of our daily toil should be made an educational incident. The daily successes and mistakes should be regarded as valuable glints of light illuminating our future pathway, and will be necessarily invaluable if properly considered, because they form that marvelous equipment called experience.

"Another characteristic of all who have qualified as winners is that they throw their entire heart and energy and faith into the task, the duty, the pursuit of the hour. Indifference or a disposition not to put forth one's best efforts at all times is a fatal error. Whatever is worth doing at all is worth doing well, or in more impressive words, 'Whatsoever thy hand findeth to do, do it with thy might.' These principles observed along with the

practice of uniform fairness and justness and with high integrity will insure the proper reward—success.

No Luck in Success.

"It is often said by those who have not been fully industrious and entirely persevering that the opportunities to-day are less than they were a few years or a few generations back. It is also frequently stated by those who have not qualified under the somewhat drastic requirements of the rules I have spoken of that this or that man succeeded by luck. My experience justifies the unqualified statement that luck has very little to do with success in life; that success in life, be it great or small, depends principally upon the capacity of the individual to be consistently industrious and persevering and to exercise those other qualities which everyone knows in his own heart are a necessary part of success in any undertaking.

"In the calling—that of public utilities—to which I have devoted thirty-five years of toil, there are to-day greater opportunities for advancement than there ever have been. The great difficulty with the average young man is that he does not learn until perhaps too late that it does not pay to fritter and idle away his time. Every individual who goes to the head of enterprises recognizes what it was that put him there, and also recognizes why others apparently as well or better equipped have failed of that distinction.

Toil Insures Happiness.

"There are certain lessons which one learns in going through the turmoil and conflict of life which, unfortunately, however, are often not thoroughly appreciated until perhaps it is too late to make them of great value to the individual himself. Among these is the fact that 'the price of happiness is toil,' that the idle man cannot be and never is happy, that the only real joy in life is the consciousness of difficulties overcome, of obstacles surmounted, and beyond this the fact that step by step as the individual emerges and advances in the battle of life, with each advancement in command, in power, in wealth, there goes a corresponding and increasing responsibility.

"Referring to the opportunities open to the young men of to-day, it can broadly be stated that there is ample standing room at the top. The greatest difficulty is for the young man to obtain a footing in any given business and then to conduct himself through his early years with patience and industry. Then he will be qualified to be in the line of promotion, and this promotion is just as sure and certain as anything in the world can be if in a manly and serious minded fashion he recognizes the things which perhaps at tiresome length have been stated herein.

Cheerfulness an Asset.

"It is not necessary for the young man to go around with a long face, to be sour, to be unsociable—in fact, these are very bad things to cultivate or practice; but it is necessary, along with cheerfulness, with hopefulness and with unending ambition of an honorable sort, to practise the fundamental principles which are as old as civilization itself.

"In any emergency that may come to any human being, no matter what his momentary impressions may be, no matter what he himself may think of his particular conduct in that particular emergency, the fact remains that his conduct is the result of the way, successful or unsuccessful, in which from his earliest youth he has met the obstacles, great or small, or the emergencies which he encountered. Every stroke of good, honest work, every hour of serious, conscientious thought on any given problem, every victory over the temptations which would lead to a sacrifice of the real interests of life for the pleasures of the moment, will just so surely as the sun rises and sets have their effect in making up the capacity of that man or that individual to meet successfully or unsuccessfully the subsequent temptations, difficulties, problems and emergencies which are sure to beset his path.

"Thomas A. Edison, who was in our city some two weeks ago, gave as his message to young men, 'never to watch the clock, to devote their entire energies to the task before them, to be persistent, not to be carried aside chasing hither and yon one

or another rainbow, but to everlastingly and persistently keep at and master the task of the time being.'

"On the same occasion one of the greatest captains of industry this country has produced, C. A. Coffin, speaking from a long life of experience, during which he never faltered or failed in the duties of the hour, said: 'Work is your great text, work is your sermon, and work, and still more work. In this engrossed, entangled life, second only to the great gospel of the golden rule, the gospel of labor—painstaking, self-forgetting work—is that which makes for greater manhood, for happiness and for the highest citizenship. And guided by judgment and vitalized by consciousness, it is the only patent for honorable and permanent success.' No living men have more fully justified these rules than Mr. Edison and Mr. Coffin.

"The leading men of the city of Chicago and largely the leading men of our entire country have been those who have started in the race of life with nothing other than sound intellects, sound healthy bodies, the wish and the capacity to toil and to practice continuing industry combined with cheerfulness and optimism throughout their lives.

"All that is said here appears to me to be axiomatic. All I have spoken of is at least a most important part of the platform of every man who has succeeded. I believe no successful man in looking back over his career would suggest any material departure from these fundamentals."

COLUMBIA PUBLICITY CAMPAIGN.

Double Spread Advertisement to Appear in the Saturday Evening Post Starts the Ball Rolling—Points on How the Dealer May Take Advantage of This Work.

Under date of January 23 the Columbia Phonograph Co., General, New York, sent to its dealers announcement of the publication of the first advertisement opening the elaborate and comprehensive campaign scheduled for 1912. Number one in this great series is to appear in the Saturday Evening Post, issue of February 17, and will consist of a double page spread. The advertisement, a proof of which was mailed with the announcements, is striking and forceful and will prove of the utmost value to dealers. The text is directly to the point and tells the story of the new fifty-nine dollar Grafonola "Favorite" in a manner calculated to impress the public and create immediate interest. The opening display lines, in bold-face type, read as follows: "7,000 Columbia dealers are ready to deliver this new Grafonola with twelve double-disc records (twenty-four selections), subject to three days' free trial, for \$59 cash—or for the same price at \$7 down and \$5 a month; no interest, no extras." Two half-tone reproductions, one of the Grafonola and one of twelve double disc records and record album, follow, with general details regarding the offer. Another proof enclosed, on pink paper, shows a newspaper advertisement worked up to enable the dealer to supplement the Saturday Evening Post announcement by running an advertisement in the local newspapers. This advertisement, which is very much like the one appearing in the Post in make-up, will do much to concentrate the effort of the Post advertisement.

Still another suggestion, on blue paper, accompanied the letter, completing the chain. This, in the form of a window display to be used in conjunction with both advertisements, the design being almost identical with the illustrations in the magazine and newspaper ads. The idea is this: The readers of the Saturday Evening Post, considerably over 1,800,000 in number, see the Columbia pages in the magazines and note the illustrations; in their local newspapers they find a duplicate, and in passing the local dealers' window, still another duplicate is on view. It's a grand idea and promises far reaching results and is thoroughly in keeping with the usual Columbia progressiveness.

Mrs. Nexdore.—I've been thinking of having my daughter's voice cultivated. Would you?

Mrs. Knox.—By all means, if you have tried every other remedy.—Philadelphia Ledger.

FROM OUR CHICAGO HEADQUARTERS

ROOM 806, NO. 37 SOUTH WABASH AVENUE, E. P. VAN HARLINGEN, MANAGER.

Business Showing in the Talking Machine Field in Chicago for January Was Most Satisfactory—Sales of Machines and Records Exceeded Expectations—Flower Horns Still in Favor—Columbia Changes in Denver and Little Rock—Meeting of Chicago Talking Machine Dealers—Managers of the Leading Jobbing Houses Optimistically Inclined—Victor Records by Elis Olson-Ellis, the Swedish Actor and Singer, Who Is Extremely Popular in the West—Interesting Budget of News for Month from Western Capital.

(Special to The Talking Machine World.)

Chicago, Ill., Feb. 12, 1912.

One hesitates, in these piping days of general trade somnolence, to intimate that there is anything in the least suggestive of a "boom" in any line whatsoever. Nevertheless, it is undoubtedly true that the talking machine business is not to be judged according to existing standards. January proved a fine month in point of talking machine record sales; that was to be expected. Machine sales, on the other hand, stacked up entirely beyond expectations. Possibly this was due in some measure to delayed sales, that is, delivery of machines which the dealers could not get from overcrowded factories in time to fill holiday orders, but jobbers also say that there has been ever since the first of the year any amount of new business from the dealers, meaning orders for particular types to fill specific orders having their origin since the holidays.

And Still the "Flower" Horn.

While the concealed horn machine gets a constantly increasing percentage of total sales, it is a fact that the "horn" types are still extant in a sales way to a somewhat astonishing degree. The wood horn, undoubtedly one of the most revolutionary advances from an acoustic viewpoint made in the talking machine trade of recent years, is the big favorite, but the metal horn is by no means out, incomprehensible as this may seem to the dealers in the "downtown" districts of the larger cities.

Coming again to the flower horn, the variegated, many-hued, rambunxiously decorated flower horn

is still selling, and selling big, in the foreign districts. For instance, large quantities of flower horns are being sold to-day in such portions of Chicago as those tapped by Milwaukee avenue, the polyglot thoroughfare, and by Blue Island avenue, where the Bohemians do foregather.

Demonstrate with Victrola.

For several months past Lyon & Healy have used a Victrola XVI exclusively in the all-afternoon Victor concerts in Victor Hall.

Record Dictaphone Month.

At the Columbia Phonograph Co.'s Chicago office W. W. Parsons, in charge of the Dictaphone department, stated that January had been his biggest month.

Good for Brown.

The C. C. Brown Music Co., of Sparta, Wis., has placed a Victor IV with wooden horn in the high school. It is being bought by the pupils on the concert plan outlined by the Victor Co. This will be followed up by the placing of Victors in the three other Sparta schools, two elementary and one graded.

With the Talking Machine Co.

Arthur D. Geissler, general manager of the Talking Machine Co., says that January was away ahead of last year. Sixty per cent. of the business was in records, but at the same time it was an unusual month in point of machine sales. The company is still filling back orders for machines, but has a large amount of strictly new business coming to hand. It is still having difficulty in filling back orders for Victrola eights, nines, tens and elevens.

Important Columbia Deals.

W. C. Fuhri, district manager for the Columbia Phonograph Co., has been making "news" the past month.

The Columbia branch at Little Rock, Ark., has been sold to John C. Nielson, who takes over the store lease, fixtures, employes and stock, and will continue the business along the same general lines as heretofore. He is new to the business, but is an enterprising, energetic man who has won success in other lines and gives indications of adapting himself most beautifully to the graphophone business.

The Denver branch of the Columbia Co. has been sold to Delzell Bros., who will operate as the Columbia Stores Co. They take over the lease of the Columbia Co.'s store at 505 Sixteenth street, buy the fixtures, furniture, stock on hand, etc., and have also placed a big initial order for new goods. They are also opening a branch store in Denver and will represent the Columbia Co. in a jobbing way for the States of Colorado, New Mexico and part of Wyoming. The Delzell Bros. have for eight years represented the Conklin fountain pen for a large expanse of territory, with headquarters in Denver. They are "live wires" in every sense of the word and great things are expected of them. The Delzell Bros. have also made a separate contract for representation of the Columbia Dictaphone. Mr. Fuhri returned a few days ago from Denver, where he consummated the deal. More recently he ran down to Salem, Ind., where he visited the plant of the Stout, Mahoney, Duckwold Co., which is devoted entirely to manufacturing Grafonola cabinets and record cabinets for the Columbia Co.

Distinguished Visitors.

E. D. Easton, president; George W. Lyle, general manager, and Frank Dorian, manager of the Dictaphone department of the Columbia Phonograph Co., were all visitors at the Columbia's Chicago office on January 25.

Columbia Advertising Campaign.

Charles F. Baer, manager of the Chicago office of the Columbia Co., says that a number of new accounts have been created through this district the past month on account of the remarkable advertising campaign inaugurated by the company. Dealers are taking hold with avidity of the opportunities offered by the combination newspaper and window display proposition on the Favorite \$50 Grafonola. More orders are being received for this type than during December, which proves that it pays to advertise.

Wiswell's Views on Business.

L. C. Wiswell, of Lyon & Healy, in a chat with The World regarding business conditions, said: "January showed an increase over a year ago both in machines and records. The dealers' record business evidently is better than any January yet. In machines the demand is greatest for the Victor Victrola nine, but this is evidently somewhat fictitious on account of shortage, dealers placing orders with a number of jobbers, and after one was filled would naturally cancel others." Notwithstanding the semi-depression in other lines, Mr. Wiswell believes 1912 will be the biggest year in the history of the talking machine trade.

Married.

L. Keane Cameron, manager of the retail talking machine and small goods department of the R. Wurlitzer Co., was married January 13 to Miss Florence Koch, an accomplished Chicago girl. The wedding was kept a secret for three weeks and they left on a honeymoon trip to Louisville, Ky., returning Wednesday of this week.

H. H. Gibbs, traveler for the Wurlitzer Co.'s Chicago branch, was married January 16 to Miss Gertrude Harcourt, a prominent young society woman of Superior, Wis. They spent a week or so at Duluth and then came back to Chicago and surprised Dad Platt P. Gibbs, the well-known music publisher. They are at home to friends at Oak Park, a suburb of Chicago.

M. H. Lowry, manager for Lawrence Lucker at Minneapolis, Minn., was married on January 24 at the Carlton Club, Milwaukee, Wis., to Miss Lizette Pollak.

Outlook Most Encouraging.

F. A. Siemon, assistant manager at Wurlitzer's, says January was a good month—would have been simply great in point of actual shipments could factories have filled orders for records. This condition is now mending rapidly and the next two

months should be remarkable. This is especially encouraging for the future, because of the large number of 40 and 10 per cent. dealers being established, and of forty dealers increasing to forty and ten.

Coming and Going.

Mr. Sellman, of the Edison Co., the well-known Edison jobbers and Victor dealers of Newark, N. J., was here recently for the purpose of buying pianos. Lorin Leeds, of the Boston Talking Machine Co., was another visitor with the object of interesting local dealers in the company's new product.

Roy J. Keith, sales manager of the Talking Machine Co., recently visited Detroit dealers with Traveler George P. Cheattle.

E. C. Plume, president of the E. C. Plume Co., of Pyro sign fame, recently returned from a trip during which he established a Southern branch at Atlanta, Ga., in the Candler building, which will be in charge of N. S. Baughn. January was a big month for the company and there were many direct results from previous advertising in *The World*.

A. D. Herriman Returns to Chicago.

Albert D. Herriman, who has been temporarily in charge of the Columbia branch at Little Rock, Ark., has returned to Chicago and resumed his position as sales manager of the local business. He

ALBERT D. HERRIMAN.

has been with the Columbia Co. continuously for eight years, and prior to that was manager of the talking machine departments in prominent stores. He formerly managed the Milwaukee and Davenport Columbia branches, and this is the third time that he resumed his present position. He is a valued member of the Columbia forces and with a host of friends.

Busy Times with Salter.

The Salter Mfg. Co. closed a very excellent January business. The company reports an increasing demand and a steadily growing appreciation for their line of cabinets throughout the country. The present line of cabinets which this company is offering to the trade is most attractive in every respect and represents values which are evidently winning the consideration of talking machine dealers.

Chicago Talking Machine Dealers' Meeting.

At the annual regular meeting of the Chicago Talking Machine Dealers' Association, held on the afternoon of February 12, matters of timely interest were discussed. It was decided to hold a special meeting on Sunday afternoon, February 25, at the warerooms of the H. Reichardt Piano Co., 321-323 North Clark street, when a large attendance both of members and non-members among dealers outside the Loop is expected and desired. It was decided to engage a paid organizer to visit the dealers and expound the objects of the association. R. T. Carlson was selected for this position and will commence his duties March 4.

Busy Times with U-S Phonograph Co.

The Chicago office of the U-S Phonograph Co. is most enthusiastic over recent sales both in machines and records. Several salesmen who are working adjoining territory have been visiting headquarters this week and all report expanding business, with improved collections.

Makes Records for the Victor Co.

Ellis Olson-Ellis, the well-known Swedish actor and singer, and a new member of the army of

ELIS OLSON-ELLIS.

Victor artists, has been spending some weeks in Chicago, where he has aroused tremendous enthusiasm among Swedish residents by his superb histrionic ability, appearing in various roles for which he has long been famous in Sweden. He has also appeared in numerous song recitals here, singing largely his own music set to Swedish folk lyrics, or small songs by modern Swedish poets. He has made twenty records for the Victor Co., some of which appeared in the January and February lists. Swedish papers have devoted columns to Ellis and his work. His records portray his wonderful interpretative abilities, as well as vocal attainments, and are destined to have an immense sale among the Scandinavian population of America. He is accompanied by his beautiful wife, who is a countess. They will return to Sweden next month.

The Mystery of "Three Six Zero."

"Thank you," says the person who calls 360 on the automatic telephone with a request for the correct time, and never realizes that the courtesy has been wasted on a very ingenious invention called the chronophone, a combination of clock and phonograph invented by Harold D. Stroud, of Chicago, and operated by the automatic tele-

phone system of the Illinois Tunnel Co. The chronophone is similar to the Edison chronograph, but is provided with special features to adapt it to the purpose of announcing time over the telephone, an Edison phonograph similar to the regular business machine run by electricity and attached directly to the telephone in the present machine. Seventy-two cylinders are used now, ten minutes to each cylinder, and as they are changed by hand constant attention is necessary. The new machine Mr. Stroud has in view will be large and will have only one cylinder. It will be arranged so that observatory time will be given and also that every movement will be automatic. At present from fifteen to twenty thousand calls a day are answered, and in the future, with the new machine, arrangements will be made to handle fifty thousand calls a day. The whole operation takes only four seconds from the time the call is rung for until the time the answer is received. Mr. Stroud has not advertised the machine as yet and will not until the new machine is in actual service.

As applied to the automatic system the subscriber merely calls 360 and instantly hears a human voice clearly and distinctly state the time. In adapting it to the manual system it is necessary for the operator to make the connection as for a regular call, and is not near as much trouble as at present though necessary for the operator to answer such calls. The accompanying photograph illustrates the machine as it is to-day and gives some idea of the working of it. There is also a humorous sid to the new device, to quote Mr. Stroud: "When I first started the chronophone I had all the trunk lines tied common and did not have them arranged to cut the party off after the time was heard. Sometimes a person mistaking the voice on the records for a real human voice would try to start an argument, and some of the talk was amusing. One fellow persisted in calling each day at a certain time and inviting 'it' to come out and play billiards. A young lady who evidently attended a private switchboard exchange called the clock at least ten times a day to see if she could make the clock tell anything besides the time. She got to be such a bother that I cut in on a special transmitter, arranged to give out the fire locations, and told her I would call her up. At that she was sure it was a real human voice, but would not stop talking to the voice on the record until I had the connection traced and secured her number. Calling her up I explained that she was talking to a phonograph, and thereafter she called for the time in silence. The majority of people

WASTE

The L. & H. Needle-Cutter or Fibre Repointer we now offer to the user of Fibre Needles is the result of four years' exhaustive experiments and we feel safe to assert, NONE BETTER CAN BE MADE.

The lover of GOOD music will find this cutter invaluable. The upper blade being pivoted above and back of cutting edge insures perfect contact with lower blade. Both of these blades are made from finest tool steel and properly tempered and with ordinary usage will last for years, without sharpening or renewal.

The cutter has a self-acting stop, which prevents cutting away more than enough, thus a pin can be played twelve or fifteen times before becoming too short.

We give our absolute guarantee with every cutter sold.

VICTROLA FOR GOVERNOR-GENERAL.

Instrument Recently Installed in Malacanang Palace, Manila—Victrolas Owned by Other Philippine Officials.

The fact that Victrolas have been installed in the White House in Washington and in a number of the palaces of royalty has become too well known to require comment, but it is interesting to

VICTROLA FOR GOVERNOR-GENERAL OF PHILIPPINES.

note that one of those handsome instruments has recently been placed in the music room of the Malacanang Palace, Manila, P. I., for the entertainment of Governor-General Forbes and his friends. The accompanying illustration shows the Victrola in position in the palace. Vice-Governor Gillett and Commissioner Arenata also have Victrolas in their homes and are enthusiastic over the instruments.

CONDITIONS IN LOUISVILLE.

Talking Machine Men Pleased with January Showing—No Reaction After the Holidays—New Manager for Baldwin Piano Co.'s Department—Montenegro-Riehm Music Co. to Move to New Quarters—How Ray Bros. Get Business—The News of the Month.

(Special to The Talking Machine World.)

Louisville, Ky., Feb. 10, 1912.

The mere word "Satisfaction" is hardly adequate to express the feelings of Louisville talking machine men in regard to business which was experienced in the month of January. Unlike the advent of previous years, the opening of 1912 was marked by a steady trade and a strong demand for the instruments and the records. As a general rule a strong reaction is usually felt after the close of the holiday season and dealers are often forced to live on what they term prospects. However, in the present instance, the annual slouch has been conspicuous only by its absence and reports as to trade are exceedingly favorable.

During the past month the talking machine department of the Baldwin Piano Co. experienced a change in managership. O. J. Junge, who for the past three years had charge of the Columbia trade in the Gateway City, was transferred by that company to Providence, R. I., where he will take

charge of a store. E. B. Walthall, formerly of St. Louis, Mo., one of the oldest employees of the Columbia Co., has taken charge of the local store and business, and will be associated with the Baldwin Co. as was formerly the case. Mr. Walthall is known all over the country as an able manager and handler of talking machines and was welcomed by the other tradesmen of the city as a strong addition to the local field. He immediately entered upon an extensive advertising campaign and is doing everything possible to double the business of the Columbia instrument in this city.

When the Montenegro-Riehm Music Co. of this city moves to its new quarters on Fourth avenue, Louisville will be graced by one of the most beautiful and best equipped talking machine stores south of the Mason and Dixon line. This section of the business, although operated in direct connection with the piano trade of which the concern makes a specialty, will have more than half of the space on the main floor. A large part of this will be used as display room and the remainder will be divided up into three small demonstration parlors. At present the phonograph department is cramped up into a small corner of the store and looks as though it did not get its share of the space. However, in the new store ample room will be provided for the exploitation of the instruments and the clerks will be able to take customers separately into a private parlor to demonstrate the machine. The woodwork will be finished in white and gold and the furnishings will be worked in along a similar color scheme. The department as a whole will present an unimpeachable appearance and the clerks will be able to take customers separately into a large increase in the number of visits by prospective customers. In addition to the demonstration rooms the department will be given a private record room where one of the fullest lines of records in the city will be handled. S. M. Frankel, manager of the department, which handles Victor instruments exclusively, said that he was more than pleased with the trade which had been experienced during the past month and that he was confident that when safely anchored in the new store the business would double.

One of the features of the talking machine trade of the Gateway City during the past fortnight can better be expressed by a slang phrase than otherwise, "It is little but it is loud." One of the members of the firm of Ray Bros. recently hit upon the idea of sending out monthly post cards to their regular customers giving the list of Victor records which were sent out during that time. They also show the stock number and selection, inviting the addressed to come in and hear them played or to let them send him a few of them on approval. C. A. Ray, of the concern, said that he was surprised at the number of replies which he received from the first set of cards and that people were actually looking forward for the time when they would arrive. He said that it has proven to be the source of a great deal of business for the concern and that they were daily increasing their mailing list. Mr. Ray reports that they have experienced a very satisfactory trade during the past month and that they are well pleased with present conditions and the prospects for a big business in the spring season.

"Oh, dear," she said, after the musicale, "I'm so mortified that I don't know what to do. I can't imagine what caused my voice to break as it did. It never happened before. What must Mrs. Waddington's guests think of me? How can I ever explain it?"

"Don't mention it," her friend advised. "They were all so busy talking while you sang that probably nobody noticed it."—Chicago Record-Herald.

SUCCESS NO ACCIDENT.

Envy and Lack of Ambition Do Not Get Anyone Anywhere—Not All Men Equal According to Their Gifts, but Each Is Capable of a Certain Degree of Success.

Success does not come by accident. Some men go through life full of envy at the attainments of others who would not make an effort to get what they may desire themselves. They wear shabby garments because they will not work hard enough to get better ones. Sometimes the individual is not to be censured for what he terms hard luck. Possibly his parents may have neglected him in childhood, or may not have been able to give him the education that would prepare him for a business career. Even this handicap has been overcome by many persons.

Most men look at success entirely from the financial standpoint. They fail to note that there are other things that may be better than a large fortune to hand down to posterity. President McKinley failed in business and was heavily in debt, but it was not through his own mismanagement, it was on account of his helping out others, yet he could not have become President of the United States had not friends come to his relief and raised the money to pay his debts; yet no one could justly say that he had not made a success of his life.

There are divers gifts; some attain high standing in literature, while others excel in oratory. There are Raphaels, who paint Madonnas that make them celebrated long after the hand that wielded the brush has moulded in the dust, and Michael Angelos, whose marvelous skill with the chisel has left many marbles as evidence of their great talent. Who knows or cares whether they left any money; what they accomplished will live for ages, hundreds of years after those whose fame depends solely upon the money that they have accumulated are forgotten. The community in general is raised to higher things by the lofty thoughts and ideals of the few, rather than dragged down by the baser impulses of the criminal class.

To declare that all men are actually equal is not true, for it is inevitable that some will differ from others. The highest degree of efficiency in the individual comes from a wholesome emulation of the goodness of others. There must be ethical and moral instruction for the best interests of the community, as well as technical instruction to raise the standards of the artisans, but each person must make for himself that which alone is immortal: character. Set a standard for success and strive to attain it.

Money is desirable for the purchase of many things that make for happiness, but wealth alone will not give happiness. He who has done something for humanity that will carry his name down to generations yet unborn, and which will cause him to be an example of rectitude to others, has won true success, though he may not leave a dollar for his children. But to do this it is imperative that his life shall be moulded upon a high and noble purpose; such results are not accidental and never will be.

SECURE NEW QUARTERS AFTER FIRE.

The Birmingham, Ala., branch of the Columbia Phonograph Co., which recently suffered a total loss by fire, has been moved to handsome quarters at 2025 Second avenue, and Manager William Parks and his staff have worked hard to get a fresh stock of machines and records in place.

DICTAPHONES FOR PEABODY CO.

O. Brushaber, dictaphone manager for New York, with headquarters at the Columbia Phonograph Co. retail store at 89 Chambers street, reports an excellent volume of January business. January, 1912, has already eclipsed the sales record for the corresponding month in 1911, with indications of even better things to come. One of the recent orders for dictaphones was for eleven machines for the H. W. Peabody Co., New York, making a total of sixteen machines now in use by that firm.

By simply pressing the lever the desired record is instantly at hand.

SALESMANSHIP DEMONSTRATED

By the Salesmen of the Eastern Talking Machine Co. Under Auspices of the Y. M. C. U.—Those Who Took Part—Playing of a Victrola the Convincing Argument—Those Who Acted as "Customers."

(Special to The Talking Machine World.)

Boston, Mass., Feb. 4, 1912.

The familiar figure of the fox terrier, so intimately associated with the mystic words "His Master's Voice," held the center of the stage at Y. M. C. U. Hall recently, when the Eastern Talking Machine Co. gave a demonstration of salesmanship, the second in a series of business talks held each Tuesday under the auspices of the Y. M. C. U., General Manager E. F. Taft of the company, assisted by several of his able lieutenants, being in personal charge. The salesmen were W. J. Fitzgerald, A. W. Chamberlain and Samuel J. Freeman, all connected with the Eastern Co.

Customers of both sexes and varying degrees of prosperity and good nature were handled in a businesslike manner by the firm's salesmen, who persuaded the prospective purchaser, by word and by demonstration of the various types and prices of machines, to buy the one best suited to individual needs.

Needless to say, the playing of the Victrolas was the most convincing argument put up to the would-be buyer. Whether it happened to be Madame Melba singing the "Aria" from "Traviata," or Harry Lauder in his famous "I Love a Lassie," equal applause greeted the selections. In the delight of listening to Caruso's marvelous tenor, or the wonderful voice of Madame Schumann-Heink, the audience quite forgot the skilful details of salesmanship responsible for the resulting sale.

The "customers" were chosen for their quickness of wit and their ability to play the part successfully. Mrs. Winship, wife of Addison L. Winship, secretary of the City Club, was roundly applauded for the finesse by which she put the salesman upon his mettle. Deputy Commissioner of Education Charles H. Prosser, A. B. Beeching, of Hayden, Stone & Co., and Prof. Edwin A. Start, of Billerica, also acted as "customers."

TO REDUCE SIZE OF MONTHLY LIST.

The following announcement was sent recently to Victor distributors and dealers by Louis F. Geissler, general manager of the Victor Talking Machine Co.:

"In order to better take care of incoming orders for stock records—which have increased to proportions so great that we are having the utmost difficulty to combat the situation—we propose to temporarily reduce the size of our monthly supplement, beginning with March, to about one-half of its usual extent, issuing only such records as must go out. We trust that you will consider our action well taken."

What an ideal store or institution—if the boss would only set the smile example, keep it under all conditions, and everyone else follow suit.

OPTIMISTIC REGARDING PROSPECTS.

H. A. Yerkes, Manager of the Wholesale Department of the Columbia Phonograph Co., Bases Calculation for 1912 Business Upon Rate of Increase During 1911 and for January of This Year—Summarized Conditions in Various Sections of the Country as Affecting the Columbia Co. Business.

H. A. Yerkes, manager of the wholesale department of the Columbia Phonograph Co., General, New York, is optimistic regarding the prospects for the year so recently opened, basing his opinions on the result of January business and the general uplift which characterized the last few months of 1911. In answer to The World's query as to general conditions the country over, among Columbia dealers and distributors, Mr. Yerkes said:

"Although the final figures for the month just passed are not at hand I will venture to say that if the entire year of 1912 runs out with the same percentage of increase as January we will exceed the record of 1911 by at least fifty per cent., and 1911 was the biggest year in the history of the Columbia Phonograph Co. Maybe the best idea of what we have accomplished during the initial month of 1912 may be gained by the fact that January fell but little short, in actual sales, of the great holiday month of December.

"We attribute much of our past year's successful business to our policy of direct co-operation and assistance to dealers. It is our aim to serve the dealers in the way best suited to their needs in their own particular locality. We have established distributing points all over the country and stocked these branches with the Columbia line in its entirety. This service, coupled with extensive and comprehensive advertising, has been effective in making our dealers unusually active, the result of our effort being best shown by last year's record. One of our recently appointed distributors and jobbers is Delzell Bros., Denver, Colo., who have taken on an immense stock of goods and are thoroughly well equipped to supply the dealers' demand in their section."

"In New England and the East generally," continued Mr. Yerkes, "business was never better, 1911 producing an improvement of at least thirty per cent. The trade was of highest quality and typical of the apparent uplift of the talking machine industry, which is universal. Western business, on the coast and in the middle West, is excellent and steadily booming, the coast being particularly brisk. In the South we are well satisfied, though general business has been a little dull, we enjoyed a good year, with the best of prospects for the coming months. The company has been very active in cultivating the southern field and it is probable that that accounts for the improvement."

In continuing Mr. Yerkes said: "During January and up to Feb. 1, 1912, there were between two and three hundred new dealers to take on the Columbia line. Thirty of these were representative piano dealers. One-sixth of our total of regular dealers are also general music dealers of high repute. Business in the talking machine

field is on a sound, staple basis and this fact is rapidly raising the standard and quality of dealers generally. Sales of records have touched phenomenal heights. The splendid repertoire covered by the Columbia Co. with the additional feature of double-disc records is largely responsible for the increase. The Grafonola Regent line, which was built to meet the requirements of the trade, both in way of price and design, has proven very popular and is gaining friends daily. Another gratifying condition lies in the fact that the

COLUMBIA STORE AT PORTLAND, ME.

public schools are installing machines for educational and concert purposes, which in itself is an encouraging sign as to the future of the industry."

In conclusion Mr. Yerkes said: "We are highly elated and well satisfied with 1911, and well satisfied with the opening month of 1912, and are confident that the new year will end with a substantial gain over any previous year in the history of the company."

Mr. Yerkes left for Boston, Thursday, February 8. He will spend ten days among the trade in that city and New England generally.

CALISTHENICS TAUGHT BY PHONOGRAPH.

Two Pennsylvania schools have discovered a new use for the phonograph. Finding great difficulty in teaching calisthenics to their many foreign pupils who were not proficient in English, these schools have decided to install phonographs with records in foreign languages. While these records are being operated the teachers will perform the proper exercises, thus securing the desired harmony in the drills.—Edison Phonograph Monthly.

It is not unusual to hear the remark, "Mr. Blank said a certain thing and when he says so it goes." A merchant who gains a reputation like that, and on whose word the entire business community relies implicitly, has an asset that will follow him through his life and never grow tarnished. It is not that there is or should be a premium on honesty, because there can never be such, but it is a merchant's most valuable asset.

"To do that I must advertise. And my advertising must do that."

We believe in friendship founded on business, but not business founded on friendship.

IN LIGHTER VEIN.

Spin Yarns to Your Customers, Mr. Dealer, and Watch Your Business Grow—Some Suggestions Worth Adopting.

Mr. Talker Man, are you a humorist? When your patrons call, do you treat them to the latest talker story, or lead them along the paths of phonographic anecdote?

There is a certain talking machine dealer in the City of Brotherly Love who makes a specialty of humor. He assures me that his patrons appreciate good tales, and that by exercising his ability as a story teller he is able to stimulate business very materially. Why not acquire the habit? Of course, the fact that he is built along humorous lines helps some, he being rotund of paunch and bald of head, while his eyes glow with the fires of mirth the day long.

"Have you heard the latest?" he asked as I sauntered in upon him, his face assuming the spherical proportions of a harvest moon.

"No, but I would very much like to have that pleasure," I answered, scenting the savory odor of a tale worth telling.

"Ever since the return from abroad of the father of the talking machine industry, the renowned Thomas A.," he continued, smiling at my eagerness, "there have been stories galore going the rounds of the talker shops which are supposed to have emanated from his fertile brain. Here is one that is too good to keep. Listen:

"A delegation of foreign noblemen had assembled at the plant of what was then the National Phonograph Company at East Orange, N. J., for the purpose of making a tour of inspection under the personal guidance of Mr. Edison. It was their desire upon returning to their several countries to be in a position to judge with accuracy the greatness of the wizard of Menlo Park. They passed from one department to another, becoming more interested at every step, and when at last they arrived at the recording rooms of the phonograph laboratory their enthusiasm reached a climax. Vocal and instrumental soloists, a military band, and a symphony orchestra were all doing duty in their respective booths, engraving upon cylinders of wax the world's greatest melodies for the musical education of future generations.

"A babel of complimentary shouts arose, but as there was not a mob scene booked for that day, Mr. Edison brought order out of chaos by relating this story:

"Gentlemen, when I was making my first experiments with the phonograph, the most popular form

of instrument then before the public was known as the nickel in the slot machine. Instead of the horn which is in use to-day, rubber tubes conveyed the sound to the ears of the listener. Several of these machines were installed in a store on Broadway, New York City, and a huge and gaily painted sign announced to the world that for the insignificant sum of five cents the melodious strains of Sousa's Band could be heard within.

"Down the street, perched upon his load of timothy hay, driving a team of fat and sleek-coated mules, came Ezra Hoskins, en route to the hay market from his farm near Hickory Corners. Coming abreast of the sign, he halted his trusty steeds with an emphatic 'Whoa!' and hurried into the store, remarking, 'Gol ding it! I've been a-waitin' ten years to hear Sousie, an' now I've got the chance I sure ain't a-goin' to let her slip.'

"Placing the tubes to his ears, and dropping the necessary coin in the slot, he drank in the harmonious blending of reeds and brasses ravenously,

"SHE REVELED IN EVERYTHING MELODIOUS."

his cowhide boots shuffling an obligato. The concert had not proceeded far, however, before Ezra dropped the tubes and ran from the shop at his best speed. Reaching the street, he dashed to where his mules were peacefully dreaming of clover fields down Hickory Corners way, and clutched their bridles frantically.

"What's the trouble, Rube?" inquired a policeman solicitously.

"My mules is feared of music, that's what."

"There were representatives of almost every nation among the listeners to this tale, and they all laughed uproariously with the exception of Lord Elsen, an Englishman, who maintained a most dignified mien. A few hours later, over an elaborate luncheon, amid the clinking of glasses and the exchange of repartee, and while the conversation was

drifting in an entirely different channel from that of the Ezra Hoskins episode, Lord Elsen began to laugh.

"By Jove!" he cried, the tears of mirth coursing down his ruddy cheeks, while he deftly fished for his monocle in the consomme. 'A deuced good joke on the mules. My word!'"

Before I could adequately express appreciation for my merry friend's ability as a raconteur, he launched forth again as follows:

"It seems there was, once upon a time, as they say in story books, a young woman who was very fond of music. In fact, she reveled in everything melodious. Her husband knew of her desires, but being a clerk on a moderate salary, he was not in a position to treat her to the concerts, operas, oratorios, recitals, etc., for which her soul craved.

"It was the eve of Christmas, and he had not yet decided upon a gift for her. It must be something musical; she demanded that, but he knew of no one instrument that would suffice. She longed for symphonies played by the great music masters, and golden-voiced renditions of famous songs. How to satisfy her was the question, and a most serious one. Just then the waitress—he was in a restaurant—asked demurely, 'What will you have this evening, sir?'"

"His mind was upon his wife and her gift, and he answered absently, 'A little bit of everything, please.'

"She nodded understandingly and gave the order thus: 'Hash one!'"

"While eating the hash he wrestled further with the gift problem. 'If,' thought he, 'I can get a little bit of everything in a restaurant for a modest sum, perhaps I may meet with similar success in a music store.' So there he journeyed forthwith and made known his desires.

"I want everything musical, and I want it cheap," he cried. 'Can you accommodate me?'"

"That's easy," the salesman answered. 'You want a phonograph.'"

How about establishing a bureau of fun in your talker shop, Mr. Dealer? One member of your glorious fraternity has profited by it. It's your turn next.

L'ENVOI A LA DAFFYDIL.

It was 2 p. m. of a stormy day in the magnificently appointed show rooms of the Penn Co. Frank Osmon, phonographic expert, was explaining to a beautiful young widow, whose husband had recently been talked to death by a talking machine salesman, the operation of an Edison Triumph. Placing a record of Chopin's Funeral March upon the mandrel, he asked sympathetically. "If the Philadelphia office of the Columbia Phonograph Co. had an important message to transmit to their Bridgeport factory, and the telegraph wires were down, could Grapho 'phone?'"

HOWARD TAYLOR MIDDLETON.

RECORDS OF HAWAIIAN MUSIC

Now Being Issued by the Columbia Phonograph Co.—Original Masters Made in Honolulu at Columbia Laboratory.

The Columbia Phonograph Co., General, New York, is announcing the release of the first double-disc records of Hawaiian music for the Pacific Coast trade, where considerable interest exists in that kind of music. In offering these first Columbia records of Hawaiian music the company is making an important addition to its already comprehensive repertory of records of "all the music of all the world," and that it will be appreciated by its many Hawaiian friends and also of considerable interest to its patrons in general, goes without saying.

Hawaiian music corresponds well with the beauty and romance for which the "Pearls of the Pacific" are noted, and these records, made under the supervision of the best Columbia recording experts from New York in the Columbia laboratory at Honolulu from selections rendered by a number of native glee clubs and singers, are such extraordinarily perfect reproductions that none of the characteristic beauty and peculiar charm of these typical Hawaiian melodies has been lost.

BUEHN SERVICE EXCELS

Mr. Edison Dealer, Who's Your Jobber?

It means a lot to us that the dealer who answers 'BUEHN' to this question can do so with a thoroughly satisfied tone and expression. We are striving all the time to the very best of our ability to make our patrons feel it means more and more, as time passes, to have this jobbing centre as their jobbing centre.

One order will show you just what we mean by "Buehn Service"—promptness and completeness. Send it in, no matter how large or small. May we have it?

BUSINESS GOOD IN PHILADELPHIA.

Demand During January Very Satisfactory to the Dealers, but Shortage of Goods Reported—Substantial Increase Over Last Year's Record—What the Different Managers Have to Say—Recent Visitors of Record—Old Talking Machine Houses Increase Facilities—Louis Buehn & Bro. Make Encouraging Report—Other News of the Month.

(Special to The Talking Machine World.)

Philadelphia, Pa., Feb. 6, 1912.

The talking machine business in Philadelphia during the month of January was most satisfactory so far as the demand for the instrument is concerned and more or less unsatisfactory in the inability of the factories to keep the trade fully supplied. In spite of the fact that the tremendous Victor plant at Camden, N. J., has been running full time and with a full quota of workmen right along, it seems to be unable to meet the calls upon it for instruments and likewise for records. The Victor Co. seems to be doing all it can to meet demands, but these are in such proportions that it is difficult to satisfy everyone.

All of the retailers and jobbers in Philadelphia say that their January business, in spite of shortness of stock, has been considerably larger than it was last January and is growing at rapid proportions all the time. They claim that the shortage is not alone in machines and records, but the cabinet men are unable to fill orders and in every other line the same condition exists.

The manager of the talking machine department at Wanamaker's informs me that he has been surprised the way the business has been keeping up, and added: "Our business for January has been very much larger than it was last year." There is no contemplated change in the Wanamaker arrangement of the talking machine department at present, but it is quite likely that the large room which is built within the department and which was on exhibition at the St. Louis Exposition will be removed or the inside will be converted into a series of salesrooms.

Manager Elwell, of the talking machine department at the Heppes store, says that January business has been excellent and that the only drawback experienced is the inability to get machines and records from the Victor Co. The Heppes are very short on the 8, 9, 10 and 11 Victrolas. Frank Schaller has been doing very well on the road for the firm. Among the out-of-town visitors to the Heppes house this week were Harry Cake, the Pottsville dealer, who reports that business is very good with him; and J. Harry Holt, of Mt. Holly, N. J.

The Columbia Phonograph Co. reports an excel-

lent business in January and it is feeling very optimistic over the situation. Ellison van Hoose, who has made a number of records exclusively for the Columbia, was in Philadelphia the past week as soloist with the Philadelphia Orchestra. He visited the Columbia warerooms and heard for the first time the records he had made for the company, which have been selling very well.

The Columbia Co. has been having a big run on the Favorite style which sells for \$50. It is the biggest seller among the firm's Grafanolas. A number of these machines were sold recently to the public schools in this city and they have been giving such excellent satisfaction that they expect to do a big public school business in the near future.

Marion Dorian stopped in Philadelphia for a couple of days last week on his way to Washington and Baltimore. Among the popular records recently gotten out by the Columbia are the operatic numbers made by Bernice de Pasquali, including numbers from "Hamlet," "Linda" and "Pearl of Brazil."

For the past three weeks and for the next two the Columbia machine is being used here in the Baptist Temple in connection with the exhibition there of "The Storm." They give selections on the Grafonola prior to the "Storm" and during the "Storm." Mr. Reynolds accompanies one and sometimes two of the records on the big organ.

The Columbia Co. has recently given a number of fine recitals at various churches and clubs and a great many are scheduled for the rest of the winter and this spring.

No new talking machine retailers have opened in Philadelphia during the month of January, but several of the old firms have largely increased their capacity for handling the instrument.

Louis Buehn & Bro. have found their business in January considerably better than last year, and if circumstances in the way of getting stock had been favorable it would have been tremendous. He does not look for any change for the betterment in this direction for the next two months. The Buehn people pulled off a couple of big deals during January which he believes are going to be excellent customers. Mr. Louis Buehn was in Pittsburgh several days last week and reports that business out there is very good. They only started the store last May and consequently there is as yet no comparison, but thus far it has been running ahead each month and is considerably better than he had anticipated. His brother, who conducts the Pittsburgh store, likes that city very much and says he never thinks of Philadelphia as home any longer.

The business in January of the Gimbel Bros.' talking machine department, Manager Stewart

says, was better than last January by at least fifty per cent. and probably more. They have already made plans for the erection of four new salesrooms, and their system of stocking will be entirely changed and a new and up-to-date plan devised. The Market street front of the department, which is now used as buyers' offices, will be torn out, thus giving them a larger auditorium in which it is contemplated to give recitals when the new monthly records come out. Their January sales equal the December business in 1910, which is showing a remarkable growth.

VICTORS IN THE SCHOOLS

The Subject of an Interesting Lecture and Demonstration at Scott & Jones' Hall, in Youngstown, O., on February 6, 1912.

(Special to The Talking Machine World.)

Youngstown, O., Feb. 9, 1912.

A demonstration and lecture on the educational advantages of the Victor talking machine was given by Mrs. Frances E. Clark, formerly supervisor of music in the Milwaukee public schools, in the Scott & Jones Hall, this city, on the evening of February 6. Invitations were sent to all the local teachers and to members of the school board, with the result that there was a large audience, which was both instructed and enlightened regarding the value of the Victor talking machines in the schools.

Mrs. Clark, who possesses a very magnetic personality and who is, moreover, a charming speaker, explained in detail the objects of the Victor Co.'s educational department and its great resources of Victor records to meet the requirements. In this connection records were played of the various marches, folk songs, primary songs, for the needs of the pupils through the intermediate, grammar and high school classes, whereby they form an important and regular feature of school work. She emphasized the utilitarian and artistic service of the Victor educational records in everyday school work, and particularly its advantages in the musical department, where music history and music appreciation, oratorio and opera is studied.

It was a most delightful evening in every respect, and all who were present were most favorably impressed, and it goes without saying that the public schools of this city will ere long include this very interesting and important adjunct to its educational work.

The Scott & Jones Co. handled the lecture in an excellent way. The invitations were gotten up most attractively and the entire affair reflected credit on its good judgment and management.

The science of all business is service. He profits most who serves best.

HEAVY RECORD TRADE ON THE COAST

Sales of Many Machines During the Holidays Result in Big Demand for Records During Following Months—Rainy Weather Helps—Curtaz & Son Department Moved to Main Floor—Frank Sharp in Charge—Increased Business Reported for All Wiley B. Allen Stores—Installing Edison Business Phonographs—E. W. Scott Buys Out Kohler & Chase Department—General Trade News of the Month That Is Worth Mentioning.

(Special to The Talking Machine World.)

San Francisco, Cal., Jan. 26, 1912.

"This is the season of the year when we do our greatest business in talking machine records," says A. R. Pommer, manager of the Pacific Phonograph Co. "This fact is due to the great number of new machines sold during the holidays. Naturally people who have machines want new records, as they do not usually buy a great many at the time they purchase a phonograph. Also, on account of the rainy season, folks stay indoors more and hence have need of this sort of amusement."

Extensive alterations are being made in the store of Benjamin Curtaz & Son on Kearny street, by reason of the fact that the talking machine department is to be moved from the mezzanine floor to the main floor. The talking machine business with this firm has grown considerably of late and it was found necessary to provide larger quarters. Five sound-proof rooms will be fitted up on the main floor at the rear, and the main offices will be shifted to allow room for the new department. Frank Sharp, formerly with the Columbia people, has for the last three months had charge of the Curtaz talking machine department.

The Wiley B. Allen Co. reports a big increase in its talking machine business for 1911. This increase extended to all its different stores on the Coast, namely: San Francisco, Oakland, San Jose, Los Angeles, San Diego and Portland, Ore. This company has completed its stocktaking and is now busy with plans for the new year. The record business is holding up well in spite of the rains, which have interfered somewhat with retail sales in this city.

A. G. McCarthy, secretary of Sherman, Clay & Co., says that he is surprised at the greatly increased sale of the larger sizes of Victrolas. Though handicapped by inadequate supplies of Victor talking machines from the factory, yet this company cannot complain, for it has done a record business right along. Its sales of records are keeping pace with the sales of machines.

Several big deals for installing Edison business phonographs in local business establishments have been made by Peter Bacigalupi & Sons lately, and the regular talking machine business, while not as brisk as a month ago, is averaging well for the month.

Babson Bros., who depend mostly upon their mail order business in Edison phonographs, report a slight improvement in business for January, especially in records.

E. W. Scott, formerly manager of the San Francisco office of the Columbia Phonograph Co., has just acquired the talking machine department of the Kohler & Chase Piano Co. here. He bought out this department on January 15 and consequently replaced C. Wortley as manager. In order to comply with the growing requirements of this department new quarters are being fitted up on the mezzanine floor of the Kohler & Chase building, to which floor the talking machine department will be moved from its old quarters on the fifth floor. All the demonstration and machine rooms will be finished in mahogany and plate glass, and the ceilings will be carried out in keeping with the general decorative scheme of the main floor; that is, in ivory and gold leaf. All rooms will be rendered sound-proof. When completed, about the middle of February, it is expected, this talking machine department will be as handsome, if not more so, than any similar department on the Coast. Mr. Scott says that he will make a strong bid for the best talking machine business of the city.

C. Wortley, until recently manager of the Kohler & Chase talking machine department, is now con-

DON'T let the other man pick all the ripe plums. Get a few yourself.

The **Trade Mark** you see marked *Music Master* is your **safeguard**. It is the **ONLY** Horn Guaranteed.

Should your jobber be unable to supply you, write us.

SHEIP & VANDEGRIFT, Inc.
PHILADELPHIA, PA.

nected with the Dictaphone department of the Columbia Phonograph Co. here.

W. S. Gray, Coast manager for the Columbia Phonograph Co., is making a trip through the Sacramento and San Joaquin valleys.

James L. Clancy, formerly the Oakland manager of the Columbia Phonograph Co., and Mr. Le-Claire, an employe of the Oakland house of Kohler & Chase, have taken over the talking machine department of Kohler & Chase in Oakland.

The Columbia Phonograph Co. announces that now it is without any retail interests on the Coast, but is devoting its energies entirely to the wholesale business.

R. B. Davis, the phonograph dealer of Stockton, Cal., was a recent visitor to the San Francisco jobbers.

A. McDowell, in the talking machine business at Petaluma, Cal., was in the city a few days ago.

E. E. Edstrom, the Vacaville (Cal.) phonograph dealer, paid a recent visit to San Francisco.

The Sturrock Music Co. at Port Townsend, Wash., is a late firm to take up talking machines.

The Cloverdale Pharmacy, Cloverdale, Cal., has taken on a line of talking machines and records.

C. L. Barnum is a new dealer in talking machine goods at Forestville, Cal.

Mr. Schindler, of Schindler & Schuler, Chico, Cal., is a talking machine dealer who recently called on the jobbing trade in San Francisco.

William Temby, a talking machine dealer of Grass Valley, Cal., has filed a petition in bankruptcy.

The only music at the funeral recently of Prof. W. M. Skinner, a vocalist, of Jackson, Mich., was a phonographic record of his own voice.

Some time before death he sang into the machine a musical arrangement of Tennyson's poem "Crossing the Bar," and this was heard at the funeral.

It's an easy thing to do a thing to-morrow,

It's a "cinch" for one to do it bye and bye.

But the man whose life is sunny,

(He's the chap that gets the money),

Is the man whose stunt is "do it now or die."

With "the one complete line" and Columbia exclusive selling rights you can tune the talking machine business in your district up to any key-note you like the sound of.

Tribune Building, New York**

NEW COLUMBIA ARTISTS.

Interesting Quintet of Famous Artists Whose First Records Appear in March Record List.

The Columbia record list for March is especially interesting to both the trade and the public owing to the several prominent artists recently signed up by the Columbia Phonograph Co. and whose records appear for the first time in the March list. One of the best known of the new Columbia artists is Giovanni Zenatello, a tenor of great ability, who achieved popular favor in America through his

Photo Copyright Mishkin.
ZENATELLO.

CAROLINA WHITE.

work with Hammerstein's Manhattan Opera House Company and later as a member of the Boston Opera Company. The story of Zenatello's rise to a position among the world's greatest singers is one full of romance, for his talents as a singer were wasted in the entertainment of his fellow employes in a workshop in Verona until he was discovered by a French impresario and started on his way to success. Another important addition to the Co-

ELLISON VAN HOOSE.

lumbia recording staff is Carolina White, the young American tenor with the Philadelphia-Chicago Opera Company, who in the course of two seasons has won an enviable reputation in grand opera circles, coming back to America with the unqualified endorsement of European critics. The records of her voice, which is a high dramatic soprano of wonderful quality, are said to be unusually good. Ellison Van Hoose, the noted American tenor, who has also arranged to sing exclusively for the Columbia Co., needs no introduction to the music lovers of the United States, for his popularity is widespread. The peculiar sweetness and purity

CHAS. W. HARRISON.

of his voice is well illustrated in the tow records made by him and which are included in the March list. The first violin records made by Jules Falk, one of the most popular of the violin soloists now in America, are also included in the new list, both the Ave Maria, by Schubert, and Traumerei, by Schumann, being interpreted with pleasing regard for tonal values. The last of the quintet of new Columbia artists whose records are announced for March is Charles W. Harrison, the well-known tenor, who has contributed in record form a rendering of "Pluck Not the Rose" from the successful Viennese operetta, "Miss Dudelsack."

CONDITIONS IN INDIANAPOLIS.

January Made a Remarkable Showing in Sales of Machines and Records—The Volume of Business Has Surprised Dealers—The Managers of the Leading Companies Make Very Interesting Reports Which Must Result in Great Activity at the Factories.

(Special to The Talking Machine World.)

Indianapolis, Ind., Feb. 3, 1912.

Talking machine dealers report that business for January was unusually good. Thus far they have not figured out just what was the cause of the remarkable increase. All of the companies, including the Columbia Co., the Wulschner-Stewart Music Co., which handles Victors; the Aeolian Co., which handles Victors, and the Kipp-Link Co., which handles the Edison line, reported good gains.

"If the month of January is any criterion of the volume of business to be done in 1912," said Thomas Devine, manager of the Columbia Co., "this year is going to be the greatest in the history of the city. It has really been an extraordinary month for the Columbia Co. We have done far and away greater business than was ever done in any other one month of the history of the company in Indianapolis." Mr. Devine says he attributes this increase in a very great measure to the effective advertising done by the company, but in a greater measure to the unusually attractive line of machines and records and in a still greater measure to the fact that of late he has been able to get and carry in stock full lines in representative quantities of the machines and records made by the company.

W. E. Ludlow, secretary of the Wulschner-Stewart Co., said that the business of his company in the talking machine line had been 50 per cent. over that of January of the previous year, and February had opened up just as well, he said. The greatest trouble is, he says, that the demand for machines and records is so great that it cannot be filled. "I think," said Mr. Ludlow, "that we are going to have to find more room for our Victor department, but I don't know just where we are going to find it. As a matter of fact, we need all of the talking machine space we have now for the playing of machines for the customers." The Wulschner-Stewart Co., in addition to its display rooms in its main store in North Pennsylvania street, has large storage capacity at another place in the city.

O. A. Gressing, of the Aeolian Co., reported that

business had been good since the first of the year and that there had been a remarkable demand for records, which he attributed to the great number of machines sold during the holidays.

The closing of the store of the Musical Echo Co. has led to some comment as to just how well the talking machine field is covered in Indianapolis. Dealers of experience believe there is not much room in the city for anything more in the way of wholesale business, but it is admitted that there is room for more retail dealers. Koehring Bros., who owned the Musical Echo Co., closed out, it was understood, that they might devote all of their time to their hardware business in Indianapolis, which they had been carrying along with the talking machine business. The wholesale stock of the Musical Echo Co. was sold to the Wulschner-Stewart Co. and other of the stock was sold at Chicago. The Musical Echo Co. had a well equipped store in North Pennsylvania street, handling the Victor line.

Some excellent sales of Victors to the public schools, both in the city and outside, is reported. This is a line of talking machine business which is growing in Indiana.

E. P. Van Harlingen, manager of the Chicago office of The Talking Machine World, called on Indianapolis dealers last week. He made a short stay at Martinsville, a health resort near Indianapolis.

Miss Ada Willsey, who was the manager of the Musical Echo Co., now has charge of the talking machine department of the Aeolian Co. Miss Willsey is probably the most experienced talking machine woman in Indianapolis, as she has been connected with the business in an executive way for several years.

The Columbia Grafonola Baby Regent has made a great hit in Indianapolis, and has been an immense seller for the Columbia Co. store. "The design of the machine," said Manager Devine, "its finish and the beautiful tone qualities are such as to appeal to every artistic and practical housekeeper. In the less expensive machines Manager Devine is strong for the "Favorite." He says this is the best selling and the best money value machine ever manufactured by any company anywhere at any time.

Cal Stewart, who has made many phonograph records, was on the bill at B. F. Keith's Grand last week for a monologue and he was one of the hits of the bill. He came to take the place of Ed Morton, who could not fill his engagement. The newspapers in speaking of Stewart's part on the program said: "If Ed Morton, who was to have appeared instead, is any better than Cal Stewart then for goodness sake send him along next week instead of Eva Tanguay, for Cal Stewart is certainly a gem of the first water."

The Olive Mead Quartet and Charles Hackett, tenor, have recently made their first Edison records, some of which will appear shortly upon the lists of that company.

There isn't a man connected with your institution who hasn't an idea or two that will do your business good. Do you offer all your assistants opportunity for expressing their ideas?

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Special to The Talking Machine World.)

Washington, D. C., Feb. 7, 1912.

SOUND REPRODUCING AND RECORDING INSTRUMENT. Henry George Wieder, London, England. Patent No. 1,013,247.

This invention relates to improvements in sound reproducing and recording devices, and one object is to obtain without a long trumpet the intensification of sound which is usually produced by a long trumpet at the same time to increase the mellowness of reproduction. In this connection the inventor provides the instrument with a plurality of short trumpets branching from the sound pipe, said trumpets being provided at or near their ends with sounding boxes, which form walls of an inclosing cabinet. By this arrangement the sounding boxes may be arranged to form a plurality of the sides of a cabinet which incloses the entire instrument, including the trumpets, and since the trumpets for a given size of instrument are very much shorter than the trumpet usually employed for such an instrument, the overall dimensions of the entire cabinet may be kept small without any parts protruding from the cabinet.

Further objects of the invention are to improve the swivel connection of the sound arm which carries the diaphragm, to provide improved support for the carrier of the diaphragm lever and needle and to provide an improved resilient mounting for the element which carries the diaphragm and needle support.

The invention further consists in pivotally connecting the portion of the sound pipe which carries the sound box to the rest of the sound pipe in such a manner that the two portions of said sound pipe are coaxial at the joint in their normal working position, and whereby the gradual taper of the sound pipe may be continued to the sound box itself.

According to another part of the invention the needle carrier and diaphragm arm are mounted on a bar having two projecting knife edged arms bearing in suitable grooves formed one on a pin extending from the sound box, and the other on a pin carried by a bracket attached to said sound box, said knife edges and their corresponding grooves being oppositely turned with respect to

each other, and so arranged that the movement of the record against the needle tends to hold the bar more firmly in its bearings.

The invention further consists in mounting a diaphragm and needle carrying element upon the end of the sound tube resiliently in such a manner that it may move somewhat relatively to said end in a circumferential direction but may not move out of its normal plane. By this method of mounting the entire movement of the needle in the direction which affects the diaphragm is transmitted to the diaphragm instead of some of the movement being absorbed in moving the dia-

phragm carrier out of its proper plane, as occurs in apparatus of this character at present in use.

The invention further consists of an improved diaphragm for sound reproducing and recording instruments consisting of a thin disc of wood,

composition or the like with a circular flange or ridge some distance within the periphery, the portion of the diaphragm within this flange or ridge being thickened.

Figure 1 is a plan view showing a gramophone constructed according to the present invention. Fig. 2 is a section on the line A-A of Fig. 1, with sound pipe and diaphragm carrying element removed. Fig. 3 is a section on the line B-B of Fig. 1, showing the arrangement of the funnels and sounding boxes. Fig. 4 is an elevation of the sound pipe having a continual taper. Fig. 5 is a partly sectional view of the mechanism shown in Fig. 4, and illustrating my improved swivel joint. Fig. 6 shows an enlarged view of improved needle mounting. Fig. 7 is an elevation of improved diaphragm carrying element with part of the back cover removed. Fig. 8 is a sectional view of the parts shown in Fig. 7; Fig. 9 is a section through improved diaphragm.

SOUND BOX FOR TALKING MACHINES. Alex Fischer, Kensington, London, England. Patent No. 1,013,145.

This invention relates to sound boxes for talking and like machines and has for its object to improve the connections between the stylus bar and sound box disclosed in his patent No. 904,523, November 24, 1908.

Referring to the accompanying drawings forming a part of this specification in which like letters refer to like parts in all the views: Figure 1 is an elevational view of a sound box made in accordance with this invention; Fig. 2 is a side view of the same; Fig. 3 is a sectional detail view of certain parts; Fig. 4 is a perspective view of the spindle and connecting parts; Fig. 5 is a view of a modified form of the invention; and Figs. 6, 7, 8 and 9 are views of the bearings for the spindle.

TALKING MACHINE SOUND BOX. Alex Fischer, Kensington, London, Eng. Patent No. 1,013,146.

This invention relates to talking machine sound boxes and refers to an arrangement by means of which an extremely sensitive springing of the stylus bar and its associated parts may be effected.

The improvement is applicable to any sound box which has a rocking plate, a spindle or the like in connection with the stylus holder, and the essential principle of the invention is to so adapt a spring or springs in connection with the said rocking plate, spindle or the like that such spring or springs keep the rocking plate, spindle or the like pressed upon its seating, without a tendency to tilt the plate or spindle upon such seating.

Figure 1 is a plan view of one form of the invention; Fig. 2 is a like view of a slightly modified form of the invention; Fig. 3 is a view similar to Fig. 1, but employing two springs; and Fig. 4 is a view similar to Fig. 2, but also employing two springs.

SOUND BOX FOR TALKING MACHINES. Bentley L. Rinehart, Camden, N. J., assignor to Victor Talking Machine Co., same place. Patent No. 1,013,314.

This invention relates to certain improvements in sound boxes for talking machines and particularly to the yielding support on which the stylus bar is mounted and to the means for adjusting and holding the diaphragm.

Briefly this invention consists in mounting the stylus bar on a flat spring which in turn is secured to a suitable supporting plate, the said spring between its points of support being buckled or slightly sprung away from the supporting plate and having its longitudinal axis perpendicular to the plane of the diaphragm and lying within the plane of the oscillation of the stylus bar.

In the accompanying drawings forming a part of this specification, Figure 1 shows a sound box having improved stylus spring secured thereto; Fig. 2 is a longitudinal section of a sound box containing my invention, taken on the line 2-2, and Figs. 3 and 4 are detail views showing the stylus bar and its support detached from the sound box casing.

Sound-conveying Device for Talking Machines. Eldridge R. Johnson, Philadelphia, Pa., assignor to the Victor Talking Machine Co., Camden, N. J. Patent No. 1,015,321.

The object of this invention is to provide such a construction in connection with sound tubes of talking machines that the sounds produced may be modified and purified, thereby particularly adapting said machines for the reproduction of speech and conversation, and is particularly adapted to those machines where the sound tubes are placed

THE BEST TRADE MAKERS ON THE MARKET ARE THE LINE OF ELECTRIC-PLAYERS

MADE BY
THE ELECTROVA CO., 117-125 Cypress Ave., NEW YORK

As a side line for Talking Machine Dealers they are unequalled. They mean easy money and big profits. We will send the arguments that will convince you and your customers.

Write for Catalogs, Prices and List of Perforated Music Rolls. You will be interested.

directly in or at the ear of the person listening to the sounds produced by said machine.

The sound produced by the disc type of talking machine is of such a volume and character when conveyed directly to the ear through the usual ear tube that it is necessary to reduce the volume and purify the tone to prevent the annoying and undesirable vibrations from being objectionable. This is accomplished by providing means for selecting the desirable and useful vibrations required, and allowing only such to be conveyed to the ear. In this instance the means comprise a damper or what may be called an "acoustic filter," which is inserted at a suitable point in the sound conveying means, such point being preferably that at which the hollow sound box carrying arm is pivoted to its support. Machines having this feature of construction are particularly adapted for the reproduction of conversation or speech which is required in teaching foreign languages by means of records having distinct lessons in such language or languages recorded hereon. In the latter use

of talking machines it is essential and necessary that the articulation and pronunciation be very clearly reproduced without regard to the volume, although it is, of course, required to have the volume or intensity of the words reproduced sufficiently great to be easily heard. This result the present invention

accomplishes in a most successful and efficient manner.

Figure 1 represents a side elevation of a talking machine having improvements applied thereto. Fig. 2, a plan view partly in section of the hollow sound arm and its supporting pivot or trunnion, and Fig. 3, an enlarged elevation, partly in section, of the sound tube at its point of support, and showing improved damper or acoustic filter in position therein.

PHONOGRAPH. Josiah B. Millet, Boston, Mass., Patent No. 1,013,421.

This invention relates to phonographs, being particularly concerned with the provision of means for improving the quality of the sound reproduced by such instruments.

In the drawings Fig. 1 is a side elevation of the reproducing mechanism of a phonograph equipped with one form of the invention. Fig. 2 is a detail in enlarged section showing the stylus support, and Fig. 3 is a modified form showing a stylus support suitable for use in connection with records provided with grooves having lateral undulations.

Sound Box for Talking Machines. Thomas H. Macdonald, Bridgeport, Conn., assignor to American Graphophone Co., same place. Patent No. 1,014,240.

This invention relates to sound-boxes for talking machines and has more particular reference to the means provided for protecting the diaphragms of such sound-boxes from injury. It has heretofore been proposed to provide a cover for the exposed side of the diaphragm in such sound-boxes, which cover was arranged to slip over the exterior portion of the sound-box frame, or was provided with means for securing such cover in position on the frame independent of the means for securing the diaphragm in position in the frame. It has been deemed desirable to have openings through which the said cover, and as heretofore constructed, these openings have been such that any sharp pointed instrument projecting through

the openings could extend in a right line into contact with and injure the diaphragm.

The present invention has for its object to provide a sound-box for talking machines, having a diaphragm and cover, both of which are secured in a position by the same means, and which cover is provided with openings which are so arranged in the cover that any sharp-pointed instrument or other projection entering through the openings cannot come in contact with or injure the diaphragm.

With this object in view, the invention consists in a suitable sound-box frame having a diaphragm retained through two suitable gaskets, preferably of rubber, a sound-box cover resting upon the outer gasket, and an elastic expansion ring for retaining the parts in position by the engagement of the ring with an undercut groove formed in the inner wall of the sound-box chamber.

Talking Machine. Eldridge R. Johnson, Merion, Pa., and John C. English, Camden, N. J., assignors to the Victor Talking Machine Co. Camden, N. J. Patent No. 1,015,322.

Figure 1 is a perspective view of a sound box with the cover in position; Fig. 2 is a vertical central section through such box; Fig. 3 is a plan view of the diaphragm, with the stylus bar in position thereon, and Fig. 4 shows the cover and the ring for retaining the parts in their assembled position.

The main objects of this invention are: to provide a compact inclosed talking machine; to provide a talking machine in which the amplifier, the record support, and the actuating mechanism for the record support are inclosed in a cabinet provided with a movable cover, and in which the

amplifier is located above the record support and is movable vertically independent of the cover, and in which the sound box is supported by a bracket secured to the outside of the rear end of the cabinet and communicates with the major portion of the amplifier

through an elbow projecting outwardly through the rear end of the cover.

In the drawings, Figure 1 is a fragmentary side elevation, partly in vertical longitudinal section, of a talking machine constructed in ac-

cordance with this invention, the parts of the machine being shown in operative position; Fig. 2 is a similar fragmentary side elevation, partially in longitudinal vertical section of the same, but showing the parts in operative position; Fig. 3, a front elevation of the same showing the cabinet closed; Fig. 4 a rear elevation of the same.

COLUMBIA BRIEFLETS.

E. B. Walthall is now in charge of the Columbia Phonograph Co., General, store at Louisville, succeeding O. J. Junge, who has gone to the Columbia store in Providence, R. I. Mr. Walthall is a thoroughly capable talking machine man, and he was for some time manager of the company's store at 1008 Olive street, St. Louis.

J. G. Widener, popular and well known among the trade throughout the country, has cast his fortunes with the Columbia sales staff as special traveling representative.

C. A. Malliet, who for some time past has been New York City salesman for the wholesale and retail Columbia branch store at 89 Chambers street, has gone to Wilkes-Barre, Pa., to take charge of the Columbia headquarters in that city. Louis C. Zeigler succeeds Mr. Malliet in New York and is on familiar ground, having previously held the position for several years.

The man who looks after only the big leaks will wonder why the boat sinks so rapidly. The man who watches only the little leaks will drown while he watches. Look after all the leaks.

CREATORE'S MUSIC IS REPRODUCED.

Bandmaster Delighted with Strains of His Pieces on the Columbia Phonograph.

Signor Guiseppe Creatore, the vivacious band conductor, spared a few hours from rural pursuits on his farm near Hartsville, Bucks County, yesterday, and came to the headquarters of the Columbia Phonograph Co., at 1109 Chestnut street, to hear the first phonographic reproductions of his band selections on the Columbia phonograph, for which instrument he has contracted to play exclusively.

The fiery and spectacular wielder of the baton sank back in a chair before a Columbia machine

and Gannes' "La Victorie," followed, completing the concert of the great conductor to himself.

Creatore was highly pleased with the work of the Columbia machine in reproducing the music of his band.

The Columbia Co. has been endeavoring for some time to obtain records of Creatore's Band, and it was only last month that he consented to his music being copied. A representative of the company said yesterday that Creatore is being paid a higher price for the privilege than has ever been given a band conductor for this purpose.

Machine Carefully Studied.

The Columbia Phonograph Co. declares that Creatore merits the consideration, because before he accepted the contract from the company he made

CREATORE LISTENING TO PLAYING OF COLUMBIA RECORDS OF HIS BAND.

and the record of his adaption of Suppe's "Poet and Peasant Overture" was run off. Creatore listened with wrapt attention, and at times forgetting himself, raised his hands in characteristic gestures, as if leading his band, whose music issued in faultless reproduction from the instrument.

Band Master Highly Pleased.

Creatore's own arrangement of "Nearer, My God, to Thee," which his band has played with so much success, was played and his own adaptation of "The Hallelujah Chorus," from "The Messiah,"

a study of the instrument for the purpose of satisfying himself that the machine was capable of reproducing his music in an accurate manner.

Through the Columbia machine the selections of Creatore's Band will be heard with many new and beautiful effects, and it is the intention of the conductor, to have his entire repertoire preserved on Columbia records. Much of this work will be accomplished this winter before he takes his band on a tour of the South and the Pacific Coast, starting on February 27.—Philadelphia Press.

JANUARY TRADE AHEAD

Of the Same Month Last Year as Far as the Sales of Victor Talking Machines Are Concerned—This Is the Report Made by G. T. Williams, General Manager of the New York Talking Machine Co., Victor Jobbers.

G. T. Williams, general manager of the New York Talking Machine Co., Victor jobbers and distributors, 83 Chambers street, New York, in a chat with The World this week expressed himself as well pleased with the 1912 outlook. Regarding general business for the month past, Mr. Williams said: "January's closing days find us substantially ahead of the same month in 1911. Just how heavy the increase will prove we can't say until the books

are balanced for the month. The demand has not been confined to any one style of instrument, but rather has been strong and healthy for the entire product of the Victor factories. We have enjoyed a phenomenal sale of records of all classes, the demand being so great as to almost cause a shortage. This condition appears to be general throughout the trade and is certainly an encouraging omen for the future. Personally," concluded Mr. Williams, "I am optimistic concerning the prospects for a new year of brisk trade. Victrola types are gaining in favor every day, with other Victor styles a close second. The great demand for records indicates a growing sentiment for high-grade music, and the talking machine business on the whole is making tremendous strides in the quality of the products."

"If it's made we ship it the same day order is received"

Every Jobber in this country should be represented in this department. The cost is slight and the advantage is great. Be sure you are in the March List.

Every time you order new Edison Records keep in mind the individual tastes of the people to whom you have sold Edison Phonographs, and to a certain extent make your selections particularly for them.

The way to make your stock of Edison Records even more profitable than it has ever been before, is to keep it moving even faster than it has ever moved before—and the way to keep it moving faster is to supply your local demand.

Classify your customers according to their particular tastes—for example: Mrs. Brown likes Grand Opera and classical selections. Mr. Harrison likes rag. Soandso is strong for band tunes and coon shouts. Lay out a definite schedule, so that when the new Records come out each month you'll know to a great extent beforehand exactly what to order for your *regulars*, to say nothing of gaining a better insight into the line of entertainment that appeals quickest to each new Phonograph prospect.

And when the new stock arrives, don't forget to invite Mrs. Brown and Mr. Harrison into your store to hear the Records you have ordered *especially for them*.

A little more personality and enthusiasm—and a lot more profits.

PROVEN VALUE OF RECITALS TO THE DEALER.

Some Interesting Views of the Subject Set Forth Herewith—Recitals Tend to Lift the Talking Machine Above Commercialism and Appeal to the Artistic Sense—How a Recital Should Be Conducted to Secure Best Results—Interesting Pointers in This Connection.

From the very earliest days of the talking machine business The World has preached, consistently and persistently, on the value of recitals as a means of developing business. There is no more dignified, forceful and effective means of demonstrating the value of the talking machine than through recitals. It not only interests, instructs and broadens the intelligence of those invited to participate, but it insures the dealer who develops the recital idea of an enlargement of a knowledge of his respective lines among the class of people who will surely buy, because they are interested in music of some sort, whether it be popular or classical.

While a great many dealers have adopted the recital plan of publicity yet it is well to bear in mind that it is of little avail unless it is done right, and some valuable and practical suggestions regarding this work are contained in the following views of O. A. Kellog, who placed his experiences before the trade as follows:

"Beyond a doubt, public recitals wherever tried have given the business an impetus and resulted in sales. However, the number of sales depends largely, if not entirely, on just how the recitals are conducted. This feature of the talking machine business, although showing some improvement, is still sadly neglected. This is an epoch of demonstration, therefore it behooves the dealer to inform the public of the great artists through the 'talkers' and records. Whenever possible, give these recitals in your warerooms. Train the public to understand that your establishment is the abode of great artists' voices. If you rent a hall, aside from the extra expense, the surroundings are only usual, and you lose a valuable asset.

"My idea of the recital feature is to eliminate commercialism. Don't advertise that 'Smith & Brown Co.' invite you to a recital; rather say the management of 'Grand Opera Hall,' 'Victor Hall,' 'Edison Hall,' or any other suggestive name, will present Caruso, Melba, Farrar, Sousa's Band, etc. Do not add that the 'Victrola' will do the work. You arouse curiosity by not doing so.

"The program must be arranged tactfully and tastefully. If you are not educated in music and have never studied the arrangement of programs, secure some musician to assist you, and you can also draw on local talent to aid you. In following this plan you secure gratuitous publicity through the society columns and music pages of the papers before and after the recitals. The Victrola advertisement should appear on the same page, and next to, if possible, the write-up of the recital.

"The attendant at the machine should describe each record before it is played. Tell your audience where the number appears in the opera, or, if it is a ballad, give an outline of the composer; say when and where born, the prominent compositions of the author, and then recite the poem that you are about to demonstrate. Also, mention the artist who renders the selection. This plan is much more effective than merely methodically playing one record after another in a sort of a mechanical manner. As to the attendance—request the presence of the leading musicians and society people, and provide them with reserved seats. You will find a fair percentage of those in attendance, although they may have attended from curiosity, will have developed into good customers.

"One evening an old gentleman sat near the Victrola, very much interested. He shook hands with me on retiring, and remarked he hadn't expected to hear anything so grand. A few days later his daughters presented him with a Victrola, remarking to me that all he could think of since hearing the recital was grand opera.

"Ascertain the studies in the public schools and search your catalogs for compositions by the authors they are studying, then invite the teachers to demonstrations. By so doing you will receive free announcements in the schools, with the request that the pupils attend. I invited the professor of music of the public schools of Dayton to spend an evening with me hearing grand opera. He grasped the possibilities of the talking machine as an educator and induced the superintendent to secure the purchase of a machine by the school board. Three other schools have since been supplied, and soon all the schools of that city will possess a Victor.

"A lady came in the other day and asked to see and hear a machine like the one used in the school, remarking that her children were becoming so familiar with classical music that she had herself become interested, and wanted a machine at home, so as further to develop her children's minds in good music.

"Excellent results will be obtained in giving well devised recitals. David Bispham is on record as saying that a talking machine and player-piano should be used in every school. Other prominent educators are getting in line, and the question is, Will you be the dealer to profit in your locality?"

VICTOR LINE FOR JACOB BROS.

Prominent Piano Concern Handles Victor Line in all Retail Stores.

Jacob Brothers, the prominent piano manufacturing and retailing concern of New York, have made arrangements for handling the entire Victor line of talking machines and records exclusively in all the retail stores which they control in New York city and other nearby cities. The extent of the field covered in a retail way by the concern and the high standing of the various stores in their respective communities, the deal is an important one for all concerned. An initial stock of Victor goods has already been placed in each of the Jacob Bros. stores.

EDISON EDUCATIONAL EXHIBIT

Held in St. Louis in Conjunction with the Convention of the National School Superintendents' Association—Talking Machines and Moving Pictures as Aids to the Teacher.

(Special to The Talking Machine World.)

St. Louis, Mo., March 9, 1912.

During the recent convention of the National School Superintendents' Association, held in this city, Thomas A. Edison, Inc., took advantage of the occasion to maintain an educational exhibit in the Jefferson Hotel, the use of both talking machines and moving pictures as aids to teachers being demonstrated in a thoroughly interesting and convincing manner.

The exhibit was in charge of W. H. Ives, head of the educational department of the Edison Co. and well known to the educators as originator of text books, and two assistants. Prof. Ives' reputation as a practical and progressive school man had much to do with the generous reception accorded his innovation, which was shown before a teachers' organization here for the first time.

The Edison idea does not conflict directly with the Victor Co.'s music plan as it is the Ives idea to relieve the teacher of much of the routine work, and his records speak examples, such as "multiply 52 by 7." These records are designed to give the teacher relief from what is universally admitted to be the most nerve racking and fatiguing part

of the teacher's work and to permit her to devote time to the government of the school. The idea will be carried into spelling and other lines.

The dealers' interest in these records were largely due to the new composition used in these cylinders, which are indestructible and which local dealers assert mean an innovation in the Edison record business. The records were spoken on an Opera machine supplied Mr. Ives by the Silverstone Talking Machine Co., the local Edison jobber, and many favorable comments were heard from the teachers and others on the effective production.

The moving picture machine, with its historical scenes and the neatness and compact films, aroused great interest and was accepted by the teachers instantly as being a great help in the school work.

COLUMBIA AGENCY IN BROOKLYN.

House of F. G. Smith to Give That Company's Products Live Representation—Handsome New Quarters in Flatbush Avenue—Other Big Deals Closed or Pending.

The Columbia Phonograph Co. has recently completed a big deal in Brooklyn, N. Y., whereby the great piano house of F. G. Smith, manufacturers and retailers of the Bradbury piano, of which there are thousands in Brooklyn homes, has made arrangements to handle the Columbia line of graphophones and grafonolas and double disc records in the new four-story F. G. Smith building on Flatbush avenue. The new deal provides for what will be one of the most representative talking machine establishments in the borough, the trade up to the present being handled chiefly by a number of small dealers. With the new branch as a basis the Columbia Co. look for a rapid development of its trade on the other side of the bridge.

George W. Lyle, general manager of the Columbia Co., announces that the company has recently sold its business in Denver, Colo., and turned over the exclusive jobbing rights for that territory to Dalzell Bros. & Scheuber, who, upon completion of the new arrangement, placed an initial order for \$20,000 worth of Columbia products.

"This transaction," added Mr. Lyle, "is in accordance with the policy which we have already announced of turning over our own business to dealers at such time as suitable arrangements can be made to take care of the territory effectively. In the same way our store in Little Rock, Ark., has been sold to J. C. Nielsen, and our store in Oakland, Cal., has been taken over by L. O. Clancy. In each case a healthy, flourishing business was developed before these stores were disposed of. We are, of course, satisfied that in each case our interests will be properly taken care of." Mr. Lyle added "that negotiations are pending for similar transfers in other cities."

PHONOGRAPHS FOR LECTURING.

To Be Used in Future on the Sightseeing Automobiles in San Diego, Cal.—Economy and Accuracy Given as the Reason.

According to a dispatch from San Diego, Cal., the phonograph will replace the human lecturer on the sight-seeing automobiles operated in that city. It is planned to put into service new double decked cars carrying fifty passengers and the phonographs have been decided upon from the viewpoint of both economy and accuracy. If the experiment proves a success there is a strong possibility that phonographs will supplant lecturers on sight-seeing cars in other cities.

NAME OF FIRM CHANGED.

In order to standardize its office work the firm heretofore known as "The Tone Controller Co." of Providence, R. I., will hereafter be consolidated with "The Minute Shine Co." The Dust Off Record Cleaner products will be marketed under this latter firm style.

DEVELOPMENT OF TALKING MACHINE TRADE IN JAPAN.

Japan-American Phonograph Manufacturing Co. Declares Dividend of 25 Per Cent. at Annual Meeting and Amalgamates with Nipponophone Co. Under Latter's Name—Interesting Facts Regarding Manufacturing and Selling Methods—Japanese Market Practically Controlled by One Company—The Management Is in the Hands of Americans.

(Special to The Talking Machine World.)

Yokohama, Japan, Feb. 17, 1912

One of the most convincing evidences of the increasing interest in the talking machine manifested by the Japanese is the development of the Japan-American Phonograph Manufacturing Co.

This concern held its annual meeting recently and declared a dividend at the rate of 25 per cent., amounting in value to 62,500 yen and showing a net profit for the year of 79,735.43 yen. At this meeting it was decided to amalgamate with the Nipponophone Co. under the latter's name, the consolidation being based on the Nipponophone Co.'s issuing four yen 50.00 shares of Nipponophone stock for one Japan-American Phonograph Manufacturing Co.'s share of 100,000 each. In this connection President F. W. Horne said:

"The consolidation of these two companies is decidedly beneficial to both. Your directors are of the opinion that notwithstanding the increase of the capital stock of the Nipponophone Co. from yen 350,000.00 to yen 850,000.00 the dividend can be maintained by the Nipponophone Company at the rate of 20 per cent. per annum, payable in July and January. The capacity of the manufacturing plant has been increased so as to enable your company to double the former output, which we believe will take care of the increase in trade for considerable time in the future.

"Within the next few weeks it will be necessary for your company to take steps to liquidate. In so doing, I think that we can congratulate ourselves on the fact that after three years of hard work your stockholders have been able to more than double the value of their stock."

The directors and inspectors elected for the ensuing year are as follows: Directors, F. W. Horne, H. E. Metcalf, W. T. Payne, J. R. Geary, J. C. Fletcher; inspectors, W. E. Ketcham, S. H. Gray.

In the amalgamation just referred to the manufacturing company has decided to take the name of the Nipponophone Co. and conduct the manufacturing and sales departments as one corporation.

The Nipponophone Co., Ltd., at its annual meeting reported an increase in business of 50 per cent., and declared a dividend of 20 per cent. per annum. It may be interesting to the American trade to get an inkling of retail conditions in Japan which are set forth rather illuminatingly in the report submitted by Chairman Horne at the

annual meeting. After commenting upon the increase of business and the dividend declared he said: "We, however, would point out to you that while we are able to put our company on a 20 per cent. dividend basis in the first year of its existence, you must take into consideration that the Nipponophone business was carried on for two years previous to the organization of your company by individuals under the trade name of Nipponophone Co. during which time there was a loss of over yen 50,000.00 in building up the business to a paying basis, which you may call the experimental stage. The company was only incorporated when it was earning 10 per cent. on its present capital stock.

"The small cash balance on hand will indicate to you that we have not sufficient capital to take care of the rapid increase in our business. While we have some yen 216,000.00 worth of stock on hand, it is a comparatively small amount when you come to distribute it amongst the 31 branch offices which we now own and control ourselves and supply over 106 agents who are under contract to handle our goods exclusively, to say nothing of wholesale trade.

"It is the intention of your directors to increase our stock on hand to nearly yen 400,000.00 in order to fill orders promptly. In order to do so, a special meeting will be called in the near future for the purpose of considering the increase in our capital aside from the increase of the capital of yen 500,000.00 which has been authorized for the purpose of purchasing the Japan American Phonograph Manufacturing Co.'s plant complete, which will be consummated within a few days.

"The purchase of the manufacturing plant and consolidating it with your company under the name of Nipponophone Co., Ltd., with a capital stock of yen 850,000.00 will be beneficial and your directors can assure you that by so doing we cannot only maintain our present rate of dividend of 20 per cent on the total stock, but will have a reasonable margin to take care of depreciation, equalization of dividends and reserve.

"The policy of your company of treating all agents alike according to the amount of their purchases, as well as maintaining one price for wholesale and retail trade for the merchandise they are selling, will be continued as in the past, as we find the public much prefer to have but one price without any rebate which enables them to order their goods by any means they deem best, being

assured that they will receive the goods at the lowest possible price they are sold to anyone. It has further been the policy of your company to make good without charge any inherent defect in records or machines sold by us, which will be continued.

"The directors of your company have to thank each and every one of our employes for their loyalty to the interest they represent. I can say that the credit for the splendid organization is due to our general manager and his able assistant.

"Each and every manager of our various branches owes his position to the ability that he has shown. Each and every man in our employ we have to thank for the services they have rendered.

"Numerous changes have been made in our staff within the last year with the result that I can say that the men in our employ at the present time are picked men. They are a fine lot of progressive young men who secure their trade by attention to their business in a businesslike manner and avoid making sales by entertaining, for trade obtained by these methods is not only expensive to secure, but cannot be held and costs more than it is worth, to say nothing of the bad moral effect on our salesmen and others.

"Patents—We are advised by our attorney that we are in an exceedingly strong position by reason of patents we have taken out in our own name and those we have purchased of others, which virtually gives us the control of the hornless machines and the best style of reproducers. We have instructed our attorney to commence suit against infringers and to prosecute them to the full extent of the law. We have every confidence that our position will be maintained.

"It is with pleasure that we can say that our records have steadily improved in quality and today, I believe, they are equal to any in the world, taking in consideration durability and quality of tone. Our machines have become standard and in the near future we will bring out several new styles which, we believe, will enable us to greatly increase our business."

From the names of the parties interested in this talking machine enterprise in Japan, it is easy to surmise that Americans are strongly represented. As a matter of fact the original promoter of both the manufacturing and retailing companies and their largest shareholder is F. W. Horne, an American citizen. The experts of the company are Thomas Kraemer of Philadelphia and O. H. Wetzig, also an American.

The company holds the Japanese market practically without competition, as there is a high import duty of 50 per cent. on foreign made goods, but there is still room for one or two more.

Victor - Victrola

The leader in the world of music

The perfect rendition of all the masterpieces—unequaled richness of tone—has made the Victor-Victrola the unapproachable leader in the world of music.

And in wending its way to the exalted position it occupies today, it has made its influence felt and elevated every branch of the musical industry.

On the principal avenues of the great cities of the world, luxurious salesrooms have been established where the Victor line is sold exclusively. In some instances rentals of twenty thousand dollars and thirty thousand dollars per year are justified because of the immense value of the Victor-Victrola as a business bringer and a money maker.

It has brought to him not only a steady stream of customers, but a steady stream of dollars and ever-increasing prestige that makes the success of the past seem insignificant in comparison to the golden future that is still before it.

Victor Talking Machine Co., Camden, N. J., U. S. A.

ENTHUSIASM IN BUSINESS.

"A Little More Enthusiasm and a Lot More Profit"—Some Timely Illustrations.

Does it not do you a world of good to meet Mr. Enthusiast, and are you not always better for the introduction? There is a vigor, a freshness, and, yes, a magnetism, too, about him that exhilarates and strengthens. Socially, he is a captivating chap, for he has a hobby and can talk about it fascinatingly, but the real place for the enthusiast is in business, for there he can turn his talents to the acquiring of riches.

Enthusiasm turns work into play and makes of business a pleasing pastime. There is a well known saying to the effect that most mortals are square pegs in round holes, and this is true, but why? Because of the absence of enthusiasm. How can a man hope to succeed without it? He will continue to be a square peg in a round hole just so long as he remains uninterested and bored. If he finds it impossible to become enthusiastic in the profession which he has adopted, he should turn to other worlds to conquer. There is a round hole, Mr. Talking Machine Dealer, for every man if he can but find it, and to the fellow of intelligence who is dissatisfied, and who longs for a congenial and remunerative occupation, the talking machine business holds out its arms in cordial welcome.

I have met and am personally acquainted with a goodly throng of business enthusiasts, and I assure you, it is indeed a delight to know them, and to watch their ever-increasing success.

Did you ever try to gain some idea of the character of a dealer through a conversation with one of his customers? I have, and, would you believe it, I can tell in almost a moment whether or not that dealer is practicing enthusiasm. If the patron is enthusiastic himself; if he has a severe attack of talkeritis; if he has passed it along to his friends until the whole neighborhood is infected with the desire for talking machines, I

arrive at the very definite conclusion that Mr. John Smith, Enthusiast, is doing business near at hand. The enthusiastic dealer makes it a point to inoculate his patrons with the serum of enthusiasm. He caters to their individual tastes; he thinks out various ways of increasing their enjoyment along phonographic lines, and he makes suggestions, which if carried out, will tend to more firmly establish their interest in his wares.

Do you know, Mr. Dealer, that the once widespread prejudice against the talker is fast dying out, and that enthusiasm is taking its place? There is great cause for rejoicing here because it shows that the public is awakening to the real truth concerning this marvelous instrument.

Listen to what "The Ladies' Home Journal," speaking editorially, under the title of "Spoiling a Good Thing," has to say upon the subject:

"Just see what we have done with the 'talking machine.' Here is a marvelous invention: wonderful in its possibilities for good. But what do we do with it? First, we consider it a tribute to our musical knowledge to speak of its results in derision as 'canned music.' Next, we pervert its possibilities by insisting that we shall be furnished with the meaningless ditties and worthless music of the streets and the musical comedies. There is no doubt that summer evenings have been made hideous to many of us by a 'Victor' on one side of us grinding out 'The Virginia Rag' and a 'Columbia' on the other side of us torturing every nerve with 'There's a Lemon on Every Tree but Mine.' But that is not because the 'talking machine' is a nuisance; it is because there are people who can always be depended upon to vulgarize and abuse anything, no matter how good it may be of itself. The fact remains that the 'talking machine' has made good music possible to thousands. If your children plague you almost to distraction with their ragtime 'records' it should not be forgotten that the same 'talking machine' can do quite another thing if you wish. It can sing to you with the voices of the great artists whom you can never hear; it can give you the tones of the

"SHE HAD A SEVERE ATTACK OF TALKERITIS."

violin and even of the orchestra, not merely for your amusement, but insensibly training your ear to some comprehension of the charm of the great world of tone. No matter where you live you can be a part of the awakening of the American public to the beauty of music. It is all in how you use the 'talking machine.' It offers you what you will."

Does it not lift you to the lofty heights of enthusiasm to read this glowing tribute, especially when it comes straight from the editorial column of a great, sincere and conservative magazine such as "The Ladies' Home Journal?"

A recent number of "Woman's Home Companion" contains a story, "The Boarding House Graphophone," in which the author, Norvell Harrison, conscientiously, I am sure, admits the musical excellence of the talker, as follows:

"When you stop and think that we three nerve-racked teachers liked to come home in the afternoon and rest, it won't seem queer that we didn't want a graphophone in the boarding house sitting room, will it? *A soothing tune set going at the right moment, or even an hour of choice repertory would have appealed to each of us;* but not a medley of the moment's rag-time hurled against a noise-weary tympanum, a daily six-hour performance with only a dozen records to draw on! *A graphophone controlled by an adult musician would be one thing; one controlled by Boysie would be another!* Imagine having forty-two algebra papers to correct, and of having the 'Laughlin Coon' tickled from supper-time to bedtime. Oh, I don't mean to be facetious because we hard-working teachers felt it anything but funny! Boysie's wanting a graphophone meant war between Boysie and us; this is the story of the campaign about it."

The tale, a few sentences of which I have quoted above, is a scream, and should be read by everyone with a sense of humor, and, Mr. Dealer, it brings out this fact very prominently: A talker need be a nuisance only when rendering "a medley of the moment's rag-time * * * with only a dozen records to draw on."

Mr. John Smith, Enthusiast, would educate his patrons to avoid such a condition, seeing to it that the neighbors and his customers, instead of appealing to the authorities to stop the noise, would beg for more music. It is all in the selection of records. Everybody likes a little rag-time; it causes a pleasing reaction from the heavier and more solemn melodies, but in order to keep the musical standard of the talking machine in the exalted position it now holds, the dealer and the manufacturer, working in harmony, and with enthusiasm, should lead the purchasing public ever upward toward the very best in music.

L'Envoi a la Daffydil.

The shipping department of the Talking Machine Co. was humming with nervous activity. There was very little chance for "conversations" but eventually "Danny Deever," who had fastened

Won't You Have a Lesson in Spanish?

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

his lunch hooks on a two hundred and fifty plunk Circassian walnut joy producer from Camden, N. J., asked curiously "What Victrola on needles about?" Then "Callaghan" looked up from his job of packing near conductor's punches, and explained thusly: "She was 'Waiting at the Church' 'In the Gloaming' for 'Bill from Louisville,' so 'Wade Cutter.'"

HOWARD TAYLOR MIDDLETON.

DICTAPHONE AT SPOKANE AD CLUB.

Some Interesting Records Made and Absent Ones Heard from Through This Means, at Recent Meeting of Advertising Men.

(Special to The Talking Machine World.)

Spokane, Wash., March 5, 1912.

At a recent meeting of the Spokane Ad Club, presided over by A. W. Sawyer, advertising manager of Eilers Music House, Spokane, Wash., a novel feature was introduced.

Dictaphone records were secured of an address given by C. C. Chapman, secretary of the Portland Commercial Club and a man well known to the ad men of Spokane and the Northwest.

A large horn was attached to the Dictaphone and the address given to the ad club while the real speaker was more than 500 miles away. The records were clear and distinct and could be heard well throughout the spacious hall in the Davenport restaurant, and there was a smile of approval from the ad men and their friends when they recognized the voice of their friend Chapman.

Dictaphones were used in order to cut the number of records down, the entire fifteen minute address being given on three records.

There were about seventy-five ad men and business men in attendance and many declared that it was the most novel and interesting stunt ever pulled off at the club luncheons.

Mr. Sawyer received some splendid publicity for his firm, both in the announcements and in the papers as well as the exhibit of machines, and feels well repaid for his efforts.

TALKING MACHINE HELPS POSING.

Victrola Enables Photographer to Secure Natural Expression on Part of Subject—A New Field for the Dealer.

According to the latest report a talking machine has been found to solve the problem of the photographer in persuading and aiding his subject to assume a natural pose and, what is even more difficult, smile naturally. It is understood by photographers that to get a proper effect the attention of the subject must be concentrated on something foreign to the idea of having a photograph taken and the posing necessary for that purpose, and while a stuffed dog or cat served to attract the attention of a small child, the grown person has presented a greater problem. Not long ago a prominent photographer in one of the larger cities installed a Victor Victrola in his studio for the entertainment of his patrons and was not long in discovering that the subject's expression was all that could be desired when the Victrola had been played while the

picture was being taken. According to The Voice of the Victor, L. Earl Elsham, manager of the talking machine department of the Trafford Co., Mason City, Iowa, recently sold a Victrola to a local photographer for developing natural poses on the part of his patrons and states that the results exceeded expectations by a wide margin. The result has been that several other photographers in that city are considering the installation of Victrolas.

PACKARD PLAYER AND VICTROLA

Heard in Joint Recital at Ross C. Kiningham's Piano Warerooms at Danville, Ill.

(Special to The Talking Machine World.)

Danville, Ill., March 8, 1912.

The beautiful display rooms of Ross C. Kiningham in the Commercial Bank building, were transformed into a well decorated recital hall, which was filled to overflowing with an appreciative and enthusiastic audience Wednesday evening. Classical and popular selections were given on the Packard player-piano by P. B. Hickman, Mr. Kiningham's player expert, and Ernest McGill, of the Packard Co. In part of the program the Victrola was used with a player-piano accompaniment, which convinced those present not only of the marvelous possibilities of the Packard player-piano, but of the wonderful effects possible through the union of that instrument with the Victrola.

The affair was hugely enjoyed and the concert will certainly be repeated at an early date. Among those members of the trade present were Messrs. Taylor, of the Victor Talking Machine Co., and Conover, of the Talking Machine Co., Chicago.

PHILADELPHIA DEALERS ELECT OFFICERS

The Talking Machine Dealers' Association, of Philadelphia, was organized in that city on February 14, when the following officers were elected: President, Wm. S. Gibson, 4239 Frankford avenue; vice-president, John A. Popp, 2324 Columbia avenue; secretary, M. Goodstein, 5207 Market street; treasurer, L. L. Goodstein, 327 West Girard avenue.

The meeting took place in the Parkway building, 119 East Broad street. There was a goodly attendance of dealers, and an active campaign is to be carried on to interest others.

DEATH OF THOMAS B. RODGERS.

(Special to The Talking Machine World.)

Pittsburgh, Pa., March 8, 1912.

Thomas B. Rodgers, a valued employe of the local store of the Columbia Phonograph Co., died Friday, February 23. The deceased was connected with the Pittsburgh store for about ten years, filling the position of manager of branch stores at Homestead, Pa., and Wheeling, W. Va., and for the past four years traveling salesman, representing the company in West Virginia and sections of Ohio and Pennsylvania.

Every position was filled by Mr. Rodgers with credit to himself and to the satisfaction of the company, and by his genial manners made hosts

of friends in the territory which he traveled and endeared himself to his associates in the Pittsburgh store.

VICTOR CONCERT IN PUBLIC SCHOOL

In New York Affords the Greatest Pleasure to Pupils and Teachers—Machine Will Be Installed.

Chester I. Abelowitz has resigned his connection with the talking machine department of the Frederick Loeser & Co.'s store in Brooklyn, with which he has been connected for two years, and has joined the forces of the Abelowitz Phonograph Co., which is opening a new store at 1353 St. Nicholas avenue, New York.

Recently Mr. Abelowitz gave a very interesting Victor concert at Public School 25, New York. He used the Victor machine, and the program consisted of about thirty selections, including popular, standard and operatic records. The pupils and teachers present were exceedingly delighted and manifested their appreciation by the closest attention and applause.

The Caruso Aria from "La Boheme" afforded such pleasure that it had to be repeated at the request of the principal, while Harry Lauder's "Breakfast in Bed on Sunday Morning" caused the teachers and pupils to go wild with laughter. All in all, the concert was a huge success, and it is probable that the school will become the possessor of a Victor talking machine for educational purposes.

Chas. C. Roberts, principal of the school, in his address after the concert said in part: "There are people living and dead who have never had the opportunity to hear such great artists as we have heard here this morning. You really cannot imagine how much it would cost if all of us were to go and hear these wonderful singers at the opera. Through the Victor and the courtesy of Mr. Abelowitz these world famous artists have come to us. The Victor does so much justice in reproducing their voices that by possessing one you have a Metropolitan opera of your own."

When the concert was over Mr. Abelowitz played the "Semper Fidelis March," by Sousa's Band, to which the boys marched out of the auditorium, keeping fine time with the music. Mr. Abelowitz is now arranging to give a number of concerts in the public schools throughout the city, which will doubtless be productive of good results in a business way.

THE VALUE OF THE WINDOW.

Every dealer gives—or, at any rate, should give—a good deal of time and thought to his windows. Whether the store be large or small, the relative importance of the windows is the same. Don't neglect them. If you are tempted to do so by seemingly more important duties that crowd upon you, put in new display cards, put in new goods, etc., and these will help solve the problem.

When the smoke of battle blows away, don't let people find you sitting there telling about what might have happened. See that they find you busy preparing for the next fight.

NEW YORK, MARCH 15, 1912.

THE offices of this trade newspaper institution are now located in the new building, 373 Fourth avenue, between Twenty-sixth and Twenty-seventh streets. Our friends who are located in town and those who are visiting this city will find the new location a convenient one.

WHILE business for the past month has not been as active as in January, yet the volume of trade in talking machines and records throughout the country is decidedly larger than for the same period last year. Despite the political ferment which is inevitable now that the competition for the Republican nomination for President of the United States centers between Col. Roosevelt and President Taft, with the battle on among other notable personalities on the Democratic side, the leading men in the talking machine industry are inclined to the belief that interference with business for the year will be comparatively slight, and a buoyant feeling prevails in all branches of the trade.

The talking machine business as a whole was never in a healthier condition than to-day. There are some matters of detail, particularly in the retail and jobbing fields, that will need consideration and revision, but, broadly considered, the business as a whole is being conducted along progressive lines.

It is a business of evolution—a business of laboratory skill—a business of education—a business of entertainment—a business of scientific development.

Its possibilities were never greater, and it only requires the confidence and enthusiasm of talking machine men to score a still greater measure of success than has even yet been accomplished.

Confidence and enthusiasm in the business and in the products should be the slogan for 1912.

THE word "service" is about the greatest word in commerce to-day. There is as much difference between good service and poor service as there is between good money and counterfeit money. Every possible effort is necessary to perfect service and to maintain it, and once established it has a money value; and this applies to any business or profession. There are countless large buyers who are willing to, and do, pay something in money for service—counting it profitable. A man said a while ago that the difference in salary between two men depended upon the difference in supervision required. So in service. Its value depends upon the certainty of it, and therefore wise buyers will seek it and buy it regularly.

When a customer remains faithful to a house because of service, the Good Will is there, and it is the opposite of the old-

fashioned Good Will, which one man kept because he was financially able and the other acknowledged because he was forced to.

THERE continues to be a great demand for first-class salesmen who understand the retail talking machine business in all its phases. There are plenty of men applying for positions, but the trouble centers in the fact that they know little about the business, and when they do get a position no effort is made to learn other than the superficial requirements in regard to styles and prices of machines.

Few men stop to think why they cannot "deliver the goods." Either through stupidity or vanity they overlook that this condition is due in a large measure to indifference and lack of energy. They float along the channel of least resistance instead of seeking to learn everything of importance and value regarding sales methods—the knowledge of, and control of, stock; the difference in machines; in tone values; in constructive details; an acquaintance with the various records; the importance, when selling, of using only first-class, instead of worn out, scratchy records; of impressing customers with the musical values of the various styles.

On the other hand, the department manager is to be censured for his failure to help the salesman—particularly the new man. He should make it a point to get in close touch with his force at regular periods and explain the policy of the house as well as the selling features of the different machines. The principles upon which the tone is reproduced by the sound-box, or reproducer, should be explained, as well as the methods of making records; the handling of customers with their varied eccentricities should be treated of fully; in other words, the department manager must do his share to make the salesman a greater factor in the development of the business of the house.

Many managers seem to think that they are disposing of a very valuable asset in instructing their salesmen regarding selling methods. They feel that they are giving them a knowledge which may be sold at a higher salary to some other establishment a little later.

While this is very true, still to withhold helpful information is a narrow conception of one's obligations. With very few exceptions when men are taken into the confidence of the manager and their knowledge and enthusiasm aroused regarding their work they will be loyal to their chief and to the establishment.

There must be confidence, however, on both sides, and this is the condition that will insure success.

In the talking machine field, as in every other industry, it is the man who sets to work seriously to know the business thoroughly in all its details that wins out. Knowledge is power. While a pleasing appearance and address are a valuable asset to a salesman, they become worth considerably more when they are backed by a knowledge of the goods which he is selling.

THE man who doesn't want to be told is a bad piece of the business world. The fellow who has pulled the doings of things down to the perfection notch and is unable to see where somebody on the outside can give him a suggestion worth trying is in a very bad way. When we occasionally run across him we experience a cross between indignation and amusement.

The upishness of the mental workings of a man who feels himself so secure in the regulation of affairs under his control that he is incapable of taking kindly and in a spirit of willingness to any suggestions that may be offered to him simply needs the application of a slipper of commensurate size to his anatomy to bring him to a proper realization of the fact that nobody knows so much that he can't learn something else with profit.

We run across men who have managed business in certain lines for years and who have so conformed themselves to their own cut and dried ways of doing things that they simply won't listen to anything that is proffered to them by other people. The result is that these men are sooner or later worsted and beaten in their lines by those others who have realized that a reasonable suggestion from anyone is worth trying, or at least worth carefully calculating before it is rejected entirely.

The exasperating attitude of a man who intimates that he is so completely perfect and satisfied with his ways that he doesn't care to listen to anything different, is similar to that of the man who listens and deliberately acts as though he had never heard.

None of us has succeeded in getting so complete a hold on what we are doing that we can't make use of something the brain of someone else may evolve, and the sooner we realize that it is worth while to pick up new ideas and use them whenever possible the surer will be the business results of a satisfactory kind. It isn't often one can afford to be cocksure. It may be a "smart" attitude, but the man with an inquisitive mind invariably wins out.

AN EDUCATIONAL FACTOR.

Success of Exhibit and Demonstration of the Victor Talking Machines and Records in Educational Work at Convention of National School Superintendents' Association in St. Louis—Interview with Mrs. Frances Elliott Clark, in Charge of the Campaign.

(Special to The Talking Machine World.)

St. Louis, Mo., March 9, 1912.

The amazing success of the Victor Talking Machine Co. in promoting the use of the talking machine in the public schools was made plain by the interest shown in the exhibit of that company at the Planters' Hotel in this city during the meeting of the National School Superintendents' Association and affiliated societies. There is no musical section connected with this meeting and that might have appeared a drawback, but the absence of those who are most directly interested in musical education only served to emphasize interest of the executives. None attending this meeting as a member of the societies is graded lower than a principal, and it is upon the recommendation of the persons gathered in this city that school boards buy devices for the school.

Mrs. Frances Elliott Clark, director of the Victor Co.'s educational department since last April, was in charge of the exhibit and was assisted by Howard J. Shartle, of the record order department, and H. C. Brown, and few idle moments did these three have.

"Our rooms have been thronged from early morning until night," said Mrs. Clark to The World correspondent, "and the persons gathering here to hear the machine have shown an intelligent curiosity as to its use in the schools. They all have heard of its excellent work and of the use of hundreds of machines in the schools of New York City, Boston, Chicago, and of their entering the Philadelphia schools recently.

"Some of these school heads until recently have had an idea that a talking machine was like the old tin horn instrument that used to drive persons off the porches for a block from its owner years ago. They are beginning to know that something different has been made or it could not be given a place in any school. Such ideas were prevalent a year ago. They are not now. Every school head is in a receptive mood.

"Our real work began last summer in San Francisco, where for 12 days we entertained grade teachers attending the National Educational Association with programs fitted for school work. We showed those teachers how pupils have as much right to know of the great fields of music and vocal expression, in singing and reading, as in literature and science. We played for them programs of folk dances suitable for school exhibitions and playground work. We showed them how tone culture was best taught by samples of performance and that Tetrassini was the great head tone artist and from her records best could a child appreciate the difference from a throat tone. Also we showed them how good music, perfectly and artistically executed, was better for all school purposes than indifferent piano playing by a grade teacher, who had been so busy equipping himself for the other work that he was not a gifted musical performer. And the great renditions of the English classics was a powerful object lesson. Then, of course, comes readings in other languages for advanced classes.

"The grade teachers and other visitors were impressed and went home and talked. At this meeting are many superintendents who have long been friendly to the talking machine, but there are others who have only heard its praises. These latter are

the ones who have been thronging our rooms. The appreciative ones come here with them and relieve us of pointing out the advantages to a certain extent.

"It might be supposed that entertainment would lead many visitors to us, but such is not the case, or if that is the motive they are quickly converted to intelligent investigators.

"Yes, we are making progress even in St. Louis. Since I was here last November four machines have been placed in St. Louis schools and more are being placed. With the beginning of next year I hope to have a very favorable report to make on St. Louis."

Mr. Shartle said that his only anxiety after seeing the interest shown in the machines was ability to supply records, "but that will be all right after we get into our own new six-story factory, of which reference was made in a recent letter to the trade.

"We are told by other exhibitors," continued Mr. Shartle, "that they are glad to have us here; that we are doing much toward drawing the members of the associations to the exhibits; that our exhibit is new and when they come to see our wares they visit the others. We have been accorded an excellent reception and are very glad we came."

It was noticeable at the hotel where most of the exhibits were installed that the Victor Co. was doing its campaigning in a way that commands respect. The placards in the corridors were plentiful and handsomely made. In no way did they permit any other exhibitor to obtain a lead.

The visit of Mrs. Clark and Mr. Shartle was made the occasion for a local educational campaign. The Koerber-Brenner Music Co. obtained consent to invite all of the nearby talking machine dealers to visit the hotel one day while the teachers were attending sessions of the association and hear the demonstration by experts and also to pick up pointers on the new educational work.

The Bollman Bros. Piano Co. took advantage of the occasion to issue to all St. Louis school principals invitations to visit the exhibit. Vocal music teachers not connected with the schools were in-

EDWARD LYMAN BILL left on March 2 for a European trip taken in the interests of this trade newspaper institution. For some time past our trade has been steadily expanding abroad and we shall have an important business announcement to make within the near future which will mean a material augmentation of the influence of this trade newspaper institution in various parts of the world.

vited to investigate from the standpoint of their work.

Incidentally it might be remarked that some local vocal teachers are seeing wherein they can use the talking machine records in demonstrations as an aid to pupils, and several such sales are reported.

A PHONOGRAPHIC PARROT.

Bird Dealer—But what's the matter with that parrot? You've had him three months now, and

you say he talks and sings all right. I don't see why I ought to exchange him.

Customer—Er—well, then, can't you put a new record in him, anyhow?

BUILT A GOOD EDISON BUSINESS.

(Special to The Talking Machine World.)

Woonsocket, R. I., March 4, 1912.

The A. S. Cook Co. has one of the finest phonograph departments of any similar establishment in New England, one entire side of the store being devoted to this growing branch of the company's business. Under the able management of Robert Peck, the Edison business has been going by leaps and bounds. Mr. Peck is careful to see that there always is a catchy window display, which means a good deal in inviting business.

The DITSON Pledge

Is to see that our clientele has a better service than ever—setting a new standard in Victor jobbing deliveries. The demands of alert Victor dealers—the kind that grow—are many and varied, and we furnish the "first-aid" in every instance.

We believe this year's Victor business will be of tremendous proportions, and it will pay you to have

The Fastest Victor Service

which is a requisite in this hustling age. We possess the largest stocks, the best organization and most up-to-date equipment in the Eastern half of the country.

This covers Victor machines, records and supplies of every kind, not to mention cabinets, needles and trade-marked accessories.

Will you let us tell you more about Ditson co-operation? A postal gets this information!

L OLIVER DITSON CO., Boston, Mass.

The Talking Machine Trade in New England

BURLINGTON, VT., TRADE ACTIVE.

Bailey Music Room Pushing Edison Goods—R. C. Smith Becomes Edison Jobber.

(Special to The Talking Machine World.)

Burlington, Vt., March 8, 1912.

William Walker, who is in charge of the Bailey Music Room at Burlington, Vt., has waxed very enthusiastic over business lately and the quarters, located in the Y. M. C. A. building, entertain a great many customers during a day, all of them interested in the Edison proposition.

R. C. Smith has taken on a full line of Edison goods and henceforth will be known as an Edison jobber in the trade. Mr. Smith has a fine store on the main street of the city. While a good portion of the establishment is devoted to sporting goods, Mr. Smith has set apart a commodious section to be devoted to talking machines. His store is widely known throughout the Green Mountain State.

RECORD SPEECHES FOR REUNION.

Worcester Gentlemen Make Records for Use at Philadelphia Alumni Banquet and Experiment Proves Great Success.

(Special to The Talking Machine World.)

Worcester, Mass., March 6, 1912.

This city was the scene of an interesting event the other day when phonograph records were taken of the remarks of a group of Worcester gentlemen for use at a reunion to be held in Philadelphia of the Alumni Association of the Worcester Polytechnic Institute.

A representative member of the Alumni in Philadelphia thought it a good idea that if certain prominent fellow members could not attend in person, at least it would be a great thing to "hear" them, and he approached the Pittsburgh office of Louis Buehm & Bro., who are jobbers in Edison phonographs. The firm in turn communicated with the Pardee-Ellenberger Co. at New Haven, Conn., who turned the letter over to Manager F. H. Silliman of the Boston office of the Pardee-Ellenberger Co. In the letter was a list of thirteengentlemen, including Hon. Charles G. Washburn, who were to be approached. As the records were to be in Philadelphia at a certain date Mr.

Silliman immediately gave his personal attention to the matter, and went to Worcester to arrange for the reproductions, and although he had a very limited time in which to get busy he was able to come in touch with nearly one-half of those whose names had been submitted.

These gentlemen went to the office of the Worcester Phonograph Co., 11 Trumbull Square, and each one made a record which was forwarded that very night to Philadelphia. The experience proved a most interesting one to the participants at the Worcester office, as several of them never had heard a machine and the idea of their so talking that the same could be reproduced over in Philadelphia seemed to them to be a most marvelous feat. One man, who was approached, could not be induced to go to the office and make a record.

Needless to say the records proved a most enjoyable part of the after-dinner speaking at the alumni gathering.

BIG DEMAND FOR COLUMBIA MACHINES.

(Special to The Talking Machine World.)

St. Johnsbury, Vt., March 7, 1912.

A. L. Bailey, the largest piano dealer in the State of Vermont, and who operates a number of stores, with the largest one here, has been having a large demand for Columbia goods lately, and his business during February was unusually large. Most of his Columbia business is in the higher-priced goods.

NEW STORE FOR CHELSEA.

(Special to The Talking Machine World.)

Chelsea, Mass., March 8, 1912.

Arrangements are under way for the opening of a large store here within the next month or so to be devoted to talking machines as well as pianos. The Edison line will be carried.

MOVES TO CENTRAL LOCATION.

(Special to The Talking Machine World.)

Woburn, Mass., March 7, 1912.

J. F. Lovell, who has been an enterprising Edison dealer here for a number of years, and who has had a place of business at his own home, up one flight, has gone into the center of the town,

where he has opened an attractive store. This step was made necessary by the growth of his business.

TAKES ON COLUMBIA LINE.

The W. B. Lincoln Piano Co., Springfield, Plans Active Campaign—Special Opening a Success—Robt. W. Carter in Charge.

(Special to The Talking Machine World.)

Springfield, Mass., March 5, 1912.

The W. B. Lincoln Piano Co., which has an attractive establishment at 493 Main street, has just installed a full line of Columbia goods and on the opening day, which was on March 1, there was a large crowd of persons to visit the store. W. E. Getchell, the Columbia's hustling salesman, was on hand to assist in welcoming the visitors, all of whom took a lively interest in the machines and records which the Columbia puts out. There were a number of large sales on the opening day. Robert W. Carter, formerly of Carter & Lewis of Lynn, has taken the management of this new department of the Lincoln Co. Mr. Carter at one time was located in Boston.

BECOME COLUMBIA DEALERS.

(Special to The Talking Machine World.)

West Somerville, Mass., March 8, 1912.

William Caldwell & Son of Davis Square have just become Columbia dealers, and their finely equipped store is well adapted to exhibiting Columbia goods to the best possible advantage.

SUCCEED WITH EDISON LINE.

(Special to The Talking Machine World.)

Concord, N. H., March 7, 1912.

Going into this city one is impressed at the size of the business being done by the firm of Brown & Saltmarsh, who have been Edison dealers only a comparatively short time. Lately they have been obliged to increase their line of Edison machines and records and they contemplate in the near future a rearrangement of their store so as to get in more demonstration booths. They are the exclusive Edison dealers in the city.

HERE'S A CLOSE CORPORATION.

(Special to The Talking Machine World.)

North Berwick, Me., March 6, 1912.

Rather a surprising illustration of the growth of business in a small place, due entirely to energy and hustle on the part of the dealer, is afforded in the case of Austin & Austin, which firm, by the bye, is composed of Mr. Austin and his wife. This town is at the end of a car line and numbers a population of only 1,800 persons, yet this firm has been able to dispose of three Opera styles of Edison machines and one Amberola, as well as a lot of lower-priced machines during the month of February. Each of the firm has her and his distinct part of the business; that is to say, Mrs. Austin goes around and gets the "prospects" and Mr. Austin follows and closes the deal.

NEW OPERA STYLE MAKES GOOD.

(Special to The Talking Machine World.)

Portsmouth, N. H., March 5, 1912.

The new Opera style of Edison machine has proved a fine seller with F. W. Peabody. Mr. Peabody also has stores at Haverhill and Amesbury, Mass., but in the first-named city the business has been growing to such proportions that he has been obliged to open an additional establishment.

LIVELY NEW HAMPSHIRE DEALERS.

Two New Hampshire dealers of Columbia goods, not far removed from each other, are the Greer Piano Co. of Manchester and Harriott & Co. of Concord, both of whom report a business for January and February only exceeded by that of December.

THE KEYSTONE

OF OUR

BUSINESS BUILDING

IS P-E SERVICE

The keystone of your profit arch is embodied in getting Edison goods when you want them.

Two complete Edison stocks at New Haven and Boston; shipped on short notice to dealers in New York and New England.

Live dealers require fast Edison Service. P-E Service fulfills your needs for repair parts, records and machines.

EDISON JOBBERS EXCLUSIVELY

THE PARDEE-ELLENBERGER CO.

66 Batterymarch St. BOSTON, MASS.

96 State St. NEW HAVEN, CONN.

FROM OUR BOSTON HEADQUARTERS

324 WASHINGTON STREET, JOHN H. WILSON, MANAGER.

(Special to The Talking Machine World.)

Boston, Mass., March 11, 1912.

There has been a great number of inquiries for the records of Emmy Destin at the Boston quarters of the Columbia Phonograph Co. ever since the announcement was made that this great opera singer was to warble for this concern. Miss Destin has always been a great favorite in Boston. Some of her records to be made in association with one of the Boston Opera House stars promise to be unusual contributions to the catalog of Columbia records, and Manager Arthur Erisman has had several conferences with a popular male star of the Boston opera arranging for a convenient time for the two to make the records.

Keeping in Touch with His Customers.

W. J. Fitzgerald of the Eastern Talking Machine Co. has devised a new postal plan for keeping in close touch with customers which already has brought excellent results. A return postal is sent out and on one side is the line "Kindly send me on approval the following Victor records." Then underneath are three rows of blank spaces, in each of which the prospective customer is to fill in the figures. At the bottom is a line for the name and another for the address. Down in one corner is the further request "How many needles?" Some of the return postals received by Mr. Fitzgerald have been almost completely filled out and there is space to request twenty-one records by number.

Excellent Columbia Co. Business.

The February business at the Columbia Phonograph Co.'s Boston establishment was considerably more than double the business of the same month of a year ago, the extra day, of course, giving the house an advantage. Manager Arthur Erisman says this makes the second largest month's business since the Boston office was established, December of last year being the banner month. The month of March has started off well, and there is every prospect of its proving a record-breaker. Fred Erisman, the assistant manager of the concern seized a few days the first part of the month to go over to New York for a short trip. On his way over he stopped at the Columbia factory at Bridgeport. Manager Erisman has been sorry to lose one of his valued employees, Joe Pyle, an expert machinist, who has been associated with Mr. Erisman for twelve years, the latter having so esteemed his services that he brought him with him from Detroit several years ago, when he took the management of the Boston store. Mr. Pyle's wife was a Detroit woman, and the climate of Boston has not agreed with her, so the doctors ordered her back to her home city. Mr. Pyle, therefore, will associate himself with the Detroit quarters of the Columbia.

New Manager of Henry Siegel Co. Department.

The personnel of the talking machine department of the Henry Siegel Co., the large Boston department store, has been changed since reference was made to this establishment a couple of months ago. A. Rubin, a hustling young man, is now in charge, having returned to the employ of the Siegel store after a season with Schwartz & Bernstein at Gloucester, who, by the bye, are making good in the sale of talking machines. The buyer for this department in the Siegel Co. is E. Reisman, who has come over from New York. The business in machines and records has been growing considerably of late and a large quantity of Columbia goods are being disposed of in these well-fitted up quarters. One of the large show windows on the Washington street front has been fitted up with an elaborate and extensive display of Columbia goods.

Chas. F. Atwood Adds Line of Talking Machines

The latest Boston store to deal in talking machines is that of Charles F. Atwood, formerly located in the Walker building, where he carried a fine line of pianos. Mr. Atwood opened his new store at 207 Tremont street, around the corner

from Boylston street, the end of February and, together with pianos, he has taken on a line of Victor machines, records and all the Victor paraphernalia. Almost the entire window is given over to an exhibit of machines and the center piece is the familiar Victor dog perched on a pedestal of small machines, and the animal's constant revolutions serve to attract many passersby. The store is in a very convenient location and all of Mr. Atwood's many friends are wishing him success in his new undertaking.

Edison's Son Shows Knowledge of Talker.

One day recently a good-looking young man entered the establishment of the Eastern Talking Machine Co. in Tremont street and was waited on by E. A. Welch. The visitor appeared to have a knowledge of machines and their method of opera-

tion, so Mr. Welch casually inquired if he was interested in talking machines. The conversation that followed developed the fact that the young man was Thomas A. Edison, Jr., son of the celebrated inventor, and he is a student at the Massachusetts Institute of Technology, in which the senior Edison long has been interested, believing it to be one of the foremost schools of its kind in the world.

Wm. A. Condon Calls on Boston Dealers.

An interested visitor to the Victor establishments in Boston a few days ago, being especially entertained at the quarters of the Eastern Talking Machine Co., was Wm. A. Condon of New York, head of the Condon Auto-Stop Co., whose appliance to stop the movement of the disc, once

(Continued on page 14.)

Two values for one price. Loud and Soft tones with Duplexetone Needles. A remarkable achievement.

Two months ago a brief announcement was made about Duplexetone Needles; views were shown of the two methods of playing them.

Before this announcement lies a story, a story that is of interest to everyone connected with the talking machine industry and to every owner of a talking machine.

The PROBLEM was to produce a talking machine needle that would be of the HIGHEST GRADE and could be used for either LOUD or SOFT playing.

The temper of steel would have to be of special material; likewise the size and shape of the needle would have to conform to particular laws. Many experiments were made and the last one—the thirty-fourth experiment—solved the problem. The needle was named the Duplexetone.

For playing LOUD the needle is held this way:

For playing SOFT this is the position:

Just how the Duplexetone will create sales and make profits for you will be told next month. However, tell us your jobber's name and we'll send you a generous package of Duplexetone Needles.

W. H. BAGSHAW, Sole Manufacturer
LOWELL, MASS.

FROM OUR BOSTON HEADQUARTERS.

(Continued from page 13.)

the needle has reached the end of the number, is meeting with such universal success. Mr. Condon reports business as very large everywhere.

Special Caruso Window Attracts.

On Tuesday, March 5, the day that Caruso was in town to sing in "The Girl of the Golden West" at the Boston Opera House, the Eastern Talking Machine Co. recognized his appearance in Boston by setting forth a window display comprising Caruso records and literature bearing on the great singer. Passers-by considered it a very clever piece of advertising.

Resign from Boston Talking Machine Co.

F. W. Hager, the song writer, and George L. Cheney, both of whom were with the Boston Talking Machine Co. for a time, have severed their relations with the company and have gone over to New York. Messrs. Hager and Cheney earned the sobriquet of the Beefsteak Twins, for their good work in getting up the famous beefsteak party of the talking machine men of the city back in the fall. J. G. Widener, who also was with the Boston company for a time, resigned several weeks before and left the city. He lately was heard from in St. Louis.

George W. Lyle a Visitor.

George W. Lyle, general manager of the Columbia Phonograph Co. in New York, was a recent visitor to Boston, spending several days here and taking in a splendid performance of the opera at the Opera House. A part of the time he was the guest of Manager Arthur Erisman.

News of the Travelers.

The Pardee-Ellenberger Co. is finding business conditions rapidly improving every day, and Manager Frank Silliman is having all he can do to get goods sufficient to supply the demand. Mr. Silliman has just returned from a short trip through some of the central points of Southern New England, such as Providence, Fall River, Woonsocket and everywhere he stopped he heard good accounts of Edison business.

H. R. Skelton of the phonograph sales department for Thomas A. Edison, Inc., who has had a very successful tour through New England, has returned to Boston for the automobile show in Mechanics building, which always is the rendezvous of a large number of talking machine men when these big exhibitions are usually held.

Feature Zon-o-phone Records.

Manager Chester J. Sylvester of the talking machine department of the C. E. Osgood Co., lately went over to New York and contracted for a large quantity of Zon-o-phone records which had been in the possession of a large department store. As a result there is a large and well-arranged display of machines and records in the window and a great bargain sale is being advertised. The Zon-o-phone records are selling like wildfire at the very low rate placed upon them. Just now there is quite a demand made upon Mr. Sylvester's department for high-priced Edison goods.

Meeting of E. T. M. Associates.

The Eastern Talking Machine Associates held their monthly meeting in their hall in the Tremont street quarters on the evening of February 29 and plans were informally discussed for the annual field day, which always is held on June 17. Harry Brown is greatly missed by the associates in the Eastern office, for he was the crack bowler of the team that had given the Associates such high prestige on the alleys. Harry, by the bye, dropped into the office the other day to see his former fellow workers, and he was given the "glad hand" in hearty fashion.

Geo. L. Schirmer & Co., Add Talkers.

Back Bay people do not have to go far these days for their talking machine appurtenances, especially those living in the vicinity of Huntington avenue, for George L. Schirmer & Co. at 34, that thoroughfare, has added to his stock of pianos a complete outfit of Victor machines and records, which are given a distinctive window display.

New System for Checking Records.

A new system of keeping a memorandum of the records that go on approval has been put in

operation at the Eastern Talking Machine Co.'s establishment, which has fitted up a special office on the second floor for the use of the new system. Miss Maud Cass of Lynn, a half sister of Charley Trundy, George Lincoln Parker's able lieutenant, has been placed in charge, and already the system has proved itself of the greatest value in keeping a close knowledge of the whereabouts and condition of all the records.

A Visitor from Pittsfield.

E. A. Tompkins of Pittsfield, the Columbia dealer, was in Boston for a few days early in the month. Visiting the Columbia's Tremont street quarters Mr. Tompkins found several styles of machines that he did not have in stock, so he quickly placed a good-sized order for them.

Victor for Governor Foss' Home.

George Reece of the Eastern Talking Machine Co. entertained as customers the other day the wife and daughters of Governor Foss of this State, who called with an eye to making an extensive purchase. Mr. Reece, who formerly was in the stock room, and has only been on the floor as a salesman for a short time, was able to sell Mrs. Foss one of the most expensive Victors as well as a large stock of records.

An Excellent February Business.

Ubert Urquhart, manager of the Victor department of the Henry F. Miller Co., had a fine business during February, which was especially notable for the large number of expensive machines disposed of.

Some Distinguished Visitors.

Frank Burbeck, the well-known actor, playing with James K. Hackett in "A Grain of Dust" at the Hollis Street Theater, was a visitor at the Eastern Talking Machine Co.'s quarters the first of the month. Mr. Burbeck has made some fine records for the Victor. Others among theatrical folk who found time to drop into the Eastern's sales rooms were Nora Bayes and her husband, Jack Norworth, who were playing an engagement at Keith's. Another visitor, whose arrival in his handsome automobile is always quite an event of interest, has been Lucius Tuttle, former president of the Boston & Maine Railroad, who is a large and frequent purchaser of Victor goods.

More Space for Geo. L. Parker.

George Lincoln Parker, whose attractive quarters on the third floor of the Colonial building are the rendezvous of a fine line of customers, has added more space to the Victor department by leasing another room across the hall, into which the records have been moved, and which will serve henceforth as the department for this branch of the talking machine business. This department, as is well known, is managed by Charles Trundy, whose enthusiasm for work is one of the chief characteristics of his personality.

Endorse the Columbia Machine.

T. R. Plunkett, president of the Adams Musical Society of North Adams, has sent to Manager Erisman of the Columbia Phonograph Co. a high indorsement of the Columbia machines. The society is now using them and the records employed are only those of the leading opera singers, whose reproduced voices are used by the members for purposes of study as well as entertainment.

Enjoying an Excellent Victor Business.

Herbert L. Royer of the Arch street office of the Victor department of the M. Steinert & Sons Co. was over at the Camden headquarters of the Victor most of this week, arriving home only on the afternoon of the 7th. He reports things in a hustling state at the factory. Business in his department at home is reported by Mr. Royer as surprisingly large considering the difficulty of getting the goods.

Expansion with Oliver Ditson Co.

Henry Winkleman has time for little else these days but look after the Victor business for the Oliver Ditson Co. The business of his department is growing at a very rapid rate, which in large part is due to the staff of assistants he has under him, for they always are most courteous and obliging young men, the type it is a pleasure to do business with.

Recent Visitors.

George Orstein, traveling sales manager of the Victor Talking Machine Co., and Frank Madison

of the legal department of the Edison Co., were visitors to Boston lately, remaining here a few days.

Now on the Selling Staff.

M. L. Reed has been advanced in the Eastern Talking Machine Co.'s Boston office; and hereafter instead of being on the second floor as formerly he will be one of the selling staff on the first floor. Mr. Reed has lately—but that's another story.

Putting Victors in the Schools.

The Eastern Talking Machine Co. has been conducting quite a strenuous campaign in the introduction of Victor machines into the schools, a resume of which appeared in this department last month. Lately outfits have been sent to Malden, Bridgewater, Salem, Arlington, Framingham, Marlboro, Beverly and other places, and teachers and pupils alike have become most enthusiastic over the music. Through the medium of the schools a number of Victor machines are finding their way into the homes of the pupils.

Notable Concerns Use the Dictaphone.

The Dictaphone business of the Columbia Phonograph Co. has been very large in the last few weeks and some of the new houses to introduce them have been the Pettingall-Andrews Co., electricians; Whitcomb & Co., the American Unitarian Association, Frank G. Macomber, fire underwriter; the American Crayon Co. and the Pneumatic Scale Co., also James H. Vahey, the well-known lawyer. One especially interesting incident of the Dictaphone business is the fact that each afternoon they were used by Adjutant General Pearson while he was in charge of the militia at Lawrence during the strike. He came down to Boston late in the afternoon and to his quarters in the State House despatched his reports by means of a Dictaphone, and this out of the way he returned to Lawrence for the next day's duty.

R. E. Golden, a graduate of the Sheldon School, is one of the new recruits taken into the office of the Columbia by Manager Erisman. Mr. Golden will be a salesman for the Dictaphone exclusively.

FITCHBURG DEALER MOVES.

(Special to The Talking Machine World.)

Fitchburg, Mass., March 8, 1912.

T. B. Matthews has lately removed into a more commodious and better equipped store in the center of the city. Mr. Matthews now has the advantage of two large plate glass windows and a series of demonstration booths where the Edison goods are shown to the best advantage.

ADDS GRAPHOPHONE LINE.

(Special to The Talking Machine World.)

Groveton, N. H., March 7, 1912.

W. O. Emerson & Co. is one of the new Columbia dealers in that State. The house has a good territory in which to work and the indications are excellent for a fine business.

COVERS WIDE TERRITORY.

(Special to The Talking Machine World.)

Gloucester, Mass., March 9, 1912.

The Gloucester Talking Machine Co. has found a great many customers along the North Shore quite outside the domains of its own city. Mr. Schwartz of the firm of Schwartz & Bernstein, who operate the store, went up to Boston the other day and made a large purchase of high-priced Columbia machines, as well as a large stock of all the latest records.

LOWELL CONCERNS ACTIVE.

(Special to The Talking Machine World.)

Lowell, Mass., March 6, 1912.

Conditions here have been improving considerably of late, the fact being evidenced by the large orders that two of the leading talking machine houses have been sending in. These concerns are F. P. Crawford & Co. and George H. Batchelder, who have been ordering more Edison goods than in a long time past.

U-S Banner Model—\$40 to \$50.

FIT ANY PHONOGRAPH

More Dealers are Daily Joining the U-S Ranks

THE exclusive features of the U-S Everlasting Records make an instant hit with dealers and users alike.

U-S Records are more profitable for the dealer because they're quick sellers, and because they don't break, chip, crack nor wear—no damaged records to cut into the profits.

They're attractive to the user for many reasons. They sell at popular prices—even for grand-opera selections. They offer a representative and up-to-date repertoire of instrumental, vocal and vaudeville successes. They fit any phonograph. And they're indestructible—affording a lifetime of entertainment.

The U-S Phonographs—\$30 to \$200—also have many selling-points. The change from two-minute to four-minute records is instantaneous. The extra-large and sensitive diaphragm gives superior voicing. And no change of reproducing-points is required.

Write for the U-S proposition to dealers. It gives every opportunity to build up a profitable and safe business. Address the main office or the nearest branch listed below.

Business During Opening Months of Year Keeps Well in Sight of December Record—Talking Machine Trade Reaches a Point Where the Element of Chance Does Not Enter—The Talker in a Boarding House—Convict Uses Phonograph to Train Canaries—Some Recent Visitors of Record—U-S Phonograph Factory Working at Capacity—Increase in Columbia Retail Business—What the Various Jobbers and Dealers Are Doing.

(Special to The Talking Machine World.)

Cleveland, O., March 9, 1912.

The remarkable business in the talking machine line in December, the closing month of last year, was apparently a forecast of the business of this winter and for the coming spring. While the dealers generally are inclined to be reserved in their statements, reports of an unusual number of sales during the past three months lend support to the hopes that 1912 is going to prove the banner year in the trade hereabouts. Some of the dealers claim the sales for the first two months of this year showed a large per cent. of increase over corresponding periods in other years. That people in general expect a good business is evident from the continuous booking of orders. To a large extent the volume of business during the year will be measured by the ability of the factories to supply the demand, both for machines and records.

There was a time when the element of chance entered most largely into the talking machine dealers' calculations, but now the business has been reduced to a solid basis, skill, science and artists have solved the problem and taken the place of uncertainty, efficiency has superseded novelty, and the future is assured. Things which are going to determine very largely the measure of success in the future are the stability of the company, the quality of their output and the sort of service rendered dealers in the way of publicity.

Not a little commotion at a boarding house was the result recently of a man next door investing in a phonograph. The morose boarder protested he would have to hunt another domicile as the music was irritating when he desired to read. The other boarders were agreed that such a proceeding would give general satisfaction. The star boarder told him Shakespeare expressed his opinion that the man who is not charmed by the concord of sweet sounds is fit for treasons, stratagems and spoils. "There is," he said, "something wrong with the man who protests against the phonograph. The truth is that it is one of the greatest blessings of the age. I purposely visit a married friend of mine once in a while to pass a pleasant evening listening to his phonograph. There is no other amusement so cheap and satisfying. The phonograph has made home life doubly attractive, and it makes me angry when I hear anyone speak in slighting terms of the wonderful instrument in a misguided effort to be funny."

Not infrequently one hears interesting stories of the use made of the phonograph. Three years ago John Atkinson, a life prisoner in the Ohio Penitentiary, was given the position of guard runner for the annex, where condemned prisoners are con-

fining awaiting execution. He made his headquarters in the death chamber, with only the gallows, electric chair and the pictures of those who had been executed as companions. Realizing that he would become insane if he didn't occupy his mind, he picked up a stray cat, which he trained until it would do a surprising number of tricks. He became possessed of a book on canary bird culture, and becoming interested, prevailed on the warden to allow him to have canaries for companions in his dreary cell. Last year he raised one hundred canaries, which he sold and uses the money derived from the sales in enlarging his facilities. To aid in educating the birds to sing he purchased a phonograph, and from the day the birds hatch through the shell of their eggs they are forced to listen to music from it, and they soon learn. Some of the birds will sing only when the phonograph is playing, and to some degree follow the tune played.

The records are carefully selected, consisting mostly of whistling selections. Atkinson's birds have become noted and are not only sought by citizens, but are always in constant demand by the condemned prisoners in the annex, and he is always free with the happiness which they afford. He appreciates the happiness the birds have brought to him and he is unselfish.

B. Feinberg, special traveling representative of the Columbia Phonograph Co., General, spent several weeks in this section recently. He signed up an initial order of over \$500 with H. H. McFarland, piano dealer, at Springfield, O. Also an initial order of over \$500 with Henry Matern, Sandusky, O., who is an exclusive Columbia dealer.

L. C. McChesney, advertising manager of Thomas A. Edison, Inc., Orange, N. J., was recently a guest of A. O. Paterson, manager of the Luckner Edison jobbing house.

F. D. Witt, president of the Witt Music Co., which handles the Columbia goods at Lorain, O., was a visitor at the Columbia store March 1. He stated the company was doing a fine business and that it was daily increasing.

Wm. A. Miller, special representative of the National Publishing Co., Philadelphia, was interesting talking machine distributors in a new record album here March 4.

John McCarthy, with the W. H. Buescher & Sons Co., is an ardent admirer of the talking machine. "Within the past two years," he said, "I have observed with great satisfaction the rapid, wonderful growth of the business, and I predict that in the next three years it will have become the principal musical traffic of the world. It is wonderful what strides it is making."

The factory of the U-S Phonograph Co. is operating to capacity in an effort to fill pressing orders. Mr. Nisbett, of the company, said: "Business with us continues to boom. Our January and February sales showed a marked increase over December. A steady increase is shown all along the line, and both our machines and records are meeting with popular approval. A number of fine new selections have been added to our catalog, among others, by Henri Scott, of the Metropolitan Opera House, Margaret Keyes, Elsie Baker and Reed Miller; also some remarkable violin solos by Dr. A. Pop-

per. Others are now being recorded by the U-S Co., by Louis Von der Mehden and his orchestra, and are fortunate in securing the exclusive services of this maestro."

The Schubert Piano Co. 729-731 Prospect avenue, has taken the agency of the Keen-O-Phone talking machine and is the exclusive dealer in this city. Recently the company put in a complete line of the machines and is meeting with good success. Geo. T. Verreault, manager, is enthusiastic in praise of the instrument and with the results already attained. He said: "It is a wonderful machine, not only in its mechanical construction but in the production of a clear, pure and natural tone. It only needs a demonstration to conclude a sale. Within ten weeks we sold thirty-seven Keenolophones, the cabinet machines, and sixty-three Keen-O-Phones, the horn machines. The prospects for a large business in this line are excellent, and it works in fine with our piano trade."

Conditions at the Columbia store were reported of the most satisfactory character. "The month of February this year," said Mr. Madson, manager, "is the first month that the Columbia store, since the purchase of the Probeck Co., could compare this year's business with last year's, and the gain has been considerably over 100 per cent. The advertising campaign of our company is gaining new dealers and customers throughout this territory. The call for the Favorite Grafonola, the popular \$50 machine, is away beyond what the factory can allow us. There is also an increasing demand for the Regent line of tables, which are growing in popularity. The Berner Co., of this city, and H. C. Fischer, of Fremont, O., have taken on the line of Columbia goods."

The Eclipse Musical Co. is doing a prosperous business both in the wholesale and retail departments. Mr. Towell said the wholesale trade was practically the same as for the previous month—good. T. H. Towell, president of the company, said he visited the Victor factory last week for the purpose of trying to hypnotize the management into hurrying along several carloads of goods. He stated he discovered while there that about the same conditions existed and that the business was good all over the country.

The Caldwell Piano Co. is pushing the talking machine business and securing a desirable clientele. On the afternoon of February 21 the company gave a matinee with the Victrola and Kurtzmann player-piano in the large recital room, attended by 250 invited guests. The program of eighteen selections included records by Caruso, Galski, Mme. Schumann-Heink, Christie MacDonald and others, interspersed with piano selections. The recitals are to be continued regularly once a week. Mr. Scroton, manager of the Victrola department, said business was very fair, with an excellent demand for records, with prospects of a good spring trade.

Before it had fairly got started the Phonograph Record Exchange, 59 The Arcade, ceased business. The presence of Frank E. Madison, of the legal department of Thos. A. Edison, Inc., last month, and an interview with the parties concerned, it is said, determined them to retire.

Business at the store of W. H. Buescher & Sons Co. is good, as is evidenced by the large number of daily sales of Victrolas and records, largely of the highest grades.

At the Edison jobbing house of Laurence H. Lucker business continues good and constantly expanding. "Trade is keeping up very satisfactorily," said A. O. Peterson, manager. "The retail dealers in this city and throughout this section are ordering both machines and records very liberally, and all express themselves satisfied with the business they are doing. Without exception they make inquiry about the new Edison disc machine and are looking forward anxiously for its advent.

Norman H. Cook, manager of the talking machine department of the W. F. Frederick Piano Co., said trade was fair and that he was daily adding to his list of customers. "Our volume of business," he said, "has been somewhat impeded by the scarcity of various types of Victrolas. However, we think that the continuous growth in our record trade has taken care of this unfortunate loss. The outlook for future profitable business is very encouraging."

Conditions at the music store of the H. E. McMillin & Son Co. are reported very satisfactory.

At the warerooms of the B. Dreher's Sons Co. preparations are making for the removal April 1, but it is not interfering with the business of the talking machine department.

Business in both the wholesale and retail departments of the Collister & Sayle Co. is rather quiet. "Machines and records are coming through very slowly," said Mr. Dorn, manager, "and our trade is greatly curtailed by reason of our inability to get the goods. The demand keeps up for both machines and records. It is especially pronounced for the \$50 machines, and we haven't got one nor have we had one for some time."

Charles I. Davis is doing an exceptionally fine business at his store here. "I consider it remarkable that in so short a time I have built up so successful a business in the talking machine line, both here in Cleveland and at Pittsburgh. I am now considering the installation of talking machines in all my stores, now numbering fifteen."

The H. M. Brainard Piano Co., which took on a complete line of Columbia goods last December, is doing remarkably well. "Every week," said Mr. Brainard, "shows improvement in the business, and our customers speak in the highest terms of praise of the Columbia machines and records."

E. A. Friedlander, of the Bailey Co., said he was very well satisfied with conditions in his department.

The Talking Machine Co. reports business is fair and that it is doing something all the time, both in Victor and Edison machines and records.

AN IMPORTANT STATEMENT.

The Victor Co. in Discussing the Recent Action of the U. S. Circuit Court of Appeals in the Suit on the Petit Double-Faced Record Patent States That Infringers Will Be Prosecuted.

It will be recalled that in an earlier issue we reported the substance of Judge Hazel's opinion on final hearing in a suit brought by the Victor Talking Machine Co. against the American Graphophone Co. et al., on U. S. patent No. 749,092, sometimes called the "double-faced record patent." Judge Hazel, it will be recalled, held the patent to be invalid, in view of certain prior art.

The Victor Co. took an appeal from Judge Hazel's decree to the United States Circuit Court of Appeals for the Second Circuit, and the argument of the appeal was heard in January, 1912. The Appellate Court has very recently filed its opinion disposing of the appeal, and, in view of the somewhat unusual disposition made of the appeal, it may be well to point out that, while the Appellate Court affirmed Judge Hazel's decree, it expressly states in its opinion that the affirmance is made without passing upon the validity of the Petit patent, and permits the court, should another suit involving this patent be brought to it for determination, to pass upon the validity of the patent without being constrained by any action taken in the suit just decided.

The United States Circuit Court of Appeals for the Second Circuit in its opinion states that it took the action which it did because it appeared that since Judge Hazel's decision the parties to the suit had entered into some settlement concerning this patent whereby the standing of the parties would not be affected by its decision in the case, and there was nothing left which called for the Appellate Court's decision in this particular case.

As far as the American Graphophone Co. and the Columbia Phonograph Co., General, are concerned, there was a certain settlement, but the Victor Co. announces that it is not settled as to others, and that it is determined to prosecute infringers of this Petit patent. The Victor Co. states further that it is confident of finally sustaining this Petit double-faced record patent, and that if any other concerns start or continue the manufacture or sale of double-faced records, other suits under this patent will be instituted and the whole matter will have to be fought over again to the Court of Appeals.

The action of the Appellate Court in affirming Judge Hazel's decree was based chiefly upon a technicality, and was not on the merits, so that the effect is unimportant.

THOMAS A. EDISON AND HIS MOTHER.

The Noted Inventor Says His Mother Was the Making of Him—Pays a Graceful Tribute.

Next to Col. Roosevelt no other man figures so prominently in the public press as Thomas A. Edison, the inventor of the phonograph. Recently he paid a characteristic tribute to his mother when he said: "My mother was the making of me. She was so true, so sure of me; and I felt that I had someone to live for, someone I must not disappoint. I did not have my mother very long, but in that time she cast over me an influence which has lasted all my life. The good effects of her early training I can never lose."

"I was always a careless boy, and with a mother of different mental caliber I should probably have turned out badly. But her firmness, her sweetness, her goodness were potent powers to keep me in the right path. I remember I used never to be able to get along at school. I don't know now what it was, but I was always at the foot of the class. I used to feel that the teachers never sympathized with me, and that my father thought that I was stupid, and at last I almost decided that I must really be a dunce. My mother was always sympathetic, and she never misunderstood or misjudged me."

"One day I overheard the teacher tell the inspector that it would not be worth while keeping me in school any longer. I was so hurt by this last straw that I burst out crying, and went home and told my mother about it. Then I found out what a good thing a good mother was. She came out as my strong defender. Mother-love was aroused, mother-pride wounded to the quick. She brought me back to the school and angrily told the teacher that he didn't know what he was talking about, that I had more brains than he possessed. In fact, she was the most enthusiastic champion a boy ever had, and I determined then that I would be worthy of her and show her that her confidence was not misplaced."

APPOINTED DOMINION MANAGER.

Jos. H. Wilson Takes Charge of the Dictaphone Interests of the Columbia Phonograph Co. in Canada.

Joseph H. Wilson, formerly and for several years connected with the New York sales staff of the Columbia Phonograph Co., General, has been appointed Dominion manager, with headquarters at Montreal, for the dictaphone. Mr. Wilson is a highly efficient salesman and his many New York friends predict a great success for him in Canada.

Count that day lost
Whose low descending sun
Sees goods sold at less than cost,
And business done for fun.

"Nothin' to do till tomorrow"

That's us. A clean slate every night—every order received that day filled and on its way to our customers.

If you are one of our regular customers this will not surprise you. If you are not, it will likely be somewhat of a revelation to you.

Yes sir, every order shipped the same day it is received.

No matter what you want in Victors, Victor-Victrolas, Victor Records, record cabinets, needles, fibre cases, horns, repair parts and other accessories, we have it right under our own roof, ready to start to you the minute you give the word.

Put us to the test and see if we don't "make good." And remember, that sort of service is a regular thing with us.

Write us today for our latest catalog and we'll also send you our interesting booklet, "The Cabinet That Matches."

FAVORABLE REPORT FROM ST. LOUIS.

Chief Difficulty of Dealers Lies in Inability to Secure Enough of Certain Styles of Machines—Columbia Co. Store Renovated—Busy Times in Aeolian Co. Department—Columbia Favorite Proves a Hit—Mark Silverstone's Experience With a Grateful "Hobo"—Some Recent Trade Visitors—Trade News of the Month Summarized.

(Special to The Talking Machine World.)

St. Louis, Mo., March 9, 1912.

The general reports regarding conditions in the local talking machine trade at the present time are of a very favorable nature and the majority of the jobbers and dealers state that the chief trouble lies in the fact that certain styles of machines are more popular than others and that the result is that it is difficult to keep a sufficient stock of the popular machines on hand. The opening months of the present year produced a volume of business in excess of that for the same months in 1911 and the prospects for the future are of a decidedly encouraging nature.

The store of the Columbia Phonograph Co. is being redecorated and thoroughly overhauled under direction of Charles L. Byars, retail manager. Enameled white paint is being used for the wood work and the demonstration booths and the paper and hanging will be as cheerful as possible, the intention being to make the store inviting, but not of forbidding excellence.

John Schmelzer of Centralia, Ill., a prosperous and widely known jeweler, who finds the Edison talking machine a profitable and well liked side line, was a recent caller at the Silverstone Talking Machine Co.

Harry Levy of the Aeolian talking machine department says the continued trade on XVI machines is the feature with the retail departments at that store. "I think we are beginning to see where the small machines are a material benefit to the trade," he said. "Already they are coming back and, of course, bringing customers for good machines, for it is impossible for a person to hear the records put out today on any machine and not become charmed with them. The small machine is just the taste of what is wanted."

The wholesale trade, Mr. Levy states, continues to be a problem of distribution as to both records and machines and that the country trade has held up very well. "February keeps up the remarkable record this company has been making."

"Our trade continues to settle on the Favorite model," said C. L. Byars at the Columbia Co. "One surprise is the excellent class of trade the general advertising for this model is bringing. We find that most of those to whom this model is suggested have already been sold as far as persuasion is concerned, it needs only the suggestion as to action. Our trade is limited chiefly by the supply we are able to get from the factory. The salesmen ask 'How many Favorites can I sell?' This morning we received 16 and this evening we cannot promise immediate delivery of a Favorite. There is a fine proportion of cash trade this month. It began last month when the

cash business ran ahead of the installment business and continued for February. Of course this is some good salesmanship in persuading so large a proportion of buyers to pay cash and we are pleased when we succeed, as we then have a good record customer from the start instead of a machine customer coming to the store to make payments on the instrument."

E. C. Rauth, secretary of the Koerber-Brenner Music Co., says that his firm is well pleased with the first month as exclusive Victor jobbers. "The country trade is very good and the stores in the city have been making some excellent sales of records. We are now shaping our affairs for an aggressive campaign to extend the St. Louis jobbing territory for talking machines and general musical merchandise."

Mark Silverstone of the Silverstone Talking Machine Co. has had a unique experience with hiring help through sympathy. During the extreme cold weather a man who admitted himself a "hobo" came into the store and asked for work. Mr. Silverstone needed a man to help in arranging the new stock that had come with his appointment as exclusive Edison jobber and he employed him. Three days later the man got sick and the next day two men of the same class appeared and were given work in the other's place. They worked a week and were paid each night. One noon they walked out the back door. Mr. Silverstone soon established that a machine was gone and set about learning the number before he reported to the police. Before he had finished that search a policeman called and asked if he had lost a machine. Of course he had and the police had the two thieves. The first man employed was so thankful for the aid given him that when he heard of the other men, whom he knew had taken his place, were reported at the lodging house as wanting to sell a talking machine that they must have stolen it from Mr. Silverstone and he followed them to a pawn shop and then told the police. Before their arrest the men had disposed of the pawn ticket, but the thankful man also located the purchaser. In the end the thieves were sent to the workhouse and the man who bought the pawn ticket got the job at the Silverstone Talking Machine Co., for the original incumbent did not recover sufficiently to work and the purchaser was a poor man who told Mr. Silverstone of his need for work when the latter reimbursed him for his loss. The machine that gave all this experience was a Fireside model and was stolen in an original package. The men were not sufficiently versed in the business to know values of the packages.

Henry C. Brown, advertising manager of the Victor Co., was a recent visitor to jobbers here.

Miss Elizabeth Vandeventer is attracting much attention in the local talking machine circles by her skillful handling of the department at Bollman Brothers Piano Co.

W. S. Byrd was a caller at the Columbia store the first of the month after a very successful trip through Missouri and Southern Illinois for the Columbia line.

Mark Silverstone of the Silverstone Talking Machine Co. says that he is more than pleased

with his first month as exclusive Edison jobber. "I have met several of the new customers and have about completed stock arrangements for making an aggressive fight for business. I will send a man on the road within a few days. I am not yet in position to speak accurately on the new business, but it appears very good to me." W. W. Fisher of Murphysboro, Ill., was one of Mr. Silverstone's new customers who called at the store and he expressed personally what he had already written of his satisfaction with a large record order, not only as to the completeness with which it was filled and the packing service.

The A. H. Mengel Music Co. of 4300 Olive street, one of the heavy retailers of the Victor line in the city, are changing their business quarters in the prosperous West End by the relinquishing of one of their suite of store rooms and the leasing of another which will increase their display advantages.

FROM A PROHIBITION STATE.

What Maine Frost Did to the Music of a Talking Machine and What Happened Thereafter—What Might Be Termed "Heavy" Music.

We have all heard of the tyrant whose voice was of such caliber as to cause the blood of his intended victims to congeal and to cause them to stand in their tracks as though frozen. In such a case the freezing was due to horror rather than to frost, but now, out of the wilds of New England, from the land of the Puritans, where truth stands mighty, comes the following story of the effect of intense cold on the notes emitted by a talking machine and the dire results:

It was so cold at Danville Junction, Me., recently that the music emitted by a talking machine froze in transit and, striking little Mary, the daughter of James Lamb, in the face, severely injured her. The accident occurred in this way: The little girl had just started the Victrola when her father entered from out of doors. The blast of cold air immediately congealed the stream of music, which struck the girl with telling effect. Unfortunately, the record was a military march played by Pryor's full brass band. One of the cymbals struck Mary over the left eye, cutting a severe gash. The bass drum then emerged from the horn of the machine and with thunderous effect completely enveloped the child.

It was more than four minutes before help came, and as it was only a five minute record, most of the damage was done before the child's danger was known to the rest of the family. When discovered four B-flat clarinets were dug out of the wall; a bass horn was hanging on the corner of the mantel piece; two trombones were wound around the parlor stove and Mary had an oboe under each arm.

It is believed that if the child had not been protected by the bass drum, which enfolded her, the high notes from the E-flat cornets or the piccolos would have pierced her little body and caused her death. It certainly has been cold at Danville Junction.

TWO POINTS OF SUPPLY; ORDER FROM THE NEARER

OPTIMISTIC IN MILWAUKEE.

Trade Both in Wholesale and Retail Lines Shows Steady Gains—Talking Machine Men Working Harder Than Ever and Being Well Rewarded—Gimbel Bros. Business Shows Immense Increase as Compared with Last Year—Miss Gannon Visiting Egypt—Book Issued by E. O. Schmidt Wins Praise of Louis L. Geissler—J. H. Becker Building Up Nice Business—Recent Visitors—Other Items.

(Special to The Talking Machine World.)

Milwaukee, Wis., March 11, 1912.

Despite the fact that business in some lines is not as satisfactory as it might be, the talking machine trade seems to be making steady gains. This is due in part to the fact that so many moderate-priced high-grade machines have been placed on the market and to the persistent campaign of advertising which Milwaukee dealers have following during the past two or three years. This campaign has been pushed harder than ever during the past few months, in view of the fact that business in some lines has been slow and dealers realized that hard and consistent work was necessary to produce the hoped for gain in talking machine sales. Jobbers and dealers have plans under way for continuing the fight even more vigorously than in the past, and with this determination and with steady improvement taking place in other lines of activity, the outlook in the Wisconsin talking machine field is far from unsatisfactory.

Jobbers report that dealers about the State are placing good orders for machines, records and supplies in order to be in readiness for the usual spring trade. Money has been more plentiful in the smaller cities and towns of the State and business there has naturally shown more activity without the strenuous methods which have been required in Milwaukee.

"The jobbing business is showing decided improvement at this time," said Lawrence McGreal, Milwaukee and Wisconsin jobber for the Edison line. "I do not believe that the fact that a presidential election will take place this year will seriously affect the talking machine trade. Business is now at a better stage than it was a year ago and the prospects are good."

Probably the most striking gain made during the past month by local dealers is reported by L. C. Parker, manager of the talking machine department of Gimbel Brothers' Milwaukee store. Mr. Parker has figures to prove that his department showed an increase of 104.62 during the past four weeks as compared with the business received during February, 1911. Mr. Parker recently accomplished the record of selling four \$200 Victrolas within one day. The Gimbel department has been so busy that its employees have had no time for outside soliciting since the opening of the new year.

Miss Gertrude F. Gannon, head of the Wisconsin Talking Machine Co., Milwaukee and Wisconsin jobbers for the Victor line, is enjoying with a party of friends an outing of several months' duration in Italy, Egypt and surrounding countries. Miss Gannon is now taking the entire Mediterranean trip, stopping at Naples and probably going as far as Alexandria. The party, which may also visit several points of interest in Europe, will probably not return until April 15. During the absence of Miss Gannon, the business is in charge of Harry Fitzpatrick and Joseph Gannon.

A. G. Kunde, Columbia jobber and retailer, has renewed his lease on the store at 516 Grand avenue and steps will be taken at once toward remodeling the entire establishment. A rear partition will be removed, new and handsome sound-proof booths will be installed, offices will be enlarged and the repair department will be given better quarters. The entire store will be re-decorated. Mr. Kunde reports a steadily increasing business and says that trade is so much better that he has been forced to enlarge his office force. Mr. Kunde followed up the Columbia Phonograph Co.'s recent double-page advertisement in The Saturday Evening Post by an extensive campaign

of advertising in the Milwaukee newspapers, featuring the Columbia Favorite. The result has been that sales in this line have increased at a tremendous rate. The Kunde store is now Wisconsin representative of the Dictaphone line for the Columbia Phonograph Co.

Lawrence McGreal, Edison jobber, has returned from New Orleans, where he and his family enjoyed a two weeks' pleasure trip and a visit with relatives. After basking in his shirt sleeves in the warm New Orleans weather, Mr. McGreal returned to Milwaukee just in time to experience the worst blizzard that Wisconsin has had this winter.

No permanent manager for the talking machine department of the Hoeffler Manufacturing Co., 306-308 West Water street, has been secured as yet. Miss Elsie Meiser, formerly assistant to J. H. Becker, Jr., the former manager who is still in charge, reports some very good Victrola and U-S talking machine sales.

The plant of the New Idea Cabinet Co. is in busy operation turning out more New Idea cabinets than at any time since the establishment has been opened.

William P. Hope, genial traveling representative for the Thomas A. Edison Co., Inc., paid a recent visit to his Milwaukee friends. Mr. Hope is enthusiastic over the prospects for the coming season.

Adolph Hoeffler, president and general manager of the Hoeffler Manufacturing Co., retailers for the Victor and U-S lines, has been given the sympathy of the trade as the result of the recent death of his father, Henry Hoeffler, a pioneer business man of Stevens Point, Wis., in his 82d year.

Emil O. Schmidt, well-known piano dealer, who now carries a full line of Victrolas, has issued a handsome illustrated little booklet, entitled "A Heart to Heart Talk with the Piano Buyer," in which he gives up considerable space to the Victrola line. The one-price system of doing business is the general theme throughout and the pamphlet has attracted much favorable comment. Louis F. Geissler, general manager of the Victor Talking Machine Co., has written Mr. Schmidt as follows:

"Allow us to congratulate you on the very high-class folder you are sending out to your prospective buyers. It is a relief to see a dealer maintaining a one-priced system and it cannot help but bring you success. It is a pleasure to see Victor goods listed in such a circular, among pianos on a good clean basis like this."

Lawrence McGreal, president of the National Association of Talking Machine Jobbers, has announced himself as a candidate for delegate from the Fifth Wisconsin district to the national Democratic convention in Baltimore, June 25 to 28. McGreal is recognized as the original Champ Clark man in Milwaukee, has always been prominent in local Democratic circles and his election is practically assured.

Florian F. Flanner, manager of the talking machine and musical merchandise departments of the Flanner Music House, 417 Broadway, reports the largest Victrola business that his house has experienced in several months. Joseph Flanner and Florian F. Flanner have disposed of their interests in the Flanner-Hafsoos Piano Co. to Eric Hafsoos and will now devote their entire time to the various other activities of the Flanner Music House.

A brisk business is reported by Harry Krienitz, one of Milwaukee's enterprising young talking

NEW BEDFORD, MASS.

machine dealers, who opened a piano department and is finding that the two lines go very well together. Mr. Krienitz gives up his entire first floor to the talking machine line and has his piano parlors located on the second floor.

J. H. Becker, Jr., who recently resigned as manager of the Hoeffler Manufacturing Co.'s talking machine department to take charge of a new store at 1120 Walnut street, is securing a fine business by various up-to-date methods. Mr. Becker has just mailed 1,000 circular letters to his friends and prospective customers, announcing the opening of his new store, describing the Victor line and calling attention to the new March Victor records. The results have exceeded even his expectations and have strengthened his conviction that advertising will repay any retailer who goes about it in the right manner. Mr. Becker reports that sales of Victrolas, styles XVI, II and XIV have been especially large, while the demand has been good for the smaller types of Victrolas.

Roy J. Keith of the Talking Machine Co. of Chicago, recently called upon the Milwaukee talking machine trade. Other visitors included Mr. Gibbs of the Rudolph Wurlitzer Co. of Chicago and Mr. Mauer of Lyon & Healy, Chicago. L. G. Krause of Krause & Grau, talking machine dealers at Port Washington, Wis., visited Milwaukee jobbers recently.

The William A. Kaun Music Co., 209 Grand avenue, well-known sheet music house, now carrying the complete Victor line, will be located in larger quarters at 90 Wisconsin street, soon after April 15.

Everything that has been done well has been done calmly. Many things that have been done poorly owe their failure to the haste, or lack of calmness, with which they were performed. This peace of mind which helps to win battles is a habit that can be formed by those who are willing to cultivate the tendency to forget rather than fret about trivial mishaps.

The human race is divided into two classes, those who go ahead and do something, and those who sit and inquire, "Why wasn't it done the other way?"—Oliver Wendell Holmes.

THE VICTOR IN THE SCHOOLS.

Live Dealers Can Make a Local Proposition Out of the Victor Company's Big Campaign in the Interests of School Music—How the Trafford Music Co. Handles the Matter Successfully—Interesting the Teachers.

One of the pleasing features of the campaign being carried on by the Victor Talking Machine Co., with a view to placing Victor talking machines and selected lists of records in the public schools of the country, is the manner in which many of the Victor dealers in various sections of the country have made a local issue of the campaign and put forth their best efforts to convince the school authorities and teachers in their vicinities that the Victor was very necessary and desirable. As any dealer who has faith in the proposition knows, the most effective methods of

TRAFFORD MUSIC CO. INTERESTING TEACHERS.

winning over the educational authorities is to give actual demonstrations where the Victor can be played and the various points in favor of the use of the machine may be explained and actually demonstrated while the prospect is interested.

The accompanying illustration shows how one western house manages to make the educational campaign dividends. The view is of a room in the store of the Trafford Music Co., Mason City, Iowa, with a number of local teachers gathered together to listen to a demonstration of the Victor. The gentleman standing is L. Earl Elsham, manager of the Victor department of the company, who is giving the matter his personal attention. Several meetings were held in the Trafford Co.'s store for the benefit of the teachers, who for their part were most enthusiastic over the records played for their benefit and the plans for the use of the Victor in the schools as explained to them. As a matter of fact several of the schools in Mason City were already in possession of talking machines before the Victor Co.'s campaign was

started, but through the efforts of the Trafford Co. the teachers in those schools have become really enthusiastic regarding the possibilities of the proposition, owing to the fuller knowledge of the details, and their work has become much more systematic and effective.

WM. A. CONDON'S LONG TRIP.

Left Last Week for a Two Months' Tour of the Leading Cities for the Purpose of Introducing the Condon-Autostop.

William A. Condon, secretary and treasurer of the Condon-Autostop Co., 26 Front street, New York city, left on Monday last on an extended trip which will carry him to the principal cities in the leading States in the East, West and Northwest.

His purpose is to introduce the Condon-Autostop for disc talking machines, which has won favorable consideration from the trade and talking machine users. His longest sojourn will be in Cleveland, Chicago and St. Louis, and it goes without saying that he will make some important connections for his house at all points visited.

With its own manufacturing plant the Condon-Autostop Co. is now well prepared to supply all orders with promptness and insure a standard of quality in the product that will do much to make it popular with the trade.

It is the intention of the company to put salesmen on the road in Cleveland, Chicago and St. Louis points, and W. Wesley Aube has been engaged to cover the New York territory.

Good advertising space has been arranged for by the Condon-Autostop Co. in the Saturday Evening Post, April 20; Collier's Weekly, April 27, and the Post again on May 24. This general scheme of national advertising will be continued. In other words, it is the intention of the manufacturers of the Condon-Autostop to educate the users of talking machines to the knowledge of the Autostop and in this way drive the trade to the dealers handling this line of goods. Thus the jobbers will be benefited.

RULES FOR ADVERTISERS.

An expert in the producing of good advertising copy has formulated the following rules which cover the subject in a sensible and scientific manner:

Rule 1. Make each advertisement a short, simple lecture upon the goods advertised.

Rule 2. Use only short arguments, short paragraphs, and the smallest words possible. Avoid technical expressions, literary terms, ultra-correct grammar and diction. Employ straight from the shoulder Anglo-Saxon language which everyone can understand and appreciate.

Rule 3. Be absolutely truthful and avoid wilful exaggeration.

Rule 4. Have your illustration as part of the argument.

Rule 5. Avoid all "fancy" effects of border and type.

Rule 6. Give all the information possible.

Rule 7. Don't fail to have some sort of a guarantee of satisfaction.

Rule 8. If you can't get the order, make your customers write for particulars. This is very important.

Rule 9. Don't say "we" so much as "you" in an ad.

Rule 10. Stand on your own merits. Don't knock competitors.

Rule 11. State the price.

G. T. Williams, general manager of the New York Talking Machine Co., 81 Chambers street, and Mrs. Williams were called to Hendersonville, N. C., recently to attend the funeral of Mrs. Williams' mother, who died in that city.

An apology to those who have

purchased our needles and had to wait because all the business swamped our facilities.

This condition was regretted more by us than you. To prevent its recurrence and to care for an increased trade, additional machinery has been installed at the German factory.

No more delivery trouble this year and shipments will be prompt—depend upon it.

An offer to those who have not

bought our Imported German and English made needles, and are buying the inferior American needles:

Do you know that you can buy imported needles—German and English made—at no extra cost?

These imported needles are made of the highest grade steel; put up in bulk or packed in special lithographed tin boxes or envelopes with your own ad at no extra cost than inferior needles.

Special prices for large quantity buyers. Send us specifications of your requirements for our lowest prices.

All standard needle sizes in stock; special sizes made to order at no additional cost.

FEINBERG TO SELL MUSIC ROLLS.

Well-Known Talking Machine Man Joins the Forces of the American Piano Co. as Traveling Salesman—Active Campaign Mapped Out for Some Months to Come.

B. Feinberg, who for a number of years has been prominently connected with the talking machine trade, first as head of the Talking Machine Shops,

B. FEINBERG, NOW WITH THE AMERICAN PIANO CO.

Chicago, and later as special traveling representative for the wholesale department of the Columbia Phonograph Co., General, has resigned from the latter position to become traveling salesman for the American Piano Co., one of the most prominent concerns in the piano trade, with headquarters at 439 Fifth avenue, New York. Mr. Feinberg will

devote his time exclusively to introducing and promoting the sales of the American Piano Co.'s new and improved music roll, the Rythmodik, which reproduces perfectly the music as actually interpreted by famous pianists. Chas. F. Stoddard, the inventor of the Rythmodik roll, will accompany Mr. Feinberg and demonstrate the merits of the new records. Mr. Feinberg is a highly successful salesman and Mr. Stoddard is an accomplished artist on the player-piano. With these two men, both experts in their own particular line, the success of their efforts is almost a foregone conclusion. The first trip of the campaign will be among the trade between New York and Denver, Col., and eventually their travels will take them over the entire country.

EDISON GLEANINGS.

Many Visitors to Plant at Orange—Thos. A. Edison Off to Florida Home—Baseball Soon—A New Volume That Shows the Work of a Master Hand—Dealers Should Look It Up.

The Edison social record at Orange, N. J., contains the following well-known names—members of the fraternity entertained during the past month: Hy Eilers, Eilers Music Co., Portland, Ore.; George Heidinger, Eilers Music Co., Spokane, Wash.; W. M. Cole, H. E. Sidles Phonograph Co., Lincoln, Neb.; Louis Buehn, Philadelphia, Pa.; E. Buehn, Pittsburgh, Pa.; Hugh Shields, Denver Dry Goods Co., Denver, Colo.; C. S. Shank and Mr. Title, of George Bogar, Harrisburg, Pa.; H. L. Ellenberger, Pardee-Ellenberger Co., New Haven; J. E. Pearce, New Orleans, La.; C. B. Haynes, C. B. Haynes & Co., Richmond, Va.; H. G. Stanton, R. S. Williams & Sons Co., Ltd., Toronto; H. S. Loudon, Toronto, Canada; J. N. Blackman, Blackman Talking Machine Co., New York; H. M. Meyer, the Meyer Store, Pittsfield, Mass.

Carl H. Wilson, general manager, is at Atlantic City for a few weeks' rest.

Thomas A. Edison, accompanied by his family, departed on the ninth for Florida, where Mr. Edi-

son will remain for a month. Mr. Edison has a winter home at Miami, one of the most beautiful spots in the State.

The Edison Club is organizing a baseball team which is going to be "some" team, so the boys assert. After the spring training this "9" will be looking for games, particularly with talking machine teams.

C. E. Goodwin, manager of salesmen, mixed business with pleasure by stopping week-ends at Atlantic City, where he could be in consultation with General Manager Wilson.

Business at the Edison works is in excellent shape; everyone is working—even the shipping department is hustling—which is most optimistic for a bright spring condition.

L. C. McChesney, advertising manager, reports a spirited demand for the volume "Splitting the Other Four-Fifths," a book describing the merits and advantages of the Edison business phonograph. This book was written under Mr. McChesney's guidance and it shows the work of a master hand from cover to cover. The Edison Co. will be glad to mail a copy to any live dealer in the country and it will either show him a way to make extra money or a path that will start him rounding out new profits.

HAGER WITH KEEN-O-PHONE CO.

Appointed Musical Director and Will Manage Recording End of Business.

(Special to The Talking Machine World.)

Philadelphia, Pa., March 8, 1912.

Frederic W. Hager has been appointed general musical director of the Keen-O-Phone Co., manufacturers of talking machines. Mr. Hager will handle the talent and recording end of the business. He has had considerable experience along these lines, not only in the production of records, but in the musical centers he was at one time in the publishing field. Mr. Hager is also a composer of note. The company is to be congratulated on securing Mr. Hager's services, as his experience and training have been wide and exhaustive.

DICTAPHONE CONTEST A HIT.

One of the Prominent Features of the Recent Business Men's Exposition in Indianapolis—Prizes for Best Letters—Typewriter Companies Show Interest in Competition.

(Special to The Talking Machine World.)
Indianapolis, Ind., March 9, 1912.

A Dictaphone display at a Business Men's Exposition is not a new thing by any means, but there was an element of novelty in the exhibit put on here at the recent exposition in Tomlinson hall

and interest in the contest was thereby made general rather than local.

The various typewriter agencies of the city were quick to see the benefit that could be made to accrue to them, could it be said that it was upon one of their machines that the winning letter had been written. In consequence of this, all the typewriter firms brought the contest to the notice of the operators of their respective machines scattered over the city, and invited them to come to the exposition and try for the prize of \$10 in gold.

DICTAPHONE AT BUSINESS MEN'S EXPOSITION, INDIANAPOLIS.

by the Indianapolis branch of the Columbia Phonograph Co. A unique feature of the exhibit was the giving of a prize to the stenographer who could write the best letter from the Dictaphone at the booth of the Columbia Co.

Typewriting machines of all the leading makes were embodied in the exhibit. Connected with each of these was a type B-6 Dictaphone, upon which was a cylinder containing a short letter, so dictated as to be easily and readily written by any one competent to use a typewriter. The award was made with regard to neatness and accuracy, speed cutting no figure whatever. Under these conditions all stenographers had an equal chance,

Miss Lizzie Hubbard, employed by the American Motor Car Co. of this city, using an L. C. Smith typewriter, wrote the winning letter. Miss Anna M. Counts, using a Remington, was second and Mrs. Louis M. Reeves was third. Mrs. Reeves used an Underwood typewriter. It is only fair to Miss Counts and Mrs. Reeves to mention the fact that the Dictaphone was absolutely new to them, whereas Miss Hubbard had been familiar with its operation for some time. In the picture of the display, C. P. Herdman, of the local branch of the Columbia Phonograph Co., is at the tube. The display was designed and arranged by C. V. Weaver.

A CONGRESS OF INVENTIONS.

Inventors of All Classes to Display the Results of Their Genius at an Exhibition in Grand Central Palace.

Inventors of high and low degree, from perpetual motion "bug" to Edison, Westinghouse, Steinmetz, Cooper Hewitt, Marconi, Bleriot, and other giants of mechanics, will show their greatest achievements to the public in the new Grand Central Palace from April 13 to 20 at the newly organized Inventions Show. This will be a congress of inventors, conducted for the education of the public and the direct meeting of manufacturer and consumer.

Another aim of the Inventions Show is to put inventors in touch with capital, and hundreds of unknown geniuses with great ideas needing money for development will exhibit their brain children beside the mechanical progeny of famous men who

have made their dreams come true. The great floor space and scientific arrangement of the new Grand Central Palace make it possible to assemble what is expected to be a splendid exhibition of the magic of inventive genius.

Edison will show all his great inventions in their latest development from cement houses to storage batteries, giant motors, electric lights, talking machines and motion picture marvels, and other inventors will display their masterpieces.

TALKING MACHINE EXPORTS.

The Figures for January Presented—Reports Show Falling Off for the Month.

(Special to The Talking Machine World.)
Washington, D. C., March 6, 1912.

In the summary of exports and imports of the commerce of the United States for the month of January (the latest period for which it has been compiled), which has just been issued by the Bu-

reau of Statistics of the Department of Commerce and Labor, the following interesting figures relating to talking machines and supplies are set forth:

The total exports of talking machines, records and supplies for January, 1912, amounted to \$226,660, as compared with \$292,347 for the same month of the previous year. The seven months' exportation of talking machines, records and supplies amounted to \$1,615,162.

TAKES ON VICTOR LINE.

Henry Kleber & Bro., of Pittsburgh, Arrange Department to Be Devoted to Talking Machine—Scott & Jones, of Youngstown, Also Fall in Line—Other News of Interest.

(Special to The Talking Machine World.)

Pittsburgh, Pa., March 9, 1912.

The Talking Machine Shop, of this city, has just added two new rooms to its talking machine shop which are very unique, both rooms being the Italian pagoda style, having the latticed sides and roof, one room with wistaria and flower decorations and the other with roses and grapes. It has fitted up the new rooms entirely after the rural style.

Henry Kleber & Bros., piano dealers, 513 Wood street, have taken on the complete Victor line and will devote their entire first floor to the Victor. They have equipped their department with four handsome sound-proof booths, and altogether will have a very beautiful department, the decorations being Paris gray and white.

Scott & Jones, of Youngstown, are moving their Victor department from the basement to the first floor, are putting in four of the finest sound-proof booths in the country at the cost of \$2,300 and, altogether, they will have one of the finest departments between Pittsburgh and Chicago.

The various dealers in Pittsburgh report good business in so far as the present shortage will permit.

IMPROVEMENT OF DICTATING MACHINE.

A new earpiece for the Edison business phonograph has been invented and put on the market. The apparatus is similar to the old ones in use, except that the ear tubes are of aluminum and therefore lighter and easier on the ears of the operator than those made of hard rubber composition.

Wisconsin Traveler Wanted.

We want a good, snappy, up-to-the minute traveler to sell Victor goods in the State of Wisconsin. One capable of establishing new dealers and who can help latter close deals for Victrolas when necessary. Address, giving experience, reference and salary to begin, C. M., Talking Machine World, 37 So. Wabash Ave., Chicago.

PARCELS POST FORTHWITH.

Two Year Limit in Post Office Appropriation Bill Introduced Last Week—Measure Calls for Limit of Eleven Pounds and Temporary Trial Will End June 30, 1914—Charges to Be Five Cents for First Pound and Two Cents Thereafter—For Rural Delivery Only.

(Special to The Talking Machine World.)

Washington, D. C., March 5, 1912.

In making public the new Post Office Appropriation bill yesterday the Committee on Post Offices and Post Roads laid before the House a provision for the establishment of a modified parcels post. The new provision is carried in section 8 of the bill and reads in part as follows:

That on each and all rural mail delivery routes of the United States the postmaster at the starting point of such route shall until June 30, 1914, receive and deliver to the carrier or carriers of said routes all articles, parcels or packages not prohibited to the mails by law and falling under the definition of fourth class matter and not weighing in excess of eleven pounds, for transportation and delivery on said routes only; and the carriers shall receive at intermediate points on all rural routes such mail matter of the fourth class for delivery on their respective routes only.

Limit to Be Eleven Pounds.

That postage shall be paid on all articles, parcels or packages entitled to transportation under the provisions of the act as matter of the fourth class on rural mail delivery routes only at the following rates: One cent for each two ounces or less, two cents for more than two ounces, but not more than four ounces, three cents for more than four ounces but not more than eight ounces, four cents for more than eight ounces but not more than twelve ounces, five cents for more than twelve ounces but not more than a pound, and two cents per pound for each additional pound or fraction thereof up to and including a total of eleven pounds. That the Postmaster General shall make all rules and regulations necessary and not inconsistent with law to the proper execution of this act.

The bill also creates a commission to study the subject of a general parcels post.

In the accompanying report the committee takes strong ground in favor of the commission plan and says:

To Give Two Years' Trial.

It would seem essential that we know how this innovation in our postal system will affect our revenue, what additional burdens we must assume in increased number of employes, and the increased railway and carriage pay; whether a flat rate can be established for the whole of the United States or not and at what figure; whether it would be wise to adopt the Zone system of transportation and pay for carriage or not; how far this extra service would interfere with the handling of first, second and third class mail matter; the probable losses and profits under different rates; the effect on the centralization of trade; whether the express companies could under one system or another secure the short hauls and leave the long and expensive hauls to the Government; whether it would first be best to condemn the express companies contracts with the railroads or not and use them, or to force the railroad companies to equal rates for the Post Office Department that is granted the express companies, or to pursue either of these courses; to know the tendency of the system to create and sustain monopolies, and its effect on the commercial and farming interests of the country.

Of the proposed enactment itself the report says:

The same conditions do not exist, and therefore the same reasoning does not apply to the strictly rural parcels post confined to matter of the fourth class arising and for delivery on each specific rural free delivery route. These routes are already established. All of their machinery is in full operation. The additional burdens on the carrier are slight, and a slight additional compensation is provided for in this bill. The estimate of the Department is that a change in equipment will be necessary as to only about 15 per cent. of the routes.

SHEPARD, NORWELL CO.'S TALKING MACHINE DEPARTMENT

(Special to The Talking Machine World.)

Boston, Mass., March 10, 1912.

The talking machine department of the Shepard Norwell Co., Winter street and Temple place, this city, of which a reproduction is herewith given, has proven one of the busiest departments in the whole of this large department store. The quarters occupy the entire end of the third floor on the Temple place side of the building and as one enters the first thing that impresses him is its close resemblance to a handsomely furnished parlor, for there is a soft green velvet carpet on the floor, while all around are handsome Columbia cabinets, for the department handles only the Columbia

goods. The demonstration rooms are at the end overlooking the much traveled street. One of these demonstration rooms is quite large, of sufficient size to hold quite a large company of people.

The department is owned by F. C. Henderson, who has a number of talking machine stores at different points and who, by the way, has just returned from a trip to Bermuda. In charge of the machines is A. Isaacson, an experienced man, while Mrs. Jones attends to all customers who are looking for records or who wish to inquire as to the grand opera work of the Columbia. The department keeps only high-class goods and its sales for the most part are in the high-priced outfits.

We have, therefore, provided for a limited rural route parcels post with postage rates at five cents per pound for the first pound and two cents per pound over one pound and for fractions of pounds, to 11 pounds limit as an experimental proposition. This experiment will last for two years on all of the routes in the United States. If it shall prove to be unwise it can be repealed or expire by limitation.

SHIPPERS AND CARRIERS INTERESTED

In the Movement Now Being Made by Business Organizations to Have Congress Amend the Interstate Commerce Law, So That Red Tape May Be Eliminated and Shippers and Carriers Be Brought Into Closer Touch.

In order to bring shippers into closer touch with carriers, the executive committee representing commercial organizations of twenty-seven Atlantic seaboard cities, has formulated a proposed amendment to the Interstate Commerce law. The form of the amendment was agreed upon at a meeting held in the rooms of the Merchants' Association, in New York, and presided over by D. O. Ives, of the Boston Chamber of Commerce.

The amendment would change section seventeen of the Interstate Commerce law, which refers to the powers of the Interstate Commerce Commission. It authorizes the commission to establish branch offices in any commercial center and to place them in charge of an authorized agent of commission. In case of controversy between shippers and the railroads, and with the consent of both parties, these agents would act as mediators or arbitrators. The amendment proposes to authorize the arbitrators to take up such questions in dispute as may be referred to them by the Interstate Commerce Commission or by the parties to the dispute. They are to be authorized, under the direction of the commission, to conduct hearings and to make decisions subject to the approval of the commission.

"The idea of the proposed amendment," said Mr. Ives, "is to bring the shippers and the railroads closer together and to avoid controversies, either

with regard to demurrage or other matters, which have a bad effect upon their mutual relations. The amendment would give shippers easy and ready access to the commission through its agents. As matters now stand an aggrieved shipper must either take his case to the Interstate Commerce Commission in Washington or let it drop without action, even though the railroad might be perfectly willing to give redress were the matter brought to its attention. These conditions lead to unnecessary misunderstandings and ill-feeling which the committee believes can be avoided by the passage of the proposed amendment to the law."

PROOF OF NAME VALUE

Found in the Success of the "Duplexetone" Needles Made by W. H. Bagshaw.

The story is going the rounds of the wonderful success and distribution from the start of "Crisco," a new cooking material. This is manufactured by the makers of "Ivory" soap. The latter product is a wonderful seller from one end of the country to the other; everyone knows it and the firm that makes it. Therefore "Crisco" obtained a distribution on the reputation of "Ivory" soap and at a cost of about 1 per cent. what it would cost an unknown concern. This emphatically shows the value of a reputation.

It is the same in talking machine circles. A short time ago W. H. Bagshaw, of Lowell, Mass., created and manufactured a new needle, which was named the "Duplexetone" for the reason that it is possible to secure both a loud and soft tone with it. The announcement caused quite a little excitement in the trade, and with the reputation of Bagshaw back of the product, many of the trade sent in initial orders with entire confidence that the "Duplexetone" needles would prove to be big sellers. Re-orders are just beginning to come in and as C. H. Bagshaw, of that house, says: "The rapid co-operation of the trade in forming an immediate distribution of 'Duplexetone' needles is most gratifying and shows that our work of years to uphold the quality of our needles is appreciated. American needles lead now, as they always did."

CHAIRMAN KONTA'S VIEWS

On the Value of the Talking Machine as a Means of Making Records of American Natives for Posterity—The Work of the Modern Historical Records Association in This Connection Interestingly Set Forth.

Alexander Konta, chairman of the executive committee of the Modern Historical Records Association, whose headquarters are in New York, writes most interestingly on the value of the talking machine as a means of making permanent records of the dialects of the fast disappearing races throughout the world. In this connection he says:

A recent report from Sitka of the ravages of pulmonary diseases among the Indians of Alaska makes timely the question, "What is being done to preserve the records of the American natives for posterity?" The American Indian is approaching, if, indeed, he has not already reached, the last stage of his native existence. Either he is gradually disappearing, or he is adopting the white man's civilization and adapting himself to it. In both cases the records of his own civilization will be lost unless something is done, and done speedily.

Much has been done, much is being done. Of this I am perfectly well aware. Indian languages have been studied—we have even preserved eight-

eenth century vocabularies of vanished tribes like the Algonquins. The culture, arts and industries, the domestic and social organization, the customs, games and pastimes, the work and play of the Amerind have been described time and again. His history has been traced as far back as his civilization has made possible. Explorers, missionaries, settlers, Indian fighters, army officers, and, later, scientists, have gradually accumulated a valuable volume of information. The camera has been brought into play (the series of photographs made by Edward S. Curtis for J. Pierpont Morgan practically stands first here); our museums have their Indian collections; and, last of all, a beginning has been made with the phonographic registering of Indian music.

This mention of the phonograph leads me to my point, which is that we have not as yet begun to take a systematic living record of the Indian in all the phases of his life. Descriptions of it in books, drawings and photographs are all well enough, but moving pictures would be still better. Vocabularies and grammars are indispensable, but phonographic records of vanishing tongues would be better still, even for the information of linguistic specialists. The question of the origin of the American native is as yet one of the mysteries of ethnology. We shall wish to solve it even after that native has been assimilated or has ceased to

exist. And a complete set of living records may in the future prove of the greatest value in solving the problem.

When speaking of the American Indian, we in this country are apt to overlook the Indians of Canada, and, still more, those of Central and South America. It is in the latter field especially that speedy and organized action is necessary. The field there is vast as it is unexploited. We need not hope to penetrate for a long time to come the veil that covers the prehistoric remains of Peru. What matters just now are the records of the living Indians of all the Americas who are still leading their aboriginal lives in more or less unadulterated form.

The field is too vast for private undertaking, too vast for the resources of the Modern Historic Records Association, whose chief aim is the making and preservation of just such records as these. The founding of similar associations in different parts of the world is already being discussed, but its realization will take time, and the organization of co-operation between them all still longer. Meantime, no feature of the life of the present is vanishing faster into the past than the native civilization of the American Indian, from the sub-Arctic to Patagonia.

Cannot the Government at Washington, the leading power on this continent, be petitioned to put

itself in communication with the other governments north and south of it for the purpose of establishing an inter-American system for the taking and preservation and exchange of the living records of the vanishing American Indians? The Modern Historic Records Association would gladly place at the service of the movement such resources as it has already at its command in the beginning of its existence.

VICTROLA AND PLAYER CONCERTS.

Clark Music Co., of Syracuse, Entertained Its Employees in a Very Novel and Enjoyable Program in Which the Above Instruments Were Used—Dance Follows Refreshments.

(Special to The Talking Machine World.)

Syracuse, N. Y., March 11, 1912.

A rather novel and very enjoyable party was given on Friday evening, March 8, by the Clark Music Co., of this city, to its employees. Mr. and Mrs. S. W. Weedon furnished much amusement to the guests by their brogue and comic songs, in which work Mr. Weedon is attracting much attention. Refreshments were served in the famous Mary Elizabeth Candy Kitchen in the Clark Music building, where places were arranged for seventy guests. The kitchen was appropriately decorated and on the large center table a beautiful green Irish harp was placed. An especial treat was that of wandering through the mammoth kitchen and eating whatever candy one wanted, as the Clark Music Co. had especially arranged for this privilege. Later the floor was cleared and a number of the young people danced, the Apollo player-piano and the Victrola furnishing the music. Melville A. Clark acted as master of ceremonies throughout the evening.

COLUMBIA NOTES.

George W. Lyle, general manager of the Columbia Phonograph Co., General, New York, is making an extended trip through the West and South. Mr. Lyle is now on the Pacific Coast. He will stop at the company's stores in the South, touching at Atlanta, Birmingham, Dallas, etc., returning to New York via Denver and Salt Lake City.

Edward N. Burns, of the export department, left recently for Europe on copyright business for the company.

Charles A. Ragan, for many years manager of the Columbia store at New Orleans, died Sunday, March 3. Mr. Ragan was a thoroughly estimable and capable young man and had been unusually successful in the management of the New Orleans headquarters. Funeral services and interment were at Washington, D. C.

SOME POPULAR SELECTIONS.

"Lizabeth Ann," a tenor duet by Campbell and Bonn, with orchestra accompaniment, and "I'm Going Back to Dixie," baritone and tenor duet by Collins and Harlan, with orchestra accompaniment,

is one of the double-disc records of the Columbia Phonograph Co., General, New York, which is enjoying unusual popularity these days. The recording of these selections is unusually fine and the trade is finding it one of the most attractive combinations issued in a long time.

THE WADE FIBRE NEEDLE CUTTER.

The Manufacturers Are Experiencing a Really Remarkable Demand for This Product, Which Is Selling Like Hot Cakes Throughout the Country—Sold at a Popular Price.

(Special to The Talking Machine World.)

Chicago, Ill., March 11, 1912.

Wade & Wade, 1237 East 46th street, Chicago, are experiencing a really remarkable demand for the Wade fibre needle cutter, which they manufacture. This unique and efficient device, as may be seen by the cut presented elsewhere in this issue, looks like a pair of pliers and operates in the same way. It is not only convenient to handle, but cuts a neat, clean point, which plays the record effectively. Mr. Wade, the inventor of this cutter, is not only a practical mechanic, but is a thorough, all-around talking machine man and is now actively engaged in that line of business. He became very much interested in the fibre needle upon its introduction and has produced several pointing devices. The present Wade cutter, however, is the final development of a long period of experimentation, and, as it has been on the market for over a year, there has been time enough to fully demonstrate its practicability and fool-proofedness. It is priced at a figure which is making it a rapid seller and yielding the dealer a goodly margin of profit.

THE DISTRACTED FATHER.—Go on, howl into that! And then, later on, you'll know what you owe your parents.—Sketch.

CHASE-HACKLEY HANDLING VICTORS.

The Prominent Piano Manufacturers and Retailers Take on This Line in Their Establishment at Muskegon, Mich.

(Special to The Talking Machine World.)

Muskegon, Mich., March 11, 1912.

The Chase-Hackley Piano Co., one of the largest and best known of Western piano manufacturers, has a fine retail store on Western avenue, the principal business street of this city, in which city its factory is also located. It has recently added a complete Victor line, devoting a large portion of the ground floor of the building to this department and installing several modern demonstrating booths.

NEW EDISON BATTERY FOR SUBMARINES.

Thomas A. Edison claims to have invented a storage battery for use in submarine boats which will enable crews to live beneath the water 1,000 days. The largest percentage of deaths in submarines is attributed to the crew breathing exhaled carbonic acid gas, so Edison uses a potash solution in the new submarine battery which, it is stated, will absorb carbonic acid gas, thereby purifying the atmosphere. It will be necessary, of course, for submarines to supply themselves with fresh oxygen, but this may be accomplished, it is claimed, by carrying compressed oxygen in tubes.

The American Admiralty will investigate the new invention, which, if successful, will greatly improve the conditions of submarine service.

NEW COLUMBIA AGENTS

In New England and the West Announced by H. A. Yerkes—Finds Business Active on Recent Trade Visit.

H. A. Yerkes, manager of the wholesale department, Columbia Phonograph Co., General, New York, returned the latter part of the week from a ten days' trip among Columbia dealers and branch stores in New England. Mr. Yerkes states that business in New England is hitting a fast clip and that one and all the dealers of the Eastern section are optimistic over the outlook for 1912. Conditions in Boston are particularly gratifying. The Boston branch, under the management of A. C. Erisman, is breaking all precedents in the way of output and general sales records. The Boston agency recently closed a nice account with William B. Lincoln, of Springfield, Mass., a piano dealer of that city, who will handle the Columbia line entirely. Another piano house to join the staff of Columbia dealers is the Butler Sons Piano Co., Kansas City.

The Cressey & Allen Co., the successful and progressive piano dealers of Portland, Me., recently held a formal opening at their new warerooms in that city. Special decorations were arranged, an orchestra gave concerts in the afternoon and evening, and a large crowd was attracted to the establishment. The company now have one of the finest piano stores in the State of Maine.

IMPORTANT DECISION ON PATENTS.

Right to Restrict Sales of Patented Articles and the Kind of Unpatented Supplies That May Be Used with Them Upheld by Supreme Court—Judges Vote Four to Three with the Chief Justice Dissenting—Should Force Growth of Monopolies in Defiance of the Sherman Law, Say Government Lawyers.

(Special to The Talking Machine World.)

Washington, D. C., March 11, 1912.

The Supreme Court of the United States handed down a decision to-day involving the right of a patentee. It gives the broadest kind of construction to the rights covered by a patent and has raised grave concern in the minds of the Government officials as to whether the case against the United Shoe Machinery, the Bath Tub Trust and other alleged combinations in restraint of trade, where the monopoly is protected by patent rights, can be successfully prosecuted.

Talking machine men will be interested in the details. The majority opinion by Judge Lurton recognizes the right of a patentee not only to control the "making, using and vending" of the patented article, but holds that the right to prescribe by licensed sale that only certain specified accessories may be used in operating the patented articles is a right protected under the patent.

The Government had strong hopes of compelling the dissolution of the United Shoe Machinery Co. and other alleged combinations in restraint of trade that depend on patent rights for their monopolies.

It is learned that the Government considers the decision of the Supreme Court so far-reaching in its results on the enforcement of the Sherman anti-trust law that the Department of Justice will not abide the "plurality" opinion of the court, but it is expected that a motion will be submitted within a short time for a rehearing of the case before the full bench. That this motion will probably be granted goes without saying.

No decision since the Standard Oil and Tobacco cases has aroused the interest created by the patent case decided to-day. Immediately after court adjourned Solicitor-General Lehman procured copies of the briefs. The case was a private one and the Government was not a party, but the effect of the issue on the pending anti-trust suit in which the monopoly alleged seeks to justify itself under the rights given by patents was promptly recognized.

The Government cannot be recognized to move the rehearing unless it appears as intervener for that purpose, but its influence can be brought to bear through one of the parties to the suit.

The case at issue was that of Sidney Henry and others against A. B. Dick & Co., arising in the Second Circuit Court of Appeals, the Dick Co. is patentee of a stencil duplicating machine for rotary mimeographing. The right to sell the machine was transferred to Sidney Henry with a condition in

the form of license stamped on each machine that its sale should be made only in connection with an obligation upon the purchaser to use certain inks and materials prescribed by the patentees, there being no patents covering these accessories.

Henry sold the machine and for its use furnished an ink not specified in the license. The Dick Co. sued to recover for infringement of the right to use. They claimed damages arising under rights covered by the patent. The defendants denied the jurisdiction, claiming that if any action accrued it arose under contract and not the patent right.

The Court of Appeals certified the question to the Supreme Court to determine as to whether the course of action was one arising under a patent and therefore cognizable at the Federal courts. The opinion of Justice Lurton, concurred in by Justices Holmes, McKenna and Van Devanter, was that the right was one protected by the patent.

The rights guaranteed by a patent, he declared, amounted to a constitutional and statutory monopoly, and that under the "right to use" the patentee could even prescribe, as in this case, not only the use to which the particular patented article may be put, but likewise the kind of unpatented supplies that may be used with it.

Chief Justice White was very earnest in his denunciation of this doctrine. He dwelt upon the "ethics of dissent" and expressed regret that a dissent was necessary.

BUSINESS AHEAD OF LAST YEAR.

General Improvement Both in Volume of Orders and Collections, Says J. Newcomb Blackman—Uncertain Political Situation May Have Effect Upon Business Before Election—Tendency Towards Purchase of Better Grade Instruments.

An informal chat with J. Newcomb Blackman, president of the Blackman Talking Machine Co., 97 Chambers street, New York, brought out several interesting points relative to business conditions for the first part of 1912. Mr. Blackman is optimistic as to the future, at the same time he is conservative in expressing his opinions. The Victor line is handled by the Blackman Talking Machine Co., both wholesale and retail, also the Edison product.

Mr. Blackman said in brief: "The first two months of this year are slightly ahead of the corresponding period of 1911. Sales of Victor records have been particularly heavy. We are handicapped largely by our inability to get the necessary goods to fill our orders. There is plenty of new business waiting which would increase our present volume materially, but we cannot benefit by this for the simple reason that the goods are not forthcoming. We know that the factories are doing their best, but that does not alter the case. All jobbers have been behind on Victor machine orders for some time. Our Edison business during the past month has gained. The Edison opera phonograph, the new machine only recently put on the market, met with immediate favor among the trade."

In answering an inquiry as to collections Mr. Blackman said: "Collections are reasonably good, or, I might say, about average. The extreme long terms on instalments effects collections from the jobbers' standpoint. Of course, if the dealer has to wait a long time for the payment of machines put out on credit it naturally follows that the jobber must wait also. This is a feature of the talking machine business which is under careful consideration and arrangements are under way to regulate."

"Regarding the months to come," said Mr. Blackman, "they look all right. I do believe that politics is going to have some effect on business generally. The political situation is so uncertain this year that it is more than liable to have a quieting effect on the whole country until after election. In the talking machine business there is such an unusual demand, however, and the business is on such a prosperous footing everywhere that it will offset to a large extent any tendency to slump."

"The present great demand for talking machines

and records has been caused largely by the deep desire created in the minds of the general public to own instruments of the better grade. This has been brought about by the final acknowledgment on the part of the public that the talking machine goods are strictly high class. The business has gone beyond the period where the public criticizes the talking machine. Their worth in the interpretation of music is recognized. The present volume of business in talking machines and records is perhaps the best illustration of the high plane to which the industry has mounted.

"It is not a question now of anybody wanting a talking machine—they all want one—the question is how to get it."

Mr. Blackman is chairman of a committee which has been appointed to formulate plans for the regulation of the instalment business. The committee is taking the matter up with the several factories manufacturing talking machines and is attempting to get some universal action on the part of all the companies without handicapping any one company in competition. Nothing definite has been arranged as yet.

VOCOPHONE CO. ORGANIZED.

The Vocophone Talking Machine Co., of Westport, Conn., was recently incorporated with a capital stock of \$250,000 for the purpose of manufacturing talking machines based upon patents controlled by J. M. Evans, who is the president of the company.

It is the intention of this corporation to produce something very novel in the way of designs. Metal instead of wood will be used and a distinguished artist is now engaged in perfecting the designs for new instruments. Carl Philgus is the secretary and treasurer of the Vocophone Co.

TOO WELL ESTABLISHED.

The trouble with many stores in small towns is that they are too well established. They are so well established that the proprietors do not consider it necessary to help themselves. They allow things to get into a rut. Nowadays the store which wins must keep busy. The boss of the job must have ginger. He must be doing things—he must grasp the new ideas which he sees mentioned.

A piece of merchandise without a price ticket is a dead, meaningless thing, but with one, it becomes an answer to an unasked question.

Salesman Wanted.

Competent, reliable salesman for west side New York trade. Give references and salary required. Steady position to right man. Address "ABILITY," care The Talking Machine World, 373 Fourth Ave., New York.

Will Sell.

WANTED—TO SELL a complete stock of Edison Machines, Records and Cabinets at a great sacrifice. Closing out line. Address "RECORDS," care The Talking Machine World, 373 Fourth Ave., New York.

Repairman Wanted.

WANTED.—First-class repairman, familiar with Columbia and Victor Machines. Must be capable of taking charge of repair department. Send lowest salary and references. Address "BOX 999," care Talking Machine World, 373 Fourth Ave., New York.

Can Place Good Men.

We know of several good openings as managers of Victor retail departments paying from \$15 to \$25 per week. Write, giving experience and references, to THE TALKING MACHINE CO., 137 North Wabash Ave., Chicago.

FOR SALE.—2,000 Edison 2-minute Records; new, clean stock; 1,000 Disc Records new stock. DENINGER, 335 North street, Rochester, N. Y.

\$15.00 DESK WALL RACKS, \$4.00; holds 2,000 10-in. 13.00 Cylinder Wall Racks, \$3.00; holds 500 records; \$35 Cylinder Cabinets, \$15. \$15 per 1,000 records, 10 cts., or buy yours. "KNIGHTS," 211 North 12th St., St. Louis, Mo.

Echo Record Albums

FITS DISC RECORDS

EVERY MAKE AND SIZE

Patent applied for
L. J. Gerson.

If you send your name and address, a sample 1911 Album Booklet, illustrating the latest style Echo Albums for both single and double-faced records, with discount sheet, will be mailed you. Echo Albums are indexed 1 to 16 with index in front and fit all record cabinets after slats are removed. Also, can be substituted for the old-style filing cases in Victrolas. If your jobber does not carry Echo Albums remit \$1.00 to us for a sample 10-inch Echo Album, mailed postpaid. Regular discounts to dealers.

ECHO ALBUM CO., 926 Cherry St., Philadelphia, Pa.

If you have a customer

*Fill his order **AT ONCE** with the*

We have been making every effort to bring the production of the Columbia Grafonola "Nonpareil" up to this announcement of prompt delivery.

From now on there is no reason why any talking-machine dealer should spend any of his time hemming and hawing to impatient customers who have a hundred-and-a-half ready to spend for a musical instrument, and more to come for records as soon as delivery is made.

The Columbia Grafonola "Nonpareil" is worth any man's \$150, and if anything were needed to add attractiveness to it, the immediate delivery certainty would supply it.

If you are a Columbia dealer, all right. But if not, are you quite sure you know the "taking" points of the Grafonola "Nonpareil"?

The February Landslide of \$50 Business

The Columbia Grafonola "Favorite"—\$50

has run well over into March. The extraordinary turn-over of Grafonola "Favorites" has stacked up a liberal profit for Columbia dealers everywhere. The record business that went with it was no small feature of the sales results, either.

This Columbia Grafonola "Favorite" has been a great business-maker ever since we first announced it as "the first instrument of the enclosed type ever offered at \$50."

If you are a Columbia dealer there is no more to be said. But if you do not carry a Columbia line, it must be clear to you that the "Favorite" instrument, and the "Favorite" demand, give you at least two good reasons why you should.

The Columbia
"Nonpareil"—

Columbia Phonograph Company,

with \$150 to spend

Columbia Grafonola "Nonpareil"

No one could criticize its tone, form or finish. It's a musical instrument—and looks it, every line of it, open or shut.

Down-swinging record compartments—a constant temptation to fill them up with records. Easily lifted lid, and turn-table well above the top of the cabinet, easy of access. Many clever little artistic touches like the velvet covered turn-table, give it an appeal that the average hundred and fifty dollars cannot resist.

You need this instrument, and it will pay you well.

Don't disappoint your customers; if you don't yet carry the Columbia line, exclusively or along with competitive lines, *why not?* The money is in it, the quality is clear, the demand is unmistakable and unmistakably increasing, and we offer you a square deal all the way from "dear sir" to "yours truly".

Columbia "Regents" Have No Competition

Take this "Regent Junior," for example. \$150. When your customer has become interested in the table type of instrument, it's no easy task to drag him over to some other type. Yet often enough the novelty and utility of the "Regent" are sufficient to induce a customer to go fifty dollars further than he at first intended.

No dealer in musical instruments can justify himself in using up energy to sell something else to a customer who has his mind's eye fixed on the table type of instrument. On the contrary, it is an inexcusable mistake for a dealer to fail to use the only musical instrument of its kind to attract customers whom now he never sees.

The Columbia Grafonola "Regent Junior"—\$150

en'l., Tribune Building, New York

CHICAGO DEALERS ELECT OFFICERS

At Meeting Held on March 12—Another Meeting for Appointment of Executive Committee to Be Held April 8.

(Special to The Talking Machine World.)

Chicago, Ill., March 12, 1912.

The delayed annual meeting of the Chicago Talking Machine Dealers' Association was held last night, when the following officers were elected to serve until November: E. T. Vandemark, president; E. J. Melick, vice-president; J. S. Reynolds, secretary; Herman Reichardt, treasurer. The executive committee will be selected at the next meeting on Monday, April 8, at 7 o'clock, to be held at the establishment of M. Reichardt & Sons, 733 Milwaukee avenue, corner Carpenter street. Some very important matters will be discussed on this occasion.

TWIN CITY NEWS.

The Leading Talking Machine Houses Make Most Encouraging Reports Regarding General Trade Conditions—Concerts Attract Large Audiences at the Talking Machine Co.'s Warerooms—Trade Steadily Growing.

(Special to The Talking Machine World.)

Minneapolis, Minn., March 11, 1912.

Arthur Magoon, who has been manager of the talking machine department of the New England Furniture Co., resigned his position on the 15th of February in Minneapolis.

Geo. Mairs, manager of the phonograph department of W. J. Dyer & Bro., of St. Paul, has had a splendid year and reports that business has been bigger than ever. Hard work agrees with George; it makes him get fat and he looks healthy. His genial smile is a trade winner.

Charles Reindfleisch, of Koehler & Hinrichs, has had a splendid year and sales have been coming in thick and fast. Many new accounts have been added to their already large list.

The Talking Machine Co., Archie Matheis proprietor, had a good trade in both of its popular stores in Minneapolis. The new store has been a splendid success and has been on a paying basis ever since the first day it was opened. Concerts are held every Thursday night and are being played to capacity houses. Dozens of Victor and Edison's machines have been sold and trade is growing each month.

DEPARTMENT HEADS DINE.

The department heads of the Columbia Phonograph Co. factories at Bridgeport, Conn., to the number of sixty, held their third annual banquet at Bridgeport recently. After the excellent dinner the guests passed a resolution of condolence with B. C. Root, who was ill at the Bridgeport Hospital and unable to attend. A fund was taken up to furnish him with flowers and a committee appointed to visit him as often as possible. A silent toast in memory of Thomas H. Macdonald was drunk by the entire party standing. Purchasing

THE BOY, THE GRAMOPHONE DISC, AND THE SHORT-SIGHTED OLD GENTLEMAN.—Pele-Mele.

Agent A. C. Wright and Shipping Clerk R. L. French were among the speechmakers. Toastmaster Parker read various telegrams purporting to be from members present as well as absent.

PUBLICITY DOES PAY.

When It Is Conceived Along the Right Lines—Landay Bros.' Success Proves It.

The campaign of publicity which is being carried on by Landay Bros., the prominent Victor distributors, in the New York daily papers has been the subject of much favorable comment both in and outside the trade. The persistency of this work, the character of its contents, the dignified presentation of the claims of the Victor talking machine for consideration of those artistically inclined in a musical way, are worthy of high praise, and Landay Bros. are to be congratulated on the effective campaign in which they are engaged. It goes without saying that as a result of this advertising their new establishment at 563 Fifth avenue is doing an enormous business, for advertising pays, particularly when it is conceived along right lines and carried on with unfailing regularity.

ANNOUNCEMENT REGARDING ALBUMS.

One of the biggest factors of the allied lines of photographic goods are albums for keeping photographs; this is an industry by itself. Albums for talking machine records are built upon similar lines and a man who stands way at the head in the manufacture of these specialties is T. C. Schaffis. He has created the Schafford Album Co., 182 Grand street, New York, in addition to his other business, and is making a line of record albums that he claims is of "de luxe" style, with prices that are the lowest.

"That dealers have not been making enough money with albums I am sure," continued Mr. Schaffis, "and in the new line that I am offering is a revelation for prices. Over three thousand of these were sold in one week to New York City dealers."

Folder "T," describing this line, will be sent to anyone on request to the Schafford Album Co., 182 Grand street, New York.

TALKER CAUSES WORRY TO NAVIGATOR.

A naval correspondent, says Truth, relates the following: A few days since a battleship was cautiously feeling her way through a fog in Torbay. Suddenly the navigator on the bridge heard church bells startlingly near. As he believed the land to be four or five miles away he panicked on the engine telegraph and ordered the leadsmen to sound. The result showed plenty of water. Again the perplexing church bells chimed, clear and near. The face of the helmsman relaxed. Asked sharply what he meant by grinning in a moment of danger, the man explained that it was one of the crew trying his new phonograph records in the mess flat forward!

Do something and do it early that will make the children talk about your store at home and on the street. It does not matter in what way you secure this desirable publicity, but get it—moving displays in the show windows or store, special goods you are offering, gifts, or whatever it may be, so long as the results are secured.

FIRE ALARMS BY TELEPHONE.

The Wonderful Advance Made in Utilizing the Telephone as a Means of Conveying Information Regarding Fires—The Subject Interestingly Discussed by a Writer in Telephony.

Telephones are now quite generally used for sending fire alarms, but in many cases, through excitement, wrong locations are given, or the person giving the alarm is misunderstood and the engines go to the wrong place. If the telephone is to be used for this purpose the advantages of a system to send alarms automatically and correctly are obvious. A recent telephone-alarm system which fills this need is connected directly with the telephone and can be installed in any desired location in a residence or building. In case of fire, all that is necessary is to take the small hammer that hangs by each of the alarm boxes, break the glass front of the box and push the button. Says a writer in Telephony:

"In this system the fire alarm box is connected to any operating telephone line, and so arranged that, upon breaking the glass and pushing a button, the telephone normally connected to this line is temporarily cut off and the connection to fire headquarters is automatically and instantaneously established through the switchboard. The fire alarm box immediately proceeds to register its own number upon a tape at the fire headquarters, repeating the registering five times, the usual tape-punching apparatus being employed for this purpose. As soon as the transmission of the alarm has been completed, the fire alarm box restores the telephone line to its normal condition so that the telephone may be used immediately. Before beginning the transmission of the alarm, the fire alarm box automatically releases any connection which may be established on the line.

"Three styles of fire boxes are furnished. For residences, stores and places requiring only one station, a handsome mahogany box is placed in any desired location and operated as indicated above by breaking the glass and pushing the button.

"For factories, hotels, schools and large buildings a transmitting device enclosed in an iron case is placed in any convenient location in the building and may be operated by push button as in the residence type, or connected with a thermostat system, whereby the fire alarm signal would be automatically sent in upon the operation of a thermostat in any part of the building. Where the thermostat equipment is used bells are installed upon each floor of the building which give a local alarm at the same time the fire alarm is being transmitted to headquarters.

"For small cities having no fire alarm system, an iron street box is provided which may be placed at a telephone pole or in any desired public place and connected with any operating telephone circuit.

"The fact that this fire alarm system operates on lines which are subjected to a test many times a day renders this method of giving fire alarm service particularly reliable. In the automatic system of telephony the fire department is usually given a low number which is called practically instantaneously by the transmitting device of the fire alarm box, and the time required to transmit the signal is the same at all hours of the day or night."

Don't forget you went into business to save money, not time.

NEW YORK TRADE IS ENTHUSIASTIC

Over the General Trend of Business in the Talking Machine Domain—High Grade and High Priced Goods Have the Call—National Advertising Campaign by Leading Manufacturers Much Appreciated Owing to Its Educational Value—Proving a Tremendous Factor in Concentrating Interest in the Talking Machine and Its Artistic Position—Some Interviews with Leading Jobbers and Dealers Throughout the City Give a Key to the Situation.

The opinions set forth below are quoted from conversations with several of the representative talking machine dealers of New York. Judging from all of these several interviews we find that the talking machine industry, both in the wholesale and retail departments in this city, is on a highly improved plane, that it is gaining in volume daily and that the feeling generally is that 1912 will record a mark hitherto unprecedented in the history of the business. The one great drawback, and the one that is limiting sales to a certain extent, is the fact that dealers and distributors are unable to get goods from the factories in sufficient quantities to supply the demand. Another gratifying feature of the trade to-day lies in the great call for high grade goods. This feature prevails almost invariably. High grade machines, high grade records; in fact, the best procurable, is the selection of the public at present.

The New York dealers are a very enthusiastic lot. They realize, and have for many moons, what the ultimate future of the talking machine would be. Now that their dreams are self evident facts it naturally follows that they are highly elated. The public has come to believe that the talking machine is not simply a mechanical device devised for the amusement of children, but rather that it is a musical instrument in every sense of the word. That the finest artists of the world are paid enormous sums for the privilege of recording their voices or interpretations on musical instruments, that the finest bands, the finest orchestras, the finest quartets, comedians, monologists, etc., make special effort to produce records of the highest quality is almost universally known, and the reward is the appreciation of the people, as evidenced by the rapid growth of the industry.

Distributors and jobbers are getting together for the common good of the trade and are endeavoring to regulate credit terms and other questions which will be of benefit to all. The dealers hold frequent meetings and conventions and discuss ways and means for the future development. The get-together idea is becoming more and more pronounced and this in itself is particularly encouraging. The instalment question is one of the big issues of the day. It is many-sided, and, briefly speaking, it is a hard one to crack. A committee has been appointed to go into the matter fully, J. Newcomb Blackman, president of the Blackman Talking Machine Co., New York, Victor dealers and jobbers, has been appointed chairman. The committee will take the matter up with the several concerns manufacturing talking machines, and it is probable that the future will see several new methods in operation. Just at present there are no developments ready for publication.

Still another asset to the trade all over the country is the wholesale advertising campaigns which are being carried on by the manufacturers. The tone of the advertising is decidedly educational. National and trade magazines are the mediums used to a large extent. The unusual growth of the busi-

ness during the past two years is largely due to the excellent advertising policy followed by the makers. It goes without saying that the dealers the country over are as much benefited by the publicity as are the manufacturers themselves. The main point is to create the demand. This is thoroughly accomplished by the national advertising of the manufacturers, supplemented with the local newspaper advertising of the dealers. The extracts following are taken briefly from the interviews of The Talking Machine World with local trade.

J. Newcomb Blackman, Blackman Talking Machine Co., 97 Chambers street: "We are running slightly ahead of last year. The record business has been very heavy, particularly with the Victor line. It is not possible to get the full benefit of the business to be had owing to our inability to get the necessary goods. A large improvement in Edison business is notable. The new Edison opera phonograph has met with immediate success among the trade."

Columbia Phonograph Co., General, retail store at 89 Chambers street, R. F. Bolton, manager: "We are beating records for the opening months of the new year. The Grafonola Favorite, so extensively advertised in recent issues of the Saturday Evening Post, has registered substantial gains in its already enviable sales record. Record sales are maintaining the same steady average that has characterized their sales for some months past. The demand is general, classic, light classic and popular sharing about equal in popular favor."

General Manager G. T. Williams, New York Talking Machine Co., 81 Chambers street, Victor jobbers and distributors: "I am optimistic regarding the business outlook. January and February were both excellent months with us and substantially ahead of a year ago. Record business is enormous and steadily climbing. Sales of machines are just as good in proportion. The Victor Victrola is proving itself one of the talking machine sensations of the day. I anticipate the brightest kind of business for the entire year."

The Columbia Phonograph Co., General, Tribune building, H. A. Yerkes, manager wholesale department: "Business with us is hitting a fast clip. We are adding many new dealers to our already large list and many of them are among the representative piano dealers of the country. All sections of the country are producing excellent results. I have recently returned from a ten days' trip in New England, where I found conditions in A1 shape. The New England trade is more than optimistic. Our general business is away ahead of 1911 so far and 1911 was our biggest year. You can judge from that what we anticipate at the close of 1912."

Wm. Knabe & Co., 439 Fifth avenue, Columbia dealers, M. J. Boucher, manager talking machine department: "Business is fine with us. People are beginning to realize that a talking machine is some-

thing worth while. The Regent table line is a wonderful seller. Our sales of the Regent 'Baby' are beyond anything the past has ever produced. The demand for records of high grade is very pleasing. Very late popular song hits are also enjoying a good call. The future of the talking machine industry, at least from a retail standpoint, looks good to me."

The Aeolian Co., 362 Fifth avenue, Victor dealers, Charles Bobzin: "We are certainly ahead of the first two months of last year. The main difficulty, and one which I guess we all have to contend with, is in getting goods fast enough to supply the demand. If we could get shipments promptly enough business would be even better than it is. High priced goods are leading in favor, both in records and machines. We sell more of the \$250 Victrola style than any other by a large majority. Personally, I wish the Victor Co. would build a factory five miles long. To me it looks like a big year ahead and more than big if we succeed in getting the goods to supply the demand."

U-S Phonograph Co., 7 Union Square, E. E. Prairie, manager: "General business is good with us. We are now showing our new model \$25 machine and it is making a hit with the trade. Record business has been big for the past year, but just at present it is even better. I am looking forward with all confidence to a big year, and the general tone of things seems to indicate that we will have it."

S. B. Davega Co., 126 University place, S. B. Davega: "Nineteen eleven was the biggest year in our history. At the rate this year has started it looks as though 1912 would at least equal it. Shortage of goods is the only drawback. The demand is far the heaviest for high-grade goods, machines selling from \$50 up constituting the bulk of our trade. The number of 100 and 900 cabinets are still going rapidly. Our new 'Simplex Record Box' promises much in the way of a business getter. It conveniently holds 16 disc records, is very handy and moderate priced."

Landay's is maintaining its reputation as the 'home of nobility' by the presence of several distinguished persons last week at its Fifth avenue, New York, warerooms. The Duke of Manchester and the Baroness DeMeyer were included in these visitors. Another notable, much in the public light of the past few years, is Morgan Shuster, of Persia fame. Mr. Shuster was seen buying Victor goods at the Landay establishment a few days ago. Max Landay reports a very brisk business in Victor machines and records, both wholesale and retail, which is a usual Landay report. Busy and Landay are synonyms.

The Talking Machine Supply Co., owned by the House of Landay, attests a tremendous sale of imported talking machine needles. This month it is using space in The World making an apology for the non-fulfilment of orders last year and saying that with the additional machinery installed at the German factories there will be no future delay. This will be good news to the trade, many of whom enjoy a large volume of needle business.

Put a dash of the unusual in your retail advertising copy and you acquire a wedge by which argument and conviction can be let in with splendid effect.

To Business Men

Business men
in every line admit
the value of good
trade papers.

A trade paper must be
original—it must contain a
variety of matter including news
service—technical information—in
fact it must crystallize the entire news
of the special business world, and be a
helpful adjunct to every department of trade.

Scan the columns of the Talking Machine
World closely and after you have completed an
analysis of the contents of this publication see if you
can duplicate its value in any other trade!

The World is a help to the talking machine
business.

It exerts an healthful optimism.

It wields an influence for the good and every man
who sells talking machines, no matter in what part
of the universe he may be located, should receive
this publication as regularly as it is issued. He is
missing a vital business point if he fails to do this.

Thousands of dealers not only in the United
States but in every country on earth consult the
pages of the World regularly.

They draw from the World pleasure and profit.

The talking machine business has a brilliant
future, and this publication is doing much to enlarge
the business horizon of every retail talking machine
man in the world.

To receive this paper annually costs but \$1.00.
All foreign countries \$1.25.

Strike of the Coal Miners Has Demoralized Business Generally—Talking Machine Industry, Both Wholesale and Retail, Seriously Affected—Trade Showing for January Not Unsatisfactory—General Situation Interestingly Reviewed—Record Manufacturers and the New Copyright Law—Important Meeting Held—Amberol Exchange Scheme—A Budget of Columbia News—New Edison Machine Helps to Concentrate Interest in That Line—Talking Machine Conditions in Russia the Subject of Some Illuminating Comments by a Continental Trader—The Outlook in England as Discussed by the World Correspondent Will Interest American Readers.

(Special to The Talking Machine World.)

London, E. C., March 2, 1912.

Talking machine conditions on this side do not warrant any special attitude in the direction of pessimism, but one is not inclined to view matters in a too favorable light. Allowing for circumstances which change from day to day, the outlook, however, at the moment of writing is distinctly serious, for the sole reason, let me say, that we are no nearer a solution of the difficulties which beset that most important of industries—the getting of coal—upon which practically all others are dependent. My American readers will be fully cognizant of the position in which we are unfortunately placed, and doubtless the gravity of the case is fully apparent to business men. Details are therefore unnecessary in a publication of this character, but it is perhaps expedient to emphasize the enormously disastrous effect upon an industry such as ours which must follow a cessation of work in the coal mines. Although trade is still pursuing a fairly even course at the moment and everyone is bringing to bear a praiseworthy spirit of optimism, one cannot disguise the insidious signs which portend the cancellation and delivery—suspension—of orders. So far this state of things is only conspicuous by its absence, but the holding up of talking machine trade in some directions, though of little proportion, is, however, clearly indicative of the growing feeling of insecurity in the minds of dealers and factors alike. Manufacturers are necessarily somewhat concerned as to the ultimate outcome of the negotiations for a settlement, and business plans for the time being are tacitly understood and accepted as being dependent upon future events. In other directions there are strong signs of industrial unrest, and while the men's leaders are paid to agitate, one is inclined to view lock-outs and strikes as an institutional legacy. That rather savors of politics, so ring down the curtain.

Latest Trade Returns.

January trade returns up to the last week in the month were not unsatisfactory. Manufacturers and wholesalers found things fairly busy, but the dealers experienced a slight falling off in sales. With the advance of the cycling season this is not unexpected, but the extra distributing recruits secured each year among musical instrument traders is synonymous with a prolongation of the season and less dependence upon the cycle agent class of dealer. The once much-maligned talking machine is coming into its own, and to-day there are very few really up to date musical instrument shops where it is not on sale. In this, its proper sphere, must lay steady progress commercially, and I do not despair of the day when music will be an applied descriptive term universally associated with the so-called "talking machine."

The Subsidizing of Records.

A peculiar, not to say interesting, feature of the trade situation here is the subsidizing of records issued under separately distinctive labels by certain manufacturers of well known standard products. It is the outcome of price-cutting. As an

example, let us say a double record emanating from the Continent is placed on sale here at the list price of 2s. 6d., is sold to factors at a price within two pence or three halfpence of one shilling by way of discounts and secret bonuses, and it is sold by the factor to the dealer in some instances at as low as one or two pence profit, thus enabling the latter to retail it at 1s. 3d., 1s. 4d., or at a figure varying slightly within a few pence, according to the conditions or status of different districts. Even some of the leading makes are somehow retailed at the latter prices, although I do not suggest in this case that the aforementioned wholesale rate rules. What is the result? Just this: Complaints galore from responsible dealers that it is impossible to maintain the full price in view of the close proximity of the cutter and that unless "something" is done to stop it they will either be compelled to relinquish sale of records or do likewise. A few manufacturers thereupon make half-hearted attempts to locate the source of supply with a view to putting a spoke in the wheel of the price cutter, and usually fail—fail because of the lack of co-operation among themselves and consideration of competitive interests which stays their hands, although in nine cases out of ten they know full well the names of the defaulters who supply the price-cutting dealers. Some of the big manufacturers, by a peculiar process of reasoning which I will not attempt to fathom, now strike out in a direction that is distinctly interesting, to say the least. In order to meet this growing and increasingly powerful competitive state of things they argue that they will not openly reduce the price of their standard product. No! But unto the parent shall be born a child. In an atmosphere of illegitimacy this offspring makes its appearance in charge of a foster mother represented in the person of a factor who, in consideration of promising to sacredly maintain the price of the parent record, is allowed to issue the progeny as his own and cast it duly labeled to the trade wolves to do with as they like.

That is the new situation in a nutshell. Further comment is, I think, superfluous.

Copyright News.

My last allusion to this subject breathed rather of suggestion that record manufacturers were exhibiting a policy of indifference as to the effects of the act upon this industry. Whether or not it acted as a stimulant I would not venture to express an opinion, but the fact remains that a private meeting of manufacturers was recently called at the instance of the Columbia Co. officials. The Gramophone Co. I am assured was not represented at this meeting, and to which, by the way, the press was denied admittance. As far as one can gather, the conference had for its object the formation of some joint protective measures to regulate conditions governing the collection and payment of royalties. This private association is probably the sequel to the recent activity in the publishers' camp, where they are busily engaged upon the formation of a scheme for an adequate and systematic method of gathering in the spoils of war. A society is in course of being which has the support of all the leading publishers and composers. That they mean to take full advantage of their new prospects under the act is tolerably clear, and while recognizing their lawful right in this respect it is pleasing and satisfactory to observe the counter-checks and moves operated by record manufacturers in the great game now proceeding.

At the meeting of record makers Paul H. Cromelin occupied the chair, and the following traders were present: Messrs. Sterling and Shields, Columbia Co.; J. E. Hough, Messrs. Turner and Sheard, Pathé Frères; A. Balcombe, O. Ruhl, Ltd.; W. Samuel, Barnett, Samuel & Sons, Ltd.; B. Andres, Hornophone Co.; F. Chapman, Sound Recording Co.; P. Blum, Blum & Co., and O. Fellheimer, Polyphone Record Co.

National Co. Contributes to Dickens Fund.

The National Phonograph Co., Ltd., Paul H. Cromelin managing director, has very generously contributed twenty-five guineas to the Daily Telegraph fund for Dickens' granddaughters.

Significant!

Barnett, Samuel & Sons, Ltd., this city, announce that the Kubelik Fonotopia records will in future be sold at four shillings less than the prices hitherto charged.

First Amberol Exchange Scheme.

The first Amberol exchange scheme inaugurated by the Edison Co. has just terminated. It was based on a liberal plan, full credit being given for old or broken records and, according to all reports, was accorded a very hearty welcome by the trade, which took full advantage of the generous provisions allowed.

Trust Rumor Denied.

The Cologne Gazette recently gave currency to an amusing report which it had "lifted" from another German newspaper. In effect it was stated that "negotiations had commenced with a view to the establishment of an international general trust of all American, English and German gramophone companies." Inquiries in authoritative quarters failed to elicit a confirmation, and the report has since been denied.

New Zonophone Offerings.

A real galaxy of good things is offered this month by the British Zonophone Co. Its March list is a real "stunner" as regards titles, all the latest and best being listed therein. Some examples to hand are: 10-inch—"Arcade" (F. Godfrey) and "The Gramophone Song," Vesta Victoria; "Heva, Hiva, Ho" (Stater), and "Once Aboard the Lugger," Peter Dawson; "The Song My Mammy Sang" and "When Life's Sun Is Setting" (Tate), Herbert Payne; "Austrian National Anthem" (Leonard), and "Reverie" (Rudeniyi), (violin solo), Jan Rudeniyi; "There Goes a Vagabond" (Long), and "They Want a Little Girlie Over There," Flora Cromer; "Peggy" Selection I and Selection II (Leslie Stuart), Black Diamond's Band.

"His Master's Voice" Records for March.

One can only describe the March list of "His Master's Voice" records as being better than ever. Each month seems to mark a step forward, and although the Gramophone Co. is here regarded by all as the supreme concern, they themselves never relax their efforts after improvement, and this is clearly reflected in recent record issues. As to quality of tone and recording the March impressions are about as near perfection as it is possible to obtain under existing methods, and in the matter of artists it is common knowledge that only the very best are invited to sing or play, as the case may be, for "His Master's Voice" records. The complete list of titles for March is as follows:

12-inch: "Quaker Girl," Selections I and II (Monckton), band of H. M. Coldstream Guards; "Ruy Blas Overture" (Mendelssohn) and "Oberon Overture" (Weber), New Symphony; "Reviens Waltz" ("Come Back to Me") (Fragson-Christine), Gottlieb's Orchestra; "Good-By" (Tosti), Mme. Agnes Nicholls; "Angus MacDonald" (Roeckel), Mme. Edna Thornton; "Wot Cher?" (or "Knocked 'Em in the Old Kent Road") (Ingle), Albert Chevalier; "Deoch-an-Doris" (Lauder), Harry Lauder; "Dreamland" (Garstien), Margaret Cooper; "The Scene Shifter's Lament," Alfred Lester; "Romance from D Minor Concerto" (Wieniawski), Francis Macmillen, (violin); "Lohengrin's Narrative" (Lohengrin) (Wagner), Evan Williams, and "Marna" (Oliver), Peter Dawson.

10-inch: "Salome Intermezzo" (Loraine), band of H. M. Coldstream Guards; "La Mousmé Dance" (Wood), Mayfair Orchestra; "Sink, Red Sun" (Del Riego), Marion Beeby; "In 1950" (Jackson),

(Continued on page 34.)

FROM OUR LONDON HEADQUARTERS—(Continued.)

Nelson Jackson; "Mary Marmalade" (McDonald and Williams), Jean Aylwin; "Melody" (Masse-net), Jacques Renard (cello solo); (a) "To Daisies," (b) "Song of the Blackbird" (Quilter), Gervase Elwes; "The Sweetest Flower That Blows" (Hawley), John Harrison; "The Skipper of St. Ives" (Roeckel), Steward Gardner; "Phil the Fluter's Ball" (Percy French), Chas. Frel; "El-dorado" (Walthew), Whitehead.

Columbia Co. News.

The latest exclusive engagement by the Columbia Co. is that of the celebrated Russian Symphony Orchestra. The Russian Symphony Orchestra has lately been touring in the great cities of the United States, filling the largest halls in New York and elsewhere. It was while the orchestra was creating such a musical stir that the Columbia Co. determined to take advantage of their presence in New York to make a series of records, these being so successful that the conductor of the orchestra, Modest Altschuler, agreed to play exclusively for the company.

The Columbia Co. announces that it has secured exclusive records by the famous Ellery Band, the organization which enjoys the distinction of having out-Sousaed Sousa in the nature of its triumphs.

George Bastow (of "Captain Gingham" fame), Burt Shepard, Jay Laurier, Dusty Rhodes, Whit Cunliffe and Arthur Leslie are some of the popular names that figure on the Columbia-Rena supplement for March.

A sacred record of unusual beauty on the Columbia-Rena 12-inch list for March presents a pair of duettists new to discs. The selection is Faure's inspiring "Crucifix," and the singers are Reed Miller and Frank Croxton. The solemnity and dignified grandeur of this notable composition are almost awesome in their perfection. It was, too, a happy thought to link with this lovely duet the beautiful "Calvary" by Paul Rodnéy.

The Columbia-Rena March list, now ready, is rich in instrumental records, there being no less than four double-sided discs of this type. There is Jean Schwiller employing his famous old 1750 'cello

in the melodies of "Home, Sweet Home" and "Robin Adair," Deiro the wonderful in two spirited overtures, cornet solos of "Dreamland" and "All That I Ask Is Love" by the inimitable Sergeant Leggett, while the newly-acquired Alexander Prince contributes a concertina brace of striking marches.

New Edison Departures Stimulate Sales.

The new departures made by the Edison Co. recently have, I learn, been much appreciated in retail trade quarters. The new Edison opera instrument, the "Music Master" wooden cygnet horn, standardizing of equipment, and so on, would seem to have exerted a powerful stimulus in awakening the sluggish dealer to renewed effort in getting after the business. And now yet another important announcement reaches us from the National Phonograph Co., which is advice that on and after May 1 next the retail price for Edison blanks will be reduced to 10d. each. This is the outcome of the recent name recording campaign indulged in through newspaper advertisements and other channels.

A fine batch of records will be issued for April, the complete list being as hereunder:

New Edison Records for March.

Edison Amberol Concert Records—"Hymn of the Emperor," "Kaiser Quartette," Olive Mead String Quartette; "Beloved, It Is Morn" (F. Aylward), Charles Hackett; "Sing, Smile, Slumber" (Gounod), Mme. Marie Rappold. *Edison Amberol Records*—"Overture Fest" (Leutner), H. M. Irish Guards Band; "My Lass Frae Glasgil Toon" (Godfrey and Williams), Billy Williams; "Star of My Soul" (Sidney Jones), David Brazell; "You Must Come Round on Saturday" (Davis and Murphy), Jack Charman; "Come Again Through Lovers' Lane" (Lipton and Darewski), Miss Florrie Forde; "I Love to See Them Working in the Mills" (F. V. St. Clair), Stanley Kirkby; "My Queen" (Blumenthal), Ernest Pike; "We All Went Marching Home Again" (W. Hargreaves), Bobbie Naish; "Questions!" (Bert Lee), Miss Florrie Forde and Jack Charman; "Selection from La Boheme" (Puccini), National Military Band; "Coronation March"—"Die Folkunger" (E. Kret-

schnor), Edison Concert Band; "Crucifix," Reed Miller and Frank Croxton; "Baby Eyes" (vaudeville), Harry Anthony; "Waldmere March" (F. H. Losey), New York Military Band; "By the Light of the Jungle Moon" (J. C. Atkinson), Walter Van Brunt and mixed chorus; "Hornpipe Melody" (violin solo), Charles D'Almaine; "Mollie Darling" (W. S. Hays), Will Oakland and chorus; "The Harbor of Love Medley," National Promenade Band; "Dancing on the House Top" (bells solo), (E. Christie), Charles Daab; "The Song of Triumph—Easter Anthem" (I. H. Meredith), Edison Mixed Quartette. *Edison Standard Records*—"Windcliffe March" (J. Ord Hume), National Military Band; "Maisie Lou" (Arthur and Lawrence), Jack Charman; "Valse Decembre" (Felix Godin), Alhambra Orchestra; "I Should Like a Girl" (Bateman and Leigh), Bobbie Naish; "Love Is Responsible" (Burley and Scott), Miss Florrie Forde; "Punchinello" (banjo solo), (Cammeyer), Olly Oakley; "I Am Thinking of You, Bonnie Mary" (Edgar and Trevor), Andrew Macdonald; "My Father Was Born in Killarney" (Godfrey and Williams), Billy Williams; "I've Left My Heart in England" (Frank Leo), Stanley Kirkby; "Carambas! Intermezzo" (M. R. Steiner), National Military Band; "Florentiner March" (Fucik), Sousa's Band, and "Rum Tum Tiddle" (J. Schwartz), Billy Murray and chorus.

Trade Conditions in Russia.

Some interesting light upon the present situation in the talking machine trade in Russia was recently offered by J. D. Cummer, a prominent member of the talking machine trade on the Continent, and who was in London partly on business and partly for the purpose of renewing old friendships. Mr. Cummer stated that the trade in Russia had suffered to a considerable extent from the widespread practice of "dubbing," or duplicating the better class of records of all makes, and that it was of little use for a company to expend large sums of money to secure the services of renowned artists when, immediately the records were issued, they were duplicated by dubbers and sold at any

old price. Legitimate business was going from bad to worse, and at last, after much trouble, the government were moved to introduce a measure making all dubbing illegal. This law is fortunately now in operation, and as the penalties for breaking it are very severe, and knowing that the Russian police are not lightly trifled with, you may rest assured that the evil was quickly stamped out. Dubbing is now practically non-existent, and trade is recovering rapidly and satisfactorily. The business outlook he described as being excellent, and Russian manufacturers look forward to a time of unexampled prosperity. But as far as the retailers are concerned, the one great drawback is the lack of stability or price maintenance. Pretty well all classes of traders indulge in price cutting, and as a direct consequence retail dealers are not so well off as they might be, having regard to the fact that the average Russian—even the peasants—are fairly good purchasers of records. The average retail price of 10-inch double records is about 1s. 8d., but in some cases as low as 1s., while a fair wholesale price would be 9d. Exceptionally long credit is given, in some instances as much as twelve months or more. The German firms, who do a very large percentage of the business in Russia, allow six months' credit. The chief companies in Russia are the Gramophone, Zonophone, Stella, Beka, Syrenna, and the Orpheon Co.

DAYLIGHT MOVING PICTURES.

Next summer, if we can rely on the promise of an obscure German inventor and the moving picture interests that are behind him, we are to have outdoor moving picture performances in broad daylight. Patents have already been obtained for a new kind of "day and night" screens on which the pictures can be shown as plainly in daylight as in darkness. The background of the screen consists of scientifically prepared and dressed canvas absolutely impervious to moisture, a magic coating of silver-faced material, whose ingredients are a strict secret, and a matt surface on the outside which contrives, among other things, to give the picture a "depth" and "atmosphere" and a bold relief never attained in cinema reproduction.

This screen is chiefly remarkable for its almost entire failure to use up light by absorption, a characteristic which results in not only making daylight pictures possible but in an enormous saving of electric current.

Experiments with the new daylight moving picture machine have been conducted during the past few weeks at a secluded spot on the seashore near Dover, England. Representatives of the big moving picture concerns who witnessed the tests declare that the pictures shown under broad daylight conditions were in every way as clear and vivid as any in the most carefully darkened room.

PERTINENT AD TRUTHS.

Establishing a factory on a one-time advertisement is like catching a shark with a three-ounce trout rod.

Sending out cheaply printed literature is like throwing a dog a bone—it keeps him out of mischief, but he never grows fat on it.

Making advertising pay that has no selling plan back of it is like teaching microbes to perform tricks.

Some advertising is like whiskey—fine to look at but awfully hard to swallow.

An advertisement is like a person's mouth—it isn't the size, but what it says, that counts.

Advertising appropriations are like lemons, says Rusty Mike's Diary. It's all right to economize on them, but, for heaven's sake, don't squeeze 'em.

An advertisement campaign is like a watch. No matter how good it is, every day winding is all that keeps it going.

The hour just passed will never return, neither

will the one just passing. Are you getting out of each 60 minutes all that you can for your employer and yourself?

"Offer special leaders to attract purchasers to your store. Show them in your window. *And quote prices.*"

"Change your ads. the moment one begins to look shop-worn. *And quote prices.*"

"Don't use too much display in your ads. Endeavor to make a neat display typographically. *And quote prices.*"

Never take up too much of the customer's time, as you may worry him; for if you do, if he comes in again he will be apt to call for another clerk.

Knowing the stock is very important. Every salesman should know where all of the goods are kept, what the prices are, and, above all, should know the goods, know them well enough to answer any question that may be asked about them. He should study all advertising matter, booklets, catalogues, etc., pertaining to the goods.

WHY THE GRUMBLER FAILS.

The Man Who Is Always Complaining Does Not Tend to Inspire Confidence in His Customers and as a Result Loses Business.

Grumbling, that morbid and improper state of mind, is too prevalent among a great many people, and is responsible to a great extent for so many failures. It excites that nervous irritability which is so productive of pining regrets and fretful complaints. It makes that large class of fretters who enjoy no peace themselves nor permit others to enjoy it. Everything goes wrong with some people, because they make it so. Their business and duties trouble them as though such things were not good. A fretting, grumbling person is one of the most unlovable objects in the world. It is not work that kills a man; it is worry. Work is healthful—you can hardly put more on a man than he can bear; but continued worry and grumbling is rust upon the blade. It is not the revolutions that destroy machinery, but the friction; and just so will the grumbling habit destroy the prospects of anyone. The man who smiles aviates where the man who grumbles merely crawls, and the true blue, all-wool, pre-shrunk, non-fading optimist is the man who smiles not only before but after he gets his wallops.

The grumbling salesman, or the grumbler in the office, is not the one who wins customers or inspires confidence. When you go into a store where all the salespeople are strangers to you, you will invariably look them over and ask your questions or make your purchases of the man who smiles. The world has no use for a man in whose face the wrinkles turn down at the ends. Turn around and look at your face right now in the mirror. Does it have a grouchy appearance? If so, just smile; then keep on smiling. Example after example can be shown to prove that nine out of ten men who have risen from small salaries and positions to the management of large institutions are noted for never losing their smile. Optimists will tell you that not only are they courteous to preserve their own self-respect, but also to set an example to their employees; for it is obvious that if the head of an office is discourteous, or even curt, those under him will take the same demeanor, believing it to be policy of the office. Don't grumble.

A credit man should not expect a salesman to constitute himself a detective and go nosing around into the affairs of the customer, but he is expected to have his eyes and ears open at all times and be on the alert for any detrimental information that may be floating around, especially as it relates to the credit standing of the customer.

Don't Buy Needles That Damage Records

Bad Needles

Grain of

Cleopatra Needles

When a needle is running a record, the friction causes the polished surface of the needle to be taken off, while its interior (grain) is exposed and touches the sound waves.

Consequence:

The poorer the polishing and rougher the grain, the more the sound waves are injured!

Only *Cleopatra Needles* are warranted to have always the highest and most perfect polish, smoothest grain. Using them means:

RECORD BREAKING MONTH.

February Made Quite a Showing in the Talking Machine Field in Indianapolis—The Managers of the Columbia Establishments Give Their Reasons for This Gratifying Condition, Which Applies to Victors, Columbias and Edisons Alike—Some Recent Changes in Sales Force—Other Happenings.

(Special to The Talking Machine World.)

Indianapolis, Ind., March 9, 1912.

The month of February was a record-breaking month of business for the talking machine houses in Indianapolis. It may appear that this is "spreading it on," but the managers of every house where the talking machine is sold declared that their houses had experienced twice as much business in the first two months of the year than they had in that length of time in the same period of last year. And all are predicting that the month of March will keep in line and give its share of prosperity.

Thomas G. Devine, local manager of the Columbia Phonograph Co., said his company had experienced the best month of business in years. Some have attributed the increase in business to the cold weather which has kept the people by their firesides and away from outside attractions, but the older heads are saying that there is no way in which to account for the condition of things except that the talking machine business has to grow whether it wants to or not.

The big selling records in the last month with the Columbia Co. locally was the New Pasquali and the New Zenatello records. The band records by the Creatore band were also in demand. The Favorite machine continues to lead all the rest in sales and the Baby Regent is also very popular.

William E. Ludlow of the talking machine department of the Wulschner-Stewart Co. also reports about three times as much business in the first two months of the year as in the same period of last year. The new catalog on Victor records issued recently is attracting much attention locally and many have commented favorably on the book. Besides giving the records put out by the Victor Co., much other valuable information about singers and composers is given. Mr. Ludlow says the people of Indiana have now become awakened to the possibilities of the Victor machines in studying grand opera. Records of the scores of entire operas are now available and orders have been coming in from all over the state.

Miss Wiltse, who for several years was with the Musical Echo Co., has been employed by the Aeolian Co. and is looking after the talking machine department.

Ben Feinberg, wholesale representative of the Columbia Phonograph Co., visited Indianapolis recently and while here took occasion to call on his many old-time friends. Mr. Feinberg was on his way East from the South and he reported excellent talking machine conditions in all parts of the territory he had covered.

Richard W. Craig, who appeared at the Empire Theater this week, featured a Columbia Grafonola in his act.

Lewis A. Moler, local manager of the branch of the Columbia Co. at Terre Haute, Ind., visited Indianapolis recently. Mr. Moler was very enthusiastic about trade conditions in his town and he predicted that 1912 would be a banner year in the talking machine business.

NEW HAWAIIAN RECORDS.

A Beautiful Volume Just Issued by the Columbia Phonograph Co. Containing a Large List of the Beautiful Music by Leading Composers of Hawaii—Something of the Peculiar Charm of These Compositions.

Hawaiian music harmonizes so well with the beauty and legendary romances for which the "Pearls of the Pacific" are noted, that the new Hawaiian records recently made by the Columbia should not only be appreciated in those islands, but should also prove of considerable interest to the purchaser of phonographic records in general, and particularly to those who have the good fortune to visit these beautiful isles.

It is music of a very lively and catchy type, not unlike our old-time Southern melodies, but, with all its simplicity, very interesting. Underneath its pronounced gaiety runs, however, a seriously sympathetic strain that is filled with poignant appeal.

The recording of native music of foreign islands is sometimes fraught with complications and expenditures of time, money and patience, which few others than phonographic experts realize. The field must first be gone over to determine the prospective demand for such records. When these investigations portend a profitable market, the best native talent is then secured, choice of selections made to be recorded, and decision as to the extensiveness of the recording decided.

Then comes the establishing of the recording laboratory. This requires the obtaining of a building which will permit of renovating to secure the peculiar acoustic properties that are essential to a perfect recording laboratory. The difficulty of this work can only be comprehended by one who knows the amount of complex paraphernalia and delicate mechanism which must be installed before the recording laboratory is complete, and it is doubly difficult, when, as in the case of Hawaii, it must be accomplished thousands of miles and many weeks from the base of supplies.

The last task, but by no means the least difficult before the actual recording, is to teach the native talent to render their selections with the perfect accuracy necessary for the recording. This requires time and patience, as their knowledge of physical laws controlling the recording process is usually not even elementary.

The original matrices are then shipped to the factory, from which test records are made to be passed on and sent to the country where recorded for O. K. before the manufacture of records is begun.

These difficulties have all been surmounted by the Columbia in Hawaii and they have been amply rewarded by being able to offer their patrons a well selected assortment of pure Hawaiian music, ren-

dered by a number of native glee clubs, singers and instrumental soloists.

The records were made at Honolulu in a specially constructed Columbia laboratory under the supervision of Columbia recording experts sent from New York and are such extraordinarily per-

COVER OF NEW HAWAIIAN RECORD CATALOG.

fect reproductions that they have lost none of the characteristic beauty and charm of these typical Hawaiian melodies.

In making these first records of Hawaiian music, the export department of the Columbia Phonograph Co., General, feel that they have made a most important addition to the already comprehensive repertory of Columbia records of "all the music of all the world."

CHANCES OF BEING PUNCTURED.

The man who lets a little authority puff him up like a balloon is simply enlarging his chances of getting punctured.

You might as well take your medicine bravely; if you don't some one will hold your nose and make you take it.

BALTIMORE TRADE VERY ACTIVE.

Excellent Record Made by Talking Machine Houses During February—New Agencies Established—Kranz-Smith Piano Co. Take on Columbia Line—Kunkel Piano Co. Add Victor Line—What the Various Local Houses Have to Report Regarding Business.

(Special to The Talking Machine World.)

Baltimore, Md., March 6, 1912.

There seems to be no indications of an end to the wonderful strides which the talking machine business has made in this city and surrounding sections during the past few months. While it was generally conceded that February would be an off month for several reasons it comes as a surprise to hear reports to the effect that sales during the 29 days of that period beat those for December in some cases as well as those during January. Yet such are the statements made by several of the dealers. And these men declare that the indications are for even better results during the spring.

A noticeable feature of the trade during the past month was the numerous sub-agencies established in various sections throughout the State and other points covered from this territory.

Thomas Gordon and Josie Fink, who have charge of the talking machine department for the Kranz-Smith Piano Co., announce that they have taken on the Columbia line in connection with the Victors. They report sales for February in both lines to have shown considerable improvement. The record business was also good.

Another piano firm that has also entered the talking machine field is the Kunkel Piano Co., Baldwin representatives, who have taken on a line of Victor machines and records. While young in the business the firm announces that it is encouraged with the outlook.

William Knabe & Co., who are newcomers in the talking machine game, are also elated with the prospects in the new field. They are handling the Columbia line. Several good cash sales of high-grade machines were reported for the week, while the demand for records is quite brisk.

Business has been very much on the go at both the Baltimore and Washington stores of E. F. Droop & Sons Co., according to Manager Roberts. Many fine sales of Victrolas and Victor records have been quoted in both cities. With the addition of the partitions in the local store, Mr. Roberts says the firm is enabled to handle more customers in less time and with more convenience and this has proved a great advantage.

Because of the big increase in business at the local stores, Cohen & Hughes, who handle the Victor, have found it necessary to add more sound proof music rooms for the convenience of buyers.

Four new booths, with glass partitions, have been placed along the right hand side of the sales rooms on the first floor and make quite an attractive appearance. Manager M. Silverstein has just returned from two out-of-town trips and reports business in the various sections to be in tip top shape.

Manager S. A. Denison of the local branch of the Columbia Phonograph Co. states that February has been a rousing good month, the figures showing an increase over the December and January business. A number of new Columbia agencies have been placed throughout the South, according to Mr. Denison, while the prospects are that more of these will be established before the spring sets in. Reports from various sections covered from the local office are all of a most roseate nature and promise well for spring results.

Hammann & Levin, who are Victor representatives, also have encouraging statements to make concerning the trade for the month of February. The record business has been particularly lively.

MAKING SOUNDPROOF WALLS.

Network of Wires Used Under Plaster in German Experiments.

Considerable attention has recently been given in Germany to experimentation with methods for rendering walls and ceilings capable of effective resistance to sound transmission. "One of the more recently devised methods," says Building Age, "involves the use under the ceiling, or parallel to the wall, as the case may be, of a network of wire stretched tightly by means of pulleys secured into adjacent walls and not touching at any point the surface to be protected against sound. Upon the wire network is plastered a composition formed of strong glue, plaster of paris and granulated cork, so as to make a flat slab, between which and the wall or ceiling is a cushion of confined air. The method is said to be effective."

NEW ELECTROVA CATALOG.

A new catalog is in preparation covering the electric line of players made by the Electrova Co., 117-125 Cypress avenue, New York. When issued this volume will tell many interesting things, not only about the Electrova line, but on the value of electric players for the dealer and owner. In a later issue will appear a complete review of the new publication.

Composer.—What do you think of the introduction to my new waltz?"

Critic.—Well, it sounds exactly as if some one were trying to sneeze and could not.—*Fliegende Blätter*.

M. D. EASTON TO MEXICO.

Will Assume Charge of the Dictaphone Business in That Country, with Headquarters at the Columbia Store in Mexico City.

M. D. Easton of the Columbia Phonograph Co., Dictaphone department, sailed on February 21 for Mexico City, where he will assume charge of the Dictaphone business in Mexico.

The general Columbia store in Mexico is in charge of Senor Cabanas, who is a wide awake and progressive business man. The Dictaphone business in Mexico is conducted from Senor Cabanas'

M. D. EASTON.

store and Mr. Easton will be under his management.

Mr. Easton is well equipped for his new work. He is a university graduate and speaks several languages. His experience in the export department of the Columbia Phonograph Co., General, New York, has familiarized him with the business methods of the Spanish speaking Americans and a thorough Dictaphone course in the workshop and assembling department in the factory at Bridgeport, Conn., followed by a connection with the New York selling force, has put him in such command of the machine he is to exploit that the Mexicans will have a difficult time transacting business in the old way.

Mr. Easton has many friends in New York among the large Columbia staff, who regret to see him leave, but who are confident that he will be successful in his new position.

Is your name worth 30 cents a month?

Would you have a single solitary soul pass your store day or night and not know "who lived there" when you could have your name and business in letters of fire above your door at a cost of

ONLY 30 CENTS A MONTH?

Is valuable space going to waste that any enterprising advertiser would be glad to own and pay big money for?

We will furnish you with a *Pyro One-Light Electric Sign* that can be read for blocks up and down the street day and night, and only costs about one cent. per hour to illuminate brilliantly,

IMPROVEMENT IN DETROIT.

Increasing Appreciation of the Talking Machine and the Perfection of Records Evident in the Increasing Sales Reported by Leading Houses—Advertising Campaign of the Manufacturers Brings Gratifying Results—Max Strasburg Co. Doing Large Victrola Business—Big Demand for Edisons at Grinnells—Columbia Co. Expands—Grand Opera Records Get the Best of Ragtime.

(Special to The Talking Machine World.)

Detroit, Mich., March 9, 1912.

"More people are learning every day the degree of perfection which has been attained in the making of talking machine records and, as a matter of fact, the records are being made more perfect every month; that is the reason for the marvelous increase in the talking machine business," said Harry Rupp, manager of the talking machine department of Grinnell Bros., who are State jobbers for Michigan of Victors and Edisons. "In Detroit and throughout Michigan it looks like the best year ever for the talking machine business. We are compelled to enlarge our quarters here. Alterations will be commenced soon which will give us considerably more room, especially for records.

"We will double our stock of Red Seal records, though we carry a large one now. The enormous demand for them indicates how popular talking machines are with the people who own them. And every one is an advertisement for the business—the best kind of an advertisement."

The trade here feels the effects of the general advertising campaign being carried on by the manufacturers to a remarkable extent. Especially is this the case in the smaller cities. The keen competition, instead of being costly, actually makes business. In Detroit all the big firms are advertising extensively in the daily press, and almost everybody is talking about talking machines, owners and non-owners alike.

The merchants advertise the low priced machines, but when the public comes to buy it selects the topnotch goods. One firm last Saturday advertised an outfit for \$29.50. They did the biggest day's business in their history, not even excepting the rush of the last holidays, but not more than half a dozen of the cheap machines were sold. The remainder ranged from \$50 to \$200.

The Max Strasburg Co. last week sold more \$200 Victrolas than all other kinds put together. "One reason is that we have to push the kind we are sure of getting," said Mr. Strasburg. "We never have been caught up on our orders for the \$50 and \$100 machines since we began business." This is in spite of the fact that the Strasburg Co. confines its business strictly to retail, and can order from half a dozen jobbers whenever it runs short. The trouble is that jobbers, in other States as well as in Michigan, can't get the goods themselves.

Edison's are going in a gratifying manner up-State. Mr. Rupp had a memorandum on his desk when The Talking Machine World representative called, of forty-five Edisons to be shipped to-day, an average of more than two to each of the jobber's branch houses. Victors and Edisons are carried in twenty-two branch houses in Michigan. The cities are the very best ones, Kalamazoo, Saginaw, Bay City, Lansing, Jackson, Adrian, Battle Creek, Flint, Port Huron, Ypsilanti, Ann Arbor, the seat of Michigan University; Mt. Clemens, the famed health resort; Pontiac, Alpena, Petoskey, Traverse City, Sault Ste Marie, Ishpeming, Escanaba and Hancock, and in Windsor and Chatham, Canada.

There has been a rather peculiar run on Edisons in Lansing recently. There has been an insistent call for the \$90 model with the direct drive, air motor. Time after time the branch house in the State capital has ordered its stock of these renewed. This machine has been selling well in most of the other cities, though in Detroit it has not done so well.

The Columbia Phonograph Co. makes a greater effort to place city agencies than any of the other firms. S. E. Lind has charge of this work. He spends a good share of his time ferreting out sections of the city where there are few or no talking

machine stores and proceeding to fill the vacancies. Manager Johns is just as attentive to the cities up-State. The Columbia has been particularly aggressive in its advertising campaign.

One thing that has made a hit for the Columbia line has been the frequent announcement of new models. People have flocked to the store to see and hear them as soon as they were advertised. The \$100 Grafonola Regent has been a favorite, for in Columbias, as well as in Victors and Edisons, the trend has been to the higher priced machines.

The Columbia Co. manages to keep all its representatives in the city in possession of a good sized library of records. Columbia records are in many of the stores which handle other machines as well as in the exclusively Columbia stores.

Grand opera is putting ragtime to the bad in the Detroit market. Caruso has had a magnificent run, but everybody is getting supplied with the great tenor's voice now, and others are selling as well or better. Amato makes beautiful records. So does Mme. Gluck, the soprano. Another offering that meets popular acclaim is the medley. The artists are all first class, though who they are the listener has no means of knowing. Quartets and trios rank well up with the medleys. The records are now so perfect that these chorus effects sound like the real thing.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines
Shipped Abroad from the Port of New York
for the Past Four Weeks.

(Special to The Talking Machine World.)

Washington, D. C., Feb. 9, 1912.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

February 7.

Berlin, 181 pkgs., \$6,118; Bremen, 6 pkgs., \$305; Cape Town, 10 pkgs., \$282; Havana, 9 pkgs., \$273; Havre, 3 pkgs., \$380; Iquique, 10 pkgs., \$410; London, 151 pkgs., \$4,328; Singapore, 6 pkgs., \$235; Sydney, 389 pkgs., \$9,855; Tampico, 24 pkgs., \$775; Vera Cruz, 207 pkgs., \$4,745.

February 14.

Batavia, 15 pkgs., \$300; Berlin, 117 pkgs., \$1,933; Colon, 11 pkgs., \$333; Dominico, 7 pkgs., \$162; Guayaquil, 5 pkgs., \$238; Havana, 8 pkgs., \$210; Hong Kong, 47 pkgs., \$1,283; Limon, 14 pkgs., \$1,009; Manila, 40 pkgs., \$3,457; Naples, 4 pkgs., \$210; Pernambuco, 4 pkgs., \$143; Rio de Janeiro, 213 pkgs., \$16,002; Shanghai, 5 pkgs., \$105; Sydney, 614 pkgs., \$10,378; Vera Cruz, 107 pkgs., \$2,473.

February 21.

Batavia, 23 pkgs., \$373; Buenos Ayres, 130 pkgs., \$6,643; Colon, 6 pkgs., \$164; Corinto, 3 pkgs., \$385; Guayaquil, 3 pkgs., \$210; Havana, 21 pkgs., \$1,218; 4 pkgs., \$202; Kingston, 13 pkgs., \$1,212; La Guira, 8 pkgs., \$755; London, 70 pkgs., \$2,120; 34 pkgs., \$4,248; Rio de Janeiro, 17 pkgs., \$816; Santiago, 8 pkgs., \$250; Surinam, 2 pkgs., \$100; Valparaiso, 9 pkgs., \$1,547; 2 pkgs., \$338.

February 28.

Berlin, 19 pkgs., \$411; 29 pkgs., \$1,526; Guantnamo, 10 pkgs., \$295; Havana, 15 pkgs., \$426; 18 pkgs., \$1,362; Havre, 27 pkgs., \$797; London, 160 pkgs., \$3,577; Mazatlan, 10 pkgs., \$403; Para, 16 pkgs., \$1,383; Vera Cruz, 78 pkgs., \$1,709.

March 5.

Bahia, 9 pkgs., \$381; Beria, 6 pkgs., \$192; Berlin, 336 pkgs., \$7,086; Buenos Ayres, 496 pkgs., \$16,187; Calcutta, 1 pkg., \$148; Callao, 13 pkgs., \$537; Cape Town, 28 pkgs., \$590; Havana, 34 pkgs., \$1,830; 32 pkgs., \$1,369; 2 pkgs., \$163; Havre, 19 pkgs., \$1,025; Kingston, 4 pkgs., \$157; London, 5 pkgs., \$338; 332 pkgs., \$8,291; Manila, 33 pkgs., \$1,402; 72 pkgs., \$4,297; Mazatlan, 11 pkgs., \$498; Pernambuco, 142 pkgs., \$13,809; Rio de Janeiro, 5 pkgs., \$221; Santos, 14 pkgs., \$376; Singapore, 52 pkgs., \$2,186; Tampico, 13 pkgs., \$300; Valparaiso, 10 pkgs., \$510; Vera Cruz, 136 pkgs., \$4,601.

A "Rip Van Winkle" window display hurts the reputation of your store.

An Explanation as to the Comparatively Small Number of Dealers Handling Talking Machines—The Problem of Reducing Selling Expense—Some Experiments That Proved Successes—Talking Machine Co. Issues List of Best Selling Victor Records—General Conditions Reviewed—U-S Phonograph Co. Gaining Ground—Death of Charles A. Regan—New Victor Department in Peoria, Ill.,—Music Carried Over Wires—Some Advantages That the Piano Dealer Can Enjoy Through the Handling of Talking Machines—The Talking Machine and the Player Piano an Ideal Combination—Other News Notes.

(Special to The Talking Machine World.)

Chicago, Ill., March 5, 1912.

It is frequently a matter of wonder in the trade that the number of piano dealers handling talking machines is not greater than it is. The topic is certainly an interesting one, and the Chicago representative of this paper has asked Byron von Elsner, a thoroughly well posted retail piano man, to give his views on the subject. Mr. von Elsner's article, which is born of wide experience as manager of piano houses, is as follows:

"What is a piano dealer in business for? For profit. How are profits made? By figuring cost, then adding selling expense and a reasonable amount for net profit. Figure it as you will, every instrument sold must bear its pro rata of fixed expense. That is the greatest problem that confronts piano dealers to-day, the immutable fixed expense. Warerooms must be well located; must be handsomely fitted up in keeping with the high tone of the piano business.

"How can fixed expense per sale be reduced? How can the net profit on each piano sold be in-

creased? Simply by adding another PRODUCING line that will bear its share of the BURDEN without ADDING to the fixed expense.

"What line? What line fits in most harmoniously with pianos? TALKING MACHINES! Rent, light, heat not increased, a small space, which can always be found in piano warerooms, utilized. Result, a new PROFIT maker; new customers; a steadily increasing 'record' business that brings dozens of musically inclined people to the ware-rooms weekly. Thousands of dollars are spent each year by the piano dealers in advertising 'schemes' to draw visitors to their stores. A well developed record business will bring in actual future buyers of pianos or player-pianos. A customer who has been sold such a satisfactory instrument as a talking machine becomes a friend of the 'house.' It is useless to argue, as some dealers do, that piano sales may be endangered by the presence of the talking machine. Experience proves otherwise. It has been thoroughly demonstrated that many a would-be purchaser of a talking machine has left the warerooms the owner of a player-piano. It works both ways. BUT IT WORKS TO ONLY ONE END—the reduction of the pro rata selling expense.

"A prominent Ohio piano dealer, and an opponent of the talking machine, was induced to 'try out' the new line. His stock investment was small. It worked. To-day his 'T. M.' department is a splendid money maker, and his record business is equally productive. Despite his fears for the piano end, he found the first year that both piano and player-piano sales had consistently INCREASED each month. Instead of a heavy fixed expense, reducing net profits to \$25 or \$30 per piano, he found a larger share of selling expense borne by the new money maker, Talking Machines!

"Talking machines as an adjunct to the piano business have become a settled fact. They are easily sold; profits are fixed. They require little after expense, and the record sales are a constant source of income. Enlightened piano dealers everywhere are recognizing the importance of the talking machines, not only as a side line, but as actual promoters of interest in their pianos and 'players.' The talking machine in piano ware-rooms has come to stay!"

A Valuable Compilation.

The Talking Machine Co., of this city, exclusively wholesale distributors of Victor goods, has recently issued a folder containing a list of 500 best selling Victor records. It includes 250 ten-inch double face records, 50 twelve-inch double face records, fifty ten-inch single face records, fifty twelve-inch single face records, twenty-five Purple Label records and seventy-five Red Seal records. The explanation is made that the list is not the selection of any one man, but is a selection made from actual statistics, showing the Talking Machine Co.'s most popular selling records. It is pointed out that the pamphlet is of special value to one collecting a Victor record library. The company has received many inquiries from dealers for quantities of these lists for distribution to their customers.

Siemon on Conditions.

F. A. Siemon, assistant manager of the Chicago branch of the Rudolph Wurlitzer Co., who has particular charge of the wholesale talking machine department, conveyed the glad news that in spite of the most "blizzardy" weather that February has known for forty years the month showed a considerable increase over the same one last year. From the wholesale point of view there seems to be a considerable gain of late in the sale of high priced machines, the Victrola XVI, for instance, making quite a remarkable record. In their desire to cultivate all branches of the trade the Wurlitzer Co. is going to make a special campaign this month on the lower priced types of Victrolas, and has consequently brought its stock of such goods up to the maximum size possible considering the state of supply.

U-S Phonograph Co. Progress.

The U-S Phonograph Co.'s Chicago office is having a business of such size as to prove that the company's product is gaining great headway in Chicago and territory tributary thereto. A particularly encouraging tendency is the noticeably large demand for the higher class machines. The new style Peerless, the \$200 concealed horn instrument, is going particularly well.

Talker Man Goes to Orient.

A. Hartman, a progressive forty and ten Victor dealer of Oak Park, the flourishing western suburb of Chicago, will shortly leave on a trip to Japan and other sections of the Far East. He will return late in the Spring.

Brings Many Inquiries.

The illustrated article in the January issue of The World regarding the enlarged retail record department of Lyon & Healy has excited considerable interest throughout the country. Many letters have been received by Manager L. C. Wiswell asking for further particulars regarding various features of arrangement and systematization. Much interest is being shown also in the several unique selling schemes referred to in the article.

Good Retail Ad.

Dealers can get a mighty good suggestion from an advertisement recently placed by Lyon & Healy to large space in the dailies. It was particularly suitable to the after-holiday period when new and unfamiliar owners of machines are beginning to wake up to the fact that it is up to them to augment their record stock. "What Will a Victrola Play?" was the effectively displayed interrogative caption, and the answer, "Thousands of Beautiful Selections," was reinforced with a list judiciously

(Continued on page 40.)

"THE WADE"—"IT'S FINE"

The WADE FIBRE NEEDLE CUTTER is made from the very best materials the market affords. The cutting blades are best Swedish Tool Steel, scientifically ground and tempered to hold a cutting edge the longest time. We know the quality of all the other materials, hence our broad guarantee of even exchange of cutter for cutter in case of defective materials or workmanship.

Don't buy a cutter with the open groove for the needle to rest in. Insist on the cutter with the triangular guide which firmly holds the needle while the cut is made—The Wade (Plyer) Cutter. All the most desirable features are found in the "WADE." Your profits are protected—we sell to Jobbers only. Get in the ring and claim the "WADE" business of your territory.

WADE & WADE, 1227 East 46th Street CHICAGO, ILL.

FROM OUR CHICAGO HEADQUARTERS—(Continued from Page 39.)

selected from the Victor catalogue and containing numbers suited to every taste.

Cabinet Novelties Coming.

Only a hint can be given at this writing concerning some new goods which will shortly make their appearance in the display rooms of the Salter Manufacturing Co., makers of talking machine record and music cabinets, of this city. There are some new cabinets of peculiarly handsome design and some especially valuable adjustable appurtenances for record cabinets which are likely to prove quite a revolutionary factor in the trade.

Death of Charles Ragan.

Charles A. Ragan, manager of the branch of the Columbia Phonograph Co. at New Orleans, La., died on Sunday, March 3, after a lingering illness which had rendered him incapable of active attendance to his duties for some months prior to his death.

Mr. Ragan was accounted by his employers as one of the most valuable members of the company's great force. He entered the Columbia service in 1898, when he accepted a position at the St. Louis branch, of which District Manager W. C. Fuhri was then manager. He remained there for five years and in 1903 went to Memphis as manager of the store in that city. A year later he went to New Orleans to assume charge of the company's interests in that city and section, and has most successfully conducted their affairs there until seized with his fatal illness. He was 34 years of age, unmarried, but is survived by three sisters and two brothers. General Manager George W. Lyle of the Columbia Co. was in New Orleans and had a talk with Mr. Ragan only two days before the latter's death.

The Columbia branch in New Orleans is in excellent shape and a permanent manager will shortly be announced.

Goes to Iowa.

Ernest Leichter, formerly with W. F. Zilmer, Monroe, Wis., spent several days in Chicago on his way to Davenport, Iowa, where he will assume the duties of manager of the talking machine department of the extensive music business of A. P. Griggs.

Open Victor Departments.

The large department store of Shipper & Block, Peoria, Ill., has just opened a Victor department. This is in line with the action of a number of important department stores in this section of the country, such as Gimbel Bros., of Milwaukee, O.; T. Johnson, Galesburg, Ill.; Linn & Scruggs, Decatur, Ill., and Boesch Bros., Burlington, Ia.

Piano Store Gets in Line.

The retail branch store of the W. W. Kimball Co., at 3165 Ogden avenue, Chicago, in charge of Mr. Handiesman, has installed a Victor department.

Talker Music Over the Wire.

How would it suit you to have all your music furnished in your flat, home or hotel by your landlord, along with the light, heat and other conveniences?

That will be a possibility upon the perfection of an invention now being manufactured by the Automatic Enunciator Co. of Chicago. The manufacturers of the invention propose to establish, in fact have already established, a similar service in several downtown restaurants and cafes. The man whose soul yearns for a musical treat along with the more material satisfaction of his stomach has simply to drop a nickel in the slot of a booth in one of these places equipped with the new machine, and may then settle down to the consumption of his meal with the satisfaction of having the most talented singers, the most perfectly selected orchestras and the greatest bands at his service, via the talking machine. When the coin goes into the slot it causes an electrical connection to be made with a central exchange station, located blocks away, perhaps, where a young lady, employed solely for that purpose, puts a fresh disc record on a talking machine. By means of the enunciator, a very small, cylindrical contrivance, the sound is transmitted over telephone

wires to the consumer in the cafe, blocks distant.

The machines now in use are, of course, public. Anyone who cares to play them may do so by dropping the coin in the slot. The music, whatever it may be, vocal or instrumental, is reproduced over the wire as fully and with equally as good quality and tone as if the talking machine were at the hearer's side. The many possibilities of the invention are obvious.

By use of the enunciator, without the talking machine record, persons may be paged simultaneously at hotels or public places in all parts of the city by one man speaking into a telephone mouthpiece. In the same way trains at railroad stations may be announced and train dispatching may be done without the use of telegraphic instruments and operators.

By employing talking machine records the names of streets may be called in street cars with the talking machine instead of by conductors. Instruments for this use have already been made. Each one would be equipped with a megaphone horn and talking machine, the latter to be operated automatically. Other uses, no doubt, will develop as the machine develops.

The enunciator apparatus is being put to practical use daily in some business houses and factories of the city in issuing general orders to several departments, and in summoning departmental managers from wherever they may be, by giving a general call over the entire building at one and the same time, thus obviating the waste of time in locating the man wanted and bringing him to a 'phone to get into communication with the person who wants him. In this capacity the new apparatus may be spoken into by an employe on the first floor, and the enunciator will repeat his spoken words clearly and loudly in every department of the building and, if so desired, carry the message.

In school houses the enunciator is being put to test. The Marquette school is equipped with fourteen stations. From his office the principal can make a general announcement to the entire school all at a single effort. Or in intermissions music can be furnished throughout the building for the entertainment of students.

Mr. Herman Kiper of the company promises that in a very short time he will be able to reproduce at first hand, without the use of the phonograph, the music of voice and instrument as it is played and sung. He also expects an adaptation of the machine to be used in moving picture shows to reproduce the words of actors as their images are projected by the moving picture machine.

The machine attachments which go to make up the enunciator are owned and controlled by the Enunciator Co., 311 Rookery building. The invention has been in the experimental stage for about a year. It is original with the Enunciator Co. and not an adaptation for other apparatus on the market.

Advertising literature, fully explaining the system, is now being prepared. So far as it has been carried the invention is thoroughly practical, the manufacturers declare, and its improvement will continue until the device for simultaneously reproducing in a number of places concerts and musicals as they are given is perfected.

An Ideal Combination.

Elsewhere in this correspondence appears an article showing the advantages accruing to piano dealers by handling talking machines. It is equally true that talking machine dealers can take on lines harmonizing with their original one, and which will greatly increase their business and prestige in the community. Many dealers have no doubt from time to time thought of putting in a line of player pianos, but may have feared that sales of such instruments will only kill the sale of talking machines, with which they are naturally more familiar, and thus simply cause a disorganization and no material increase in gross business. However, the arguments are strong on the other side and are here set forth at the request of the World by Charles Duncan Allen, traveling representative and demonstrator for the Farrand Co.

of Detroit, makers of the Cecilian player-piano:

"The talking machine and the player-piano are undoubtedly more closely allied than any other branches of the music trade, for they are not only both wonderful educational factors in the musical life of their possessors, but to-day are without doubt the best business getters for the live dealer who actually appreciates what an ideal combination these two instruments form to lure the 'elusive dollar' from the purse of the prospective purchaser. Many dealers in talking machines overlook the great advantage of having a good line of player-pianos in connection with their other line, possibly because they have never stopped to consider the intimate relations between these two branches of the musical industry.

"The average owner of a talking machine of the better grade will, almost unconsciously, become interested more and more in the better class of music. For a time the perfect reproduction of the voice or instrument by the talking machine will satisfy this budding musical nature, but soon, with the inherent desire of most mortals to accomplish things for oneself, there arises the ambition to possess some instrument by means of which one can give vent to one's own interpretive ability. Where is there an instrument to be found which combines all the essentials to such a degree as the player piano, and to whom will this individual turn more naturally than to the dealer who has been catering to his musical needs in the way of records, etc.? The successful dealer in player-pianos is the one who has followed out the same ideas in his music roll department as those which have made the talking machine department successful. He has felt that when the instrument was sold he had only gotten the 'principal,' and has immediately commenced to plan to get his 'interest' in the sales of records, and by that means has kept the customer's enthusiasm alive. Instead of saying: 'Well, I have closed that man and have his money,' he says, 'Now, I have one more account to nurse and to assist in increasing my business.'

"The dealer in talking machines can, without materially increasing his overhead expenses, add a line of player-pianos, and, if he will use the same methods in the conduct of the player-piano department of his business, find that he has not only largely increased his sphere of activity, but at the end of the year will notice a nice balance on the right side of his ledger. This latter condition will be largely due to the fact that he is better equipped to handle a business of this nature than almost anyone else, because of the training he has received along the progressive lines which are used in the sale of talking machines and records. Many a player-piano is 'dead' to-day because its owner has been allowed to become lukewarm on the music roll question. It is the dealer who is to blame, not the owner. Mighty few talking machine owners are permitted to lose interest in their machines, for the new records are continually called to their attention by the live dealer. There is no reason why the same methods if applied to the player-piano roll would fail to show equal results, and this without interfering in the least with the talking machine business.

"The comparatively little used combination of the player-piano and the talking machine, i. e., the talking machine record accompanied by the player-piano makes an especial appeal to the music lover, and in many instances has been the means of selling one or both instruments to persons who had no thought of purchasing until after they had heard this most delightful combination. In this combination we again meet with the personal idea, as the operator on the player-piano is given an opportunity to accomplish something tangible as the result of his personal control of the player mechanism. The use of these two instruments is just in its infancy, and great strides are being made in the perfecting of accompaniment rolls, and it is only a question of a comparatively short time until the talking machine and the player-piano will be almost inseparable and both will be found in the

(Continued on page 42.)

We're Beginning to Squeeze a Machine Stock Out of the Factory

Plenty of Victrola IV's; plenty of Victrola VI's; plenty of Victrola XI's; plenty of Victrola XIV's and plenty of Victrola XVI's.

We're having a hard time filling orders on the Victrola VIII, IX, and X; but here's a scheme and a good one—

Order a liberal stock of the Victrola IV's and VI's, at least five each. We will send you ON APPROVAL a "CABINET THAT MATCHES" each machine. If you like them, order more; if you don't like them, send them back.

Advertise these machines—push them hard—it will boom your record business.

If you are holding sales on the larger machines, loan your customers one of these "OUTFITS" until you get the stock.

home of every music lover. Instead of trying to divorce these two lines why not use one as a feeder for the other, and thus conserve energy and time, and, heeding the knock of opportunity, move on to a bigger and better business."

Good Columbia Month.

The Chicago office of the Columbia Phonograph Co. reports an unusually good February, considering the untoward weather. It showed an increase of 50 per cent. on total business as compared with the corresponding month last year and 100 per cent. on the retail.

A. W. Roos, who has been acting manager of the New Orleans branch for the past three months, has returned to Chicago to take up his work as auditor, assisting District Manager W. C. Fuhr.

Retail Business Picking Up.

L. Keane Cameron, manager of the retail talking machine department of the Rudolph Wurlitzer Co., reports that while business was somewhat punk up to February 13, it commenced to show a decided improvement on that traditionally unfortunate date, and has been expanding in volume ever since. About the only thing that L. Keane is really sorrowful for at the present minute is the shortage of the Victrola IX.

A Record February.

"The best February in the history of department H" was the manner in which L. C. Wiswell, of Lyon & Healy, answered the usual question of "How's business?" "The machine sales were good," he continued, "but the demand for records was really phenomenal. The satisfactory phase of the situation is that the shortage on records seems to be largely a thing of the past and shipments are now coming forward in a quite satisfactory manner."

The Lyon & Healy fibre needle cutter, which is duly described in a page advertisement elsewhere in this issue, is proving one of the best selling specialties that the house has ever introduced. It is being handled in a large way by jobbers all over the country.

Distinguished Visitors.

George Ornstein, traveling manager for the Victor Talking Machine Co., and Sam W. Goldsmith, district manager, were in Chicago this week visiting the jobbers and conferring with the itinerant Victor missionaries in middle western territories. These were: C. H. North, who exhorts the brethren in Michigan; V. P. Taylor, apostle of the holy cause in Wisconsin and Illinois, and H. C. Baesh, minister to the Vikings of Minnesota.

Receives Personal Letter from Edison.

Here's one of those pleasant little incidents that occasionally occur between heads of great enterprises and those who are engaged in the selling end of the game which show that even men of the importance of Thomas A. Edison in his industry are appreciative of special efforts on the part of associates in the business. On the occasion of Mr. Edison's sixty-fourth birthday, February 11, the Chicago office force of the Business Phonograph Co., in the First National Bank building, sent a note of congratulation to the great inventor. Incidentally with the note, E. C. Barnes, local manager of

the Business Phonograph Co., sent in his sales report for January showing that by a special effort in an ordinarily dull season he had been able to make an unusual increase in the business for that month. In response the following personal letter was sent by Mr. Edison to Mr. Barnes, dated Orange, N. J., February 12, 1912:

"My Dear Mr. Barnes—It gives me great pleasure to acknowledge your splendid sales report for January and the kind wishes of your force of employees for my birthday. In making a sales record by a special effort at this time you have given me the most genuine satisfaction that is possible to a manufacturer and advocate of the dictating machine since its conception. Please convey this appreciation to each of your loyal assistants. With my best wishes for your continued prosperity, I am very sincerely, (Signed) THOMAS A. EDISON."

The signature to the letter is in Mr. Edison's own handwriting. The letter has been framed by Mr. Barnes and hangs on the wall of his office. Mr. Barnes also has in his possession an autograph copy of the electrical wizard's "Advice to Young Men," which was presented by the inventor to Mr. Barnes during the latter's visit to the factory some time ago.

DAVIDSON BROTHERS EXPAND.

New Evidence of Progressiveness of the Well-Known Victor Retailers of Chicago—The Talking Machine Shops Secure Entire Fourth Floor of Steger Building, with Handsome Display Space on Ground Floor—Will Be One of the Handsomest Talking Machine Ware-rooms in West.

(Special to The Talking Machine World.)

Chicago, Ill., March 8, 1912.

Chicago is to have an exclusive talking machine store, which will vie in space occupied, in equipment and arrangement with the best departments and stores in Chicago and the West.

The Talking Machine Shops, of which George W. and Cecil L. Davidson are the guiding factors, has leased the entire fourth floor of the magnificent eighteen-story Steger building at the northwest corner of Jackson Boulevard and Wabash avenues, and also will have part of the elegant display rooms of the Steger Piano Co. on the first floor of the building. When these new quarters are occupied, which will be about April 1, the two stores of the Talking Machine Shops at 222 South Michigan Boulevard and at 24 Jackson Boulevard will be discontinued, and the business of both establishments consolidated at the new location.

In the April World it will be possible to give a detail description of the new quarters. The showrooms on the first floor, which are among the handsomest in the Wabash avenue music district, will not be altered. Here will be a fine display of Victor machines. This will be primarily a reception room, where prospective customers may inspect the leading types of Victors and Victrolas, under the supervision of competent sales people. There are entrances, both from Jackson Boulevard

and Wabash avenue, and the private elevator runs from this "reception room" to the main quarters on the fourth floor. Practically every inch of the frontage on both streets is display window, and the lighting arrangements are superb. The fourth floor

C. L. DAVIDSON.

warerooms are also accessible by the several elevators running from the rotunda of the Steger building to the floors above. Ten booths of glass and white enameled woodwork will be erected on the fourth floor, and other parts of the floor will

G. W. DAVIDSON.

be devoted to space for the machines, record stocks, offices and shipping rooms. No change will be made in the personnel of the concern. C. L. Davidson will superintend the sales force and G. W. Davidson will have charge of the office business, advertising, etc. The head sales people will be W. E. Clark and Miss Pauline Tishler, both of whom are experts in the selling game and have been associated with the house for some time.

The "Davidson boys," as they are known by their friends in the trade, have developed a remarkable business in a very short time. Both of these young men got their start in the wholesale talking machine business, George in office work and Cecil as traveling salesman. They started in the retail business for themselves with the purchase of a store at 222 Michigan avenue four years ago. They later established the branch at 24 Jackson Boulevard. They have won their success by dint of hard, intelligent work and by due attention to exploitation. Their advertising policy has been an aggressive one, and the newspaper copy of the "shops" and the mail matter issuing therefrom has been of the highest type. The new deal, which they have just consummated, and which involves a good deal of money, furnishes proof positive of the size and profitability of their business and of their progressiveness from the start.

New Model "TIZ-IT" Tone Modifier

This new model straight tube horn connection and tone modifier will fit all Edison phonographs equipped with Cygnet or Music Master Horn and Model "O" or Model "S" reproducers.

FINEST TOOL STEEL

GUIDE
WHICH
SAVES
ALL
WASTE

The L. & H. Needle-Cutter or Fibre Repointer we now offer to the user of Fibre Needles is the result of four years' exhaustive experiments and we feel safe to assert, NONE BETTER CAN BE MADE.

The lover of GOOD music will find this cutter invaluable. The upper blade being pivoted above and back of cutting edge insures perfect contact with lower blade. Both of these blades are made from finest tool steel and properly tempered and with ordinary usage will last for years, without sharpening or renewal.

The cutter has a self-acting stop, which prevents cutting away more than enough, thus a pin can be played twelve or fifteen times before becoming too short.

We give our absolute guarantee with every cutter sold.

Stores Are Doing—Grand Opera Artists
Visit Columbia Co. Store—Some Machines
That Are Selling Well.**

(Special to The Talking Machine World.)

Philadelphia, Pa., March 10, 1912.

The talking machine business in Philadelphia during February and early March has been most satisfying to the dealers. They still complain of shortage of stock, but acknowledge that the factories have been doing fairly well by them. All of the dealers agree that February of this year showed very much of an advance over the February of last year, and went considerably ahead of the January of this year.

As far as stock of records and machines are concerned the dealers do not look for a satisfactory condition for some time to come, but they are looking to the future with confidence. There are new conditions entering into the business which will develop before the fall and which they expect will ease up matters very considerably.

Lit Bros., who have had a talking machine department for a number of years, to which they did not devote very much special attention, have started to move that department up to a position where the business would warrant and in keeping with similar departments in other department stores. They have never had any soundproof rooms, but will have such rooms in a very short time, for already the manager who has charge of the musical instrument end of the Lit business has arranged to have four booths built at once and sufficient others to satisfy requirements as soon as necessity demands them. Harry Hovey has been placed in charge of the Lit talking machine department. He has been there for about three weeks and has started things moving at a business-like pace. Mr. Hovey has not been in this line before, but he is a young, active business man and the Lit Bros. could not have made a better choice. He has already put the department on a different basis altogether.

Gimbel Bros. in February have more than doubled their business over the same month of last year, and they are signing up now to do a very much bigger business in the future. They expect to make a considerable change in their department, adding considerably more space to it just as soon as the record buying season settles down, or about the first of May. Walter Fitzgerald, one of

the popular salesmen of the department, will shortly leave to again enter the baseball field as a member of the Rochester baseball team. He has been a first class salesman and he will leave with many regrets. One of the visitors to the department this week was Mr. Fulghum, of the Victor Co.

Jacob Bros. within the past ten days have added a talking machine department to their business. The past week they have had a liberal display of Victor machines of the various styles in their window, and they are about to have a number of hearing rooms built at the eastern end of their store, running back from their bookkeeping department. They are conducting the department themselves at present, but will shortly get an experienced manager. They will enter into the business with a full stock of everything connected with that line of the business.

The Heppe department has shown a big advance over last year and the talking machine business at that house is most gratifying. Manager Elwell has the general complaint of shortage of stock, and they have on hand lots of orders for goods which they are unable to fill on account of their not being able to get the machines and records from the factories. The talking machine department at the department store of M. Hager & Bro., Lancaster, Pa., in which they are more or less interested, they report has been having a most satisfactory business. William Keyes, of the Stoll Blank Book & Stationery Co., of Trenton, N. J., was one of the visitors at the Heppe store this week and he reports that business in the talking machine line in his city is most satisfactory.

Manager Henderson, of the Columbia Phonograph Co., reports that business has been splendid. It is much better than last year. Walter Linton, for several years their State traveling man, has severed his connection with the house and will take charge of the business of the Wilkes-Barre Music Co. Morris Housel will take Mr. Linton's place on the road for the Columbia, covering the same territory.

A number of the big operatic artists of the Philadelphia-Chicago company at present playing in this city are daily visitors at the Columbia store, and the past week Bassi, Zeppilli, Langona, Barado, Malatesta and a number of others happened to meet there and they amused themselves by making some records on the dictaphone of the company, with which the boys about the store are having considerable fun.

George W. Lyle, general manager of the Columbia, was in Philadelphia the past week, also C. W. Woddrop, assistant treasurer of the Columbia. They have been having a big run on the Carolina White records.

The Columbia Co. has been having a large dicta-

phone business, and have furnished a number of these instruments for the Pennsylvania Railroad and the Hershey and the Wilbur Chocolate companies. W. S. Hollenbach, of Reading, was a recent visitor.

W. C. Holzbauer, manager of the Wanamaker talking machine department, reports that they have had a very good business in February; in fact, they are so busy at present that they cannot make the changes that they contemplate in the way of additional hearing rooms. Mr. Holzbauer, who is also in charge of the small goods department, said that that line had also shown a most satisfactory advance and that they had almost doubled the former amount of stock they handled.

Louis Buehn, of Louis Buehn & Bro., reports that his business in February was the best that his house has ever had. It was way ahead of last year and they could have done a great deal more had they been able to get the stock to supply the demand. Mr. Buehn says: "The complaint now is the getting of the goods, and I don't see any outlook of this condition being improved. We have had shipments of various machines, but usually in small lots entirely too small for our needs. Things look rather problematical at this time and I question whether there will be any extraordinary improvement within the next few months."

They have been having quite a sale on the Victor \$25 and the sales on the \$50 machine has gone ahead of any other machine. "The outlook," Mr. Buehn says, "if we can get the goods, is way beyond anything we ever expected." Mr. Buehn has changed his offices about, moving them to the opposite side of the store, where he has considerably more room. They have four hearing rooms at present, but may add a few more, for business has been so brisk that on Saturday last not only were the four rooms going, but the main salesroom as well.

WIRELESS GHOST EXPLAINED.

Banjo Record Transmitted by Wireless Telephone Over North Sea.

According to a dispatch from London the mystery of the banjo playing and human voices heard by isolated wireless operators in the North Sea, which had caused them to christen the author of the weird sounds "The North Sea Ghost," is explained by the manager of the Marconi factory at Chelmsford. He declares that they were caused by experiments with wireless telephony being carried out there. In order to test the apparatus they had used a gramophone which played several banjo selections.

By simply pressing the lever the desired record is instantly at hand.

A Distinct Advantage of the Pooley Record Cabinet

CONDITIONS IN CINCINNATI.

Jobbers and Dealers Make Favorable Business Reports—Great Increase in Record Trade—Mrs. Clark Lectures at Wurlitzer Hall Upon Educational Value of the Victor—New Grafonolas Please Dealers and Their Customers—New Victor Catalog Proves Real Aid to Business—Other News of General Interest.

(Special to The Talking Machine World.)

Cincinnati, O., March 4, 1912.

The local situation is a very favorable one, the business during February having been exceptionally satisfactory, considering general conditions. All the houses report having either excelled or beaten the record during February, 1911.

At the R. Wurlitzer Co. the month of February was a record-breaker, both in the retail and wholesale business. In addition to the splendid showing which was made in both departments, lines were laid for future business, that will make trade boom right through the summer.

The wholesale business was exceptionally heavy in February, while the receipts on some styles of Victrolas were light, on those styles of which stock could be secured, a sufficient amount was on hand to meet all demands. The record situation is gradually clearing up and the shortage is giving away to heavy express shipments, which are being made up by the manufacturers.

In spite of the shortage on records, Wurlitzer service has not been impaired, as is proven by the satisfaction expressed by dealers.

The retail department is awaiting the arrival of the new record catalog with interest. A very small shipment has been received, but not enough for general distribution.

The record trade, which has already assumed immense proportions, is sure to double or treble, as soon as these catalogs get into the hands of Victor owners. The catalog is acknowledged to be one of the most wonderful pieces of literature ever distributed by a manufacturer of musical instruments, and the few which have found their way into the hands of the retail customers are being treasured among the valuable books in their respective libraries. The catalog is a regular encyclopedia on musical matters, and none can resist the temptation of reading and studying its contents.

Among the distinguished visitors was Miss Clark of the educational department, who gave a lecture in the Wurlitzer Hall to a big gathering of teachers and principals of the Cincinnati public schools. Other important concerts were given during the month, which together with a splendid line of newspaper advertising and beautiful and effective window displays, will go far toward increasing the immense demand for Victors and Victor records in Cincinnati.

The Aeolian Co. says: "Since February is now a back number and we are 'March-ing on' we can look back and figure up where we have had a most satisfactory month with a nice increase. We attribute the result partly to the placing of the new Victor catalog properly before the public. We figured out exactly at what time

to issue same and had announcements printed, which were put in the hands of every customer of our store and also all those attending our recital. Our supply was practically exhausted in one week. We want to compliment the Victor Co. on the wonderful thoroughness of its new catalog, as it is a decidedly original idea and greatly facilitates the immediate finding of whatever record wanted. We have had some bound in leather covers and added the regular catalog of Victrolas in the back. They make a permanent and complete booklet for ready reference."

Manager R. J. Whelen of the Columbia Phonograph Co. reports that February was the very best yet, business in every department running far ahead of any previous February in the history of the store. He stated: "The shortage of goods to supply this demand really reminded us of the holiday trade. The widespread advertising of the \$50 Grafonola 'Favorite' in February caused a real sensation in both the retail and wholesale departments, and the hardest proposition we had to face was to get the machines for actual bona fide orders. Many new dealers have been signed up exclusively and enthusiastic reports are being received from all over the territory. The dealers seem to never tire of praising the new models of Grafonolas and the large catalog of records offered them, both popular and grand opera selections. We have been pushing the proposition this winter of placing Grafonolas in Cincinnati's schools and our success has been very gratifying, having placed a number of them in the best schools in the city. The Y. M. C. A. have also installed a Grafonola in their handsome Cincinnati home.

Manager Stever, of the Lyric Piano Co., is well satisfied with his talking machine department. He now claims it to be self-sustaining and believes it will become one of the factors in the trade in a very short time. This house is making a business of displaying talking machines and records.

J. E. Poorman is advertising the sale of ten-inch records for twenty cents. He says he has no kick to make.

John Arnold is elated over the collection end of his business. This and the sale of records during February is causing him unusual satisfaction.

Manager Stodler of the Milner Musical Co. announces that the February sales were in excess of January's totals, the business being principally confined to high-class goods and records.

The A. F. Mengel Music Co. in their March letter to record customers announces the completion of two new sound-proof demonstration booths and asks: "Are you telling your friends of our excellent service and our plan for furnishing clean and unscratched records?"

Al Jolson's singing of "That Haunting Melody" and "The Crucifix," by Caruso and Journet, are among the best sellers of the month.

THOS. W. LAWSON BUYS FOUR VICTROLAS

(Special to The Talking Machine World.)

Boston, Mass., March 11, 1912.

Assistant Manager Chamberlain of the wholesale department of the Eastern Talking Machine Co. had a good customer the other day in Thomas

W. Lawson, the big State street financier, who spent considerable time in examining machines of the most approved Victor type. Mr. Lawson's order was for four high-priced Victors, two of which were sent to his Back Bay home and the other two to his country home, "Dreamworld," at Egypt, down on the South Shore. With the machines went a large quantity of the best records. Mr. Chamberlain has been putting an immense lot of time and hard work into his department of late, with the result that the business has about doubled itself since Christmas.

PARABLE OF A SALESMAN

Who Was Almost Nearly but Not Quite and the Moral Thereof.

There was once a salesman who seemed to have a face value of one hundred cents on the dollar, and who possessed the earmarks of the one best bet. His knowledge of his goods was such that he could talk them in his sleep; his preparation on a prospect was a thing of beauty and a joy forever; his demonstration was the admiration and envy of his fellows, and he had a line of convincing conversation that would make a Russell Sage quicken with the desire to spend. But, alas, alack and odds-gazook, he developed, upon trial, one great defect—at the crucial moment he could not guide the hand of destiny to the dotted line and get the John Hancock that copper-riveted the order. Time and again he played his part to the climax of the piece and departed in defeat from the prospect's office. The knack was not his. His wish-bone was where his back-bone should have been. It was indeed sad, not to mention somewhat peevish, to those who had backed him as a sure winner.

But it came to pass, upon a certain day, says the wise man in The Caxton, that this salesman awoke to his weakness, and set about to remedy the defect. Said he to himself, "Up to a certain point you seem to be the candy kid, but beyond that you're a lemon drop. You're almost nearly but not quite, and what you lack is decision. When you get down to quantities, prices and terms you develop a case of frigiditis pedal extremities, and it is infectious. It's you for a 'matter of course' attitude and an insistence that will make the dotted line draw the penpoint like a magnet. Forget yourself and go out and put it over like a real salesman, not a fancy imitation." And with this wise counsel in mind he straightway went out and lined up his prospects in green apple quick-step time. There was no getting away from him. He created the obvious and that was to sign. It was the triumph of decision over hesitation. He led to the last step and then assisted locomotion. Thus he lived happy ever after and waxed great in his line.

Moral—Which teaches that the dotted line is of more importance in business than the fatted calf.

It is one thing to recommend your goods highly and it is another and very different thing to brag about them. The recommendation you are willing to stand behind; the brag you want to hide behind,

GEO. W. LYLE IN BIRMINGHAM.

Visits Local Columbia Branch While on Annual Tour—Department Store Takes on Victor Line—Strong Window Display of "Spring Maid" Records.

(Special to The Talking Machine World.)

Birmingham, Ala., March 9, 1912.

George W. Lyle, vice-president and general manager of the Columbia Phonograph Co., was in Birmingham this week, stopping over here for a couple of days on his annual round of visits to the branch Columbia stores of the country. Mr. Lyle expressed himself as well pleased with the past year's business of his company and predicted big things for the coming year. He was particularly gratified at the showing made by the Birmingham store, which, notwithstanding the fire in January, took rank among the foremost Columbia branches for January and February sales.

The Talking Machine Co. have placed the Victor line with Drennen & Co., one of Birmingham's large department stores. Only recently the Talking Machine Co. had started the Drennen Co. in the talking machine game with a large stock of Edison goods, and this recent sale of Victor goods, makes this the prize order of the South.

Manager Blackstone of the Dictaphone Co. has had a particularly successful season so far. Several large department stores, two big real estate and insurance concerns, and the Birmingham Ledger are recent installers of complete Dictaphone service. The Ledger is one of the first, if not the first, newspaper to install these great little time-savers.

One of the most effective talking machine window displays ever seen here was made by Loveman, Joseph & Loeb, under the supervision of Manager Broyles. "The Spring Maid" was billed to show here, and just in advance of the show Manager Broyles had a thirty-foot window filled with Columbia and Victor machines, "Spring Maid" records and cut-out posters of scenes from the opera. Not only was the window successful from an artistic standpoint, but the commercial returns were large.

ENJOYING THE VICTROLA.

How a Cultivated Man Has Reared His Children to Appreciate the Best of Music.

A gentleman who bought a Victrola about ten years ago has just explained in detail how he has managed to secure a musical education for his family at small cost. He has five children, all of whom have inherited musical tastes from their parents. The father and mother sing. She can play the piano very well and he is something of a performer on the violin. Like many other cultivated people they were without large means to give their children all that they desired according to the old method, and so determined to make the best possible use of what they could afford.

They bought a Victrola on the instalment plan and the father assures us that he never missed the money. It is true that at times he felt a little pinched to make the monthly payment but feels confident that he never would have saved the money if he had not put it into the Victrola. He invested \$50 in records at the start and has spent \$5 a month ever since. He bought with discretion, securing the best of the red seal records and those of the purple and black records which seemed fitted to his plan of education.

His principal claim is that on its educational side these records have taught his children accuracy of pitch and the value of time in counting music on the piano. On the other hand his children love their home and stay in at nights, bringing troops of their friends with them.

Every teacher knows that unless a child is particularly gifted it will lose time and in singing will not keep at the pitch. Piano pupils of this man have learned accuracy and those who have taken singing lessons have, from the very start, learned how to keep the pitch. The mother has instructed the children on the piano—one of the girls plays the violin and all of them sing. The

SHEIP & VANDEGRIFT, Inc.

PHILADELPHIA, PA.

father claims that it would not be easy to find as good a little band of amateur musicians as the parents and five children, the youngest of whom is seven years old. He has educated them in grand opera, in oratorio, in the classic songs, as well as popular music, with the result that all of them are enthusiastic and have made great progress. He insists that they are not only happier than most children, but that they make better progress at school because of the lessons and habits of accuracy they have learned from the Victrola.

He considers that his investment has cost him nothing that he could not easily afford, and that his children are developing into cultivated young men and women who are making better progress and giving finer promise than any others in his neighborhood. The Victrola did it.—Wanamaker's "The Opera News."

A man can get all the grouchy looks he desires by going home for lunch on washday, and when he comes into your store he welcomes a smile. Get it?

TO MAKE TALKING MACHINES.

The Mid-Eastern Holding Co., Augusta, Ga., has been incorporated with capital stock of \$100,000, for the purpose of manufacturing and dealing in all kinds of sound recording and producing instruments and also moving pictures. E. M. Leavitt is president and treasurer of the company.

* * * *

The American Automatic Phonograph Co., Augusta, Ga., has been incorporated with capital stock of \$2,000,000, for the purpose of manufacturing and dealing in all kinds of moving picture machines, phonographs, etc. President and treasurer, E. M. Leavitt.

The greatest thing a man can do in this world is to make the most possible out of the stuff that God has given him. This is success, and there is no other.

There is no road to success but through a clear, strong purpose. A purpose underlies character, culture, position, attainment of whatever sort.

TO DOUBLE PLANT OF VICTOR CO.

Old Buildings to Be Enlarged and New Buildings to Be Erected to Meet Demands from Dealers—Plans Call for Expenditure of Million Dollars—Will Have Great Resources.

Despite the vastness of the plant of the Victor Talking Machine Co., its seeming ability to take care of a volume of business in talking machines and records, almost beyond conception, it is nevertheless a fact that the company has found it necessary to arrange for the enlargement of the plant to almost double its present capacity for the purpose of properly handling the business now on the books or in sight.

The matter of increasing the size of the plant

manufacturing department, through to Front street, which will make this one of the largest manufacturing buildings in America.

Buildings Nos. 6 and 7, now used entirely for storage, should be torn down to permit of building No. 8, cabinet factory, being carried through to Front street.

An entirely new building, specially constructed for the purpose of the shipping department, to take the place of buildings Nos. 9 and 10, to be erected on Market street, extending from Front to Second street. This new shipping department will save the company much loss and inconvenience now caused by having the shipping department so far removed from the factory.

After the removal of the shipping department to the proposed new building on Market street, build-

cover the requirements of this branch of the business.

In submitting these plans Mr. Johnson said:

"At first glance the changes enumerated above may appear to be radical and even extravagant, but I do not hesitate in stating that the suggested improvements and additions are absolutely necessary and should be completed as soon as possible. It is true that some of the buildings recommended to be torn down would be quite serviceable for ordinary manufacturing purposes, but the greatest economy and highest efficiency is so necessary to the future of the Victor Talking Machine Co. that there should be no hesitancy on account of the large outlay involved. I feel that the present time is the great opportunity to put ourselves in an impregnable position as not only the largest

THE PLANT OF THE VICTOR TALKING MACHINE CO., CAMDEN, N. J.

was taken up by the board of directors of the Victor Co. on and at the annual meeting of the stockholders of the company held on February 16, Eldridge R. Johnson, president of the company, announced the following plans:

Building No. 3 to be enlarged to six stories (as shown in accompanying illustration), to increase capacity of record plant.

Building No. 2 to be torn down and replaced by an extension of buildings Nos. 1 and 3, machine

ings Nos. 9 and 10 will be materially enlarged and rearranged to meet the requirements of an up-to-date warehouse where materials for all departments can be received and properly stored pending their use in the manufacturing departments.

A new building is needed immediately for the record material and grinding department, now located in buildings Nos. 14 and 15. Plans are under way for a building specially constructed to

and best manufacturers of talking machines, but as the most economical manufacturer."

"To you who are not familiar with the vast extent of these additions to the Victor factories," says the Voice of the Victor, "let us impress their magnitude on you by stating in cold print that on the completion of these buildings we will more than double the floor space of our present plant. Their completion and equipment will entail an expenditure of upward of a million dollars."

EDISON OPENS ELECTRIC SHOW

In Minneapolis by Pressing Button in Orange—Talking Machine Companies Who Will Exhibit—Jobbing Business Heavy, Is the Report—W. J. Dyer & Bro. Enlarging Talking Machine Department—Strong Columbia Trade—General News of the Month.

(Special to The Talking Machine World.)

Minneapolis and St. Paul, March 9, 1912.

Thomas Alva Edison, the creator of the talking machine from his laboratory in Orange, N. J., will press the button which will open the Northwestern electric show March 16 in the National Guard Armory, Minneapolis. Thomas A. Edison, Inc., will have three booths in the big show, one occupied by the Minnesota Phonograph Co., with business machines and the general line of instruments.

Lawrence H. Lucker, president of the Minnesota Co., reports a highly satisfactory retail and jobbing business in both the Victor and the Edison goods. "When a dealer in a little country town will order eight Amberolas at one time, you may know the talking machine trade is not languishing in the Northwest," remarked Mr. Lucker. "Such orders are not unusual. The Edison Opera machines are having tremendous sale. I can't describe the success any other way.

"It's fully as good with the Victors. We are

more than a hundred orders behind in the small Victrolas. This week we received a carload of the \$15 and \$20 machines and they will not last at all."

W. J. Dyer & Bro., the veteran St. Paul dealers, are altering the third floor of the big building so as to give the retail end of the talking machine department a floor space of 40x150 feet. The wholesale department long has been crowded and the house for months has been away behind in Victor orders because of inability to obtain instruments as ordered.

The Metropolitan Music Co. in Minneapolis finds that it must give more time and space to the talking machine department. This section is nicely housed in one of the most desirable quarters in the building.

"We have had the finest business in Columbia machines during the past four months that we have experienced since opening here," declared J. H. Wheeler, Northwestern manager for the Columbia Phonograph Co. "The jobbing trade literally is growing with leaps and bounds and we are giving it our best attention, as the collections are unusually sure and prompt. We are having much success with the Creators band records and the Zenatello records; they go just like hot cross buns in Easter." I understand that the retail store in St. Paul, of which A. W. White is the manager, is doing an exceptionally fine business.

F. J. Weyel, manager of the Dictaphone department of the Columbia agency in the Northwest has placed the Duluth agency with Chamberlain & Taylor.

GET A TRANSFER.

If you are on the gloomy line,
Get a transfer.

If you are inclined to fret and pine,
Get a transfer.

Get off the track of doubt and gloom;
Get on the Sunshine train, there's room—
Get a transfer.

If you are on the worry train,
Get a transfer.
You must not stay there and complain—
Get a transfer.
The cheerful cars are passing through,
And there's lots of room for you—

MORE ATTENTION TO TALKERS.

San Francisco Houses Increasing Facilities for Handling the Business—Many New Branches Opened—Grafonola-Victrola-Amberola Club Organized in Oakland—Baseball Teams Organized by Talking Machine Men—J. Raymond Smith Co. Opens New Store—Emil Cruells Moves Store to Larger Quarters—Other Changes in the Local Trade—Girard Piano Co. Recovers from Effects of Fire.

(Special to The Talking Machine World.)

San Francisco, Cal., March 8, 1912.

There is somewhat more activity in the city trade than last month, as the demand for new machines is more in evidence than after the holidays, and the record business is keeping up in fine shape. Local music houses are giving more attention to the talking machine department all the time, realizing that there are still great undeveloped possibilities in this line, and that for the next few years it is likely to be more profitable than ever before. A good many new stores and departments have also been opened in the country lately, and up to the middle of February the outside trade showed considerable gain, but since then sales have fallen off in some districts. This is attributed to the lack of rain, which, with dry north winds for the last two weeks, has caused great anxiety throughout the state. If March brings the usual heavy showers a good season may be predicted, but meanwhile buyers are inclined to hold off.

New Talking Machine Club.

Talking machine men of Oakland, Cal., have organized the Oakland Grafonola-Victrola-Amberola Club, which met for the first time about the end of January, and now gathers about a luncheon table at an Oakland restaurant every Wednesday. The friendly feeling engendered by these meetings, and the discussion of important trade topics from various points of view, are regarded by all the members as a decided benefit.

Baseball Teams Organized.

The music houses of San Francisco and Oakland have organized rival baseball teams for the season of 1912, in which the talking machine men take a leading part. The first game of the season took place on Washington's birthday in Oakland, the Oakland team being the winner with a score of 11 to 2, owing largely to the expert twirling of Mr. Fallon, the Oakland pitcher. Captain James Clancy of Oakland played a fine game and Jack Clancy of the same team was the heavy hitter of the day. Captain Rothlin and Catcher Baker of the San Francisco team played good ball. The second game of the series will be played in San Francisco soon. The teams were as follows:

San Francisco—Rothlin lf, Dinkel lb, Baker c, O'Connor ss, T. Little p, Moore rf, S. Little cf, Bird 2b, Lydon 3b.

Oakland—James Clancy lf, Munjar 2b, Dougherty cf, Jack Clancy lb, Blodgett c, Henry ss, Bury 3b, Nichols rf, Fallon p.

J. Raymond Smith Co. Open New Store.

The most important development in the local trade is the opening of a new store by the J. Raymond Smith Co., which will occur in about a week. The store will be on Union street in the North Beach district, where most of the Italians of San Francisco reside, and for the present will have little nearby competition. While some piano, small instrument and sheet music business will be done, the place will be mainly a talking machine store, and is being fitted up especially for that purpose. The local Italians have always been among the most enthusiastic supporters of the talking machine business, and will doubtless patronize the new establishment in good shape. The store will also be near the Harbor View site of the Exposition, from which much additional business may be drawn.

Moving to Larger Store.

The Mission Phonograph and Piano Co., operated by Emil Cruells, formerly at 2687 Mission street, is moving into a large store at 2530 Mission street, which has been fitted up on up-to-date lines and will afford much more ample space than the old location. This company, which is one of

the leading talking machine concerns of the Mission district, also has a branch on Sixteenth street.

Improving Store Equipment.

Benjamin Curtaz & Sons have not yet completed the changes in their talking machine department, but have made some improvements, and will probably carry out alterations on a larger scale than was at first contemplated.

Byron Mauzy is taking more interest in his talking machine department than for some time past. He says things have started out in great style this year, and is making preparations for the future by fitting up several new talking machine rooms on the fifth floor of his building.

The Wiley B. Allen Co. has started the projected work of improvement in its local talking machine department, the principal change being the installation of an automatic elevator, connecting the volume of Victor business for February.

Visiting Sherman, Clay & Co. Branches.

Andrew G. McCarthy, head of the talking machine department of Sherman, Clay & Co., has been away for the last couple of weeks on one of his regular trips among the Northern branches, but is expected back early next week. Before leaving Mr. McCarthy expressed great satisfaction with the volume of Victor business for February, in both retail and wholesale departments.

E. W. Scott in New Quarters.

The fitting up of the new talking rooms for E. W. Scott, on the mezzanine floor of the Kohler & Chase building, took more time than was expected, but Mr. Scott is now moving down from the fifth floor, and will be comfortably settled in another week. He has had a steady rush of business all month, and expects to do much better in the new quarters, which are more accessible and in a more conspicuous position. He is justified in the opinion that he has the finest talking machine rooms in the city, as the place has been fitted up and decorated in highly artistic fashion.

Geo. W. Lyle on Coast Visit.

W. S. Gray, Pacific Coast manager for the Columbia Phonograph Co., has just left for Los Angeles, where he will meet George W. Lyle, general manager of the company. Mr. Lyle had special business which took him to the Southwest, and decided to continue to San Francisco. He will not make the Northern territory this trip, however, but will return East from here via Salt Lake City. Mr. Gray states that the February business locally has been considerably ahead of the preceding month. M. B. Sharp, for some time with the Columbia Phonograph Co. in this city, is now with Mr. Scott in the Kohler & Chase building.

Recovers from Effects of Fire.

The Girard Piano Co. of Oakland opened its new talking machine department only a little before the end of the year, and suffered a fire loss before the place was well established. Since then, however, everything has been put in good order, and the department has already proved itself a most valuable addition to the business. J. M. Wheat, manager of the department, is enthusiastic over the start made, and looks for a big business.

A. R. Pommer in Ill Health.

A. R. Pommer, head of the Pacific Phonograph Co., is still suffering from rheumatism, and is able to be at his office only about one day in the week. He is well satisfied with business conditions, however, and says collections are coming in extremely well. So far he is not worrying much about the dry weather, and believes that the outside business in California will revive by the end of the month, while his sales in the north coast district are fully up to expectations.

HONOR FOR MARCONI.

Wireless Pioneer Made Life Member of Italian Senate.

A dispatch from Rome states that Guglielmo Marconi, pioneer of wireless telegraphy and who is also keenly interested in the talking machine business, having been associated in a consulting capacity with the Columbia Phonograph Co., was on Monday made a life member of the Senate. This followed his refusal of the offer made by King Victor of Italy to elevate him to the nobility.

SOUTHERN CALIFORNIA TRADE.

Business in Good Shape Despite Continued Drought—New Victor Catalog Proves Welcome Surprise—New Houses Which Have Taken on Lines of Talking Machines—Frequent Recitals the Rule—Pays Visit to Charles S. Tainter—Interesting Personal Items—News of the Travelers—New Record Stop Placed on the Market—What the Various Prominent Houses Are Doing—Plan to Form Club of Talking Machine Men.

(Special to The Talking Machine World.)

Los Angeles, Cal., Feb. 27, 1912.

Owing to the lack of rain the entire section of the Southwest is suffering severely; nevertheless the talking machine business is flourishing far more than expected. Many dealers state that the past month has been most satisfactory in all the distinctive lines—Victor, Edison and Columbia.

The new Victor catalog has created much interest among all Victor dealers. Even the public will be doubly interested when the market is supplied with a sufficient number of this up to date, long-looked-for publication.

The Wiley B. Allen Co., of San Diego, has been enjoying a very fine business. Mr. Harris, the local manager, has Miss Roby as manager of the talking machine department. They have lately featured the Grafonola Baby Regent, thus bringing splendid results.

Bowman Merritt, Edison dealer of Fillmore, Cal., is keeping up his record in selling Edison goods. He specializes on the Amberola.

T. T. Gardner, who has been connected with the talking machine department of the Southern California Music Co. for many years, has been transferred to the sales force of the piano department of the same firm. Mr. Gardner is not only a successful talking machine man, but a real live experienced piano man as well.

The Boston Piano Co., 700 West Seventh street, of this city, has installed a complete line of Columbia goods. Norman Turley, president of the firm, formerly connected with Frank B. Long's piano house for many years, states that it is a very desirable line to handle and is bringing the desired results.

An effort is being made in Los Angeles to start a social club among the many persons interested in the talking machine business. Messrs. I. H. Andrews and W. P. Carson have kindly taken in hand the calling of the first meeting, the purpose of such being to decide future ways and means. Nearly one hundred persons gave their signatures endorsing the project.

The Smith Music Co., Seventh and Hill streets, has added a complete catalog of Columbia machines and records to its Victor stock. This enables them to accommodate a greater scope of trade.

The Southern California Music Co. has added two more salesrooms to its large talking machine department, also adding more space to the office of the wholesale department. By this act the talking machine business must be increasing, not decreasing. The large shipment of the new opera machine lasted only two days; now nearly all the

Edison dealers are supplied according to their wants.

Through the kindness of Frank Lewin a very enjoyable Victor recital was given at the Hollenbeck Home February 15, 1912, which was much appreciated by the inmates and friends of the institution. Mr. Lewin, who is a Victor owner and a strong advocate of the same, has been giving many such recitals, with introductory remarks, in Los Angeles and vicinity. I. H. Andrews, of the Andrews Talking Machine Co., who is somewhat of a vocalist, assisted, together with Sibley Pease, of the same company, who is an accomplished pipe-organist. The recitals being composed principally of oratorio numbers rendered by the celebrated Victor artists.

E. Stewart Payne, an old time talking machine man of Little Rock, Ark., has joined the selling force of the Southern California Music Co. in the same line.

A. G. Farquharson, special representative of the Columbia Phonograph Co., had the privilege recently of visiting Charles Sumner Tainter in San Diego. Mr. Tainter, of "Bell and Tainter" basic patent fame, still takes a great interest in the talking machine business, and but for a long illness covering a number of years, this great and original inventor would doubtless, as of yore, have continued to astonish with new ideas and improvements.

Geo. P. Austin, Edison dealer of Oxnard, was in the city for a few days and left a good order for Edison goods, which he favors very highly.

Barker Bros., one of the leading furniture houses of Los Angeles, are having splendid results in the talking machine line. F. E. McArthur, manager of the piano and talking machine department, reports business conditions are very good.

F. A. Anrys, general manager of the Wiley B. Allen Co., of San Francisco, is in Los Angeles for several days visiting the branch store in this city. He is accompanied by his wife and will spend a few days motoring in southern California in their large touring car, which they shipped down by boat, thus combining pleasure with business.

E. L. Bailey, dealer of Edison goods for Fallbrook, Cal., reports fine results from the canvassing of his district, making many sales of high grade instruments.

M. B. Romaine, mechanical expert from the Edison factory, is in southern California calling on all Edison dealers and giving general instructions regarding repairs and explaining the make-up of Edison motors in general. Mr. Romaine will continue his trip, covering the entire coast as far North as Seattle, calling on all Edison dealers. While in the South section Mr. Romaine is making his headquarters with the Southern California Music Co., Edison jobbers for the Southwest.

O. A. Lovejoy, manager of the talking machine department of the Southern California Music Co., in company with W. J. Raynard, traveling representative for the same firm, is making a trip in his new automobile visiting dealers in Burbank, Lankershim and vicinity.

E. A. Borgum, one of the oldest talking machine men on the Coast, is now located with the Wiley B. Allen Co., of this city. He has had a wide

experience in this line, being a pioneer salesman in Los Angeles, and was recently with the Eilers Music Co. in Seattle.

The Wiley B. Allen Music Co., of this city, is contemplating enlarging its talking machine department so as to occupy nearly the entire main floor.

A most economical little instrument is being placed upon the market by Geo. H. Hiles and Karl W. Thalhammer, of Los Angeles. It is economical because it saves nerves, time and money; besides this, it pays big dividends on the money saved in satisfaction and enjoyment.

At the end of a record every talking machine has to be stopped by someone or else a constant running of the machine, which might prove very detrimental to the record.

This new record-stop consists of a small battery concealed inside the cabinet part of the machine properly connected to a small apparatus used as a stop, placed at the back of the turntable with a small metal lever extended upwards, which touches the arm of the machine, thus making the contact and stopping the revolving of the turntable instantly at the end or at any desired place on the record. It is not complicated in the least and can be adjusted to all disc machines by any operator.

The retail price of this record-stop is very low and affords a good margin to the jobber and dealer. The advertisement of the record-stop in this issue of The Talking Machine World shows a cut to which this article refers.

VENDING MACHINES IN MEXICO.

United States Consul Marion Letcher, Chihuahua, writing of prospects for talking machines, self-playing pianos and other specialties, said:

"As to the steps necessary for the establishment of a slot-machine business in this city, and particularly as to the charges for license, etc., I find that machines for vending, weighing, etc., placed on the street or in any public place apart from a house of business pay monthly the equivalent of \$1 gold. Where a regular business is done, as, for example, such a general slot-machine business as is done in American 'penny arcades,' the charge varies from \$1 to \$5 monthly, the amount varying according to the number of machines up to the maximum charge of \$5.

"There appear to be in this city only two of the slot weighing machines. The owner informs me that he cleared the price of these machines the first month of their operation, they being then great novelties here, and that subsequently he has made a small profit each month. The same person is also the owner of eighteen kinetoscope slot machines.

"These, it appears, were purchased second-hand from a man who conducted here at one time a 'penny arcade,' which enterprise was very successful, and was only abandoned because of the expiration of the lease on the building in which the 'arcade' was conducted and the failure of the owner of the machines to secure a suitable substitute. I am of the opinion that a very good business could be established by setting up 'penny arcades' in different parts of Mexico."

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Special to The Talking Machine World.)

Washington, D. C., March 9, 1912.

PHONOGRAPH FOR DOLLS OR OTHER TOYS. Herman Ringel, Newark, N. J. Patent No. 1,015,587.

This invention relates more especially to phonographs designed to be placed in dolls or other toys, whereby they can be constructed in a manner so simple and inexpensive, as to be adapted to almost universal use in the production of articulate sounds, and especially short sentences or phrases of everyday speech.

In the accompanying drawings Figure 1 is a side elevation of an improved phonograph, showing the same in position in a dotted view of a doll. Fig. 2, is a front view of the phonograph, and Fig. 3 is another side view of the same.

SOUND REPRODUCER FOR TALKING MACHINES, TELEPHONES, ETC. William N. Hunter, Blanchester, O. Patent No. 1,015,622.

This invention relates to the new and useful improvements in sound reproducers for talking machines, telephones, etc., and is more particularly an improvement over former Patent No. 875,352, issued December 31, 1907, and the object is to provide means in connection with a sound receiving chamber for suppressing or eliminating all sounds other than the pure and finer tones produced by the diaphragm.

A further object is to provide means for intensifying the tone sound without affecting the quality of the tone.

A further object is to provide adjustable means for increasing or decreasing the intensity of the sound.

A further object is to provide means for preventing outside disturbances or noises from reaching the diaphragm, when the diaphragm is in use for reproducing purposes; and a further object is to provide means for adjusting the tension on the sound excluding or arresting mechanism.

Fig. 4 is a sectional view similar to Fig. 1, showing a slightly modified form of device, and Fig. 5 is a detail sectional view of a disk used in connection with the device shown in Fig. 4.

NEEDLE HOLDER FOR THE SOUND-BOXES OF TALKING MACHINES. Clarence Vogt, Berlin, Germany, assignor by mesne assignments to Victor Talking Machine Co., Camden, N. J. Patent No. 1,015,363.

This invention relates to needle holders for the sound-boxes of talking machines, and more particularly to needle holders or stylus bars of the kind in which the insertion and securing of the needle is effected without the employment of screws or similar fastening means. For this purpose such needle holders are provided with clamping means, in which the needle is held by friction so as to be capable of being freely changed, addi-

tional spring pressure being provided if required. The needle is secured in its correct position by the pressure of the sound box on the record, and the clamping means are preferably oppositely located in the bore of the needle holder, so that the needle is grasped and held at the upper end by one and at the lower end by the other clamping means. It may be understood that the invention relates also to needle-holders having in the usual manner screws for fastening the needle, eventually in combination with clamping places.

An important feature of the present invention consists in that a lateral longitudinally-extending slot is provided in the needle-holder near the clamping means, through which slot the needle can be conveniently introduced into and removed

from its operative position between the clamping means through the sides of the needle-holder, the said needle meanwhile moving parallel to its longitudinal direction. This lateral insertion of the needle presents the advantage that, for the insertion and replacement of the needle, a mechanical device can be

arranged whereby the needles are fed, moving parallel to themselves, into the lateral slot in the needle-holder, in the contradistinction to the known needle-changing devices in which the needles are moved along in the direction of their axes. The lateral insertion of the needle further presents the possibility of arranging the mechanical needle-changing device independently of the sound box and of its carrier-arm and of thereby relieving the sound box of the weight of the needle-carrying device. The needle-holder can be provided, on the side opposite to the inlet slot, with an additional slot which serves for the feeding out of the needles. This preferably takes place in such a manner that the new needle introduced

laterally into the needle-holder automatically pushes out the already used needle still in the holder at the other side.

A separate locking or holding device may, if desired, be provided on the needle-holder, this device being constructed in such a manner that it holds

the needle elastically in the normal position, but automatically opens by the lateral pressure when a needle is inserted and replaced. The locking or holding means for the needle when the needle-holder is made with two oppositely-arranged slots is formed in such a manner that when inserting a new needle the previously used one is thrown out of the holder by a spring.

In the drawing, Figure 1 is an underside view of a sound box which is pivotally attached to the sound box arm and which has a needle-holder provided with clamping means and lateral slots, and which has a retaining spring for the needle. Fig. 2 is a side elevation corresponding to Fig. 1. Fig. 3 is a side elevation of a sound-box and needle-holder with a lateral slot and spring, in combination with a device whereby the needles are fed out of a needle magazine to the lateral slot of the needle-holder. Fig. 4 is a plan of this device for changing the needles, with the sound box depressed. Fig. 5 is an oblique elevation looking from the front with the sound box swung up, and with the needle magazine and the needle-changing device in section. Fig. 6 is a rear elevation of the needle-changer. Figs. 7 to 9 show an example of construction of the needle magazine in different kinds of elevations, Fig. 7 being a side elevation with the front wall somewhat

drawn up, Fig. 8 a front elevation, and Fig. 9 a horizontal section of Fig. 7. Fig. 10 is a partial side elevation of a talking machine looking in the direction of the arrow A of Fig. 11. Fig. 11 is the plan corresponding to Fig. 10. Fig. 12 shows a sound-box with a needle-holder having two slots and an inserted needle in the operative position. Fig. 13 is an elevation of the sound-box looking toward the needle-holder. Fig. 14 is a transverse section on the line 1-2, Fig. 13. Fig. 15 is a plan corresponding to Fig. 13. Fig. 16 shows the needle-holder in section and similar elevation to Fig. 13. Figs. 17-20 show diagrammatically and to an enlarged scale how a needle is inserted into the needle-holder and the previously used needle removed. Figs. 21 to 23 are views of the needle-holder with two slots, in combination with a needle-changer in different operative positions of the latter. Fig. 24 is the corresponding plan and Fig. 25 a side elevation.

TONE-CLARIFIER FOR TALKING MACHINES. Frank Von Vleck Morse, Minneapolis, Minn. Patent No. 1,014,841.

This invention relates to improved means for clarifying and improving the tone of talking machines and other sound producers or reproducers.

The general object of the invention is to provide a device of this character whereby the volume of

the sound is increased without affecting the quality of the tone.

A further object is to provide means for preventing outside disturbances or noises from reaching the diaphragm, when the diaphragm is in use for reproducing purposes; and a further object is to provide means for adjusting the tension on the sound excluding or arresting mechanism.

A further object is to provide means for preventing outside disturbances or noises from reaching the diaphragm, when the diaphragm is in use for reproducing purposes; and a further object is to provide means for adjusting the tension on the sound excluding or arresting mechanism.

A further object is to provide means for preventing outside disturbances or noises from reaching the diaphragm, when the diaphragm is in use for reproducing purposes; and a further object is to provide means for adjusting the tension on the sound excluding or arresting mechanism.

A further object is to provide means for preventing outside disturbances or noises from reaching the diaphragm, when the diaphragm is in use for reproducing purposes; and a further object is to provide means for adjusting the tension on the sound excluding or arresting mechanism.

A further object is to provide means for preventing outside disturbances or noises from reaching the diaphragm, when the diaphragm is in use for reproducing purposes; and a further object is to provide means for adjusting the tension on the sound excluding or arresting mechanism.

A further object is to provide means for preventing outside disturbances or noises from reaching the diaphragm, when the diaphragm is in use for reproducing purposes; and a further object is to provide means for adjusting the tension on the sound excluding or arresting mechanism.

A further object is to provide means for preventing outside disturbances or noises from reaching the diaphragm, when the diaphragm is in use for reproducing purposes; and a further object is to provide means for adjusting the tension on the sound excluding or arresting mechanism.

sound will be increased, the tone clarified and the enunciation made more distinct and natural.

Another object of the invention is to provide a clarifier for this character which will be simple and inexpensive in construction and efficient in operation, and which may be quickly and easily engaged with and removed from its operative position.

Fig. 4 is a detail perspective view of the clarifier.

STOP MECHANISM FOR PHONOGRAPHS. Oscar W. Hartung, Detroit, Mich. Patent No. 1,016,563.

This invention relates to means for stopping the record-supporting table of talking machines after they have made a predetermined number of revolutions, and its object is to provide a stop mechanism which can be set for any desired number of revolutions within its range without the necessity of altering the adjustment of any of its parts, but by merely positioning an indicator for the number of revolutions desired.

This invention consists, in combination with a spring actuated brake adapted to engage the supporting table of a sound reproducing instrument and a lever to hold same in inoperative position, of a graduated dial, a pointer adapted to be swung over the dial to indicate the number of revolutions, a notched disc against which the lever presses and which holds the lever outward until the predetermined number of revolutions have been made by the table, a toothed wheel to turn the notched disc and pointer, and an operating device to actuate the toothed wheel, which device is operated by the mechanism which revolves the table that is to be stopped.

In the accompanying drawing Fig. 1 is a plan of the stop mechanism, a portion of the dial being broken away for clearness. Fig. 2 is an elevation of the same with the case broken away.

TALKING MACHINE. John C. English, Camden,

N. J., assignor to the Victor Talking Machine Co., same place. Patent No. 1,016,255.

The main objects of this invention are to provide a talking machine having an inclosed cabinet provided with a plurality of openings, and an amplifier in the cabinet and adjustable to register

with any one of said openings; to provide a talking machine inclosed in a cabinet having a sound outlet in one side thereof and which is adapted for convenient operation in a corner of a room or in a similar position; to provide a compact, inclosed talking machine having a comparatively large storage space for records and comparatively large and efficient sound amplifying means; to provide a talking

machine, constructed in accordance with this invention; Fig. 2 a rear elevation partly in section of the same; Fig. 3 a side elevation of the same partly broken away to show the amplifier; Figs. 4 and 5 a rear elevation and a fragmentary side elevation partly in section of the upper portion of the same, showing the rear door thereof open; Fig. 6 a fragmentary horizontal section on the line 6-6 of Fig. 2, and Fig. 7 a side elevation partly in section of the amplifier.

RECORD FOR TALKING MACHINES. Eldridge R. Johnson, Merion, Pa., assignor to the Victor Talking Machine Co., Camden, N. J. Patent No. 1,016,271.

Heretofore in the manufacture of flat disc records for talking machines it has been the practice to stamp out the record discs from a suitable material by means of a die containing a matrix upon the surface of which has been engraved or otherwise placed the record grooves, which grooves, in connection with the sound box are adapted to reproduce the sounds impressed upon the original record. The record discs formed by so impressing the matrices have usually been of some durable material which softens under the influence of heat, but which is hard and firm under normal conditions of temperature. The material usually employed for making these records has been in the form of flat sheets which have been of uniform thickness throughout the entire extent of the disc with the possible exception of the central portion, where the label has been impressed or countersunk into the material during the pressing or forming of the record. This material, in many instances, has been the substance called "duranoid," which consists of shellac and certain other coloring pigments and strengthening ingredients. Other similar materials which have been used are hard rubber and celluloid. It will be realized that these

machine having a sound amplifier provided with an outlet in a casing, and in which means are provided to deflect the vibrations transmitted from the side of the amplifier upwardly or in a direction different from that in which the vibrations are delivered from the outlet of the amplifier.

In the accompanying drawings Fig. 1 is a front elevation of a talk-

compositions are expensive when used in large quantities, especially in view of the fact that talking machine records now employed in this art have been steadily increasing in size.

The object, therefore, of this invention is to produce a record which may have all the advantages of a flat disc record of uniform thickness, but which will at the same time be much lighter and therefore less expensive in original cost and also will be easier to handle and less expensive in transportation either by mail, freight or express.

A further object of the invention is the production of a record which will have strengthening means applied in such a manner as to give a stiff and firm backing for the reproducing surface without the necessity of employing the larger amount of material required in a disc record made entirely of duranoid or other similar substance.

Briefly, this invention comprises a disc record having upon its under side a metallic plate or backing made in different forms so as to retain the record material firmly in position and at the same time, to protect the record material from injury to which it would otherwise be liable owing to its reduced thickness. The metallic backing may also extend across the central portion of the record not occupied by the record grooves and may form a centering means for the record when placed upon the turntable. The central portion of the record may also be occupied by an independent disc of metal or other material which forms the centering means and which is fixed in position during the stamping or forming process.

Fig. 1 is a reverse plan view of a talking machine record having the strengthening plate applied thereto. Fig. 2 is a transverse sectional view of the form of record shown in Fig. 1 and Fig. 3 is a transverse sectional view of a modification showing the centering disc placed in position independently of the metallic backing.

OPENS TALKING MACHINE STORE.

I. M. Bame, Former Victor Co. Traveler, to Handle That Line at Retail in Atlanta, Ga.

(Special to The Talking Machine World.)

Atlanta, Ga., March 4, 1912.

I. M. Bame, who has been well known to Atlanta for a number of years as a traveling representative for the Victor Talking Machine Co., has severed his connection with this company and will go into business for himself here.

He has organized the I. M. Bame Co., which will occupy commodious quarters at 72 North Broad street, where the most elaborate talking machine parlors in the South will be opened about February 22. Mr. Bame will handle the Victor line exclusively.

You would object to another placing a limit upon your business ability. Why place any upon your own?

TO AMEND COPYRIGHT LAW

In So Far as It Applies to Moving Picture Shows.

(Special to The Talking Machine World.)

Washington, D. C., March 6, 1912.

Representative Edward W. Townsend, of the Seventh New Jersey District, has introduced a bill annulling the copyright law so far as it applies to moving picture shows. The measure, according to Mr. Townsend, afforded ample protection to the owners of copyrights and "is designed to prevent strike suits." Discussing his measure Mr. Townsend said:

"As the law stands to-day, if the proprietor of a moving picture theater exhibits a film made from a copyright story he is liable to a penalty of \$100 for the first performance and \$50 for each subsequent performance. As there are usually at least six performances daily at which the same film is thrown on the screen, the proprietor of a moving picture theater is liable to a penalty of \$350 if he used a scenario from a copyrighted story. As there are produced from forty to fifty reels for

each film made, it can readily be understood that strike suits may bring ruin to the moving picture business.

"My bill provides that if suit is brought for the violation of a copyright the proprietor of a moving picture theater must prove that he had no knowledge of the existence of copyright in the story on which it was based and had no reasonable means of ascertaining that copyright existed. The burden of proof is upon the violator of the copyright. If he can prove innocence he must pay one penalty only, provided he ceases upon notification to continue the performance. Should he fail to heed the notice he is still subject to the penalties provided in the present law. At the same time it is specifically stipulated that a plea of innocence shall not be considered in any case where a drama or play has been produced is concerned."

NEW RECORD ENVELOPES

With Novel Features in the Way of Publicity
 Sent Out by the Victor Talking Machine Co.

The Victor Talking Machine Co., of Camden, N. J., is now shipping all records in the new record envelopes, which are made of substantial craft paper. On the backs of the new envelopes the Victor Co. is advertising a list of 248 new records, divided so there will appear on the back of each ten-inch and twelve-inch double faced record envelope about twenty records, and on the back of each single faced envelope from fifty to sixty records.

This new advertising departure is bound to create a heavy additional demand for the records listed. The company has very carefully divided the records into special classes for the convenience of Victor owners, and it goes without saying that if these records are called to the attention of Victor purchasers it will greatly increase the sales of these particular selections.

The Victor Co. is also sending to the dealers two new special order sheets, one for the records listed on the new envelopes containing the titles of the entire 248 selections, and one in which are listed the Victor records in French, Italian, Spanish, Portuguese and Greek. The records shown on the foreign order sheets are also listed in the January General Record. With these records the dealer is well equipped to go after the foreign population, most of whom are great lovers of music and to whom the music of their native land in their native tongue would strongly appeal.

ERA OF "GOOD FELLOW" IS PASSED.

Being Popular Is All Right in Its Way, but
 Does Not Add to the Bank Account.

Being "a good fellow" may make one "popular," but it does not add to the bank account. Successful merchants are rarely ever "mixers." Most of them are dignified, courteous and cordial to a degree, but they always maintain a certain amount of reserve. Many of the successful ones are undeniably cold, gruff and unapproachable.

There is a very good reason for the failure of the too-genial man in merchandising. Good nature is usually imposed upon. The jolly man, the cordial man, may be liked, and even admired, but he does not command such respect as does the man of

reserve. Folks like to meet socially the "good fellow," but they prefer to do business with the serious man. Too much cordiality does not go with executive ability. The man capable of driving a business to conspicuous success is seldom a "mixer." Though he be gruff, he is usually honest; he renders his customers superior service; he gives them a square deal all the time; his establishment serves them so well that they recognize through it his superior business ability.

THE "VELVET TONE" NEEDLE BALANCE.

Of the many devices evolved for the betterment of tone reproduction, the article which is known by the above descriptive title certainly calls for great praise. It is an American production, and is made to fit all machines fitted with a detachable goose-neck. The idea of the "Velvet Tone" Needle Balance is to counterbalance the weight of the sound box, thus permitting the needle to float more freely, and reducing friction and wear on the record considerably. The method of fixing and working this device is best conveyed by the illustration. Easily and quickly fixed, this ingenious invention does not in any way hold the sound box rigid, and the swivel goose-neck is as free in movement as without it. Letter A indicates the counterbalancing weight which, by releasing a screw, will slide up and down the lever, the other end of which passes under and supports the sound box just so much according to the adjustment of the weight.

We have personally tested the "Velvet Tone" Balance, and must say that the manufacturers' claims are not in any way exaggerated. It is a most excellent and useful invention, one of real merit, and we can thoroughly recommend it as being a line which will appeal very strongly to the gramophone enthusiast. Terms of trading, literature, and other particulars may be obtained direct from Mr. A. D. Macauley, Columbia, Pa., U. S. A.—The Talking Machine News, London, England.

VICTOR RECORDS BY SIROTA.

The recent visit to the United States of Cantor G. Sirota, the famous Cantor of the Warsaw synagogue, whose reputation extends throughout Russia and in fact throughout the world, attracted special attention in this country owing to the statement made to the effect that though the Cantor possesses a voice said to rival Caruso's he has steadily refused to appear in grand opera, despite the flattering offers made him. When the Victor Talking Machine Co., therefore, announced that it had secured the services of Sirota for the purpose of making Victor records, the announcement received the attention it deserved. In the March list of the Red Seal Victor records there are four by the Cantor, all said to reproduce his unusual quality of voice with remarkable faithfulness.

The man who wins is the man who is ready and is willing and is working. Complaining may make lots of noise, but does no more towards making things go than the steam that escapes from the crevices of the boiler.

Don't get into a groove and stay there, even if it is easy. Easy things are not the best things.

"If it's made we ship it the same day order is received"

This is the way we are reaching boys and girls all over the country, by extensive advertising in St. Nicholas, American Boy and other youngsters' publications.

Band! Come on Boys!

If Sousa's Band came marching down the street you'd be out and after it in half a minute. The chances are that Sousa's band *won't* come down your street, but you can hear it just the same—as often as you like—on your

EDISON PHONOGRAPH

— not only Sousa's, but other great bands, such as the Garde Republicaine Band, U. S. Marine Band, and New York Military Band. And band music is only one of the many kinds of entertainment that the Edison has in store for you.

Think of hearing Harry Lauder in one of his droll Scotch songs, Victor Herbert and his orchestra playing one of the pieces for which they are famous, Nat M. Wills telling a funny story, Slezak singing a great aria from opera, and all the other best artists in every line, *whenever you want them*. And think of the fun of making records yourself. That's what it means to own an Edison Phonograph—entertainment for every member of the family—entertainment that you never tire of and that never tires.

Write us, to-day, for a catalogue and complete information.

Edison Phonographs from \$15 to \$200; sold at the same prices everywhere in the United States. Edison Standard Records 35c; Edison Amberol Records (play twice as long) 50c; Edison Grand Opera Records 75c to \$2.00. We have a large, handsomely illustrated catalogue showing all types of Edison Phonographs, with descriptions and prices, which we will send free to any boy or girl who will write for it.

TALKING MACHINES OF FORMER AGES.

Ancestors of the Present Creations Were Wonderful and Intricate Contrivances, But Without the Scope of the Modern Machine—Some Interesting Facts.

By MILTON GOLDSMITH.

The talking machine, a thing of yesterday, has already become a necessity in the social and commercial world, and has been so perfected and simplified that one may be bought for a trifling sum. About thirty years ago the world first heard the announcement that the Wizard of Menlo Park had found means of perpetuating the human voice and of taking an indelible record of the slightest variation of sound. It sounded like some fantastic fairy tale, beautiful but visionary, until at length Edison's first uncouth effort was exhibited and the world stood in mute surprise. Since then the phonograph has undergone such vital changes as to be scarcely recognizable from the cumbersome, uncouth, tin-foiled cylinder of former days. It has become a vast industry and gives support to an army of men.

It is interesting to note the wonderful contrivances that have preceded the phonograph. From the earliest time of which the world has any record have men striven to imitate the human voice, and many have been the efforts to construct a machine which would articulate or play upon musical instruments. Ancient magicians devoted much of their time in devising apparatus calculated to startle their unsophisticated audiences, and found in the wonderful properties of acoustics a fertile field for their ingenuity.

In the labyrinths of Egypt, which, as historians tell us, contained 1,500 subterranean apartments, the gods were heard to speak in tones of thunder, and Pliny informs us that the doors of some of the palaces were so constructed that when they were opened peals of thunder were heard. It is possible that modern theater methods of producing thunder were resorted to in this case, although historians are silent on the subject.

More remarkable as acoustic contrivances among the ancients were the singing or speaking heads which were supposed to be inspired by the gods and were worshipped as oracles. The speaking head of Orpheus, which became celebrated as the oracle of Lesbos, was known not only throughout Greece, but even in remote countries, and to it was accredited the predicting of many bloody tragedies. Odin imported into Scandinavia a head encased in gold, which was supposed to have been that of the sage of Minos, and which uttered responses and made many wonderful prophecies. In the thirteenth century Albertus Magnus invented a head which not only moved, but talked in a rational manner. It was made of earthenware and the mechanism was marvelous, if we can credit the authority of such a man as Thomas Aquinas.

There is little doubt that many of these so-called speaking machines owed their powers to ventriloquism. The priests of Egypt and Greece were obliged to perform a certain number of miracles daily for the benefit of their lagging followers and all manner of schemes were resorted to to impose on their credulity. It is also probable that pipes or tubes conveyed the sound from a living person through the mouth of the figure and thus made it appear gifted with articulate speech. Theopilus broke one of the Alexandrian speaking statues into pieces and found it hollow and so constructed that a man might conceal himself within.

During the seventeenth century a successful attempt was made to produce an automaton which would really talk. The Academy of Science of St. Petersburg offered a prize for the construction of the instrument which would utter the vowels, and many were the inventors who gave their ingenuity to the subject. Mr. Kratsenstein won the prize by devising an instrument consisting of reeds so shaped that the vowels were distinctly recognizable

when air was blown through the apparatus. Mr. Kempelen, of Vienna, continued experiments on the lines which Kratsenstein had originated. He successfully contrived a hollow box so arranged as to represent human jaws. By a series of reeds and by controlling the movements of these jaws he not only produced the vowels, but a number of consonants as well. By means of these he could combine syllables, such as papa, mamma, etc. Finally, by imitating the human glottis and palate by the aid of elastic gum and by adding a nose of metal, communicating with the jaws much as in the human being, he produced some very creditable conversation. Some very intricate sentences were uttered by the machine. When any word or phrase was desired by the audience the inventor would place his hand into the box and by manipulating certain levers would slowly and laboriously bring forth the desired utterance. When the machine was exhibited in France a modification of the nose was required to enable it to speak with a French accent. The machine was never fitted up as a human figure, although that was the inventor's original idea.

Many years later Mr. Willis, of Cambridge, improved on Kempelen's experiments and devised an apparatus which did not need the introduction of the hand to produce the variations, but in which the same result was obtained by a sliding lever from the outside.

In 1835 the world was startled by the invention of a talking machine which went by the name of "The Invisible Girl," and which for a long time baffled all attempts at solving. This machine not only repeated whatever the audience desired it to say, but answered questions and gave descriptions of persons addressing it. That some trickery was employed was evident from the start, but it was years before the mystery was solved. We are indebted to Brewster's letters on natural magic for a detailed description of this ingenious device. Four upright posts were united at the top by cross pieces, forming as it were, the skeleton of a table. Four bent wires proceeded from the top of these posts and, forming an arch a few feet overhead, the ends were joined by a copper ball. From the ball, suspended by a string, hung four metal trumpets, forming a right-angled cross, the mouths of these trumpets being right on a level with the cross pieces. The apparatus could be examined, but the complete absence of machinery and its extreme simplicity baffled all attempts at discovery.

The spectator was requested to ask a question by placing his mouth near one of the trumpets. An appropriate answer was then heard issuing from all four trumpets. The machine talked in any language, and the replies were usually very oracular and suggested a power almost superhuman. It was evident that the wires or string could not conceal anybody and the mystery grew. The explanation of this prodigy was very simple. One of the legs of the supporting stand was hollow and communicated through a hole in the floor with a speaking tube to a distant room. The cross beams were also hollow, and the voice from the invisible girl was conveyed through the tube right against the mouths of the trumpets and thence reflected out into the ears of the person listening.

There have been some wonderful acoustic automaton invented in past years which would put our modern ingenuity to shame. Sheep that bleated, dogs that barked and birds that sang were frequent toys in France during former centuries. In 1736 Mr. Vaucanson produced a very wonderful automaton called the "Flute Player." This contrivance, which was life sized, played the most intricate and

beautiful selections on an ordinary flute without the aid of human hands. A metallic roller containing pins supplied the motive power and bellows the wind. The mechanism must have been exceedingly intricate. This was followed in 1741 by another figure called "The Pipe and Tabot Player," and excited great curiosity, King Louis XVI. himself taking a hand in its construction.

How intricate all these contrivances appear by the side of our exceedingly simple Victrola. Here the human voice is impressed upon a hard rubber-like disc creating a series of indentations and depressions. When the needle attached to a sensitive diaphragm is made to repress these identifications, the resulting vibrations to the diaphragm give vent to the same sounds which at first produced them. No intricate wheels or bellows, no imposture on the part of the exhibitor—simply a law of nature thoroughly comprehended and brought to a stage of perfection by great inventors. That this apparatus should reproduce not only different sounds, but the minutest variations of sound and quality of tone is certainly marvelous, but so accustomed have we become to marvels of this kind that we are no more startled when we hear a bit of mechanism reproduce the voice of Caruso, Tetrassini and a host of popular operatic stars, the inspiring music of the world's greatest bands or the rendition of the latest ragtime or music hall successes. How the Greeks or Egyptians would stare in amazement could they hear our own Victor talking machine utter sentences which, with all their supernatural backing, their talking heads were never able to accomplish.

TO HANDLE TALKERS IN CANTON.

Complete Victor Department to Be Installed in Store of W. F. Frederick Co. in That City—To Be Run Through Cleveland Store.

(Special to The Talking Machine World.)

Cleveland, O., April 9, 1912.

The W. F. Frederick Piano Co. is giving large display space and dividing attention between the piano and talking machine business. Norman H. Cook, manager of the talking machine department, said: "Our business in Cleveland is still building up satisfactorily on the very solid foundation of satisfied machine and record customers. The company is about to install the talking machine line in the store at Canton, and plans for a very complete department have been given the contractor. We expect to have it installed about May 1, and will carry a complete line of Victrolas, Victor machines and Victor records. I will handle the Canton store in connection with the one here in Cleveland. Miss Gast, now in the Canton store, will look after the department locally there."

TRADE INCREASED FIVEFOLD.

(Special to The Talking Machine World.)

Washington, D. C., April 9, 1912.

Some interesting figures which show the progress that the United States is making in this decade in manufactures appears in a final summary of the census of manufactures showing the totals, the number of establishments, the output, and the States and cities that lead in manufacturing activities. The grand aggregate of manufacturing output for 1909, the year of the manufacturing census, was \$20,672,052,000, an increase of 39.7 per cent. over 1904, when the last previous census of manufactures was taken. This is almost a doubling of output in ten years, the total for 1899 having been \$11,000,000,000.

In the talking machine industry there are interesting data to be observed.

The manufacture of talking machines increased fivefold from a total value of \$2,246,374 to \$11,725,000. The number made five and ten years ago was not taken in the censuses of those years. The manufacture of records now constitutes 42.7 per cent. of the business.

CONDITIONS ON THE PACIFIC COAST.

Trade for March Exceeds Expectations—Improved Weather Conditions Have Helped to Cause a Feeling of Extreme Optimism—Leading Houses Making Extensions and Improvements—Byron Mauzy Featuring Victor and Columbia Records—Recent Visitors of Note—Big Demand for Victrolas at Sherman, Clay's—Pacific Phonograph Co.'s Big Trade for the Edison Goods.

(Special to The Talking Machine World.)

San Francisco, Cal., April 6, 1912.

Talking machine dealers, both wholesale and retail, report last month's business the best in their experience for the month of March, and the critical condition noted at the end of February has given place to a feeling of extreme optimism all over the Coast. The drouth, which had caused a temporary interruption of business, was broken several weeks ago, and the rain was followed by a resumption of buying on an even larger scale than had been expected. The present prosperity and high expectations of the trade are well illustrated by the great improvements recently made in departments in San Francisco and other Bay cities, and the numerous new dealers who are starting in outside towns. It seems safe to say that more attention is given to this line by the music trade than ever before.

The progressive policy of the Columbia Phonograph Co., Gen'l, and the marked improvement made in its machines within the last year or two have resulted in a rapid gain in business in the Pacific Coast district. Local stores specializing on Columbia goods are putting in facilities for increased business, and several firms, who have formerly handled only other lines, have recently made arrangements for large stocks of Columbia goods. Among the most prominent of these are Byron Mauzy, Benj. Curtaz & Son and Clark Wise & Co.

Clark Wise & Co., who have been doing business in a rather desultory way for some time past, have rearranged their quarters, installing a large and well-appointed talking machine salesroom and a large stock of Victor and Columbia goods, this part of the business being under the personal supervision of R. H. Wise. They have already picked up quite a lot of business, and are sending out 50,000 circulars featuring the Columbia machines, from which they expect immediate results.

Byron Mauzy has just completed the new talking machine rooms in his building, and held a formal opening for the department on Thursday evening of this week, when the new records for April were played before a large and appreciative audience. In addition to the complete Victor line, which he has handled in the past, he has taken on a large assortment of Grafonolas. His demonstration rooms are the largest in the city, as he is con-

vinced that the average demonstration room is too small to give the best results. Herman Beck, for several years with the local store of the Columbia Phonograph Co., Gen'l, and lately with Sherman, Clay & Co., has been engaged to look after the work of the department. Mr. Beck's energy and ability in this line are well known, and he is expected to build up the department to a point never before reached. A special recital, similar to that of this week, will be held every month when the new records come out, this being the first house in the city to adopt this method of advertising. The first recital was a great success, resulting in some good sales the following day.

Benj. Curtaz & Son have been making a prominent feature of the Grafonola for the last month, making a display of these machines on the ground floor, and report many sales resulting from the new departure.

Geo. W. Lyle, general manager of the Columbia Phonograph Co., Gen'l, arrived here early in March, accompanied from Los Angeles by W. S. Gray, the Coast manager. Mr. Lyle left for the East about the middle of the month. Mr. Gray is preparing to make another trip South about April 15, planning to go as far as San Diego, where the rapid growth of the business merits special attention. Mr. Gray says the new double record, containing "King Chanticleer" and the "Houn Dawg" song, has aroused more enthusiasm than anything he has seen in a long time, orders for it being far larger than can be filled promptly.

E. W. Scott, who operates the graphophone department at the local Kohler & Chase store, has been unable to get into his new rooms on the mezzanine floor as expected, owing to delay in delivery of the glass for the walls. The rooms are now complete, however, and the removal will be made at once.

The J. Raymond Smith Co. has its new talking machine store at the Harbor View Exposition site well established, M. E. Dietrich being in charge. Mr. Smith is well pleased with the start made, but looks for an enormous growth when work on the exposition grounds and buildings is fully under way.

Andrew G. McCarthy, of Sherman, Clay & Co., returned about three weeks ago from his Northern trip, where he found everything in very satisfactory shape. He looks for an active summer in the Victor line, and says the March business has been the best in his experience, with large sales of the more expensive Victrolas.

George Ornstein, traveling from the Victor office, was in San Francisco a few days ago.

The Wiley B. Allen Co. has just about completed the new elevator in its talking machine department and is fitting up some new rooms in the basement. The increased accessibility of the demonstration rooms is expected to keep them much busier than

formerly, though the former facilities were rather crowded before the changes were started.

The employees of the graphophone department of Kohler & Chase in Oakland are preparing to go on a picnic next week. J. W. Clancy, manager of this department, is enthusiastic over the recent gain in the Oakland business, particularly on the higher-priced Grafonolas.

J. E. McCracken, traveling for the Pacific Phonograph Co., of this city, has just left for a long trip in southern Oregon and the northern coast. A. R. Pommer, head of this company, reports a great deal of inquiry regarding the new Edison kinetoscope. A number of talking machine dealers from southern Oregon have visited the Pacific Phonograph Co. recently to look over the new goods and place large orders for their summer trade. This company has just put into service a large motor truck to handle goods between the warehouse and the freight sheds.

The Ralston-Collier Co. at El Centro, Cal., has put in a full line of Victor goods, and expects to build up a big business in the Imperial Valley.

The Yakima Music Co., of North Yakima, Wash., is improving its sheet music and small goods departments, and is prominently featuring the Grafonola, though all the leading lines of talking machine goods are carried.

Fred Huffaker, of Visalia, Cal., has just received the largest shipment of talking machine goods ever received at that place, consisting of all lines of Edison machines, records and supplies, on which he is starting a strong selling campaign.

LOS ANGELES "TALKER" MEN MEET.

Los Angeles Talking Machine Association Holds First Dinner and "Get-Together" Session—New Organization Proves Popular.

(Special to The Talking Machine World.)

Los Angeles, Cal., April 6, 1912.

The first meeting of the Los Angeles Talking Machine Association took place in the form of a banquet at the Hollenbeck Hotel, Tuesday, March 19.

This being a "get-together" meeting it was well attended by some sixty representatives from all the principal music firms of the city. A. G. Farquharson took charge of the affair, and through his efforts arranged a thoroughly delightful dinner.

After the repast future "ways and means" were discussed and a committee appointed to arrange details.

The Los Angeles dealers are to be congratulated on their success in starting this social organization, where, as pointed out by several of the speeches, many are enabled to meet their fellow dealers and salesmen whereas formerly they were practically unknown to one another.

Victor-Victrola

The best medium of the
world's best music

As such it is acknowledged by the musical public, and as such it enjoys a commercial supremacy that is assured.

The combination of the most perfect musical instrument that the world has ever heard, with constant and convincing advertising is an invincible one, and the sensational success of the Victor-Victrola in the past is but a hint of its greater future.

Hand in hand with the commercial triumphs of the Victor-Victrola has come a prosperity to the music trade, never before thought possible.

The modern, luxurious salesrooms of Victor dealers all over the United States tell the story of Victor success better than words can describe it.

And the powerful Victor organization is back of every Victor dealer helping him to increase his profits and his prestige.

MARION DORIAN SPEAKS ON TARIFF.

Treasurer of the American Graphophone Co. Appears Before the Finance Committee of the Senate for the Purpose of Protesting Against the Placing of a Tax Upon Copal Gum and Gum Shellac—His Contentions.

Among those who took an active part in the recent fight before the Finance Committee of the Senate against the provision of the House Chemical Schedule that proposes to place a tariff upon copal gum and gum shellac, at present on the free list, was Marion Dorian, treasurer of the American Graphophone Co.

In his address before the committee Mr. Dorian stated that both copal gum and gum shellac enter largely into the manufacture of talking machine records and that the American Graphophone Co. had expended a large sum of money trying to find a substitute, but nowhere in the world except in the Far East can this be found. It cannot be produced in this country. He said that in the manufacture of talking machine records of the disc type shellac forms a very important ingredient. Copal gum is also used in some makes of records. In this particular industry, he said, it is clearly demonstrated that no substitute can be employed in place of the shellac and the same is true of the copal gum in the case of records employing it.

Mr. Dorian also said it was evident that no American industry was to be benefited by the imposition of this tax, but, on the other hand, he thought a handicap would be imposed upon the American industries manufacturing the articles enumerated, because the arts mentioned are common to several important foreign countries, with the manufacturers of which our American manufacturers are in constant and keen competition, not alone for the home market, but international markets as well. These foreign manufacturers, he said, already have a very substantial advantage over the American manufacturer, due to the fact that they are nearer the source of supply and profit

by a much cheaper transportation rate, speedier delivery and less depreciation in transit.

"If we add to the handicap already referred to the additional burden of a specific duty on articles which enter so largely and indispensably into American manufacture we shall unquestionably discriminate in favor of the foreign competitor," he said. "We think the discrimination should be in the opposite direction if there be any means of accomplishing it. There is no doubt in the minds of the American manufacturer that the imposition of this duty will greatly encourage the importation of British and German made goods, which will do serious injury to the American manufacturer without benefit to the American consumer."

The speaker stated that his company had a large factory located in the city of Bridgeport, where they employed upwards of 1,500 people, and another in the near vicinity of London, England. Fifty per cent. of the product of the Bridgeport shop, he said, was records. He said that if this useless tax on their raw materials became a law it would be necessary for his company to transfer all of their record work to their London shop in order to compete with the foreign manufacturer. He said that about 30 per cent. of their product was exported under present conditions.

FEATURING THE CARUSO RECORDS.

How the Wanamaker Store Calls Attention to the Famous Victor Records in Its Local Advertising—Telling a Story That Means Something, and in an Interesting Manner.

The high class of the Wanamaker advertising, whether it be devoted to cravats or player-pianos, is generally conceded, for both the text and the manner of presenting it is not only original, but decidedly interesting and pleasing. In other words, the story each day is presented in a thoroughly readable manner, and the reader does not feel that his time has been wasted in the perusal of the advertisement. The method of calling the atten-

tion of the public to the line of pianos handled by the store, and particularly to the various desirable features of the Victor talking machine and Victor records is unique. The story is told in the column immediately adjoining the regular display announcement, and its character may be understood from the following treatise on the Victor records by Caruso, which appeared recently:

"When Caruso sings at the Metropolitan seats are at a premium. A long line of people willing to pay for the privilege of standing throughout the opera stretches from the box office, and whoever has not secured tickets in advance has small chance of hearing the greatest of living tenors.

"When Caruso sings in the Wanamaker Auditorium, comfortable seats are plenty, and they are free to everyone who cares enough to hear him to come take them!"

"It is true that the actual physical presence of Caruso is not here.

"But it is not that that brings high prices and great crowds to the Metropolitan.

"It is his magical voice—a voice without a flaw, with marvelous depths of feeling and heights of emotion. A voice with wonderful tears and laughter in it, and with such musical qualities as no other tenor voice on earth possesses.

"And this golden voice of Caruso's is heard in the Wanamaker Auditorium just as truly and just as really as it is heard at the opera!

"The records of this great singer's voice on the Victrola are the most perfect the Victor Company makes.

"Some voices may occasionally rasp, or thin out, or flaw. Caruso's never. It is full-rounded, clear and vital.

"It may seem trite to talk about anything so well known as the emotional qualities of Caruso's voice, but it is important to add that his enormous ability to enter into every air he sings is marvelously demonstrated in these Victor records. Passion, love, grief, scorn, anger, mirth, are poured forth as convincingly as they ever are on the stage.

"To hear a Caruso record on the Victrola is to hear the great singer at his best.

"Caruso's voice sings in the Wanamaker Auditorium every morning at 11 o'clock, at Victrola recitals.

"So does Fames's and Melba's, Farrar's, Scotti's, Homer's, Journet's, Alda's, Amato's and Calvé's.

"These are all new records, and even though you have a Victrola you have not heard these unless you have gotten the new records for March.

"The recital begins at eleven each morning. Twenty-eight numbers are given, with piano accompaniment."

NEW TALKING MACHINE MOTOR

Being Introduced to the American Trade—It Is Made Under a New Construction Called the Hydra-System.

We have just received from one of the largest German manufacturers of talking machine motors a new construction called Hydra-System, which appears to be of the greatest interest to the trade and to the public, and on which a patent has been applied for in the United States.

One of the advantages of the "Hydra" construction is that it avoids all the discrepancies which on any make of talking machine takes place in case of breakage or defect of the spring or spring box. In this connection the manufacturers say: "On Hydra motors a child can repair any of such defects within thirty seconds by exchanging the detachable spring box by another one. By selling such complete spare spring boxes, which are supplied at a special cheap price to the trade, a decent profit to dealers and factors is secured. By these means the proprietor of a talking machine with Hydra motor can do such repairs by himself, practically without an interruption in using the machine, without sending the machine away, without taking the motor out of the cabinet, or without taking the motor to pieces, and without using any tools, simply by loosening one or two nuts. It is, of course, very practical to put in order again the defective spring box.

"The Hydra motors are to be supplied in several models, at all prices, with one or two spring boxes, all of a solid construction, first-class workmanship, nickel plated. Of the greatest importance are the Hydra motors to all firms building up their own talking machine models, because all these different models of the motors require for fastening the very same holes in the cabinets. By this means any cabinet, once bored, can be fitted with any Hydra motor which is required."

The illustrations and data in the company's advertisement on page 42 of this issue are worthy consideration. For further details, quotations, catalogs and samples of motors, other accessories required for self-building the machines, and for complete machines it will be well to apply direct to the manufacturers, the Triumphon Co., Ltd., Berlin, S. W., Kreuzbergstr. No. 7 H.

Geo. F. Herrling, 1309 East 75th street, Chicago, Ill., has recently opened up as a dealer, handling the U-S Phonograph Co.'s line.

Won't You Have a Lesson in Spanish?

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph—made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

MRS. FRANCES E. CLARKE'S LECTURE.

Speaks Before the Annual Session of the Public School Musical Supervisors—Also Met the Executives of the St. Louis Schools During Her Visit—Entire Affair Was Most Interesting and Educational.

(Special to The Talking Machine World.)

St. Louis, Mo., April 8, 1912.

Mrs. Frances E. Clark, director of the educational department of the Victor Talking Machine Co., who was here in February to attend the National Convention of School Superintendents, returned recently to participate in the annual sessions of the Public School Musical Supervisors. By good fortune the musical meeting was coincident as to dates and hotel with the National Mother's Congress, and Mrs. Clark also interested the members of the latter organization in the talking machine as an educational instrument and appeared before the convention to talk on "The Education of the Child Before School Age."

Mrs. Clark's March errand in St. Louis was vastly different from that of February. As was told in *The World*, she was doing pioneer work among the superintendents, showing those who had heard but doubted and further convincing those who had permitted limited use of the machines in their schools. But at the musical meeting she was among those who, for the most part, knew and appreciated the value of the talking machine and who knew and believed in Mrs. Clark. For Mrs. Clark was for many years in public school work and she had been meeting with some of the persons attending this meeting in State associations for 20 years. Last year, soon after she took up the Victor work, she appeared on the program of the Musical Supervisors with her machines and gave an extended and explanatory talk. This year such a talk was not needed. Her mission was largely to display new records, show the progress the Victor educational department has made toward meeting school requirements and how much has been done toward making the kindergarten work come up to the ideal by presenting Mother Goose and other childish classics through the highest type of human ability, ability that the ordinary school teacher cannot hope to rival, for if she could larger salaried fields would claim her.

However, the talking machine did not go without a champion on the program, as it was referred to by several speakers, and W. Otto Miesner, of the Oak Park (Ill.) schools went into his profitable experience with the machines rather thoroughly. He has seen to it that an abundance of machines have been provided in his schools and that he has funds for the purchase of needed records.

Mrs. Clark's connection with this organization is very intimate, as five years ago she was one of the organizers and served as the first chairman. She was then connected with the Milwaukee schools, where she was for eight years in school work. Last year the official badge of the supervisors was a dainty bronze pin supplied with compliments of the Victor Co. at the suggestion of Mrs. Clark. These pins were saved and worn by the members this year, without the ribbons which

marked them as being for the Detroit meeting. The centerpiece of the pin is a picture of Lowell Mason, father of music in the public schools. This year Mrs. Clark noticed that none of the school authorities had caused to be printed a roster of those attending the meeting, and she had a list of delegates printed and distributed with compliments of the Victor Co. She participated in several discussions on the floor, some of which pertained to her present work. She also loaned an enlarged portrait of Lowell Mason, which was given place of honor over the president's chair.

The Mothers' Congress was valued by Mrs. Clark because most of the women attending it are prominent at home in work of the school patrons' associations, through which funds for the purchase of talking machines must come until laws are altered, or at least school board rules, to permit their purchase with public funds, which has not yet been done.

In her address before the mothers Mrs. Clark first established the reasonableness of the theory that the ear of the child, which is fully developed almost from birth, should be educated before the sight, which does not attain reasonable perfection until several years of age. Then she took up the natural course of music through the progress of the human race. First the tom-tom, next the reeds and pipes, then come horns and finally the piano and orchestra effects. She demonstrated through records how this effect may be gained for the child. She compared the present mode of teaching music to that of placing a child in a deaf mute asylum until eight years of age and then bringing it out, never having heard spoken words and handing to the child a grammar and telling it to "learn language." The time, she said, for musical grammar comes after the child's musical appreciation has been developed by graduated advancement of the music it hears.

Mrs. Clark's talk excited so much interest that her rooms were thronged with mothers during the rest of her stay seeking more information. And it was then that she planted the suggestions that are expected to bear fruit with the purchases of machines for school work. And it is likely that dealers who have neglected the educational records will hear from Mrs. Clark's address in an unexpected demand for these records for home work in many cities.

During Mrs. Clark's stay it was arranged that she meet the executives of the St. Louis schools, including the musical supervisors, at Bollman Bros. Piano Co. for an evening with the Victor-Victrola from an educational standpoint. The attendance was not as large as was hoped for.

St. Louis has been slow to take up with the talking machine in the schools, but those present were greatly interested and all concerned felt that the evening was profitable. When Mrs. Clark came here in February four machines were in use in the schools. She learned before she left after the March visit that 15 had been sold for schools here as a result of her work during the two visits.

H. C. Brown, who accompanied Mrs. Clark here on her previous visit, was with her again and they had little idle time. A helper was engaged to operate the machines for them, so that they might have

full time to devote to their visitors, all of whom had many questions to ask.

DEALERS SHOULD GET TOGETHER.

Philadelphia Now Has a Well Organized Dealers' Association, Which Should Win Hearty Support from Their Confreres in That City.

The recent organization of the Talking Machine Retail Dealers' Association, of Philadelphia, Pa., with the following officers, president, Wm. S. Gibson; vice-president, John A. Popp, secretary, M. Goodstein, and treasurer, L. L. Goodman, should give the dealers of that city an opportunity of getting together for mutual advancement. There are many matters that are ripe for discussion that will tend to uplift the trade if the dealers co-operate. They can uplift the standing of the business, discuss ways and means for its development and so emphasize the importance of the retail end of the business as to make it a factor of helpfulness to the industry as a whole.

The Philadelphia association, which held its last meeting at 119 North Broad street, meets every second Wednesday of the month, and among the resolutions recently passed was that of taking strong action against price cutters. This has already borne good results apart from the trade benefits to be derived from the association effort is the matter of interchange of views and social amenities that do much to wear away the rough edges of discord and misunderstanding.

FEATURES M'CORMACK RECORDS.

Schmelzer Arms Co., Kansas City, Takes Advantage of Appearance of Great Tenor in That City—Enter 55th Year of Business.

(Special to The Talking Machine World.)

Kansas City, Mo., April 8, 1912.

The Schmelzer Arms Co., of this city took advantage of the recent appearance of John McCormack, the great Irish tenor, in Kansas City on March 29 to have inserted in the official program of the Willis Wood Theater a notice to the effect that each of the selections recorded McCormack on Victor records were obtainable at the store of that company.

The Schmelzer Arms Co., distributors of Victor talking machines and Edison phonographs in this city, have entered on the fifty-fifth year of their business life, and report a great trade for the opening months of the present year. They recently sent out a letter to the dealers in their territory urging them to put more steam on and sell more goods. In this connection they outlined plans that might prove helpful.

NOW PROMINENT IN THE SOUTH.

T. R. Lombard, who is one of the incorporators of a new corporation in Atlanta, Ga., for the development of Southern enterprises, was at one time president and general manager of the North American Phonograph Co., which figured prominently many years ago in the talking machine field.

Take it for granted that every

EDISON PHONOGRAPH

prospect is an Amberola prospect

Reports from all parts of the country show that more and more people are buying the Amberola—people in villages of 600 population as well as in the cities—folks who look at every dollar twice, as well as those who can afford anything they want.

This is because the desire for the best is growing all the time in all the people, and because live Edison dealers are fostering that desire and playing up to it.

Take the lesson home—offer your best first. Talk Amberola from the beginning, and *talk to win*. You *will* win in a surprising number of cases—and when you don't, it's easier to come down from the Amberola to one of the lower priced models than it is to start at the bottom and work up.

Optimism is contagious—so is enthusiasm. Call them in to help play your game.

Thomas A Edison
INCORPORATED

59 Lakeside Avenue, Orange, N. J.

If you are not stocking and pushing Edison Amberol Concert Records, you are letting good profits go by.

Don't underestimate your customers' musical appreciation. Even those who generally buy the light, catchy airs of the day will also prize a few of the classics—many prefer them.

Edison Amberol Concert Records have scored a big success and are gaining in popularity every day. They offer a variety of the world's best music, sung and played by the best talent, and perfectly recorded. Think of the appeal of Tosti's "Good-Bye" as sung by Riccardo Martin—of Massenet's "Thais" when played by such a master of the violin as Albert Spalding. And think of the added momentum this appeal will give, not only to your Record sales, but to your Phonograph sales as well.

Everybody in your vicinity who owns an Edison Phonograph, or is thinking of owning one, should hear all of the Edison Amberol Concert Records that have appeared and the new ones as they come out each month.

Keep your eye on the new record list. and keep in touch with your Edison jobber.

NEW YORK, APRIL 15, 1912.

EVIDENCE abounds on all sides that the present year promises to be a phenomenal one for the talking machine industry. The busy holiday period was followed by continuous trade activity during January and February, while the past month has made new records in a business way as compared with any preceding year. As a matter of fact it is impossible for some of the manufacturers to fill the demands for machines and records, despite the fact that the plants are working full force and that enlargements are constantly under way.

The talking machine has made a tremendous advance in popularity during the past couple of years, and people who formerly looked upon it with disdain or indifference now are enthusiastic over its great possibilities not only in the home, but as an educator and stimulator of musical taste and knowledge in public institutions.

This position has been won through the increasing merits of the products themselves as well as by the forceful, educational campaign carried on in an advertising way by talking machine manufacturers.

Correspondents of The World in all sections of the country report the brightest prospects for the talking machine business, with an increasing demand for and appreciation of the high priced, high class instruments.

IT is noteworthy that those dealers who are giving the talking machine most serious consideration and demonstrating it in an artistic environment through special rooms and parlors, as well as proper window display, are reaping the greatest reward.

This tendency to surround the talking machine with an art atmosphere is most commendable, and points the way to the achievement of a still larger success.

That the talking machine is entitled to consideration from the art viewpoint is apparent from the fact that the greatest artists of the world, both vocal and instrumental, are now being heard through the medium of this instrument, and when the machine or records are demonstrated in special rooms, garbed in furnishings that lend an aesthetic influence, it becomes a factor of importance.

Refined people like to buy in such surroundings and when the talking machine is shown in this environment it attracts a class of people, who, in the past, considered the talking machine beneath their consideration.

That is why talking machine men of keen discernment in all parts of the country are devoting considerable time and money to the equipment of special stores, or special rooms, and that is why they are advertising along dignified lines, either in the way

of special recitals or daily paper publicity. Wherever these plans have been adopted business has made steady strides.

THERE is no room to-day for the talking machine man who is indifferent to public requirements. The dusty, ill-kept talking machine stores with their crowded, dirty windows and poorly-kept stock—and we have a few of them, sad to say, in Manhattan—are not making headway and they never will. Such stores may have made progress in the past, when there was little competition, but they cannot win out to-day.

It is impossible to visit one of these stores without being disgusted and disheartened. And yet the proprietors actually expect purchasers to pass by well-equipped, well-lighted and attractively arranged talking machine showrooms and buy from them! They complain of hard times, but they rarely seek to find the reasons why their business is retrogressing instead of progressing.

This is an age of keen competition in all lines, and no business man, whether in the talking machine field, or elsewhere, can expect to make headway unless he thinks and acts.

It is refreshing to visit the magnificent talking machine display rooms which are now to be found in practically every city of any importance throughout the United States. The men back of these establishments have had faith in the talking machine from the very start, and while others were talking hard times they were planning and perfecting their establishments so that they are to-day reaping the reward of their enterprise.

It is just this kind of effort that should give "light" to the men who are depressed, to the men who cannot comprehend why things are not going well with them. For it is time to wake up to the fact that the talking machine business is here to stay, that it is not a transitory trade "to be milked while the grass is high," that a full measure of reward awaits the man who conducts his business with enthusiasm, with faith in and a full understanding of its future.

WHAT we want in this trade is men who appreciate the possibilities of the talking machine of our day—men who believe in its future—men who will not sit supinely by and wait for trade to enter their warerooms, but men who will use modern methods to bring the business to their store, and who are interested to the point of enthusiasm in that which they have to offer for sale.

There is plenty of waste territory in this country which can be cultivated with such profit that a big crop of orders can be reaped where the land is now sterile.

Jobbers in particular should make a study of their territory to the end that it is properly worked to its full strength.

Many jobbers are not fully alive to the absorptive power in their territory and they should inaugurate a campaign so as to make dealers realize the situation; in other words, they must get busy. If one, two or three dealers are holding down the business lid and not working the territory, it is best to replace them, for an agency is worth nothing to a jobber or a dealer unless it pays.

This waste territory proposition is a topic worthy of a great deal of serious consideration. In these days it is necessary that the jobber and the dealer should be thoroughly alive to developments. In this way the enterprising dealer will be suitably rewarded, and the backboneless dealer, who is hindering progress, will be eliminated. There are new conditions coming up all the time which must be considered, and talking machine men, whether in the manufacturing, jobbing or retailing ends, must be wide-awake. There is an immense amount of unworked territory in this industry which can be made profitable, but it requires men fully awake to the situation to achieve the best possible results.

PLANS are now being perfected by the National Association of Talking Machine Jobbers for the annual convention to be held at Atlantic City on July 1 and 2. Present indications point to a very large attendance from all parts of the country, for this reunion offers a very pleasing opportunity for the talking machine jobbers and their families to make a short stay at one of the most famous seacoast resorts in the world.

The Jobbers' Association has been a factor of no small importance in bringing about many betterments in the trade, aside from the social enjoyments which form no small feature of its

annual gatherings. Through co-operation it has helped to bring the jobbing trade of the entire country closer together and through association intercourse, views have been exchanged and suggestions made which have been of mutual advantage to every member.

The association has been conducted along broad lines, and has been free of those picayune animosities which oftentimes do so much to mar trade progress. While the list of jobbers who belong to the association is imposing there is still room for others, and it is time that all should lend a hand to making this association a greater power for trade good and trade advancement.

The coming convention at Atlantic City will be a most opportune time for jobbers outside the fold to come into line. The

arrangement committee for the forthcoming convention, of which J. C. Roush, of the Standard Talking Machine Co., of Pittsburgh, Pa., is chairman, is perfecting plans and outlining a program for the gathering and within a few days Mr. Roush, accompanied by Perry B. Whitsit, L. C. Wiswell and E. F. Taft, will make all the necessary hotel, banquet and other arrangements during a visit to Atlantic City.

We understand that L. F. Geissler, general manager of the Victor Talking Machine Co., has extended an invitation to the jobbers' association to spend the day of July 3 with the Victor Co., and a very unique program will be arranged for the jobbers' entertainment.

ADVERTISING A BIG ORDER.

J. W. Jenkins' Sons Music Co., Kansas City, Mo., Hold Parade Upon Occasion of the Transfer of Two Carloads of Victrolas from the Railroad to Their Warehouse.

When doing something big it never hurts to get full credit for the act. This at least appears to be the theory of the J. W. Jenkins' Sons Music

goods, wherein Mr. Eilers said: "Half of our enormous business is in talking machines."

"Do you believe that the coal strike will affect the talking machine industry?" was asked of Mr. Dolbeer.

It is evident that he has some inside information on this point, as he is keeping in close touch with the situation evidenced by his reply: "I look for the coal strike to be promptly cleared, so I cannot say that any injury will come to our industry

THE VICTOR IN SAVANNAH.

Success Met With in Pushing That Line by the Phillips & Crew Co. Store.

(Special to The Talking Machine World.)

Savannah, Ga., April 8, 1912.

One of the interesting features of the recent celebration of the ninth anniversary of the establishment of the local branch of the Phillips & Crew Co., Atlanta, Ga., was the attention given to the line of Victor talking machines, Victrolas and Victor records handled by that house. One of the most successful departments of the store since its opening has been the Victor department, and many homes in Savannah and vicinity have been supplied with elaborate outfits of machines and records by the house.

USING PHONOGRAPH RECORDS

As an Aid in Teaching Telegraphy—The National Educational Association Behind the Move of Which W. Smith Is President.

The National Educational Association, Wm. Smith, president, Boston, Mass., is behind the movement of a new stunt in educational lines for the Edison phonograph, and this is to teach telegraphy by the aid of phonographic records. It has succeeded admirably in getting master records of the telegraph alphabet, numerals and punctuation marks by which even the beginner can hear exactly what the "tapping" is. Wm. Smith, the prime mover in the new school, is an old telegraph operator of years of experience and he believes that by the aid of the Edison records people can be taught telegraphy very quickly and at a low cost. Public announcement of this method will be forthcoming shortly.

J. W. JENKINS' SONS MUSIC CO.'S PARADE OF VICTROLAS.

Co., Kansas City, Mo., and judging from the success that had attended their efforts during the past they have the right idea.

Some weeks ago the company received a shipment of two carloads of Victrola XIV's and immediately set to work to acquaint and impress the public with the fact. The entire shipment was loaded on a large motor truck and six double horse trucks, and each truck was appropriately decorated with large banners telling of the reason for the exhibition. The parade wended its way through the principal streets of the city to the J. W. Jenkins' Sons Music Co. warehouse, with its progress heralded by a bugler seated on the first truck. The event afforded an excellent indication of the extent of the company's business.

DOLBEER IS OPTIMISTIC

Regarding Business Generally, and Reports a Marked Increase in Sales—Piano Dealers Pushing Edison Goods Energetically—Eilers' Great Record—Discusses Labor Troubles.

Commenting about business, F. K. Dolbeer, general sales manager of Edison phonographs, says: "The past few weeks have shown a marked increase in sales, which reflects the general prosperity of the country at large. The volume of business comes from all sections, thus denoting an absence of the 'spotty' conditions which were in force some time ago."

Mr. Dolbeer remarked that he is greatly pleased at the energetic manner in which the piano dealers of the country are handling Edison machines and records; he says that many of them are making a fine success, particularly those who are prosperous in the piano field. He pointed with considerable pride to the statement made by Hy. Eilers, head of the big Eilers piano and music industry along the Pacific Coast, who sells Edison

from that score. I had a communication yesterday from a party who is closely affiliated with the powers that be in this strike, and he advises me that the coal strike will be adjusted in a very few days." Probably ere this appears the trade at large will have had an opportunity to judge of the correctness of Mr. Dolbeer's prediction.

The DITSON Pledge

Is to see that our clientele has a better service than ever—setting a new standard in Victor jobbing deliveries. The demands of alert Victor dealers—the kind that grow—are many and varied, and we furnish the "first-aid" in every instance.

We believe this year's Victor business will be of tremendous proportions, and it will pay you to have

The Fastest Victor Service

which is a requisite in this hustling age. We possess the largest stocks, the best organization and most up-to-date equipment in the Eastern half of the country.

This covers Victor machines, records and supplies of every kind, not to mention cabinets, needles and trade-marked accessories.

Will you let us tell you more about Ditson co-operation? A postal gets this information!

ROLIVER DITSON CO., Boston, Mass.

The Talking Machine Trade in New England

TRADE IN GLOUCESTER

Is Now Becoming Very Active—Demands from Summer Resorters and Shipping Men.

(Special to The Talking Machine World.)

Gloucester, Mass., April 10, 1912.

The Gloucester Talking Machine Co., which is conducted by Schwartz & Bernstein, reverses the usual experience that obtains with talking machine dealers. For instance, while most of the houses enjoy a big demand for goods during the winter season, that is just the time when this company does its smallest business. On the other hand, during the spring and summer, when the city concerns are feeling the effect of people going away, the Gloucester company makes ready for its heaviest demand for goods, and that is why this Gloucester concern just now has been heavily stocking up, for Gloucester is not only a popular summer resort but it likewise is a fishing port, and the great number of fishermen who have been away on fishing trips all the winter are now coming back into port as the spring comes on. These same fishermen are great enthusiasts over talking machines, and many a Columbia outfit is to be found on the fishing craft. Always ere they start on a cruise these vessels stock up with records, for there is scarcely a ship that is not equipped with a Columbia machine. So that is why Schwartz & Bernstein are now beginning to do their big annual business.

SELLS MANY EDISONS IN BROCKTON.

(Special to The Talking Machine World.)

Brockton, Mass., April 8, 1912.

Charles S. Sackett, proprietor of the Caesar Misch Store at this place, is doing a big business with the Edison line of outfits. His store is fortunate in having fine display windows, which show off the goods to splendid advantage. Much of Mr. Sackett's business is confined to high-priced goods, and his customers number some of the most prominent people in Brockton.

Charles Monahan, who runs a large instalment jewelry house at Worcester, Mass., has found it profitable to add Columbia machines and records to his line of trade, for his business in this department alone has grown at a rapid rate.

REPUTATION AND PROFITS

Are Centered in the Bagshaw Needles—Why the Duplexetone Has Won.

Knowledge is power, a student of manufacturing cannot know as much as the teacher or the professor. As each step advances, so does the amount of knowledge. Being the oldest makers of talking machine needles in this country, it is proper to give the title of professor to W. H. Bagshaw, the widely known needle manufacturer of Lowell, Mass. The honor of making the first needles for a disc talking machines is something worth achieving, particularly from the experience point of view.

All the time since these first needles appeared, W. H. Bagshaw has strived to follow all possible trends of the market with a contingent improvement of the products. Quantity never interfered with quality, as when the unchallenged world's shipping record was made by Bagshaw some time ago when 63,020,300 needles left the Bagshaw factory in ten consecutive working days, the needles were of the same artistic quality as marks the Bagshaw standard. It is a question of quality once and for all the time.

This extended and varied experience behind the new needles recently put upon the world's market—the Duplexetone needle—the needle with two tones. The crystallization of years of effort is centered upon this one needle and it is no wonder that the dealers and jobbers of the aggressive type are displaying these Duplexetone needles prominently with good advantage to their reputation and profits.

GETTING RESULTS IN VERMONT.

(Special to The Talking Machine World.)

St. Johnsbury, Vt., April 8, 1912.

The McLean Music Store, of this city, is a favorite rendezvous with music lovers, and with Miss Morrison in charge of the talking machine department the business has grown considerably, for this capable woman is especially qualified for the position. Mr. McLean, who is a hustler, has gone some long distances through the snow this past winter to work up business in the Edison goods, and he will long remember some of his twenty-mile rides in a sleigh with the thermometer 30 degrees below zero.

HOW DEALERS ARE HELPED

To Develop Their Business and Make It Most Profitable—The Good Work of Henry Winkelman Throughout New England.

(Special to The Talking Machine World.)

Boston, Mass., April 11, 1912.

Perhaps the greatest compliment a man can secure is to have the term applied to him "He's another Henry Winkelman." Henry Winkelman, the reference used, is the manager of the Victor department (wholesale and retail) of The Oliver Ditson Co. He is known as one of the most pleasant and experienced men in the field and has a wide circle of friends all over New England. He has been with the Ditson Co. for years, during which time he has watched the talking machine field grow and prosper. One of the important parts of Mr. Winkelman's duties, which is pleasing to him as well, is the coaching of new dealers so that they understand the best way to reap the most profits. He helps them and he invites their inquiries regarding all phases of the business.

BUSINESS SUFFERS FROM STRIKE.

(Special to The Talking Machine World.)

Lawrence, Mass., April 8, 1912.

Among those who are glad the Lawrence textile strike is over is Mr. Kneuper, of Kneuper & Dimmock, who are large Victor dealers in that city. Mr. Kneuper said in a conversation lately that business all through the city suffered terribly while the strike was on, and himself included, though by no means, in proportion to other departments of business. However, now that it is all over business is picking up considerably and he sees a big business ahead in Victor outfits. He has a well-fitted-up establishment in a very convenient locality.

DEMAND FOR PURITONE NEEDLES.

John M. Dean, the talking machine needle manufacturer of Putnam, Conn., offers to send a sample package of "Puritone" needles to any talking machine man who will send the name of his jobber. The evident faith of this proposition is surely indicative of merit, and to those who are not acquainted with the Puritone needle it is an excellent offer. Anent business conditions, Charles E. Dean remarked: "I am pleased to say that the sales of Puritone needles are gaining all the time, I finding our strongest gains being with those of the trade who have been using the brittle foreign needles to the detriment of their business. In buying the Puritone needles they secure an American-made needle at even a little less cost than they were paying, quality considered. The outlook for the year is most encouraging and I believe it will rank with the record year."

MEETING WITH BIG EDISON DEMAND.

(Special to The Talking Machine World.)

Newport, Vt., April 8, 1912.

Charles A. Clark, of this city, is making some much-needed alterations in his store, mainly in the way of installation of booths wherein more perfect demonstrations of the Edison goods can be made. Mr. Clark has sold some of the highest-priced Edison outfits lately, and his business is coming along right merrily.

COLUMBIA LINE IN HOLYOKE, MASS.

J. G. Heidner, the leading piano dealer of Holyoke, Mass., has just installed a large number of Columbia outfits, and the first day saw a great demand for these goods. Each customer has become so enthused over the possibilities of the machine that he or she has informed neighbors, with the result that already Mr. Heidner's business has grown rapidly.

Two Edison supply centers with a single thought —Fast Service

If you have tried our "P-E Service" you know how valuable it is to your business success. **THE PARDEE-ELLENBERGER CO.** positively guarantees that all orders will be filled the same day as received.

Our complete stock of Edison Goods and up-to-date methods make our "P-E Service" an absolute necessity to up-to-date dealers.

Remember, we are exclusively Edison and exclusively wholesale, which insures your getting machines and records just as they come from the Edison works. **Two complete sources of supply—Boston and New Haven.**

FROM OUR BOSTON HEADQUARTERS

324 WASHINGTON STREET, JOHN H. WILSON, MANAGER.

(Special to The Talking Machine World.)

Boston, Mass., April 10, 1912.

There is a rumor abroad in the city that there is more or less price cutting being practised among those handling talking machines, and the worst of it is, according to The World's informant, it cannot be run-down. Evidences of the practice keep cropping up and it is badly handicapping several of the Boston trade, who have good prospects, but find someone has got in ahead of them with a lower price on the same goods, but who the person or persons are cannot be ascertained. Not long ago one read of the rather demoralized condition of the talking machine business in England due to this deplorable practice of price cutting, and it then was a matter of congratulation on this side that such a condition did not obtain here. It would be a pity, and bad for the business at large, if there is to be a disposition to break faith on the part of the local distributors. Up to now there has been an honest disposition to "play fair" and it has been a source of pride that the business has not felt the sting of what is so frequently found in other departments of commercial activity.

Arthur C. Erisman's Visit to New York.

Manager Arthur C. Erisman, of the Columbia Phonograph Co., General, was over in New York a week ago and visited the Columbia's laboratory in 38th street, and while there he witnessed the taking of records of a number of prominent singers and comedians, whose names will be conspicuously displayed in a forthcoming list of the Columbia Co. While in New York he lunched at the Knickerbocker Hotel with Manager Henry Russell, of the Boston Opera Company, who was sailing that very day for Europe. Mr. Erisman and Manager Russell discussed the new stars whom the latter is to contract with for appearances at the Boston opera house next winter, and tentative arrangements were made for taking records of their work at the Columbia laboratory. Manager Russell is a great believer in the efficiency of talking machines as a medium wherewith to popularize grand opera in Boston.

Talking Machine Associates Meet.

The Eastern Talking Machine Associates enjoyed a very pleasant evening at their headquarters the latter part of March, and the chief feature was the entertaining talk that President E. F. Taft, of the company, gave the members relative to his visit to the several factories where talking machines are turned out, and the information that he gave should prove of the greatest value to the Eastern's employes in their future trade relations. Incidentally the information which he gave threw new light on why there is such a shortage of goods at this time.

The committee on entertainment reported that considerable progress is being made in the details of the field day, which will be enjoyed at Crescent Park, Rhode Island, on June 17, which is the same place the boys went to last year and where a great day was enjoyed. Mr. Brown, who recently resigned his connection with the company to go with the Waltham Emery Wheel Co., sent a letter of resignation from the several committees on which he had so ably served, among others that of chairman of the press committee, and the chairman asked S. J. Freeman, manager of the Victor department, to accept that position to serve out Mr. Brown's unexpired term as publicity representative of the company.

Sylvester With Columbia Co.

Roy C. Sylvester, a brother of Chester J. Sylvester, manager of the talking machine department of the C. E. Osgood Co., has become associated with the Columbia Co. and is "making good" in fine shape. This new addition to the Columbia forces is a little hustler, active, alert and right "on the job" all the time.

Atwood's Easter Display.

Charles F. Atwood's new place in Tremont

street, around the corner from Boylston, had the large window almost entirely given over to a beautiful Easter display of Victor goods early in the month. In the center was an angelic figure with a harp, and the lily effect was used to good advantage. There was a quantity of discs of Easter hymns, with their titles conspicuously displayed all around the window, and several handsome machines were included in the exhibit. The window was as attractive as anything one sees around town at this time.

Sales of High Priced Outfits.

Chester J. Sylvester, in charge of the talking machine department of the C. E. Osgood Co., has been having some good sales in high-priced outfits. The sale referred to last month of a lot of records, which the house was able to secure at a

low figure over in New York, are being rapidly disposed of, and the purchasers are surprised at the good things they are able to pick up in this collection.

Visitors at Pardee-Ellenberger Co.

W. O. Pardee, president of the Pardee-Ellenberger Co., was a visitor in Boston for a few days lately, going back to Connecticut deeply imbued with the idea that there is a large field here for the Edison goods. Another visitor at the Pardee-Ellenberger Co.'s quarters in Batterymarch street was M. A. Carpell, Eastern sales manager of the Herzog Art Furniture Co., of Saginaw, Mich., who handles cabinets, and was in town calling upon the trade. Still another caller who dropped in on Mr. Silliman, of the Pardee-Ellen-

(Continued on page 14.)

This is the Loud Position for Duplexetone Needles below is shown the Soft

☐ You have many customers who want the BEST; they own a high priced machine and buy expensive records. They want the BEST MUSICAL EFFECTS. These are the people who WILL BUY Duplexetone Needles, the HIGH QUALITY needle with TWO tones.

☐ It is absolutely ESSENTIAL that you sell the highest grade needles for the reason that it helps your business by a bettered tone. Customers say: "I can get better tones with Duplexetone needles and also I can secure both LOUD and SOFT tones with ONE needle." They will go out of their way to reach your store.

☐ You are losing profits if you do not sell the Duplexetone.

☐ Although Duplexetone needles have only been on the market for a few months, the sales have leaped forward by kangaroo jumps. Remember that they are made by the House of Bagshaw, the oldest and largest makers of needles in the country. We sell to jobbers only, furnishing all sizes, shapes and styles.

☐ Your jobber will supply you with any quantity desired. If you want a generous package of Duplexetone needles for your personal tests, send us his name and the package will go to you postpaid by return mail.

LOUD

SOFT

W. H. BAGSHAW

Sole Manufacturer

LOWELL - - - MASS.

FROM OUR BOSTON HEADQUARTERS. (Continued from page 13.)

berger Co., was J. W. Scott, special representative of the phonograph sales department of the Edison Co., who stopped over on his way from Maine, where he reported business good.

Interested in Record Exchange.

Oscar P. Ditleff, of Gouldville Terrace, Roxbury, is one of those enterprising young men, who has become interested in the record exchange business. He does this in addition to his regular vocation.

Does a Large Business.

H. N. Rosen, whose talking machine department in School street is most conveniently located, as it is in close proximity to the downtown business section of the city, is the distributor daily of any number of records for Victor, Edison and Columbia outfits, and it has happened more than once that he has been able to supply some records that another dealer had lacked in his stock. Mr. Rosen has lately taken on a line of dictaphones, as well as language phonograph outfits put out by the Edison house. Edgar L. Davenport, the former well-known actor, is associated with Mr. Rosen, and he is very successful in selling outfits.

Big Call for McCormack Records.

An interesting aftermath of the appearance in concert of John McCormack, the Irish tenor, who appeared at Symphony Hall on March 31, was that there was a great demand for his records at all of the talking machine places in the city. Though not on his program, he was obliged to sing "I Hear You Calling Me," which is by far one of his most popular records, and it was the current opinion among those familiar with his recorded voice that closing one's eyes it would have been hard to distinguish between the singer and his record, which is a pretty good tribute to the faithfulness of reproduction.

Alice Nielsen Sings the Mayor's Song.

Mayor John F. Fitzgerald, of Boston, has lost his great chance of going down to posterity through the medium of a talking machine—though there is hope yet. He is as famous as a singer as head of the great municipality, and his song, "Sweet Adeline," is frequently sung by His Honor at gatherings. Now comes along Miss Alice Nielsen, the opera star, who has sung the song for the Columbia Co. It is reported that the Mayor has heard the song as interpreted by a woman and thinks that it really ought to be sung by a tenor, so the Columbia Phonograph Co., General, is still hoping that His Honor will finally find time to get his voice bottled up for the enjoyment of future generations. Meantime Miss Nielsen's record is in wide demand.

Takes On the Victor Line.

The Shepard Norwell Co., which has been doing a large business in Columbia outfits ever since it opened up the department under the management of F. C. Henderson some months ago, is going to enlarge the department through the addition of Victor products. The house has qualified as Victor dealers and the goods of this company were placed on sale on Monday, the 8th inst. L. F. McNeil, the manager of the Victor department at the Providence establishment of the John Shepard Co., came over to Boston to get the department started, and from the first day the sales have been large.

Large Business in Edison Opera Styles.

The Pardee-Ellenberger Co. has been doing a large business in the new opera machines put out a few months ago by the Edison Co., and Manager Silliman says it is hard to get sufficient goods from the factory. The April list of records likewise is proving very popular with the patrons of the house.

Attractive Signs Interest Public.

No one can fail to find the Columbia's quarters in Tremont street these days, for the front of the building has lately been adorned with an enormous sign stretching across the front of the building with large letters in gold against a black background, which from Boston Common, across the thoroughfare, stands out most conspicuously. Meantime the windows are constantly being kept

well dressed, thanks to Norman Mason, the floor manager of the Columbia, who is responsible for some very catchy effects in front of which there always is a group of spectators who are interested in the Columbia display. Manager Erisman reports the business in Columbia outfits as extremely large, with the demand for goods growing all the time. Mr. Erisman has lately contracted with a number of new dealers, who now are Columbia distributors, and among the more important ones are J. N. Solomon, of Groveton and Littleton, N. H., who has the largest installment house in northern New Hampshire; the B. A. Bloome Piano Co., of Manchester, N. H., whose initial order was a large one; the Avery & Woodbury Co., of Milford, Mass., who are making a specialty of table machines, and whose first customer was Manager Sturgis, of the company, who has become a great enthusiast.

Recent Visitors.

Willie Golden, of the vaudeville team of Golden and Hughes, who sings for the Victor people, was a welcome visitor to the quarters of the Eastern Talking Machine Co. lately.

A Boston visitor a few days ago, whose trip here was partly for business, was Auditor T. L. Laurie, of the Columbia Co., who makes his headquarters at the New York executive offices of the company. Manager Erisman entertained Mr. Laurie at the Boston opera and in other ways while he was in town.

Donald M. Bliss, chief engineer of the laboratory of the Thomas A. Edison Co., Inc., was in Boston the latter part of March and called upon the trade.

Congratulations for Miss Davis.

Miss Annie J. Davis, one of the very popular members of the office staff of the Eastern Talking Machine Co., recently announced her engagement to L. C. Hammond, who is widely known in the tailoring business in this city. Following the announcement of her engagement Miss Davis' many friends gave her a surprise in the shape of a tin shower, and she accordingly was the recipient of many useful gifts which will come in handy when she goes housekeeping following her wedding, which will be some time in June, so her office associates say. As all the Eastern's staff know the sort of young woman Mr. Hammond is getting for his bride they have been giving him most hearty and genuine congratulations.

Demonstrating New Kinetoscope.

John W. Farrell, sales manager of the home kinetoscope department of Thomas A. Edison, Inc., with Adolph F. Gall, staff engineer of the Edison laboratory, J. H. Gill and C. W. Phillips, of the sales department of the kinetoscope end of the business, were in Boston lately and gave a most interesting demonstration of this new Edison invention at Manager Silliman's office in Batterymarch street. They were here three days and those who were privileged to see the demonstration which they gave were filled with wonderment.

Planning Extensive Improvements.

Conditions at the quarters of the Eastern Talking Machine Co. are much the same as they were at the Christmas season. All the employees are busy as bees, and there is the same difficulty of getting a sufficient amount of stock to supply the demand for Victor goods. The management hopes, however, that this condition will show some signs of improvement, but there are no such signs in sight as yet, "Although," as General Manager Taft says, "I am using a powerful field glass." The company is planning extensive improvements which will greatly add to its facilities for handling business. This will particularly apply to the first floor, details of which changes will be announced later.

Victor at Miller Co. Reunion.

Ubert Urquhart, manager of the Victor department of the Henry F. Miller & Sons Co., has had an extensive call for the April list of records, and he and his able staff have sold some of the most expensive outfits during the month just passed. Mr. Urquhart operated most successfully a Victor at the dinner which the Miller Co. gave its employees at Wakefield a couple of weeks ago. Mr. Urquhart assembled a fine collection of records,

so that the concert which he gave was a thoroughly enjoyable one for all present.

Takes On the Columbia Line.

The Summerfield Co., which has stores all over the country and has just opened one in Washington street, Boston, has installed a talking machine department and has chosen the Columbia goods as its medium. One of the store's large windows is given over to a fine display of Columbia goods. By way of bringing its output before the public the house has lately sent out 20,000 circulars.

Special Victor Rooms Installed.

George Lincoln Parker's changes in his establishment in the Colonial building in Boylston street have proved of the utmost benefit to his rapidly growing business. Mr. Parker has taken two additional rooms on the other side of the building across the hall and is devoting these rooms exclusively to the Victor goods. The rooms are tastefully furnished, with a handsome rug on the floor, and Manager Charles Trundy is thus given exclusive quarters quite apart from the piano rooms. The business has been excellent during March, so Mr. Parker reports.

Steinert Quarters Rearranged.

The first floor of the M. Steinert & Sons Co.'s Arch street quarters, which is the company's Victor department, has been considerably rearranged so far as counters are concerned, and business therefore can be despatched with more economy of time than heretofore. The Steinert Co. has had a surprisingly large business in Victor outfits the past few weeks, and the business continues to grow at a rapid rate.

Close Some Big Contracts.

Manager Erisman, of the Columbia Co., has just closed some big contracts in the dictaphone department. A few of the biggest houses to arrange for these machines are the A. W. Stephens Manufacturing Co., of Waltham, the Boston Elevated Railway Co., the Commonwealth, of Massachusetts (the State House), where the dictaphones will be used in the auditor's department, and the Carnegie Institute, whose large nutrition laboratory is located close to the Harvard Medical School in the Back Bay.

Waked to Victor Music.

A Back Bay gentleman, whose family has been in the habit of being awakened by morning alarm bells, has hit upon a new and more welcome plan of being aroused from slumber each morning. He went to the Eastern Talking Machine Co.'s store the other day and purchased an expensive Victor machine and he established this in the hall of the second floor of his house. The desired record is placed on the machine the night before and early the next morning a domestic starts the machine at the proper time and out pours the velvety voice of some soprano singing an "Ave Maria" or some other equally pleasing classical number such as would tend to gradually rouse one to ennobling thoughts. Thus far the scheme has worked to perfection, and everyone gets up in a highly classical atmosphere of music. Here is another use for a talking machine.

Demand Active at Oliver Ditson Co.

Manager Winkleman, of the Victor department of the Oliver Ditson Co., has no fault to find with business, for the demand continues large for both machines and records.

PREPARING FOR SUMMER BUSINESS.

(Special to The Talking Machine World.)

Pomfret, Conn., April 8, 1912.

Carl E. Gilbert, of this city, was a caller upon the trade in Boston lately, going up to arrange for the replenishing of his stock of machines. Mr. Gilbert has a large and well-arranged establishment in Pomfret, which, as everyone knows, is a popular summer resort. Mr. Gilbert has lately sold a large number of high-priced outfits, his customers taking most kindly to the Victrolas, which are getting to be very popular in Pomfret.

Too many retailers feel that it is the duty of the manufacturers to do all the advertising, while they sit back and wait for the goods to be called for.

Get the fast-selling U. S. Line More Profit

Exclusive Features
that will appeal to
you as they do to the
public.

The Silent Motor

Positive and long running. Can be wound without hitch or interference while record is being played.

The "Duplex" Reproducer

permits playing two minute or four-minute records with equal facility. A simple turn of thumb-screw, to right or left respectively, engages the proper feed-gear.

The Flexible Tone Arm

An exclusive feature of the U-S PHONOGRAPH; made of metal (not rubber) and it gives the exactly proper amplification to the sound waves. It means the correct impact of sound which carries naturally and without mechanical loss of tone-roundness.

Sapphire Reproducing Points

of hardest jewelled Sapphire. Need no replacing and never wear out. They last like the jewels of a watch—forever.

**No loss through breakage---
a feature that adds to
your profits.**

**Demonstrate them as often as you
like---the music is *everlasting*---no
loss in tone values or salability.**

Popular Prices

for a positively permanent entertainment.
Grand Opera Records—United States 75
cents; Canada 90 cents.
Four-Minute Records—United States 50
cents; Canada 65 cents.
Two-Minute Records—United States 35
cents; Canada 40 cents.

Popular Selections

by the highest talent of the day, reproducing the very latest and best there is in Opera, Oratorio, Concert, and Sacred Music, as well as Band and Instrumental Music, Vaudeville, and all the popular entertainment from metropolitan centers.

**No needles to destroy the
tone value--or wear out
the records.**

The absolute freedom from any adjustment whatever stamps the U-S PHONOGRAPH as a leader. The Sapphire Reproducing Points neither wear the record or need replacing—they are as permanent as the keys of a piano.

A Big Line

that means satisfaction to your customers and to yourself. They buy U-S EVERLASTING RECORDS which they can enjoy forever, and you have no broken or worn-out stock to discount from your profits.

THE INFLUENCE OF THE TALKER.

Grant S. Jones, of the Scott & Jones Co., Youngstown, O., Makes Some Strong Points in Favor of That Instrument in An Interview in the Sunday Vindicator of That City.

(Special to The Talking Machine World.)

Youngstown, O., April 8, 1912.

Youngstown is really a musical city, for besides the many who can play the piano or some other musical instrument there are thousands who are getting an excellent musical education by means of talking machines. So heavy has the local demand for talking machines become that the dealers are finding some difficulty in securing sufficient stock to supply their customers. It is stated on excellent authority that one store supplied over \$800 worth of records to the inhabitants of one square block during the holiday season. The growing popularity of talking machines in this city recently caused the Sunday Vindicator to publish a special interview with Grant S. Jones, of the Scott & Jones Co., the prominent piano and talking machine dealers of this city, on the subject, in which he said in part:

"There is many a home in Youngstown where the talking machine is all that the household has to cheer and brighten it. Men and women who objected to it at first and declared that they would not have such a thing in the house, are now among the talking machine's best friends. Music made a bigger difference in their home than they had ever dreamed it could. Once they had experience of it, heard how well it reproduced and felt what charm it could add to their homes, they would not do without it.

Pianos Traded for Talking Machines.

"Papa will not pay you now," said a young lady in selecting a machine in one of the local stores, 'for he's against our having a talking machine. But I know that if you send one up he'll pay for it sometime.' It was four months, the dealer said, before the machine was paid for. But in that time the father's attitude had completely changed. He is frequently confined to the house and the talking machine proved such a comfort as he had not known for years. Particularly in homes where children have grown up and gone away has the talking machine proved itself a kindly aid. Many a lonely old man and wife whose children have moved away and left a piano behind have, traded in the piano for a talking machine and have felt that the day they could have music in their home marked a new epoch in their lives. It was like bringing a companion into the house who could make them forget themselves.

Raising the Standard of Taste.

"Many people object to the talking machine on the ground that it is mechanical and that it provides entertainment without any effort on the listener's part. They hold that it is a step backward that modern children should enjoy the music of a talking machine, whereas the children of a generation ago themselves acquired by long practice and study the accomplishment of playing. Dealers say that the objection does not hold good. The head of the largest music house in the city said last week that instead of making young people satisfied

with listening to music played by others, the talking machine was encouraging them to learn to play. More people than ever are buying pianos, he said, and the only effect that talking machines have had upon the sale of pianos has been that people are buying better pianos. Hearing good music on the records has given them a better ear and they are not satisfied with any but good instruments. The talking machine has had an effect upon the sheet music department; but the effect has been

to decrease the sale of ragtime and increase, many times, the sale of music that is really good."

Mr. Jones also took the opportunity to call attention to the growing use of talking machines in schools and to the elaborate repertoire of records offered to talking machine owners.

FILLING A RECORD ORDER.

Several Trucks Required to Handle the Initial Order of the Bon Marche Dry Goods Co., Lowell, Mass., Which Was Placed with the Eastern Talking Machine Co. Recently—251 Machines and Accompanying Records and Supplies Make a Total of \$7,996.87.

(Special to The Talking Machine World.)

Boston, Mass., April 8, 1912.

The accompanying photograph shows the front of the Eastern Talking Machine Co.'s establishment in Tremont street, on one of its busy days. The Bon Marche Dry Goods Co., of Lowell, Mass., recently qualified as Victor dealers, placing with the Eastern Co. the largest initial order for a dealer's contract that ever had been placed, and this initial order is the one seen in the picture all ready to start away. The Bon Marche is one of the largest and best department stores north of Boston. Its general manager, Mr. Gilmore, and the confidential man, Mr. Martin, recently called at the Eastern's quarters and, in discussing the details of this order, said: "If

its in the Victor catalogue it is good, and if it is good, we want it and we'll have it." The machines ordered totaled up 251. Every record in the entire Victor catalogue was sent the firm, and all of the fixings that go to make up the Victor outfit were sent also.

The progressiveness and enterprise of this Lowell house, which is known far and wide to the people who live within any sort of distance of Lowell insures a most faithful representation for the Victor products.

T. W. Duncan, one of the hustling traveling men for the Victor line, was largely instrumental in putting the big deal through and his success in the matter is another proof of his ability as a salesman.

M'GREAL WINS OUT FOR CLARK.

Chosen Delegate for Clark to National Democratic Convention Despite Progressive Sentiment Throughout State.

(Special to The Talking Machine World.)

Milwaukee, Wis., April 8, 1912.

Lawrence McGreal, president of the National Association of Talking Machine Jobbers, and Edison jobber for Wisconsin, won a sweeping victory at the polls at the recent election and was chosen as a Clark delegate from the Fifth Wisconsin district to the National Democratic Convention in Baltimore, June 25 to 28. Despite the fact that Wisconsin is a strong progressive State and went almost unanimously for LaFollette and Wilson, Mr. McGreal secured the largest vote polled for a Democratic delegate and won by a plurality of 1,500 votes. The vote was sure proof of the decided popularity of Mr. McGreal in Milwaukee and surrounding territory. Mr. McGreal will now be able to combine his Eastern trip to the Baltimore convention with his trip to the annual convention of the National Association of Talking Machine Jobbers at Atlantic City. Mr. McGreal has long been a personal friend of Champ Clark, having met the well-known Democrat many years ago in Missouri, and is regarded as the original Champ Clark man in Milwaukee.

The more a man mixes with the world generally, the less he is apt to develop into a crank.

EASTERN TALKING MACHINE CO. MAKING A VICTOR SHIPMENT TO LOWELL.

WITH THE CINCINNATI TRADE.

Dealers Seem to Be Satisfied with the Business Developments for the Past Month, and Each and All Look Forward to a Very Active Spring and Summer Trade—Victrola Concerts at Wurlitzers Attract Crowds—C. S. Browning a Recent Acquisition—Columbia Styles Which Are Especially in Favor.

(Special to The Talking Machine World.)

Cincinnati, O., April 6, 1912.

There have been no startling doings in the local talking machine situation during the past month. All the houses appear to be satisfied with the business transacted during March, and some are looking forward to the opening up of the camping season and the consequent demand for goods, particularly in the cheaper grades, for use during the summer.

The Rudolph Wurlitzer Co. report a very flourishing trade for the month of March, the sale of Victrolas and records far exceeding their expectations. The special records which were recently issued by the Victor Co. are certainly proving good sellers, particularly the record, "They Gotta Quit Kickin' My Dawg Aroun'," which seems to be the favorite. The activity in the retail department during the month of March was a gentle reminder of the month's rush of business enjoyed in December. This we undoubtedly believe is due in part to the efforts of the "Wurlitzer Concert Company." The organization has given a number of concerts wherein the Victrola has played a leading part with such good effect that a number of sales can be traced directly to their efforts along these lines.

The Columbia Phonograph Co. reported the busiest March in its history, Manager R. J. Whelen stating: "March business was tip-top in every department, retail and wholesale, as well as Dictaphone, and April has started off with a boom. The arrival of the Creatore 12-inch double disc records created a great deal of interest and enthusiasm among record buyers, everyone hearing

them pronouncing them to be the most exquisite band music they ever heard. The 'specials' placed on sale have proven unusually popular. In the machine trade the Grafonola \$50 'Favorite' is the leader in the largest volume of sales, with the \$150 'Nonpareil' and the \$100 'Baby Regent' close after the 'Favorite.' The announcement of the new 'Princess Regent,' \$75 table, has created great interest among the dealers, whose orders are being filled as fast as stock arrives from the factory. We are proud of our great record in taking care of our enormous sales the past month or six weeks, as we have been able to make prompt deliveries on nearly all types, thus avoiding the disappointment of our retail customers as well as dealers, which is greatly appreciated by them. This shows great work and foresight on the part of our factory as business has gone even beyond our expectations, the figures for March going far ahead of any other March in the history of this store, which is proof positive of the great progress we are making from month to month."

The Dictaphone department of the Columbia Phonograph Co. had a very satisfactory month in March; C. M. Beckett, Springfield, Ohio, agent, placing a large number of Dictaphones with The Bauer Bros. Co. and the Robins & Myers Co., while R. L. Seeds, Columbus, Ohio, agent, placed several Dictaphone outfits of equal interest; of course the Cincinnati manager came in with his share of the business with several large installations, the chief one being with the law firm of Reeves, Burch, Peters & Oppenheimer, of Cincinnati.

A. M. Winstandley, exclusive Columbia dealer of Bedford, Ind., spent a very pleasant day in Cincinnati talking over Columbia plans of the future with Mr. Whelen, of the Columbia Co.

E. J. Meyer, of Madison, Ind., exclusive Columbia dealer, was also another visitor at the Columbia store recently.

The Mt. Healthy Public School, of Cincinnati, has purchased a Columbia Grafonola "Favorite" for school work, with which the teachers and pupils are all delighted.

The larger number of instruments sold during March by the Wurlitzer Co. were of the larger type. This may have been due to the shortage of the smaller types. Altogether the business of March far exceeds the business for the same month of last year, and the Wurlitzer Co. is looking forward to a still larger month in April. All indications are pointing this way.

C. S. Browning, formerly of the Victor Co., has joined the ranks of workers of the Rudolph Wurlitzer Co. to act as their traveling man. It can be said that the month of March has been one of the best months which the Wurlitzer Co. has enjoyed for some time at this season of the year.

President W. H. Stever, of the Lyric Piano Co., is more than pleased with the results that is being obtained from his experiment of adding a talking machine shop to his piano business; the results that he has obtained are very satisfactory. Through a little extra effort of keeping in touch with each and every consumer by writing them every month, sending them catalogues of the new records that have been issued and sending machines out upon approval, he finds he has been very successful. He now has two people in the department and keeps them busy most all the time. On the whole there are very few things that Mr. Stever turns his mind to that he does not make a success of in some way or other. He is now thinking of making some more room for his Victor machines, and he says he expects to add to it by degrees until the Victor department is bringing him a net business of \$5,000 per month. It is now almost one-half that amount, and he expects before another four or five months to double that amount. He thinks this is a nice way to get people into his place of business, and he has found that this has brought him several good piano deals and player customers. He is more than pleased with his efforts in this line.

With John Arnold, Elm street dealer, the last half of March was the best. The month, Mr. Arnold stated, was a good one, beating the sales for March, 1911. He is planning some big things which he expects to spring upon the trade as a surprise.

J. F. Poorman has not very much to report about the machine end of the business, but is highly pleased with the demands for records. Mr. Poorman gives up much of his window space to the plates.

TALKING MACHINE EXPORTS.

The Figures for February Presented—Reports Show Falling Off for the Month.

(Special to The Talking Machine World.)

Washington, D. C., April 6, 1912.

In the summary of exports and imports of the commerce of the United States for the month of February (the latest period for which it has been compiled), which has just been issued by the Bureau of Statistics of the Department of Commerce and Labor, the following interesting figures relating to talking machines and supplies are set forth:

The total exports of talking machines, records and supplies for February, 1912, amounted to \$228,342, as compared with \$244,001 for the same month of the previous year. The eight months' exportation of talking machines, records and supplies amounted to \$1,843,504.

ALTERS STORE TO HANDLE TRADE.

(Special to The Talking Machine World.)

Montpelier, Vt., April 8, 1912.

Thanks to the alterations made in his well-arranged store, this city, E. T. Sequin is now better able than ever before to handle his rapidly increasing business. He has some finely arranged booths for purposes of demonstration and his business has grown so that he is able to show the best results of any time in three years.

More dollars are lost through the lack of force put into the throw, than through inaccuracy of aim.

If you want to catch the crowd, bait your hook with something that looks like money.

Tribune Building, New York**

FIFTEEN YEARS OF SERVICE.

Hayward Cleveland, Manager of the 23d Street Warerooms of the Columbia Co., Has a Great Sales Record to His Credit—An Interesting Chat with Old-Time Columbia Man.

In a recent chat with Hayward Cleveland, manager of the retail store of the Columbia Phonograph Co., General, on West 23d street, New York, the Talking Machine World learned that Mr. Cleveland had been with the Columbia Co. for fifteen years. In speaking of his long term of Columbia service, Mr. Cleveland said: "Early in March I entered my fifteenth year of service with the Columbia Phonograph Co., General, this fourteen years added to fourteen years in a previous position makes a total of twenty-eight years in two employments. My total years of labor number thirty-one and a half, and I am still a 'boy' in thought if not in years.

"I guess," continued Mr. Cleveland, "I can claim to be one of the old guard now. I can recall only ten or twelve who preceded me, among whom were Mr. Easton, G. W. Lyle, E. N. Burns, the Dorians, V. H. Emerson, H. A. Budlong, W. P. Phillips and R. F. Bolton. The rest have left the service or have gone to the Great Beyond.

"Some call me the 'dean of the office managers.' I do not know if this is true, but certain it is that I have been largely on the same old job, in the same dear old town all these years, making an exception to that unwritten law of the Columbia Phonograph Co., General, that 'all men shall move.'

"I have been through two panics with the company and wavered but once, in 1901 when things were at a low ebb. I have seen a mere toy, thought by many to have a short life, become a dignified musical instrument with a certain future. I have seen the trade completely shift around from cylinder to disc.

"From the day when I issued the first list of special records on a postal card (that was to grow to the now well established monthly supplement) I have taken an interest in the larger game, and while the task recently set me was very exacting, I have found time to continue and perhaps enlarge upon that interest. I recall several moves made in the last two years that I strongly advocated."

Mr. Cleveland is too well-known throughout the trade to need much mention here. He is named as friend among the whole industry. The Twenty-third street store is typical of his success as a manager. The Talking Machine World joins with the rest in wishing him fourteen years more of prosperity and success.

GOOD BUSINESS IN MALDEN.

(Special to The Talking Machine World.)

Malden, Mass., April 8, 1912.

In Summer street there is a store which few people can pass by without stopping to look at the admirable arrangement of Edison outfits. It is conducted by W. H. Cooper, who is one of the most enthusiastic of Edison dealers. Mr. Cooper's March business was very large, and he reports the outlook as excellent.

AN ORIGINAL WINDOW DISPLAY.

McCormack Greeted With a View of His Native Athlone Upon a Visit to the Store of Sherman, Clay & Co., San Francisco.

The importance of attractively decorated show windows has been dwelt upon to such an extent that there is probably not a talking machine dealer in the country who does not realize the fact. The activity of the manufacturing companies themselves in suggesting and actually preparing window displays for their dealers has done much to stimulate this form of publicity. Whatever virtue may lie in window displays of standard character there is no question but window decoration represents a field wherein originality pays premiums.

An interesting example of the effectiveness of originality in window decoration was recently evident in San Francisco during the tour of the country made by John McCormack, the Irish tenor. When the famous singer reached the Golden Gate one of the first things to attract his eye was the display in the window of the Sherman, Clay & Co. store, which represented a bird's-eye view of Athlone, Ireland, McCormack's native town, with a figure representing the singer himself placed in the foreground. The Victor records made by the tenor were placed along each

side of the window and the general effect was thoroughly pleasing. Incidentally it sold records.

NEW RECORD DISPLAY STAND

Which Will Certainly Interest Columbia Dealers

The Columbia Phonograph Co., General, New York, has still another record display stand ready which it is offering to its dealers at factory prices. It is the first time that a stand of this model has been offered. It is designed to display Columbia records vertically in front of the passer-by and at any height the dealer may please. The records are held in place by a thumb-screw without damage—are always in plain sight and clean. The company is ready to ship them in any numbers from one up.

Advertising at its best is something more than space in magazines, clever copy and attractive designs. It is a vital part of the problem of salesmanship which can best be solved by the team work of experts—experts in manufacturing, experts in distribution and experts in publicity—pulling together for a common purpose.

Buy no business which has failed, or which has been given up by its owner for lack of prosperity. The old stock will be like so much lead.

PLAYING THE AUDIENCE.

Christie MacDonald, Star in "The Spring Maid," Enjoys Interesting Experience When Listening to "Day Dreams" Through the Medium of the Victrola.

One of the most popular of the operetta records issued by the Victor Talking Machine Co. during the past season has been that of "Day Dreams" from the clever operetta, "The Spring Maid," in

which Christie MacDonald plays the stellar role. Much of the value of the records, besides that of their musical excellence, lies in the fact that they were made by Miss MacDonald herself, the artist who actually sings the numbers in the operetta. An interesting picture in the Voice of the Victor for April shows Miss MacDonald resting at ease and listening intently to her own rendering of "Day Dreams" through the medium of the Victor Victrola. From the expression of Miss MacDonald's face she is perfectly satisfied.

CHRISTIE MACDONALD LISTENING TO CHRISTIE MAC DONALD.

KEEPING UP ITS GOOD RECORD.

The Demand in Cleveland Is For the More Expensive Machines and Records, but the Sales as a Whole for the Month Are Away Ahead of Last Year—The U-S Phonograph Co. Brings Suit Against Lawrence Lucker as Edison Agent for Infringement of Patent—Hart Piano Co. Purchases Business of Talking Machine Co.—Situation Analyzed.

(Special to The Talking Machine World.)

Cleveland, O., April 9, 1912.

Business in Cleveland is keeping up its good record and the demand for talking machines and records instead of letting up is actually showing a considerable volume of increase. The distributors are all doing more than a normal business, although handicapped by their inability to obtain from the factories a sufficient quantity of goods to keep up their supplies of either machines or records. This condition with the distributors is reflected in the business of the retail dealers, and they are almost without exception doing a satisfactory business.

It is observed that the demand is for the more expensive durable and ornate machines. In his purchase, the buyer selects the more costly, conditioned on time payments, rather than a cheaper, cash down machine. There are few more expert musical critics than the Italians, and there are few that have not a machine or some musical instrument in their house, however humble it may be. They are among the dealers' best patrons, and have among their repertoires some of the most famous operatic selections, and are the owners of records for which they have paid from 75 cents to \$7.

The April lists of records are the most popular that have been issued this year. Especial favorites are "Let Us Have Peace," by Werrenrath; a double record by Maria Gay and Giovanni Zenatello, and "They Gotta Quit Kickin' My Dawg Aroun'."

The last week in March the State convention of motion picture men was held at Findlay, O. Although the industry is practically in its infancy, there were present on the occasion upward of one thousand. The proceedings of the convention demonstrated that the industry is growing and expanding in various directions.

William N. Thornburgh, former general manager of the American Multinola Co., recently filed a petition in involuntary bankruptcy in the Federal Court. A grand jury investigation of his admitted debts of over \$20,000, by his creditors, has been asked, they alleging he incurred most of his liabilities by obtaining money and merchandise under false pretenses. Among the numerous creditors is Samuel Grossman, a director of the Multinola Co., and K. D. Bishop, president of the Bishop-Babcock, Becker Co., of the U-S Phonograph Co., from each of whom he borrowed \$400.

Business with the Eclipse Musical Co. during the month of March was very satisfying, said T.

If Bought at the Right Price

Albums are Profitable.

THE Schafford Albums

Are made by the best of album makers. They possess qualities found in no other, and the prices are the lowest. Think! Better albums at lower prices.

New York City dealers bought 3,000 in one week.

Schafford Albums are for Victor or Columbia Records and are made in many sizes and styles.

If your order is sufficient you can have a special cover and stamped in gold with your name and trade-mark without extra charge.

Send for Folder "T" and learn more about increasing your album sales and profits.

THE SCHAFFORD ALBUM CO.

23-25 Lispenard Street, New York

H. Towell, president of the company. Machine and record sales were unusually good, and only the shortage of the smaller type Victrolas kept March from being a banner month. Both the wholesale and retail departments are doing a larger business than ever. Mrs. Edward Leighton, well known in talking machine circles in Cleveland, is now with the Eclipse Musical Co. in the retail department. She takes the place of Miss Ince A. Johnson, who was for several years with Grinnell Bros., of Detroit. Max Strasburg, who was with the same firm, has gone into business for himself and drafted Miss Johnson back to Detroit.

John McCormack, whose records are so popular here, sang in a concert given by the Irish Choral Society in the Hippodrome March 24. During his stay he called at the Eclipse store and delightedly listened to some of his own productions.

The Talking Machine Co., 42 The Arcade, has sold out to the Hart Piano Co., just across the Arcade, and on the first of May will establish the talking machine business in the piano store.

The dictaphone business, under the management of G. J. Probeck, is steadily improving, and has been increasing month by month since the first of the year. The outlook for April is very bright, and judging from the present number of prospects it is going to be an unusually good year for the dictaphone.

Suit for the infringement of patent on phonograph reproducers has been filed in the United States District Court here by the U-S Phonograph Co. against Lawrence H. Lucker, the Edison distributor. An accounting is asked for, and the plaintiff also seeks an injunction restraining Lucker from the further use or sale of the patent.

Business at the Columbia Phonograph Co.'s store is characterized by a steadily increasing volume, both in machines and records. "Business is extra good," said Mr. Madson, manager. "March was the second best month we have had since we opened up here. The retail dealers throughout this territory all report trade good and are quite well satisfied with conditions. Our \$50 Grafonola 'Favorite' is leading in sales, which are constantly increasing. The new \$75 Grafonola 'Princess' is one of the most attractive of that type and has made a most favorable impression. It will prove a good seller."

Mr. Madsen relates the following incident: "I was in one of the small towns in my territory a few days ago taking a customer's order, when one of the townsmen, hearing our conversation, called our attention to the March number of one of the magazines which contained two stories of Edward D. Easton, president of the company. The man was contemplating purchasing a talking machine and he said: 'Now if your company had such a well known president that the magazine would write him up I would buy your machine.' I immediately produced a Columbia letterhead showing E. D. Easton, our president, and the local dealer on the strength of that sold the man a Regent Baby for spot cash."

The March business of the W. H. Buescher & Sons Co. showed continuous sales of Victrolas and records, largely decreasing the stock, which it was unable to replenish from the factory. Trade, Mr. Buescher stated, greatly exceeded the most sanguine expectations of the company, both as regards variety and the large volume of business transacted.

F. B. Guyon, manager of the Victrola department of the B. Dreher's Sons Co., reports business is very satisfactory and that he is booking new customers daily. "We are making sales of cabinets and records," said Mr. Guyon, "to customers who purchased Victrolas last winter, and the volume of this trade is away ahead of expectations."

In line with other Victor distributions, the Collier & Sayle Co. were busy throughout March, the volume of business being circumscribed both in machines and records by the inability of the factory to fill the orders. Mr. Dorn said he was completely out of some types of machines, for which there was an excellent demand, and which he hoped the Victor people would soon be able to supply.

GEO. W. LYLE IN LOS ANGELES.

General Manager of the Columbia Phonograph Co., Gen'l, Royally Entertained by Southern California Music Co.—The Bowling Contest.

(Special to The Talking Machine World.)

Los Angeles, Cal., April 5, 1912.

The recent visit of Geo. W. Lyle, general manager of the Columbia Phonograph Co., Gen'l, in Los Angeles, was attended by many enjoyable incidents.

After calling on the numerous dealers in the

and Advertising Manager Jas. A. Stitt, Edison Business Phonograph Manager C. H. Rundel and Talking Machine Manager O. A. Lovejoy.

The dining table was decorated in a most elaborate manner with huge bunches of roses, and was fittingly ornamented by a very pretty miniature figure of Miss Columbia, which entirely captivated the visitors, one of whom, in fact, well known for his gallantry, insisted on presenting his card. Mr. Lyle complimented the Southern California Music Co. on its beautiful establishment in a city which was remarkable for its handsome music houses and remarked that his visits to Los Angeles seemed more enjoyable each time.

After dinner the company proceeded to the Majestic Bowling Alleys, where a team consisting of O. A. Lovejoy, J. V. Haines, W. E. Smith, J. Depew and O. W. Terry, of the wholesale department of the Southern California Music Co., met the Columbia five, with W. S. Gray, W. F. Stidham, W. V. Hardy, F. Saltamachia and I. M. Stone. The result was

a victory for the former team. Great enthusiasm was then aroused when Mr. Lyle and the popular C. H. Rundel proceeded to give an exhibition game, and when the Columbia general manager was declared winner the applause and delight knew no bounds. General Manager Lyle, accompanied by Pacific Coast Manager Gray, left for San Francisco the following morning to continue his work of inspection.

Left to right: Columbia Bowling Team—I. M. Stone, F. Saltamachia, W. F. Stidham, W. V. Hardy and W. S. Gray. Southern California Music Team—O. W. Terry, J. Depew, J. V. Haines, W. E. Smith and O. A. Lovejoy. Standing Special Representative—A. G. Farquharson.

various parts of the city, a duty which he seemed to take exceptional pleasure in, Mr. Lyle, together with Pacific Coast Manager W. S. Gray, Local Manager W. F. Stidham and Special Representative A. G. Farquharson, attended a sumptuous dinner at the Cafe Bristol given by the Southern California Music Co., represented by Vice-President and General Manager Geo. S. Marigold, Treasurer

NO LULL IN BUSINESS.

Lenten Season Has No Effect Upon Talking Machine Sales in Baltimore—Heavy Demand During March—What the Various Prominent Firms Have to Report—Hub Piano Co. to Install Talking Machine Department.

(Special to The Talking Machine World.)

Baltimore, Md., April 5, 1912.

The Lenten season nor any other season seems to have little effect upon the talking machine business, judging from the roseate reports made by the various local dealers. At each of the stores where the representative of The Talking Machine World called the statement was made that sales for the month of March eclipsed those for any other month this year, while in several instances it was stated that the sales for March netted more money than those during December for the reason that the demand for large machines was greater than during the holidays. Another feature about the trade in some instances was the fact that the dealers were able to supply the demand in consequence of their efforts to obtain the necessary number of machines from the factories being successful.

Manager M. Silverstein, of Cohen & Hughes, reports the Victor business to be in fine shape for March. The sale of the lower-priced machines at this house has been better than usual, and this has been attributed to some extent to the advertising done and the display of these machines which has attracted a great deal of attention. During the month Mr. Silverstein had a number of these machines arranged in an artistic manner in the firm's show windows.

F. A. Denison, of the local branch of the Columbia Phonograph Co., has been a happy man recently. To begin with, he was presented with a daughter weighing nine pounds, and following this up he reports trade for the month of March to have been fine. Mr. Denison has been the recipient of many congratulations in consequence of the newcomer in his home.

At E. F. Droop & Sons Co., Victor and Edison representatives, Manager Roberts stated that the demand for the larger machines was better than usual during March, this feature of the trade being better than the sale of the smaller machines. Mr. Roberts was especially pleased with the fact that he was able to better supply the demand by reason of the fact that he was able to obtain a greater number of machines from the factory.

Thomas Gordon, manager for the talking machine department of the Kranz-Smith Piano Co., stated that both the Victor and Columbia machines had a good run during March and that prospects for the spring were excellent. He also reports a good record business for the month. Joseph Fink, who is connected with this department, has just returned to work after an illness of several weeks.

The demand for records was rather heavy during the month at Sanders & Stayman, who handle the Victor and Columbia lines, according to Manager Albert Bowden. There was also a nice call for the various sizes of machines.

The Hub Piano Co., which will soon open at 122 North Liberty street, will put in a line of talking machines, but just what make they will handle the members of the firm have not yet announced.

The Kunkel Piano Co., which recently took on

the Victor line, and William Knabe & Co., who is handling the Columbia line, makes encouraging reports concerning the trade during March.

Hammann & Levin also talk encouragingly about the business for March. This firm also handles a Victor.

SUCCESS COMES AT LAST.

Young Man Profits Through Study of Inspirational Literature.

The bright young man had tried several business ventures and promptly failed in each.

"You're not well grounded," said a friend who had been watching his commercial tumbles. "What you need is technical knowledge."

So the bright young man sat himself down and ate up the six best sellers of the commercial library. They told him how to do business in every way known to the gods of supply and demand, and they plainly showed him that if he had efficiency and energy and enthusiasm on his side he could take the limited to success and get there ahead of time.

So the bright young man read these helps to prosperity forward and back and down the middle.

One day he met his friend.

"Hell," he said; "I've got all the success dope I can carry and don't intend to shake down for any more."

"Good," said the friend. "I suppose you'll be right back in business again?"

"Nothing doing," laughed the bright young man. "I've got something better on hand than that."

"But aren't you going to apply the principles you have just absorbed?"

"Yes, yes."

"By working?"

"No, by lecturing!"

Up to date to-day will be out of date to-morrow unless you have an open mind and keep up with the procession.

Being satisfied with old methods handicaps a merchant's progress.

ABOUT THAT SPRING TRADE.

A Few Suggestions Relative to Toning Up Your Tired Business, Mr. Dealer.

The air is balmy; I hear a robin calling from amid the naked branches of a maple; the chipmunks are quarreling over the last of their winter store, and above the waters of the Rancocas, a wild gander is marshaling his feathered legions for their northward flight. There comes the staccato roar of a motor, and a long black shape darts round the wooded bend. The gander, wild-eyed, and frightened, hawks his followers into line, and describing a long irregular U athwart the sky, they aviate rapidly away toward the Canadian marshlands. The wild geese have gone; the motor boat has dropped anchor in the cove; spring is here.

Yes, the spring is with us again, and that means, of course, that a sort of languor prevails throughout the business world. Especially is this true in talkerdom, for with the coming of warm weather, the desire for indoor amusements wanes very materially. The open country calls Mr. Cityman away from his home and the talking machine. While this lust for the great out doors is develop-

ing in the breasts of your customers, Mr. Dealer, you must show them that instead of abandoning the talker, they should make it their boon companion upon every occasion where good music is acceptable. The automobilists and motor-boatmen among your patrons will tell you that their Victrolas, Amberolas, Grafonolas, and U-S Cabinet talking machines, though wonderfully entertaining at home, are prohibitive while en route because of their size and weight.

This information should ring in your ears like the tinkling of silver bells, for it means more business. If you state to Mr. Travelingman that you have exactly what he needs to make his touring kit complete, namely: a perfect hornless machine so compact that it will take up no more room than a lunch hamper, you can rest assured that he will express a desire to hear it. When you play one of his favorite selections upon any of the Junior 'olas, and inform him that he can procure a satisfactory outfit for as little as \$15.00, he will surely accept your advice; and this spring-time, whether upon the broad highway, chugging up the winding channel of some inland stream, or roughing it in the pine woods, the talker will accompany him.

As I write, the opera season in Philadelphia is just closing, and there is nothing, Mr. Dealer, to take its place but the talking machine. While the last faint melodious echo is still ringing in the ears of Mr. and Mrs. Operagoer, and before they have had an opportunity to recover from the sad news that there will be no more Caruso, Scotti, or Eames until next winter, you should get right after them. Act as their physician; diagnose their case as operaitis, and prescribe a rigid diet of Red Seal Records. This remedy will prove most effective, and both your business and reputation will wax great. The opera goer is a valuable cus-

tommer, and can be depended upon to carry you through the months of light trade if you handle him judiciously. He represents the class that enjoys itself during the summer season. He has his automobile, his motor-boat, and, perhaps, his aeroplane. Each of these vehicles should be equipped with a diminutive 'ola, and if you do not advertise the merits of the talking machine in this particular field, you are neglecting golden opportunities.

In reference to the small cabinet machine as part of a motor-boat's equipment, I wish to state what my friend, Benjamin S. Cross, of Mount Holly, N. J., has to say upon the subject. This gentleman holds a unique and enviable position in the marine world, his racer, The Witch, being the fastest craft of her power afloat, so his opinions should bear some weight.

"To my mind," exclaims Mr. Cross enthusiastically, "there is nothing that adds so much to the pleasure of motor-boating as the talking machine. I am having a small hornless installed in my Lady Alice, and anticipate much enjoyment from it during the spring, summer, and autumn, while skimming the waters of the beautiful Rancocas. Although we talker fiends contend that our instruments give perfect renditions under all circumstances, the fact remains that they sound their very best on shipboard. Slight imperfections in the records, such as surface noise, etc., which are sometimes apparent in the music room, are entirely eliminated when heard upon the water, and all selections, whether they represent the matchless bowing of Maud Powell, or the eccentric gymnastics of the Great Frosini, are absolutely true to life.

Oh, the peace that flows into the soul from the fountain of phonographic melody is past all understanding. A few miles below the quaint little town of Mount Holly, nestling close to the tranquil bosom of the Rancocas, stands our Antlers Club House. Of an evening, our launches and canoes tethered to the landing stage, our pipes aglow, and the appetizing odor of frying catfish in our nostrils, we recline at full length before the campfire, watching the gorgeous banners of the sinking sun fling themselves in glorious array across the western sky, and listen to Elman make love to his violin. That is life, indeed."

Cool ghostly mists caress the sedge
Where wild geese honk and heron feast;
A mink waits at the water's edge
To glimpse the moonrise in the east.

A whip-poor-will calls to his love;
She answers him—a wailing cry.
An owl hoots in the pines above;
The first star lights the velvet sky.

The shadows lengthen—night is near;
A last faint banner tints the west;
On shore a campfire blazes clear,
While breezes whispered, "Twilight, rest."

Then rising gently, liquid, soft,
A low sad thrum of silver strings
Salutes God's night lamps hung aloft,
And lo the great Caruso sings.

Now, Mr. Dealer, after reading this little tale of mine, I trust you will consider it worth your while to investigate the motoring fraternity, and that you may be able to do some good business with them is the very earnest wish of your most humble servant.

L'Envoi.—By way of finale, the writer has just learned that John M. Smith, Supt., Burl. Co. Trans. Co., Hainesport, N. J., has a collection of something like 3,000 records. Can you beat it?

Mr. Smith lives alone upon the property of the company in a snug little bungalow, and in the evenings after his labors connected with the maintenance of the plant are over, he turns to the talker for recreation, deriving much pleasure from his extensive repertoire. Some dealer has profited by Mr. Smith's enthusiasm. Why not create other customers with a like purchasing capacity. It can be done if you hustle.

HOWARD TAYLOR MIDDLETON.

Trust more to work than to talent. Rely more on your own sweat than upon your friends' recommendations. Pin your faith to labor, rather than to the short cut. The genius who works indefatigably is the only one his generation remembers.

The man whose selling points don't carry ought to use more ginger for ammunition.

Have you received your package of imported needles?

¶ You can have these if the request is made on your business letter-head.

¶ These needles are made in various sizes and imported solely by The Talking Machine Supply Co. You cannot buy these special needles from anyone else.

¶ When you consider that the needles will be put up for you in lithographed boxes with your own advertisement and that they cost no more than inferior needles made in this country, it is the most wonderful opportunity that you have.

¶ The tonal possibilities with our imported needles are many, being adapted for demonstrations. They are used with equally fine results by your customers, too.

¶ Capacities of our factories have been doubled and there will be no more delay in shipping—we positively guarantee this.

¶ Special prices for large quantity buyers. Send us specifications of your requirements for our lowest prices. Today is a good time to write.

563 FIFTH AVENUE
NEW YORK, N. Y.

LANDAY ON BROADWAY.

Lease Quarters in Building Now Being Erected at Broadway and 42d Street—Will Be Fitted Up in the Style of the Grand Salon of Versailles—Will Be Fourth Store.

Landay Bros., Inc., have signed a lease for ten years, at an aggregate rental of \$110,000, for a store in the twelve-story building now being erected at the northeast corner of Broadway and 42d street, Times Square, New York. The Landay store will be on the ground floor about 50 feet from the corner. This building will probably be completed about September 15.

In a chat with *The World*, Max Landay said: "We are going to install ten booths fitted up in the style of the Grand Salon at Versailles, with many novel acoustical devices for Victor exhibitions. Weekly concerts will be given there of both grand opera and entertainments for children. The fittings and hangings of the new Landay store will be in the French style, details of which I can tell you later."

When the house of Landay is settled at this new location it will be the fourth in the chain of stores operated by them in New York.

Landay Bros., Inc., are also planning an addition to their present motor truck delivery service by installing a two-ton truck, which will be ready in a few months.

WRONG TIP QUEERED HIM.

Experience of a Salesman Who Endeavored to Get Close to Customers by Studying Their Hobbies—How Times Have Changed.

"Times have changed," said the retired merchant, after the salesman had left the hotel office. "Notice how businesslike that salesman is? He comes into this town every once in a while, visits half a dozen dealers in an afternoon and then takes the next train out. When I was a young man I was on the road for several years and was considered a success, but I couldn't hold my end up now."

"The world was more leisurely then. When I landed in a town I never knew when I'd get away again. A merchant had to be coaxed and jollied along, sometimes for a day or two, before he was ready to talk business."

"If a traveling man bounced into a store and opened his grip and began lecturing on the goods he was selling before he had said a word about the weather and the crops and the Sullivan-Kilrain fight, he'd be pretty apt to bounce out again with no sales."

"I made a special study of every customer on my route. I knew every man's fads and peculiarities and made the most of them."

"There was old man Joppy, down in Iowa. He was crazy on horse racing, although he had never seen a real race horse in his life. His trade was worth having, and so I fairly soaked myself in race track figures and statistics, and when I blew into his store I'd give the history of every race horse in the world, from Bucephalus down to the President's saddle horse, and the way the old man would loosen up when I produced my order book was a sight for sore eyes."

"Well, my scheme fell down just once, and if I live a hundred years I'll never forget that once. I returned home from a trip and learned that an old customer in Iowa had sold out to a stranger. That old customer was one of my good friends, and the news didn't cheer me up any. I wanted to know what particular fad afflicted the new man and wrote to the hotel man in the town asking for information."

"The hotel man answered that the merchant's chief peculiarity was an unreasonable hatred of vegetarianism, which was then being agitated a good deal. 'If you want to make yourself solid with him,' wrote the hotel man, 'just sail into vegetarians with spiked shoes.'"

"I must have been in a trance at the time or I'd have remembered a joke I had put up on the hotel man on my last visit there and might have suspected that he was trying to get even."

"In due time I landed in the town and went to the store, loaded to the guards with useful infor-

mation concerning vegetarianism. I had read up everything bearing on the subject, from the account of Nebuchadnezzar's stunt in a pasture down to a table of statistics showing the annual yield of rice in China."

"I opened up without loss of time. The way I threw it into the vegetarians was a sin. I ridiculed the idea that a vegetable diet built up the muscular system."

"'A cow eats grass and succotash and beets and such wishy-washy stuff,' I cried, 'and that sort of grub will do for a cow, which doesn't know any better, but that's no reason why a man should live on greens. When a man has four or five stomachs, like a cow, it will be time enough to swear off on sausage.'"

"'Why, my dear sir, a tiger doesn't weigh half as much as a cow, but it adheres to a sensible, wholesome diet. You never see a tiger going around eating cauliflower or string beans.'"

"'When a tiger wants something to eat it goes up to a cow and knocks that cow's fool head off with a blow. Why doesn't the cow lick the tiger, if a vegetable diet is such a muscle builder?'"

"'There's no use talking, sir; the man who eats greens when he can get sirloin steak has a leak in his headpiece.'"

"I got about as far as that when the merchant gathered me in his arms and shut me together like a jackknife, so that my heels made dents in the back of my head. Then he hustled me outside and dropped me down a coal hole and sent my grips after me."

"He was a crank on vegetarianism all right enough, but it happened that he was an enthusiastic advocate of the greens diet. The hotel man had crossed the wires on purpose."

The harder, the more intelligently you use well directed advertising, the quicker the returns come back to you.

The ability to sell more and do more and to make one's personality felt, and to do it all with greater ease, brings its own financial reward.

THE EDISON HOME KINETOSCOPE.

Long Looked for Moving Picture and Lantern Slide Machine for Home Use to Be Placed on the Market About May 1—Factories Busy Turning Out Stock—Details of Machines and Proposed Retailing Methods.

On May 1 will appear the long looked for Edison Home kinetoscope, which is a moving picture and lantern slide machine for the home. Manufacturing of these machines is energetically going on at the huge Edison factories, and it is apparent that in a few weeks the general public will be privileged to see and buy the wonderful machine.

The Home kinetoscope, according to J. W. Farrell, sales manager of that department, is absolutely fool-proof; you can wind films or rewind backward or forward without the least fear; you can throw a picture approximately six feet square at a distance of thirty feet and use a film that has as many pictures as on a thousand foot reel of the regular professional machine.

The entire machine weighs about twenty pounds, which includes a cover that, when not used for carrying the Home kinetoscope, is used as a stand for showing the pictures. A strap on the top of the case is intended for hand use in transportation. The mechanism itself is simple, there is a metal spool for putting on the reel of film, which looks somewhat like a big typewriter ribbon, the spool being larger at one end than at the other, so that the reel shall be put on exactly the same every time.

It is a very easy matter to "get a light," there being three methods, one by acetylene gas, one by a Nernst lamp and the other with a baby arc lamp, the latter being the most powerful, naturally, although the other two are very brilliant. A few minutes' instruction should teach the average person how to operate the entire mechanism, which in its entirety from putting in the reel to the rewind at the end, is exceedingly simple.

By pressing a little button the Home kinetoscope is converted instantly into a stereopticon. Special slides can be purchased for projecting these "magic lantern" slides at a cost of 50c. each, which is eight times less than the cost of the ordinary slide now on the market, for the reason that with the Edison slides there are eight views, as against the one view of the others. The lantern slides to be furnished will be more of an educational nature, as "Views in Holland," "Views in Germany," etc.; 50c. for eight clean-cut views of the finest photographic art showing pictures about four feet square is considered to be the most reasonable offer ever put upon the market. These Edison slides, by the way, are only 1½ inches tall and 4 inches long, which is very small for ten photographs.

The most wonderful thing about the films for the Home kinetoscope is the way the photographs are arranged. A film of a thousand feet long for the regular moving picture machine is condensed into 80 feet, although the number of pictures, 16,000 photographs, remains the same. The time for displaying either film is the same, sixteen minutes. The way this is accomplished is by having three rows of pictures running on the Home kinetoscope

film, although this film is not quite half the width of the regular film, the former being ¾ inch wide. Thus by the new methods the actual picture on the Home films is ⅝ inch long and a trifle over ¼ inch high, so small that the views are barely distinguishable by the naked eye, although clear and perfect when projected upon the screen. The operator, who can be man, woman or child, with equal ease reels off the full film on the outside line of pictures, then shifts the picture so that the middle line of pictures is thrown and, by reversing the cranking, re-reels till the film is back to where it started. Then another little shift and the other outside row of pictures goes upon the screen, a total of 16,000 pictures on an 80 foot film in a time of sixteen minutes. Talk about the comforts of home! Perhaps if Thomas A. Edison keeps on he will have things so we can press a button for a full course dinner before the Home kinetoscope entertainment and when concluded another button will give an "after-theater" supper. Then the expression "Home was never like this" will have plenty of popularity.

A very ingenious plan has been created for securing new films. When a purchaser buys a Home kinetoscope he has to purchase four films to go with it. The lowest priced film is \$2.50 and contains ten feet. This is known as a class "A" film, the company preferring to call them by class rather than by the number of feet. This little film has 2,000 pictures and can be run off in a few minutes. The next class is "B," which has 20 feet and costs \$5; the next "C," with 30 feet at \$7.50; "D," with 40 feet at \$10; "E," with 50 feet at \$12.50; "F," with 60 feet at \$15; "G," with 70 feet at \$17.50, and "H," with 80 feet at \$20, the highest priced film that will be manufactured. As this article is going to the trade is the reason that the number of feet is mentioned, because the films will be sold only by class designation.

When the purchaser has had the films long enough to be tired of them he can send one or more back to the Edison factory at Orange and by a small payment secure a new film of the same class as sent. To facilitate things, coupon books have been published and are on sale at all authorized dealers, each book containing 50 ten cent coupons and costing the buyer \$5. Suppose a man has a class "B" film (retail price \$5) and grows tired of it; he detaches four ten cent coupons from the book, sends the film and coupons to the Edison factory at Orange with a request that a selected film number be sent in exchange. The entire exchange problem is to be cared for by the home plant, and monthly bulletins of new films will appear like is now the policy of the phonograph record end. The exchange fee of the various classes is as follows: A, 30c.; B, 40c.; C, 50c.; D, 60c.; E, 70c.; F, 80c.; G, 90c.; H, \$1. A person buying four films can exchange and exchange indefinitely, getting new films every week or every day if wanted, at a very small cost. A wide variety of subjects in various ranges of interest will be offered and all Home films will be of the character that mark the regular Edison films—sharp, clear and brilliant.

Most important of all, the pictures are printed on non-inflammable film, so the kinetoscope can

be used with safety in homes, schools, clubs, lodges, churches, halls, etc.

The Home Kinetoscope prices are based upon the lens system used and also upon the system of lighting purchased. Sixty-five dollars is the lowest retail price of the Home kinetoscope, this price being for a machine with acetylene generator, lens system "A," or for a machine complete with the Nernst lamp equipment, with the same lens system. Eighty-eight dollars is the highest retail price, this figure covering a machine complete with arc lamp and transformer for alternating current (110 volts) with lens system C. Three lens systems are used, A, B and C.

Through the courtesy of Mr. Wilson, of this department, J. W. Farrell, sales manager of the Home kinetoscope branch of the Edison industry, and G. B. Ward, foreman of the Home kinetoscope and film department, a representative of The Talking Machine World was extended a special demonstration of the ease, efficacy and points of merit of this machine. The pictures displayed were clear and showed every movement distinctly, in every way they were as good as those seen of the large regular size. The stereopticon pictures were marvels of sharpness, resembling a photograph taken by a high priced camera and printed upon the best grade of paper. Mr. Ward operated the kinetoscope, doing it with ease, which shows that this work is performed without fatigue. "Getting a light" was simple, Mr. Ward explaining that the bugbear of not getting lights frightened more professional operators for some unwritten reason that he couldn't explain. The process of "getting the light" on the Home is simple indeed.

With the production appearing on May 1, it is natural that the sales manager, J. W. Farrell, is doing considerable hustling these days in an effort to create a strong jobbers' field. Demonstrators are going about the country showing the advantages of the Home kinetoscope and, which is better, also the profits that they say are bound to come to jobber and dealer alike. So far only one Edison jobber of phonographs and records has signified his intention of handling the kinetoscopes, and this house is the Pardee-Ellenberger Co., Inc., of New Haven, Conn., and Boston, Mass., one of the most aggressive and up-to-date jobbers of Edison phonographs in this country, but the idea at present seems to be to create jobbers rather than to have the line handled by the talking machine trade. For instance, in the optical field, concerns like Williams, Brown & Earl, of Philadelphia; H. E. Murdock Co., Portland, Me.; J. H. Hallberg, New York, and others are already enrolled as jobbers. There seems to be no question, however, but that the line will be a remarkable seller with dealers, not alone for its low price and ease and cheapness of securing films, but because of its novelty. Take a family living in the country nowhere near a theater, as an illustration, it will be possible for them to have all the latest moving picture films at a very low cost. The field in a mail order way seems boundless. The Home kinetoscope adds more laurels to the achievements of Thomas A. Edison, and is the result in its present completeness of many years of experimenting at a cost of thousands of dollars.

IRELAND AS A FIELD FOR TALKING MACHINES.

By WALDEN FAWCETT.

For no industry more than the talking machine trade does the present "new era" in Ireland hold promising significance. It means, in effect, the development of what will probably prove in time one of the richest fields open to this form of musical expression. It is a field, too, in which, for sentimental and other reasons, American firms and their foreign connections will have an immense advantage. And, finally, it is unique in that it is a field every step in the development of which will be reflected by a corresponding stimulus to trade here in the United States—the explanation of this latter phase of the situation being found, of course, in the steady and growing demand here in America for the various talking machine records of Irish music.

During a recent extended journey through almost all parts of the Emerald Isle I was struck

Copyright, Walden Fawcett.

ONE OF THE NEW COTTAGES IN REAWAKENED IRELAND.

with the small proportion of the homes where talking machines were to be found. This absence of the universal musical instrument—or, for that matter, any musical instrument at all—was much more marked in the rural districts and in the small towns than in the larger cities of Ireland, but since agriculture, cattle raising, dairying, etc., form the backbone of Erin's activities it goes without saying that a majority of her people reside outside the five large cities. The paucity of talking machines in these rural habitations was in particularly marked contrast to the situation in that other musical country, Italy, where instruments of this class are rapidly becoming household necessities or to the status in some of the Latin-American countries or in our own island of Porto Rico, where there is an axiom to the effect that a phonograph and a goat are the adjuncts of every household, however lowly in estate.

The casual traveler in Ireland, knowing of the passionate love of the Irish people for music, and the further circumstance that Erin possesses a wealth of the most beautiful music in the world, is likely to be mystified as to why the talking machine has fewer devotees in this land of the reel and the jig. The explanation is found, however, in the best of reasons—lack of means to indulge a love of music. The last half of the last century found Ireland in pitifully poverty-stricken condition. The situation became acute with the famine of 1846, 1847 and 1848, and thereafter with industry paralyzed and hope and ambition stifled the people were obliged to bend every energy to derive means of livelihood, and only a very limited number in any community could give thought to equipment for musical education and entertainment.

Happily, however, this period of depression has passed or is passing, and, as has been said, to no interest should the regeneration of Ireland prove more welcome than to those concerned with mechanical musical reproduction. Much has appeared in the newspapers of late regarding the benefits that will accrue to Ireland with the advent of Home Rule, which appears to be a certainty of the next few years. There is no doubt but that if genuine Home Rule is granted it will further stimulate an awakening in Erin, but as a matter of fact, Ireland has been recovering in-

dustrially for almost ten years past and far from waiting for the boon of self-government she has forged ahead until in many respects she is actually, to-day, more prosperous than either England or Scotland.

The main factor in this improvement in Ireland has been the workings of that new legislation which is designed to break up the great landed estates, long controlled by absentee landlords, and to place the farming areas in the hands of the men who till them, thus doing away with all the horrors of that system of eviction which was for decades the curse and blight of Ireland. Moreover, not only have the farmers and cattle raisers thus been made masters of their own destinies, but even the laborers are being given a better chance for health and contentment through the medium of neat, new, sanitary cottages which are rapidly replacing the old stone and turf houses in all parts of Ireland.

Just here, too, it may be noted that no influence is going to do more to make Ireland a fruitful field for the purveyors of talking machines and records than this era of better housing conditions. Instead of the one-room or two-room cabin of other days any family can now enjoy a cosy two-room to four-room cottage of brick, stone or concrete construction with slate roof, and its own garden plot. And what is more, such a home can be purchased on the installment plan by means of payments as low as 36 to 50 cents per week. The government has advanced the money to build these new homes—upward of 35,000 of them are already completed—and it is also selling fishing boats, looms for weaving, harvesting machinery, etc., to the people of Ireland on the installment plan. Consequently, talking machine interests that desire to proceed along the line of least resistance in developing the trade possibilities of the "new Ireland" will do well to adopt the easy payment plan almost exclusively—preferably with weekly instead of monthly collections.

It must be evident from the very nature of things that the main market in Ireland will be for the cheaper machines, and the popular price records—provided the selections are standard, for the Irish like good music. While Ireland is recovering, and her savings bank deposits have increased several hundred per cent. in the past score of years, prosperity with some of her people will be of slow growth, and they will be obliged to count the cost carefully in the case of all expenditures. At the same time there is a market for some expensive machines—not only among the well-to-do class of the native Irish population, but also among the Irish-Americans who are returning in increasing numbers to reside in Ireland, and among those Americans of wealth and leisure who have acquired residence in the land of the shamrock solely because of its fascinations and climatic advantages. For instance, Eugene Zimmerman, the Standard Oil millionaire, and American railroad magnate, who purchased for \$350,000 the famous Kylemore estate as a resi-

Copyright, Walden Fawcett.

ONE OF THE NEW FREE SCHOOLS IN IRELAND.

dence for his only daughter, the Duchess of Manchester, had no sooner gotten well settled at Kylemore Castle than he sent to America for a \$200 Victrola and several hundred dollars worth of records to help the family while away the evenings in this mountain stronghold in western Ireland—a dozen miles from the nearest railroad.

If American interests care to go after the business there is no doubt that they will enjoy a marked advantage in Ireland. Unlike the inhabitants of most countries beyond the Atlantic the Irish not only have not the slightest prejudice against American products or inventions, but on the contrary prefer them. The explanation is found in great part in the circumstance that Ireland is linked to America by strong ties of sentiment. During the past century millions upon millions of her people have crossed the ocean to

Copyright, Walden Fawcett.

KYLEMORE CASTLE, IN WESTERN IRELAND, The American purchaser of which (Mr. Eugene Zimmerman) has installed a Victrola and a large library of records.

seek fortunes in the big republic, and many of the older generation in Ireland owe such comfort as they have enjoyed in more recent years to the money sent home from America by their children. Moreover, it is only the American talking machine interests which have given liberal recognition in their recordings to the beautiful music of Erin.

Reference was made at the beginning of this article to the unique situation which presents itself with reference to Irish music in the form of disc or cylinder records. It is probable that the time is not far distant when it would be well worth the while of a recording laboratory to perpetuate all the Irish airs if from no other consideration than the record sales to be attained in Ireland just as Columbian or Chinese or Hawaiian music is recorded for sale in those respective countries. But behind this, in the case of the Irish music is the certainty of a tremendous sale here in America. And this means not merely a sale for such standard selections as "Come Back to Erin" and "Kathleen Mavourneen," but also for such less-known gems as "My Lagan Love" and "Savourneen Deelish."

In reality the splendid market in the United States for recordings of Irish music is readily explainable when we take into consideration the sentimental nature of the Irish people, their loyalty to home and their fondness for music, and when we further take into consideration the numerical strength of our Irish-American population. There are in the United States more than 2,000,000 people who were born in Ireland; at least 6,000,000 people who were born in Ireland or whose parents were born there; and the astonishing total of 20,000,000 people, or more than one-fifth of our entire population, who have Irish blood in their veins. The excellence of the American recordings of Irish music has also done much to stimulate this trade here at home, and will do much to facilitate the American conquest of the talking machine field in the Isle of Saints. Two of the leading American companies have a wide range of recordings by John McCormack, the greatest of all Irish singers, and a lyric tenor whose records from a technical, mechanical or reproductive standpoint are splendidly flawless and in the uniformity of such excellence are perhaps unrivaled by any save those of David Bispham.

Sound reproducing instruments will undoubtedly be used to a considerable extent in the schools of Ireland, and apropos consideration of this trade channel it may be noted that no feature of the awakening in Ireland is more impressive than the improvement of the schools. All over the island modern, commodious school buildings are being erected, and the advance in art and education is keeping pace with the revival in industry. Already the phonograph is being employed—together with specially prepared records—as a language instructor in connection with the crusade to perpetuate

the Gaelic language. A number of public-spirited men and women have determined that the rising generation in Ireland shall have a knowledge of the native Irish language, and in pursuance of this policy traveling teachers and others are making use of a series of thirty-six Gaelic records, including twenty-one dialogues, two folk-tales, six recitations and seven songs. It is probable that Gaelic songs and recitations in record form would find a sale at the present time in the open market both in the United States and in Ireland.

NO REHEARING IN PATENT CASE.

United States Supreme Court Stands by Its Decision—Important Action That Has Wide Significance—Subject Up to Congress.

(Special to The Talking Machine World.)

Washington, D. C., April 9, 1912.

It will interest manufacturers and sellers of talking machines to know that the Supreme Court, sitting in chambers to-day, refused to reopen for rehearing the "Patent Monopoly" case decided a few weeks ago. The decision reached to-day was a surprise, as it was generally expected that a reargument before a full bench would be ordered, as the question involved is one of transcendent importance, involving issues in one or more important anti-trust cases brought by the Government, notably the United Shoe Machinery case.

No statement was made by the Court as to the reasons for denying the rehearing. It is presumed that the justices decided, owing to the wide difference of opinion disclosed in Federal Court decisions construing the patent laws, that Congress should assume the responsibility of removing all ambiguity by remedial legislation that will definitely fix the legal rights of a patentee.

The case which called out the "Patent Monopoly" decision was brought by the A. B. Dick Co., of Chicago, against the Henry Co. of New York. The patentees held patents on a rotary duplicating machine or multigraph. They sold it under a license imposing a condition that purchasers or licensees of the machine should use only such supplies as were manufactured and sold by the A. B. Dick Co.

The purchaser of one of the duplicating machines purchased supplies other than those prescribed in the license from the Henry Co., which sold them with the knowledge that they were to be used in violation of the license restrictions.

The court decided by a vote of four to three in favor of the Dick Co., holding that the patentee could impose on the purchaser or user of his patent any restrictive conditions he might elect as to the manner of its use.

The Government took the keenest interest in the decision, because of its probable effect on pending anti-trust suits in which the alleged monopoly rests mainly on patent rights. Notice was given that the Government would ask leave to intervene, and, at the instance of the Attorney General, the formal motion for rehearing was made last Monday by the defendant-in-error and at the same time the Government moved to intervene. Both motions were denied to-day.

At the time of the original hearing there was one vacancy on the Supreme Court bench and Justice Day was absent. This left but seven justices to decide the case, and they were divided four to three, making the majority opinion come from a minority of the full bench. For this reason it was believed a rehearing would be granted. Chief Justice White disagreed entirely with the majority opinion and wrote a vigorous dissent, pointing out the dangers likely to result from the ruling.

The original decision was handed down on March 11 last, and caused more comment throughout the country than has been aroused since the Standard Oil and Tobacco Trust decisions.

Justice Hughes and Lamar concurred with Chief Justice White in the minority opinion. They held that the only rights conferred by the patent were property rights and that the patentee had no legal authority to enforce the use of any special kind of supplies.

Whatever your personal character may be in the matter of selfishness, or generosity, never let your store get a reputation for stinginess. No one likes to do business with a stingy store.

AN EFFICIENT TONE MODIFIER.

Kreiling & Co., North Fortieth avenue and Le-Moyne street, Chicago, have just introduced a novel and efficient tone modifier in connection with their "Tiz-It" all metal, ball-bearing horn connection for Edison phonograph. This combination is made in two models, one a straight tube horn connection and tone modifier for all Edison phonographs equipped with Cygnet or Music Master horn, and model O or model S reproducers, and a curved tube horn connection and tone modifier, fitting all Edison straight horn phonographs. In either instance the "Tiz-It" horn connection can be furnished without a tone modifier if desired, at a somewhat lower price.

EXCITE COMPLIMENTARY REMARKS.

Emil Bauer, of the Keen-O-Phone Co., Philadelphia, Pa., makers of the Keen-O-Phone, was in New York recently looking after the sales end of the business. Mr. Bauer says that the house is making rapid progress with the manufacture of records and is preparing a list which will be published soon. He also says that a full sample line

of the latest design of hornless Keen-O-Phones is at the offices, 136 South Fourth street, Philadelphia which are the subject of many complimentary remarks from visitors and trade members. The new records also coming through are winning high praise.

INSTALL COMPLETE DEPARTMENT.

(Special to The Talking Machine World.)

Washington, D. C., April 10, 1912.

The F. G. Smith Piano Co. has installed a modern and complete department in its handsome new store at 1217 F street, with a full line of Columbia Graphophones and Grafonolas, as well as a complete library of Columbia disc records. The new department is under the management of Joseph H. Chase, a thorough musician, and who is acquainted with the talking machine of to-day. The new department is being widely advertised in the daily papers, a special announcement being set in the center of a liberal white space in a manner to attract attention.

Men who brag are like brass drums. The bigger the noise the greater the hollow.

"Sparks" from Blackman's Wire

Have You Noticed This Condition in Your Territory?

The "progressive," "hustling," "up-to-date" dealers are "successful," "prosperous" and increasing their business and profit. The "disgruntled," "rut sticker" drifting kind spend all their time complaining about their successful competitors, refuse to adopt up-to-date methods and are fast losing ground, prestige, business and money.

You Must Be One or the Other

The American merchant of to-day seldom stands still. You must fight for business, for business of to-day is a struggle, and those who participate must be trained for the contest.

Think This Over, Mr. Dealer

What are you doing to increase your business, hold your customers and attract others, as compared with your competitor?

What Is the Matter With My Business?

Have you ever asked yourself the above question, or, if so, did you try very hard to find the answer?

If your business and profit is entirely satisfactory you won't need to, but that is seldom the case.

Find the "Trouble," Remove the "Cause" and Effect a "Cure"

Take the position of one of your own customers and be serious. Be just as particular, critical and impatient as you would be in some other store and you will soon notice the "weeds" in your business.

Perform an "operation" if necessary; "clean house," put things in order. Systematize what stock you have so you can find anything called for quickly, and last, but not least, increase your stock so that you will be in a position to give "service."

We Believe in "Reciprocity" and Hope You Do

Reciprocity is a "Give and Take Proposition" whereby one should balance the other.

To work satisfactorily it should not be one-sided, for then it defeats its purpose and becomes something else.

"The Blackman Policy" Calls for "Reciprocity in Service"

That means that we owe "Service" to our "Steady Customers," for they encourage it and are entitled to it by steady patronage.

We don't believe in "Emergency Bait" when some other jobber cannot make good with his regular dealer. That should be the "Cue" for the dealer to become a "Regular Customer," so that he can expect "Regular Service."

Blackman's "Regular Dealers" Come First Every Time

This means fewer disappointed dealers and less necessity to go to the other fellow. It will pay you to become a "Regular Blackman Dealer." "Show Good Faith" and don't place orders only for goods that you cannot get anywhere else. Give us some "Regular Orders."

It is not too late to start if you are not already in the "Blackman Fold."

Yours for EDISON or VICTOR

Blackman Talking Machine Co.

97 Chambers Street, New York

Everybody's Doing It Now! Arranging to give their stock a square deal by giving the Columbia line a side-by-side representation—their interest being centered on the making of a sale to every caller.

THE QUAKER CITY IS AWAKE

To the Value of the Talking Machine as a Musical Factor in the Home and Elsewhere—March Business Surprisingly Good and April Is Following Suit—Interesting Chats with Some of the Principal Jobbers Reveal Progress All Along the Line—Some Anxiety Through State Over Coal Strike Prospects.

(Special to The Talking Machine World.)

Philadelphia, Pa., April 8, 1912.

The talking machine business in Philadelphia during the month of March was excellent in every way and the only complaint that is to be heard among the dealers is the old story of scarcity of goods. All of them agree in the statement that the difficulty they have experienced in getting machines and records has seriously handicapped them in preventing them from securing the full amount of business which would ordinarily have come to them had they been able to supply the demand. The trouble in getting the more popular records seems to be the cause of more complaint just at present than is the lack of machines.

Manager T. C. Henderson, of the Columbia Phonograph Co., reports that the retail business of his firm was excellent in March, and the wholesale business was quite satisfactory; however, the coal region business has been affected somewhat by the talk of strike. It has been doing considerable advertising in Philadelphia, which has assisted it materially in the volume of business it has done. It has been having a number of attractive window displays during the month, and its Easter window is one of the prettiest ever seen in this city. Its business has shown quite an increase in March over last year.

Among the recent visitors at the Columbia house were F. Grant Sweet and Charles Reed, of Williamsport, who have just organized in that lumber city of Pennsylvania the firm of Sweet & Reed, and they were in Philadelphia placing a large order for Columbia machines and records. Morris Housel, who is at present connected with the Columbia, is going to Williamsport to conduct the Grafonola department for this firm.

The Columbia Co. had considerable business during March on its Dictaphone, having sold a large quantity of them to the Pennsylvania Railroad Co. Walter Linton, who had been with the firm for several years and recently went to Wilkesbarre in the same business, has again returned to Philadelphia to the Columbia Co. It is patiently awaiting the new Princess Columbia, a \$75 machine upon which they expect to have a large sale.

Gimbel Bros., last week called a meeting of the talking machine men with the general managers of the store with reference to the coming fall business and the talking over of changes in the department which have been contemplated for some time, most important of which is the building of several more hearing rooms. Gimbel Bros. will make some extensive improvements in the department, and the plan of the department as a whole is to be more comprehensive and much more extensive than ever before. The system of filing records at the Gimbel department will be entirely changed.

W. J. Elwell, manager of the Heppe talking machine department, reports that his firm had a most excellent March, with the old complaint of shortness of goods still seriously handicapping it. It has also had considerable trouble in getting from the Victor factory parts of machines which it wishes to use in repair work. It has sold a number of machines which the owners have damaged either through carelessness or not understanding how to use them, and they have sent them to the house to be repaired, and some of them have been held for six weeks and two months awaiting the parts to go ahead with their repair work, and as many of these machines have been purchased on the instalment plan the owners have refused to pay instalments until they have had their machines returned to them. Among the visitors to the Heppe department recently have been Harry F. Cake, of Pottsville, Pa.; J. Harry Holt, of Mt. Holly, N. J., and William Keys, of Trenton, N. J.

C. N. Woodrop, secretary and assistant treasurer of the Columbia Phonograph Co., spent an afternoon last week at the Gimbel department trying to prevail upon that firm to undertake the handling of the Columbia Phonograph Co.'s product.

Lit Bros. have made a wonderful improvement in their talking machine department in the short time that it has been in charge of Harry Hovey, their new manager. Three new hearing rooms were built during March and a little later several more will be added. The entire department has been rearranged and they have been having a splendid business.

Louis Buehn & Bro. report that they are considerably ahead of last year. Mr. Buehn says that they would have been able to have done considerably more business if they would not have been handicapped by a lack of Victor stock. He further says that the outlook for business during the coming months is extremely good and expects a fine summer trade. He believes that the grand opera season has helped the sale, particularly of the high-class records, but on the other hand he attributes the unusual success of the past opera season to the great love for music that has been fostered by the Victor and Edison talking machines, as well as other machines of the same character.

The Buehn branch in Pittsburgh is booming and each month is showing an increase of Edison sales over the previous month.

W. C. Holzbauer, manager of the Wanamaker talking machine department, and A. C. Weymann, of Weymann & Sons, have the same report to make of a good March business—much better than last year.

The trade generally in Philadelphia feels that the coal strike agitation in Pennsylvania is going to materially affect business in that section, and as they depend almost entirely on Philadelphia, the volume of business in a wholesale way is going to be considerably cut until conditions again change.

There were no new stores opened in Philadelphia during the month of March, but there is considerable talk of other firms going into the handling of the little "talkers."

Jacob Bros. have their new talking machine department fully established, and they have three fine hearing booths as well as a most complete record room. They are handling the Victor line and carrying a heavy stock of records. While they have only been in business a short time they have already had the satisfaction of supplying records to customers who had purchased their machines at some of the old-established houses, who seem not as progressive as this new firm in keeping supplies on hand. They are running their department themselves at present and have already had most encouraging results.

BRIEFLETS.

J. W. Binder, now a Woodrow Wilson presidential campaign manager, with headquarters at 42 Wall street, New York, was a caller at the Columbia general offices Monday.

Joseph H. Wilson, Dominion manager for the Dictaphone, spent the week-end at headquarters, New York.

Kenneth N. Johns, manager of the Columbia Phonograph Co., General, store at Detroit, Mich., with his wife, spent the latter part of the week in New York. Mr. and Mrs. Johns were entertained Sunday at the New Jersey home of President E. D. Easton.

J. "Dictaphone" Westervelt, outside traveler for the Dictaphone, is back at headquarters after an absence of several days among the trade in the South. He reports business conditions in the South as improving rapidly.

SALES STEADILY INCREASING.

That little talking machine accessory, the "Dust-off" de luxe disc record cleaner, while only being on the market a little over six months, is certainly showing some results for itself by its steadily increasing sales. The manufacturers report that initial orders are being steadily duplicated by the trade throughout the country and some of the foreign countries. This de luxe model is a very pretty thing, being made of a beautifully designed metal holder finished in a "tiger back" oxydized design. Besides being individually boxed the cleaners are put up every dozen in an effective display carton that helps a great deal in selling the article on the dealer's counter. "Dustoffs" are now being manufactured under the new trade name, namely, "Minute Shine Co."

G. A. Scofield, manager of the retail department of the Pease Piano Co., which handles the Victor line of talking machines and records, 128 West Forty-second street, New York, in speaking of the talking machine trade said: "There is a good demand for Victrolas, in fact the demand is a little stronger than we are able to supply. The medium priced machines are enjoying the bulk of the call just at present. The entire line of records is going well. Popular music is, maybe, a little more in vogue than opera or classical selections."

Don't take it for granted that the engine which whistles the loudest pulls the heaviest freight.

CONDON-AUTOSTOP EXPANSION.

Wm. A. Condon Returns from Successful Road Trip—Placed the Representation of the Condon-Autostop with Leading Jobbers—Campaign of Publicity in the Magazines—To Visit the South This Week.

Wm. A. Condon, treasurer and general manager of the Condon-Autostop Co., 26 Front street, New York, returned this week from an extended Western trip, which carried him as far as Denver. He visited in all thirty-one of the leading cities and placed the representation of the Condon-Autostop with representative jobbers in every city visited.

While in Chicago Mr. Condon appointed H. P. Carlton, Western representative of the company with headquarters in Chicago. The latter, who is an experienced talking machine man, has been associated with the Chicago branches of the Wurlitzer and Aeolian companies and intends to give the Condon-Autostop a vigorous representation in the territory allotted to him.

At every point Mr. Condon found the jobbers interested in this Autostop for disc talking machines and a proof of its popularity is to be found in the fact that at the present time the Condon Co. has orders on hand for more than five thousand Autostops to be delivered at an early date. Consequently its large factory is now being kept fully manned, so that there will be no delay in shipments.

Late this week Mr. Condon expects to make a tour of the South visiting the cities of importance, and it goes without saying that he may expect the same success that he met with in the West.

This week the Condon-Autostop Co. is sending out prints of the very striking illustrated advertisements which are to appear in the Saturday Evening Post for April 21st and May 4th, and in Collier's Weekly, April 27th. These advertisements are attractively displayed, and cannot fail to stimulate a great deal of interest among users of talking machines in the Condon-Autostop, all of which, of course, inures to the benefit of the dealer handling this specialty.

At the present time jobbers report that dealers are manifesting a keen interest in the Condon-Autostop, and this advertising campaign in the magazines will certainly augment this interest materially. Speaking of his trip Mr. Condon paid a high compliment to the enterprise and progressiveness of the talking machine jobbers at all points visited.

VALUE OF INDIVIDUALITY.

The moment that every one thinks you are right, you are probably wrong. Popularity is by no means an indication of strength. Individuality is positive. It has a distinct form—it is unique—it departs from precedent.

Talking Machine Manager Wanted.

WANTED—The best retail Talking Machine manager in the United States to take charge of largest Victor retail business in the country; must be aggressive, with knowledge of Department Store advertising, and have ability to pick retail salesmen. Salary \$2,500 and excellent prospects. In answering give present employer, references; go into detail about self, age and habits of life. Address XLT, Chicago Office of The Talking Machine World, 37 South Wabash Ave., Chicago, Ill.

Salesman Wanted.

WANTED—An experienced Columbia retail salesman for position with an up-to-date, progressive music house located in Central Iowa. State experience and furnish references. Address COLUMBIA PHONOGRAPH CO., 101 North Wabash Ave., Chicago, Ill.

DINE AUSTRALIAN MANAGER.

W. W. Wyper, Managing Director of Thomas A. Edison, Ltd., in Sydney, N. S. W., Entertained at Banquet Upon Eve of Departure for America—Cleverly Compiled Menu and Toast List Presented to Guests—An Excellent Sense of the Fitness of Things Exhibited.

(Special to The Talking Machine World.)

Sydney, N. S. W., March 6, 1912.

An interesting event in talking machine circles in this city was the dinner tendered to W. W. Wyper, managing director of Thomas A. Edison, Ltd., by the staff of that company upon the eve of his departure for a tour of America, where he will take occasion to visit the factories of Thomas A. Edison, Inc.

The dinner, held on February 29, was an elaborate affair, one of the interesting features being the menu and toast list, wherein trade terms were injected with due regard for the fitness of things. The matter on the menu card, which may offer inspiration to those in charge of other trade banquets, is reproduced herewith. It is like reading through the Edison catalog:

MENU.

"Hello People (200)

Hors d'Oeuvres

(A Prize for the best guess what this means)

Oysters (with Attachments complete) Shells
(No crating allowance)

SOUP

Consomme d'Amberola
(Mahogany Finish)

FISH

Fried Fillet of Whiting, Sauce a la Florrie Forde (hot stuff)
"Girls, Study your Cookery Book" (13715)

ENTREE

"Two Little Sausages" (13650) got drowned, Bow Wow
Lamb Cutlets and Green Peas

(With "Red Pepper Rag" (665), ad lib.)

"Possum Pie" (8697) and "Rabbit Hash" (8628) are off.

RELEVÉ

"Spring Chicken Selection" (13363)

If you order this it's "Tosti's Good Bye" (13355)

Roast Turkey (in the Straw (219)) and Ham

"Boiled Beef and Carrots" (13934) got spoiled, so don't

order

Potatoes Peas

ENTREMEATS

Charlotte Russe a la Billy Williams

Harry Lauder Jelly

Nesselrode Ice Pudding

(How would you like to be the Iceman.—A cut-out.)

DESSERT

"Strawberries" (323) "Peaches and Cream" (448)

"Have a Banana" (12190)

CAFE

"Drink, Boys (and Girls), Drink" (12338)

"Scotch and Potatoes" (14006)

"Has Anybody Here Seen Kelly" (416)

Or know the "Cook's Whereabouts" (13807)

TOAST LIST

"Just for To-night" (12164)

Our Guest (Mr. W. W. Wyper)

"He Was Very Kind to Us" Lauder (13783)

Proposed by Mr. A. H. Pettifer, Assistant Manager

Response by Mr. Wyper

We won't see him again for "Months and Months and Months" (12162)

The Ladies

"You all want Something to Cuddle" (12003)

If not "Tax the Bachelors" (12133)

"No Wonder We (the married men) Look Jolly" (12317)

Proposed by Mr. John Stinson, Director.

Response on behalf of Ladies, Mr. J. Carmichael

Comic Song—"The Grass Widower" Mr. A. H. Pettifer

"I'm Bursting to Tell You This" (13382)

The Staff

"B.P.O.E." (223) which means Best People on Earth

Proposed by Mr. Cumming, Auditor

Response by Mr. F. L. Thomson, Secretary

"Is Everybody Happy Here" (13789)

Mandolin Selection, Miss M. C. Norris

"Over the Waves Waltz" (513)

This is a Miss Record not Master

"Don't Wake Us Up, We're Dreaming" (696)

Presentation to Our Guest

"It's better than being a Carnegie" Chairman (13736)

By the Chairman

This Programme was made up by the "Two Poets" (663)

"We've had a most delightful evening" (12254)

"Fall In and Follow Me" (12282) "Good-Bye" (816)

"Good-Bye Till We Meet Again" (12402)

"Auld Lang Syne" (525)

"There is a good idea," said a clerk as he picked up a bright trade paper and read suggestions it contained, and which would be especially helpful to his department of the store. "I'll just file that away, until I get a little time, and then I'll make the few changes necessary in order to enable me to apply that idea in our store." That is just where this young man fell down. He filed it away instead of going at it at once to put "the bright idea" into execution.

NEW CABINETS PLEASE TRADE.

Numerous Reorders Coming in for the Products of the Hanover Factories—Handsomely Finished to Match the Leading Styles of Machines—Clement Beecroft's Good Work.

(Special to The Talking Machine World.)

Philadelphia, Pa., April 11, 1912.

Clement Beecroft, of 309 West Susquehanna avenue, reports that the high-class talking machine cabinets recently placed on the market by the George A. Long Cabinet Co., Hanover, Pa., are meeting with a full measure of favor, and that with repeat orders coming in rapidly the sales total is most satisfactory. The attractiveness of the line is becoming widely known in the trade, and the result is making itself evident in the form of orders.

The various cabinets in the new line are made under the direction of experts in cabinets, and the construction and finish are both exceptionally fine. The cabinets are designed to conform with the leading styles of machines as to finish, and will be kept strictly up to the minute in that particular as new machines are placed on the market by the different manufacturers.

Mr. Beecroft, through his long connection with the trade, is well qualified to handle the sales end of the proposition in a thoroughly satisfactory manner. The cabinets are sold to the retailers through the recognized distributors and jobbers.

MAY TRAVEL CHEAPER NOW.

Through Business Allowed on Excursion and Commutation Tickets—Of Interest to Traveling Men in the Talking Machine Field.

(Special to The Talking Machine World.)

Washington, D. C., April 11, 1912.

The Interstate Commerce Commission announced to-day its interpretation of the law governing the use of mileage, excursion or commutation tickets for through passenger business over connecting lines. It was held that regular established excursion, mileage and commutation rates, in accordance with tariffs lawfully filed with the commission, may be used in basing fares for the transportation of both passengers and their baggage the same as if the passengers held through tickets over the entire route of their journeys.

Passengers, however, must procure either through tickets over the two or more lines involved or present to the initial line separate tickets covering the entire journey. Railroads then would be permitted to accord through accommodations, including all conveniences, such as through sleepers, in the same manner as is accorded on through tickets over the entire physical line.

PATENT APPLIED FOR.

Standard Loose Leaf Holders for Disc Records

Each leaf affords a separate compartment for the perfect protection and preservation of the record.

By our loose leaf method records can be arranged to suit the user, making them easy and quick to find. Leaves can be added at any time, and in any quantity desired. Name of record read at a glance. Write for dealers' terms and discounts.

Adams, Cushing & Foster
168 Devonshire Street - BOSTON, MASS.

An offer of "the 24 best records"

NUMBER TWO in our campaign of special advertising for the direct benefit of Columbia dealers appeared in the Saturday Evening Post of April 6th.

You saw it—and so did two million others. And you could hardly fail to notice that every line of those two big pages was concentrated on *retail business for the Columbia dealer*.

The same was true of our big double-page advertisement in the Saturday Evening Post of February 17th, which, as you may by this time know, produced an absolute landslide of Grafonola "Favorite" and record business.

You will notice also that this advertising was designed—and the future advertising is being laid out in the same way—not to create a demand for something the dealer did not yet carry, but to make a definite offer of stock that the dealer already had and assist him to keep it moving in a healthy fashion.

We are not suggesting that you ought to throw out any other line for the Columbia—but we should be extremely glad to have somebody give us one solitary good reason why you should not carry the Columbia line with your other lines if you don't see your way clear to negotiate exclusive Columbia selling rights.

It is a fact that the Columbia Grafonola "Favorite" occupies a place all its own—and the demand is undeniable and the profit is highly interesting. It is likewise true that every record mentioned in the list printed in the Saturday Evening Post advertisement of April 6th is a record that every owner of a talking machine ought to have and that every talking machine dealer ought to be able to supply. And if you haven't heard everyone of those records yourself—don't let anybody shut your ears for you, but take the first opportunity to hear them.

Certainly the names of the artists represented in this record list are names that positively should not be without representation in the store of every talking machine dealer who makes any pretense of carrying a complete stock. The record buyers are getting those records somewhere—and they are going to get them more and more all the time. Why should your customers have to go somewhere else, as they are doing?

The List of 12 Ten-inch Records (24 Selections)

Any one of these Records delivered by your dealer at the price named—or the complete series for \$8.65

- "HERD GIRL'S DREAM." (Double-Disc No. A587, 65c. This selection has already had the largest sale of any record in the world). Violin, Flute and Harp Trio, by STEHL, LUFISKY AND SUTHL. Coupled on the reverse side with "Invincible Eagle March," Banjo Solo by Vess L. Ossman, with orchestra.
- "SILVER THREADS AMONG THE GOLD." (Double-Disc No. A835, 65c.) Counter-tenor solo by FRANK COOMBS, with orchestra. Coupled on the reverse side with "Nelly Was a Lady," sung by Frank Coombs, with orchestra.
- "JUANITA." (Double-Disc No. A903, 75c.) Sung by ARCHIBALD BROTHERS QUARTETTE, unaccompanied. Coupled on the reverse side with "The Two Roses," sung by Archibald Brothers Quartette, unaccompanied.
- "HUNGARIAN DANCE NO. 5." (Double-Disc No. A1095, 65c.) Played by PRINCE'S ORCHESTRA. Coupled on the reverse side with "Hungarian Dance No. 6," played by Prince's Orchestra.
- "CONSTANTLY." (Double-Disc No. A915, 75c.) Sung by BERT WILLIAMS, with orchestra. Coupled on the reverse side with "I'll Lend You Anything I've Got, Except My Wife," sung by Bert Williams, with orchestra.
- "COOPER'S SONG." from Boccaccio, (Double-Disc No. A1070, \$1.) Baritone Solo by CECIL FANNING, with orchestra. Coupled on the reverse side with "Vaquero's Song," from Natoma, sung by Cecil Fanning, with orchestra.
- "ROSARY." (Double-Disc No. A227, 65c.) Violoncello Solo by VICTOR SORLIN. Coupled on the reverse side with "Motor March," Banjo Solo by Vess L. Ossman, with orchestra.
- "ON THE BANKS OF ALLAN WATER." (Double-Disc No. A1103, 75c.) Soprano Solo by GRACE KERNS, with orchestra. Coupled on the reverse side with "Irish Lullaby," Soprano Solo, by Beulah Gaylord Young, with orchestra.
- "LOVE'S OLD SWEET SONG." (Double-Disc No. A968, 75c.) Violin, Cello and Harp Trio, played by STEHL, RICHARD AND SCHUETZE. Coupled on the reverse side with "Song Without Words," Harp Solo, played by Charles Schuetze.
- "HOLY CITY." (Double-Disc No. A242, 65c.) Tenor Solo by HENRY BURR, with orchestra. Coupled on the reverse side with "Take the Name of Jesus With You," Duet by Harrison and Anthony, with organ.
- "BEAUTY'S EYES." (Double-Disc No. A941, 75c.) Tenor solo by REED MILLER, with orchestra. Coupled on the reverse side with "Forgotten," tenor solo by Reed Miller, with orchestra.
- "LIBERTY BELL MARCH." (Double-Disc No. A118, 65c.) Played by COLUMBIA BAND. Coupled on the reverse side with "Manisot March," played by Columbia Band.

The List of 12 Twelve-inch Records (23 Selections)

Any one of these Records delivered by your dealer at the price named—or the complete series for \$26.25

- "ISOLDE'S LIEBESTOD," from Tristan and Isolde. (Single-Disc No. 30652, \$3.) Sung by LILLIAN NORDICA in German, with orchestra.
- "LIBERTE!" from Le Jongleur de Notre Dame. (Double-Disc No. A5289, \$3.) Sung by MARY GARDEN, in French, with orchestra. Coupled on the reverse side with "Il Est Doux, Il Est Bon," from Herodiade. Sung by Mary Garden, in French, with orchestra.
- "DICH THEURE HALLE," from Tannhauser. (Double-Disc No. A5281, \$3.) Sung by OLIVE FREMSTAD, in German, with orchestra. Coupled on the reverse side with "Elsa's Traum," from Lohengrin. Sung by Olive Fremstad in German, with orchestra.
- "THE LAST ROSE OF SUMMER." (Double-Disc No. A5283, \$3.) Sung by ALICE NIELSEN, in English, with orchestra. Coupled on the reverse side with "Home, Sweet Home," sung by Alice Nielsen, in English, with orchestra.
- "HOME TO OUR MOUNTAINS," from Il Trovatore. (Double-Disc No. A5370, \$4.) Duet by GIOVANNI ZENATELLO and MARIA GAY. In Italian, with orchestra. Coupled on the reverse side with "While Yet in Languishment," from Il Trovatore. Duet by Giovanni Zenatello and Maria Gay. In Italian, with orchestra.
- "MARY OF ARGYLE." (Double-Disc No. A5132, \$1.50.) Sung by DAVID BISPHAM, with orchestra. Coupled on the reverse side with "Drink To Me Only With Thine Eyes," sung by David Bispham, with orchestra.
- "THOU BRILLIANT BIRD," from Pearl of Brazil. (Double-Disc No. A5350, \$3.) Sung by BERNICE DE PASQUALI, in Italian, with orchestra. Coupled on reverse side with "O Luce di quest' Anima," from Linda Di Chamounix. Sung by Bernice de Pasquali, in Italian, with orchestra.
- "EVER OF THEE." (Double-Disc No. A5244, \$1.25.) Sung by MARGARET KEYES, with orchestra. Coupled on the reverse side with "Angel's Serenade," sung by Margaret Keyes, Contralto, with orchestra.
- "SCENES THAT ARE BRIGHTEST." (Double-Disc No. A5159, \$1.) Violin, flute and harp trio, by STEHL, LUFISKY AND SCHUETZE. Coupled on the reverse side with the Intermezzo from Cavalleria Rusticana, played by Prince's Orchestra.
- "O TERRA ADDIO," from Aida. (Double-Disc No. A5331, \$1.25.) Sung by the COLUMBIA ITALIAN OPERA COMPANY, with orchestra. Coupled on the reverse side with "Selections from Aida," played by Prince's Orchestra.
- "THE LAST HOPE." (Double-Disc No. A5355, \$1.) Played by PRINCE'S BAND. Coupled on the reverse side with the Gloria from Mozart's 12th Mass, played by Prince's Band.
- "BARCAROLLE," from Tales of Hoffman. (Double-Disc No. A5274, \$1.25.) Duet by IDELLE PATTERSON AND MARGARET KEYES, with orchestra. Coupled on the reverse side with Schubert's Serenade, duet by Idelle Patterson and George Clarence Jell, with orchestra.

You have considered this subject at various times before, of course. But it seems to us that you owe it to yourself right now to take it up again and decide whether you are going to get along without the Columbia line.

Columbia Phonograph Company, Genl.

Creators of the Talking Machine Industry. Pioneers and Leaders in the Talking Machine Art. Owners of the Fundamental Patents.

Largest Manufacturers of Talking Machines in the World.

and a splendid success renewed

THE "Favorite" offer of April 6th was practically a repetition of the first one which appeared in the Saturday Evening Post of February 17th, and started the rush of "Favorite" and record business that everybody knows about now. This advertising campaign is planned to keep our dealers' stocks moving—not to force something new every twenty minutes. The "Favorite" is the most regular kind of regular stock—and only *two* of the records in the advertised outfit are named; the selection of the rest is left to the dealer.

Everybody's Doing It Now!

(Columbia Double-Disc Record A1123)

Turning the Columbia demand into *money*, instead of turning it *away*.

Selling Columbia instruments and records, instead of paying salesmen to tell their customers why not.

Meeting a good business half way, instead of missing it altogether.

Putting Columbia instruments and records alongside their other lines to let them all sell on their merits.

For the good, plain everyday reason that there's money in it.

Because the Columbia "Favorite," for instance, is in popular demand, with nothing in the market to touch it.

Because the Columbia "Regents," for another instance, are musical instruments that have no competitors at all.

Because *every* Columbia model is an instrument that appeals to certain people who won't be satisfied with something else—and at a price that makes that appeal final and decisive.

Because records by Nordica, Fremstad, Garden, Nielsen, Destinn, Zenatello, Hofmann, Bispham, and hosts of others are so sure of an audience that it's good business policy to be in a position to furnish them to inquiring customers.

You next! Next or soon, that's certain. But *how* soon? Don't give yourself a last year's reason why it shouldn't be this afternoon!

A CONDITION TO BE IMPROVED.

The Shortage of Machines, Its Effect and Possible Remedy, Outlined by J. Newcomb Blackman, President of the Blackman Talking Machine Co., New York.

In discussing business conditions with J. Newcomb Blackman, president of the Blackman Talking Machine Co., 97 Chambers street, New York, who said:

"Who can honestly say that dealers, jobbers and manufacturers are not always seriously handicapped and suffer great loss when they cannot get the benefit of holiday business through a shortage of goods?

"Is it not discouraging to the dealer and jobber, who has patiently and expectantly paid the rent and other heavy expenses during the summer season in view of the reward he expects to get from the extra heavy holiday business? What manufacturer can truthfully say that his competitor does not benefit by such a condition?

"Then, again, does it not encourage other manufacturers to enter the field, and perhaps do so in a manner which would be objectionable to the trade in general?

"I think that most all would agree that the above are but a few of the results of a general shortage of manufacturers' goods.

"Those who point to a condition which should be improved usually leave it to the 'other fellow' to suggest a remedy, but I am going to try and be more fair, even though the suggestion may not be received with 'open arms.'

"Compared with other months the summer months represent a dull period in the talking machine business. It is the time when we all should use the temporary lull to find defects and apply remedies. Is this not the time when most factories in our business reduce their manufacturing force, catch up on orders and sometimes deliver in April, May or June, a carload of 'machines' needed badly during the winter, but hardly as much when received. In other words, can holiday machine orders always be received with the same welcome in March or April and will they fill the purpose for which they were intended?

"The dealer cannot be forced, and more often cannot afford to stock up months in advance of the demand, and this condition is also true of the jobber. The factories say, 'We are manufacturers, the jobber should carry the stock,' all of which is true to a 'reasonable' extent.

"The successful merchant is the man who pays his bills, and the man who pays his bills nowadays usually likes to discount, and this type of man is considered a desirable representative for the factory. That being the case, as well as the fact, that most everybody's resources are limited, is it conservative, is it good business judgment for the manufacturer to encourage the jobber to 'plunge' during the dull season by stacking up all machines that he can stagger under, simply because he fears the factory will be unable to fill his orders, except on a 10 per cent. basis, during the coming holidays? Should he not consider that the factory might find it necessary to make certain changes during the many months intervening, and that these changes might make it almost impossible to dispose of the old type machines?

"The factories often relieve jobbers in such cases, but I believe in giving as much thought in 'preventing fire' as in having an efficient fire department to put it out. To boil it down, is this not the situation?

"The dealer expects the jobber to carry the stock for him to get 'telegraph service,' and it seems as though he will continue to view it that way. The jobber does not have unlimited capital, and if conservative wants to remain so and must consider the possible evil of plunging as much as the benefits that may mature.

"The factory don't propose to stack up machines during the summer for delivery to the jobber in the fall. Now, what are we going to do about it? Let us consider what they do in other lines of business.

"In the dry goods and other staple lines goods for a certain season's use and delivery are sold months in advance against bona fide orders for specified delivery and are made up during what is the dull season from a retail sales standpoint.

"The manufacturer gives dating consistent with the time the goods will lay on the jobber's or dealer's shelf before the season opens. The manufacturer obtains his financial accommodation from banks during this period without difficulty, because it is considered necessary to manufacture ahead and have the goods on hand when the harvest is at hand. Why cannot we adopt this principle in the talking machine business? The manufacturer could determine what would be a reasonable regular stock for the jobber to carry during the summer months and require him to maintain that stock on current terms. Above that, special stock orders could be given in May or June with regard

to fall and holiday requirements, with invoice dating to September, October and November, on proper proportionate parts of the quantity of machines ordered.

"Assuming then that a large quantity of machines was shipped and received by the jobber in July, the invoice dated from October 1, the jobber who discounts could, after properly checking the invoice, give his note to the manufacturer payable on the discount date, after dating, for the gross amount. The factory would, after payment of note, then credit the jobber with the cash discount.

"In the case of the jobber who never discounts, his note could be made to mature on a proper date for net payment. These notes would come from concerns whose financial standing would probably make it very easy for the factory to use them for discount purposes.

"Instead of laying off a large number of factory hands during the summer and suffering the effect of re-employing a lot of green ones at the eleventh hour, a steady experienced force would be kept at work during the summer and we would all have the goods when the big rush was on.

"If this is not 'the plan,' I think it certainly represents something that can be used as a basis for careful consideration, for the factory is the 'supreme court' when it comes to making decisions regarding changes, improvements, etc., and they could so regulate the matter as to provide properly for such contingencies.

"This article is not to be considered as a complaint, but more as a suggestion, for those who have the future welfare of the business at heart should be of a 'progressive' type and, taking the talking machine business as a whole, it certainly has been and should continue to be progressive. If I cannot do anything else I want to set everybody to thinking on this subject, for I feel that many thousands of dollars have been lost by not better solving this problem during the last few holiday seasons. Let us get together and see if we cannot crack this 'stubborn nut' and expose the 'kernel' of 'desired results.'"

THERE'S A DIFFERENCE.

There is a wide difference between having a note in the bank and having a banknote in the pocket, and therein lies the difference between complacency and discontent.

One breeds confidence, the others worry.

CINCINNATI :: :: CHICAGO

TWO POINTS OF SUPPLY; ORDER FROM THE NEARER

VIEWS OF THE NEW YORK TRADE.

Business in and around New York is far ahead of any previous year. All of the representative New York jobbers and distributors are substantially ahead of the first three months of last year and, in every instance, they say that actual sales might be much further advanced if they were able to get shipments in quantities desired.

The growing tendency of the public toward high grade goods, both in records and machines, is most notable. This does not mean that lower-priced goods have gone out of date or even lost much ground; it is a fact though that the demand for the better class of instruments and records has grown all out of proportion to the lower grade. This in itself is a pleasing feature of present day conditions, and one which has marked the marvelous uplift of the industry the country over.

Collections are fairly good. There is also a slight gain in the percentage of cash sales. The installment departments report larger initial payments in many cases than characterized the business for 1911. This would seem to argue that money is more plentiful among the working people, and that General Prosperity has not retreated from the active campaign, as some would try to make out.

* * * *

The main item of gossip in talking machine circles the past few days has been the contemplated expansion of Landay Bros., Inc., who are planning to occupy another store at the corner of Broadway and Forty-second street, one of the busiest centers in the city. Details of their signing a lease for ten years at an aggregate rental of \$110,000 are to be found in another section of The World.

The rental of the new store is at the rate of \$11,000 per year; the store at 563 Fifth avenue, the one at 400 Fifth avenue and the one at 27 West Thirty-fourth street are all valuable locations, and while we make no attempt to pry into the personal affairs of houses, a real estate man places an estimate that the total rental involved would be approximately \$50,000 to \$60,000 per year for the four locations. Just think, \$50,000 to \$60,000 a year for fixed charges of rent alone! The business of Lan-

day Bros., Inc., is exclusively Victor talking machines, and it is doubtful if there is another organization in the world exclusively devoted to the distribution of talking machines that equals the magnitude of the house of Landay.

Skeptics, wish-bone dealers and other pessimists should read the foregoing and ponder.

Max Landay believes that the political debates are not effecting business, and he looks forward to a year of good volume. "Who do you think will be elected President?" was asked of Mr. Landay, who humorously replied: "Taft, Roosevelt, Wilson, Clark or Harmon."

* * * *

V. W. Moody, sales manager for the New York Talking Machine Company, 81 Chambers street, New York, Victor jobbers and distributors, is optimistic to the very limit. In talking with The Talking Machine World he said: "Really there is nothing to tell you except the same old story. We are busy, of course, as is everyone else in this industry. The situation at present is deplorable. Here we are with almost unlimited opportunities waiting at our very door, and we are unable to get goods enough to fill even a substantial percentage of our orders. At present we are easily 25 per cent. ahead of the corresponding three months of last year. Nobody knows how much we might increase that if we secure good shipments. I've no doubt the result would be surprising though." Mr. Moody said that the demand was not confined to any particular instrument or line of records. Victor goods generally, and of course when Victor is mentioned everyone immediately thinks of the Victrola, are enjoying a popularity hitherto unprecedented. Wholesale and meritorious advertising, coupled with Victor quality in both records and machines, are largely responsible for the creation of a demand which is far in excess of the factories' resources.

* * * *

In speaking of the new machine recently marketed by the Columbia Phonograph Co., General, New York, which is fully described in another part of this issue of The World, R. F. Bolton, manager

of the company's store at 89 Chambers street, New York, stated: "The Princess, our new model Grafonola, which we sell for \$75, is proving itself a winner from the start. We have taken more orders for the Princess directly from the photograph, and even before we had a sample machine for our customers' inspection, than of any other in our whole line. Our advertising campaign in the local papers, with local dealers advertisements surrounding ours, is working wonders. The Journal, Globe, Commercial and two German papers are the mediums employed so far. The dealers are particularly enthusiastic over this scheme for keeping trade lively in local circles. The special list of Easter records was a great success."

* * * *

Channing Ellery, director and manager of Ellery's Band, has recently arrived in New York from London. Most everyone is acquainted with the Ellery Band reputation, both in this country and on the Continent. Mr. Ellery was a caller at the Columbia store on Chambers street the first of the month, and brought with him several band records which were made in London, and as Mr. Bolton expressed it, they were "some" records.

* * * *

O. Brushaber, manager of the Dictaphone for New York, states that his department is fully 50 per cent. ahead of March. To explain this extraordinary increase he says: "Every day our selling organization is improving, our men are a unit, they work for each other and for the firm, personal gain is secondary, for they thoroughly realize the advantage of struggling for the desired end, increased general sales. We are confident of gaining still more right through the summer. The cream of the phonograph business has hardly been touched as yet, and the summer season will be just as productive for us as any other."

* * * *

S. B. Davega & Co., 126 University place, New York, report the same conditions as are in evidence among the other New York jobbers. Both the Edison and Victor lines which the firm handle are away behind so far as filling orders is concerned.

Somewhat I always admire a monkey who hangs on to a mule's tail till he's kicked to death, better than the man who'd let go.

SPECIAL "FAUST" WINDOW FOR USE OF TALKING MACHINE DEALERS

The Victor Talking Machine Co., Camden, N. J., is announcing the Faust Window Display No. 27, and suggesting that now, with the close of the opera season, is the time for bringing the Victor to the attention of the music lovers of their respective communities. The Victor Co. has recorded the entire opera, and the window display is designed to promote the sales of these records. The imitation of the art glass window with Marguerite at the spinning wheel, and the life-size pictures in colors, true to life, of Mephistopheles and Dr. Faust, illustrate the story of one of the most highly dramatic scenes in the opera. The display is easy to assemble. Machines and records are arranged as best suits window space available. Victor dealers will find the Faust Window Display a puller and a typical Victor creation, which it will pay them to feature. No live dealer can afford to overlook this display.

FROM OUR CHICAGO HEADQUARTERS

ROOM 806, NO. 37 SOUTH WABASH AVENUE, E. P. VAN HARLINGEN, MANAGER.

March Proves Excellent Month for Business and Does Not Betray Usual Spring Slacking Up—Many Sales Being Made to Piano Prospects—What the Managers of Some of the Prominent Departments Have to Report—Good Demand for the Various Specialties—New Quarters of Talking Machine Shops Assuming Settled Appearance—Booths Handsomely Decorated—Muskegon House Increases Facilities—New Salesmen for Talking Machine Co.—Numerous Trade Visitors During the Month—General News of Interest from the Western Metropolis.

(Special to The Review.)

Chicago, Ill., April 11, 1912.

The story of March can be told in a few words; it was an usually good month and did not betray, even at the close, the usual slacking up of activity coincident with the approach of spring. In fact, the talking machine business this year has been really remarkable, especially when considered in conjunction with the distressing dullness in the piano trade. There is no doubt whatever but what a considerable proportion of the talking machine sales now being made are to people who were piano prospects before they got interested in the talker game. Especially does this maintain in the case of the higher priced machines, which constitute attractive pieces of furniture, as well as universal entertainment. This statement, of course, furnishes a potent argument for the handling of talking machines by piano dealers.

Business Situation Discussed.

F. A. Siemon, assistant manager of the Chicago House of Wurlitzer, says that March was a thoroughly good month, ahead of the corresponding month of last year, and also of February of this

year. April is opening up in good shape. Mr. Siemon says that while there is a great deal of talk each year about the number of sales made to people leaving for summer resorts, that this business is by no means what it is cracked up to be. However, the new Victor \$15 and \$25 machines should stimulate this class of trade considerably because of both their low price and extreme portability.

L. C. Wiswell, manager of the talking machine department of Lyon & Healy, says that last month was the biggest March in the history of the talking machine department of the house, and that the increase was about evenly divided between the wholesale and the retail.

Lyon & Healy have two specialties which are enjoying a very large sale. One is their fiber needle-cutter, which is being ordered by dealers everywhere, and the other their machine table, which can be shipped in collapsible form and contains an under shelf on which can be placed their special compartment files.

Business conditions in the talking machine industry in Chicago seem to be very good, according to Arthur D. Geissler, manager of the Talking Machine Co., who says that March this year with him was 20 per cent. better than March of last year, and 10 per cent. ahead of February. April also starts out even better than March, and indications are that business is going to continue good for some time. There is still a shortage in the VIII, IX and X Victors, but records are coming along better.

The New "Shops."

The new quarters of the Talking Machine Shops on the fourth floor of the Steger building are now beginning to take on a business-like appearance. The ten large demonstration booths have been built

around the walls of the room, leaving a large space for display purposes in the center of the room. All except two of the booths have outside exposure. They are white enamel and double panes of glass, making them as nearly soundproof as possible.

It is intended to devote three of them to machines all of the same finish. One will contain all the styles of mahogany from the XVI down; another the weathered oak and a third the golden oak. On the display floor in the center will be shown as many as possible different finishes in the Style XVI. The stock of machines was moved into the rooms only last Friday, but the rooms are being rapidly put in shape so as to take care of business.

Add to Facilities.

Two new display booths to be used for talking machines have been added to the store of the Alden & Biddinger Co., of Muskegon, Wis. One will be devoted to the Edison and the other to the Victor machines. The booths are located in the front of the store, and besides adding attractiveness to the store rooms give prominence to their talking machine business. They are now splendidly equipped for handling talking machines.

Enlarge Force.

Two new employes have been added to the Chicago branch of the Talking Machine Co. H. F. Colson, an experienced salesman, both in the talking machine and other lines, will be on the floor at all times to take care of dealers and customers of dealers who come to call at the headquarters. With this addition to the force of the Talking Machine Co., dealers and their customers will have expert attention when they come to the Chicago branch, all sales made by Mr. Colson to be accredited to the dealer. Alden Senny, the second new employe of the Talking Machine Co., will call upon the city dealers, keeping them well posted on the monthly records and looking after their other wants.

New Dealer.

The Schultz Piano Co., 1503 West Madison street, has added a complete line of Victor talking machines and is going after the business in that line aggressively and in an up-to-date way.

Visitors and Personals.

E. H. Jackson, retail manager of the Victor talking machine department of the Chase-Hackley Piano Co., of Muskegon, Wis., was a Chicago visitor last week.

Frank C. Miller, president of the H. C. Waite Music Co., of Cedar Rapids, Mich., was in the city recently.

Edward A. Vaughn, talking machine dealer, of Peoria, Ill., was a visitor last week.

L. C. Parker, manager of the Victor department of Gimbel Brothers, Milwaukee, who is known in the talking machine trade for his progressive ideas, was a visitor to Chicago last week for the purpose of inspecting the various retail stores and picking up a few clever ideas that he can adapt to his own business. Mr. Parker is a wideawake dealer and one of the kind who believe that neither a Presidential year nor a pestilential year will seriously affect business if the dealer is a hustler and knows the game. He reports that his business has doubled this year.

Herman Schaad, assistant to General Manager Perkins, of the Aeolian Co., was in Chicago last week on a tour of inspection of the Western territory.

Arthur D. Geissler, general manager of the Talking Machine Co., Chicago, is spending this week in French Lick, Ind., working off a case of spring fever and chasing the festive golf ball.

Walter Stotts, one of the directors of the Victor Talking Machine Co., was a visitor in Chicago last week.

Keeping the Dealers Posted.

A new method of keeping dealers posted as to the condition of the record stock of the Talking Machine Co. of this city has been instituted by Arthur

SELL THE "WADE" AND INCREASE YOUR TRADE

The WADE CUTTER is the manufacturer's best effort—the buyer's best judgment.

When you hear this statement, "JUST AS GOOD AS THE WADE, with one exception—the WADE has a triangular guide for holding the needle in position while repointing"—make up your mind to have the best, "THE WADE."

The WADE FIBRE NEEDLE CUTTER constitutes a very important part of your Talking Machine Equipment.

Give us a chance to make good with you as we are doing regularly with other jobbers.

WADE & WADE

1227 East 46th Street, CHICAGO, ILL.

\$1.50 \$1.50 \$1.50 \$1.50 \$1.50 \$1.50

FROM OUR CHICAGO HEADQUARTERS—(Continued from Page 33.)

D. Geissler, the general manager. Instead of compiling a list of the stock records on hand each month and sending them to the dealers, Mr. Geissler has reversed the custom and is sending them a list of the records he is out of. In this way the dealer can compare his own list with the company's, and if he finds they do not compare he knows that the company has on hand the records he desires. Incidentally in compiling the record Mr. Geissler finds that out of over 3,000 titles in the Victor catalog there are only about 300 that are not now in stock at the Chicago headquarters. Consequently they are able to fill their orders 85 to 90 per cent. complete.

Phonograph Suggests Suicide.

A sentimental song being played and sung on the phonograph in a Chicago shooting gallery has been accredited with stimulating in the mind of a despondent young man the idea of taking his own life. The young man, Edward Wicks, aged twenty-two, walked into a shooting gallery at 106 South Halsted street last week and as he passed the door he heard from the horn of the phonograph a mechanical voice singing: "I Wish I Had a Girl Like the Girl That Married Dear Old Dad." He stopped and listened a minute to the song then passed in. He walked close to the musical instrument and seemed to be influenced by the song. When the song was finished the listener asked the attendant of the gallery for a target revolver. Four times he shot at the targets at the other end of the room and then turned to the keeper: "Would a bullet from this small revolver kill a man?" he said.

"Sure, if it went into his brain," said the target setter. The young man then deliberately placed the muzzle of the revolver to his head and pulled the trigger. He died instantly.

Has Made a Favorable Impression.

Kreiling & Co. report that the new straight tube "Tiz-it" horn connection and tone modifier advertised in *The World* last month has made a favorable impression in the Edison trade. They are offering a special discount for a limited time.

New Factory for Lyon & Healy.

Lyon & Healy have just purchased a tract of six acres at Fullerton avenue and Fortieth avenue, on the Chicago, Milwaukee & St. Paul Railroad. There is a freight and passenger station at this property, and it can also be reached by the Fullerton avenue trolley and Fortieth avenue trolley, which pass the property, and also by the Northwestern elevated. Lyon & Healy are making plans to erect a large fireproof structure, which is to be one of the most modern musical instrument factories in existence. Improvements in methods of lighting and of maintaining a uniform temperature will be incorporated in this building. The ample amount of floor space will permit of many economies in the making of musical instruments of the highest grade. The manufacture of Lyon & Healy pianos, Lyon & Healy harps and other musical instruments will be carried on there under ideal conditions.

March a Good Month.

C. F. Baer, manager of the Chicago office of the Columbia Phonograph Co., said: "March of last year was an abnormal month on account of a single immense order that came in. Eliminating that, March of this year showed a good increase over the corresponding month of 1911. Business looks very bright to us, indeed. The new Princess, the only talking machine made standing on its own base to sell at as low a price as \$75, is a winner both as to appearance and tone, and is going to have a whirlwind sale."

The Wade Fibre Needle Cutter.

The Wade fibre needle cutter, manufactured by Wade & Wade, 1227 East 46th street, Chicago,

is continually growing in favor with the trade. This cutter reaches the high point of efficiency, convenience and ease of operation. It works like a pair of scissors or pliers, and is hailed generally in the trade as one of the most practical devices of the kind ever placed on the market.

Speeches by Dictaphone.

A unique entertainment feature was pulled off by Hibbard, Spencer, Bartlett & Co. last week in their farewell dinner to S. Sandell, manager for many years of the purchasing department of that firm. About thirty men representing the heads of the different departments of Hibbard, Spencer, Bartlett & Co. were in attendance. Instead of making personal speeches, as is usual in an affair of this kind, the banqueters had previously recorded their flowery offerings on wax cylinders by means of the dictaphone through a Twentieth Century horn, several of which are used in the company's store, and these were reproduced on a Columbia graphophone. The stunt was quite a novel one and furnished much amusement.

**No. 100 Adjustable Corners.**

The above picture illustrates Salters' Patent Adjustable Square Corners, made to fit any make of machine, providing the top, in which the talking machine stands, is of sufficient size.

Salters' corners do away with the old style rails, which have always been a source of annoyance for the reasons that they were either too large or too small, and that they were dust catchers. These corners are made in both mahogany and oak and finished in any color. There are four to a set, furnished with eight round head, nickel plated screws. They are easily adjusted and make an excellent appearance. The use of the corners is to keep the machine in place on the cabinet. They are sold, complete with screws, at \$1 a set.

THE PHONOGRAPH IN THE HOME.**The Subject of Some Commendatory Remarks From Walt Mason.**

Thomas A. Edison, Inc., has had put in folder form the very clever story written by Walt Mason in the *Chicago Daily News* recently, entitled, "Canned Symphonies." It is worth reproducing for the benefit of our readers generally:

"The man in the house next door has invested his hard-earned savings in a phonograph," said the morose boarder, "and he keeps it going every evening just when I want to read some uplifting book. Unless he can be suppressed I foresee that I'll have to hunt another boarding house, for I can't stand it to hear a corn sheller trying to sing 'When the Daisies Bloom, Dear,' every evening."

"I trust you will seek another boarding house," said the star boarder, politely. "Such a proceeding would give general satisfaction. As William Clarence Shakespeare remarked, the man who is not charmed by the concord of sweet sounds is fit for treasons, stratagems and spoils, and some extremely sweet sounds are produced by the phonograph next door, and by all other high-class phonographs, which are properly oiled."

"It has become the fashion with half-baked humorists in boarding houses and elsewhere to say biting, caustic things of the phonograph. These humorists are the descendants of the merry men who used to insist in print and on the stage that a mother-in-law in the house is worse than a contagious disease. A quarter of a century ago you couldn't pick up an almanac or a comic paper without seeing the mother-in-law held up to scorn and contumely."

"In the course of time the joke concerning this admirable female became so halt, lame and blind that it was forced

into retirement, and then the stove-pipe joke made its triumphant debut. It was held by American humorists for many years that the chief employment of the married man was putting up stove pipe, and that such employment caused him to mutilate the English language beyond recognition. This truly irresistible quib did yeoman service for many years, until it was discovered by a committee of savants that the average married man seldom has anything to do with stove pipes.

"Then came the phonograph jest, which has contributed to the gaiety of the nations for several years, and which appears to have a long career of usefulness before it. When a man appears in society and wishes to convulse people with merriment he makes some casual reference to a phonograph, and everybody lies down on the floor and indulges in apoplectic mirth."

"Now, the truth is that the phonograph is one of the greatest blessings of this age of blessings. I have a married friend whose humble abode I pass an evening once in a while, and every time I go there he furnishes a free concert with his music mill. He is a phonograph fiend and keeps his machine going most of the time when he is at home. Perhaps some of the neighbors are sore about it, but what of it? If a man can't open a few cans of music in his own home, what's the use of having a home?"

"Before he got the phonograph habit my friend was a restless, dissatisfied man. He didn't know what to do in the long winter evenings. He got tired of beating his wife and jawing the children, and his eyes were too weak to read much, and he was a trial to himself and everybody else. He liked music, but it cost a good deal to go to concerts and take his tribe along. He belonged to a club, but he was a poor hand at poker, and generally lost."

"Then he was persuaded to buy a phonograph and his nights were filled with music and the cares that infested the day folded their umbrellas and chased themselves. He gets more happiness out of that little box with a sheet-iron horn attached than the millionaire gets out of his yacht, and his wife and children have an equal share. He buys a record for a few kopecks and plays it a million times, and enjoys it every time."

"Tell me, if you can, of another amusement as cheap and satisfying. The phonograph has made home life in this country as attractive as it used to be, and it makes my blood boil in my veins when I hear an Aleck speaking of the canned music grinder in slighting terms, in a misguided effort to be funny."

A POPULAR EDISON STYLE

Is the Opera Model Which Has Been in Great Demand Throughout the Country.

One of the most popular creations put out by Thomas A. Edison, Inc., in some years is the new opera style, of which an illustration appears herewith. It has proven a big seller and its reproduc-

**NEW EDISON "OPERA" STYLE.**

tive qualities are highly acclaimed. Reports from correspondents at all points throughout the country are a unit in proclaiming this one of the sellers of the season.

Don't try to get rich suddenly, by selling goods at a figure that doesn't pay a profit. Trade now in that way is not held. Your patrons expect you to make a profit, and if you do not, they are sure there is a trick somewhere. If they come to trust in your judgment, and you assure them that the price is fair, they take your word, and the goods.

"Let us have ninety per cent. of confidence and ten per cent. of money with which to conduct business, rather than one hundred per cent. of money and lack of confidence."

LAVAL POCKET LIGHTER

Only practical pocket lighter yet produced. No mechanism to get out of order. Durable, reliable, waterproof, made of best material, highly nickel-plated. Occupies space of pencil. Just the thing for lighting cigars, pipes, lamps, gas, campfires, etc. Money refunded if not as represented. Special prices to agents and dealers. Sent complete with pocket clip, 35 cents. **LAVAL MFG. CO., Dept. , CHICAGO**

Our Hat's in the Ring!

You know our stock is not in as good condition as it should be—and we realize it. But we're sending out the most completely filled orders in the country—and we can **prove** it.

And You Mr. Dealer—

you that have some empty bins, you've been trying to fill—**send us that order.** See if we don't come pretty close to "making good."

Another Point—

The Talking Machine Company is the original concern doing business under that name—been in business fifteen years—has no branch offices—and wholesales **exclusively.**

YOU AROUND"

U-S PHONOGRAPH CO. PLANT REALLY A LABORATORY.

Every Move the Result of Close Study and Under the Direction of Experts—Some Facts About Sapphire Quality—Interesting Views of the Principal Departments of the Large Plant—Nothing Left Undone to Guarantee Reliability in the Product of the Company.

(Special to The Talking Machine World.)

Cleveland, O., April 10, 1912.

The thing that impresses the visitor to the plant of the U-S Phonograph Co., of this city, is the scrupulous care exercised in every department of the business. Each of the various processes is

carried out under the charge of a man of long experience in that particular branch. Technical books are seen everywhere. This is not a factory in the accepted sense of the term—it is a laboratory. It is hardly possible at this time to enter into a detailed description of the manufacture of the U-S

phonograph and of the everlasting non-breakable records, but every dealer within reach of Cleveland would find an hour or so spent in this remarkable plant a most enjoyable as well as instructive experience. A few views of the interior of the factory are here given. The conditions under which the employes labor are the very best, and the high character of the workers is evidenced by their countenances. One does not go very far in his journey in this plant before he under-

stands why the finished product has achieved such wide distribution in so comparatively short a time.

Take, for instance, the department in which are prepared the permanent sapphire needles that are used on the U-S machines. It is in charge of a man whose experience in this line goes back almost to the inception of the cylinder machine. A special type of sapphire is used. The stones come either from the island of Ceylon or the Casimer mountains. Experiments were made at one time with stones from Montana, but it did not prove suitable to needle purposes. It's quite a scientific procedure, the grinding of these sapphires to the required size and shape, and one requiring expert workmanship of the highest order.

Probably next in interest is the record-making department. The matrices come direct from the recording laboratory in New York, are subjected to a copper bath and finally leave their impression on the celluloid rolls, which are afterwards appropriately mounted.

The assembling department where the various parts of the machine are put together is a model of system. Scientific factory management here maintains and waste of time is here reduced to a minimum. The men controlling the destinies of the U-S Phonograph Co. are used to handling big propositions, and everything in this plant moves with a noticeable precision and accuracy.

The fact that the manufacturing methods of the U-S Phonograph Co. have been successful in developing a product of recognized quality is indicated by the cordial reception extended to its machines and Everlasting records by the trade throughout the country. The entire proposition is a big one and has long ago passed the period of experimenting.

This brief sketch only suggests one or two of the salient features in this remarkable plant. A trip of inspection to Cleveland is well worth the taking.

CHICAGO, ILL., U. S. A.

If it looks natural it is not regarded as authentic.

On maps all bodies of water are blue, and some States are pink, while others are yellow, green, mauve, magenta or red.

New York is always red and Rhode Island is green. Massachusetts is a calm gray and Texas is a hectic pink.

Maps are useful to show children how some place is bounded.

Railroad maps are more interesting than any other kind. A railroad map can make the State of Illinois twice as long east and west as it is north and south, without the slightest inconvenience. Only on a railroad map may New York, Nashville, Butte and San Antonio be shown upon the same parallel of latitude.

Dr. Cook sought the North Pole with a railroad map.

Much should be forgiven him, therefore.—Chicago Evening Post.

TEACHING BIRDS BY PHONOGRAPH.

In the death chamber of the Ohio Penitentiary, with the electric chair and the old gallows as com-

panions, John Atkinson, Cuyahoga County prisoner, is conducting the largest and most scientific canary bird farm in the State. Every bird raised in the old death chamber is taught to sing by the use of a phonograph.

Atkinson was received at the prison 15 years ago from Cleveland to serve a sentence of 15 years for robbery. Before his sentence expired he killed a guard, was tried in the Franklin County courts at Columbus and was sent back to the penitentiary to serve a life sentence.

A NEW FORM OF AUTOMATIC LIGHTER.

The Laval pocket lighter, which fits in anywhere that a match is ordinarily used, has simplicity as one of its strong features. The lighter is handsomely nicked, fits in the pocket like a pencil and is, moreover, durable and waterproof. The claims of the manufacturers are backed by their guarantee. It should be quite a pleasure for the smoker to possess an automatic lighter that does not require the constant services of an experienced mechanic to keep it in working order.

THE LYON & HEALY FIBRE NEEDLE-CUTTER

SIMPLE
AND
EASY
TO
OPERATE

CORRECT
LEVERAGE
FOR A
PERFECT
CUT

FINEST TOOL STEEL

GUIDE
WHICH
SAVES
ALL
WASTE

The L. & H. Needle-Cutter or Fibre Repointer we now offer to the user of Fibre Needles is the result of four years' exhaustive experiments and we feel safe to assert, NONE BETTER CAN BE MADE.

The lover of GOOD music will find this cutter invaluable. The upper blade being pivoted above and back of cutting edge insures perfect contact with lower blade. Both of these blades are made from finest tool steel and properly tempered and with ordinary usage will last for years, without sharpening or renewal.

The cutter has a self-acting stop, which prevents cutting away more than enough, thus a pin can be played twelve or fifteen times before becoming too short.

We give our absolute guarantee with every cutter sold.

POLITICS HURT MILWAUKEE TRADE.

Bitter Municipal Campaign Which Results in Defeat of Socialists Receives Much Attention—Improvement Noted, However—Death of Well-Known Dealer—Victrola Relieves Tiresome Job—What the Various Dealers Are Doing to Capture Business—New Columbia Dealer Established—L. C. Parker Honored by Associates—William A. Kaun Music Co. to Remodel Quarters—News of Interest.

(Special to The Talking Machine World.)

Milwaukee, Wis., April 10, 1912.

Now that one of the most exciting and bitterly fought municipal elections in the history of Milwaukee is a thing of the past, local talking machine dealers say that business is beginning to take on new life. The Socialist administration was defeated by a decisive majority. People had been too deeply engrossed in politics during the latter part of March to have much time to buy much of anything out of the line of absolute necessities. Conditions in all lines have settled down once more and business is showing steady and healthy improvement. Genuine spring weather has made its appearance and the reaction from a long and severe winter is making itself manifest in a better trade in all fields. The fact that this is a Presidential election year does not seem to be causing any uneasiness either in the jobbing or the retail trade. As long as business in general is showing improvement talking machine men say that they are confident of meeting with a fairly prosperous year and are making preparations accordingly.

Jobbers seem to be well satisfied with conditions. Dealers are ordering well in order to be well stocked up in readiness for the late spring trade, and the outlook is better at this time than it was a year ago. Indications are that retailers are not stocked up especially heavy and this is taken as a hopeful sign.

The Milwaukee trade was shocked recently by the death of Oscar Bach, 3515 North avenue, a well-known music dealer, who carried both the Edison and Victor lines and has always played a prominent part in the local talking machine trade. Mr. Bach had been in ill health for some time and had recently undergone an operation.

Louis F. Stark, of Hilbert, Wis., has joined the Wisconsin contingent of Edison dealers.

George D. Ornstein, sales manager of the Victor Talking Machine Co., is expected to arrive in Milwaukee soon on his way from the Pacific Coast. Mr. Ornstein has several sisters in Milwaukee and

will probably spend a short time in the city.

Otto F. Leidel has resigned as general manager of the Victor department of Emil O. Schmidt, 310 Grand avenue, and has joined the forces of the F. G. Smith Piano Co. No successor to Mr. Leidel has been chosen, and Mr. Schmidt announces that he will give personal attention to the Victor line. Mr. Schmidt has a high class trade and is doing especially well with his talking machine line.

Probably the Victrola has never been put to a more unusual use than it is in Milwaukee at the present time. Secretary Frank Harbach, of the Milwaukee school board, is a busy man and at the end of each month has to sign 1,600 pay checks for the teachers in the local schools. He used to find it a pretty tiresome job, but now signs the checks while listening to the music of a Victrola. He says he actually enjoys the job now and he strongly recommends that various financiers, who find it so wearisome a task in signing checks, adopt his little scheme.

L. C. Parker, the enterprising manager of Gimbel Bros.' talking machine department, has been elected vice-president of the association of Gimbel managers and assistant managers. Monthly meetings and luncheons are held by the organization, and Mr. Parker has been one of the faithful workers. A gain in business of 148 per cent. for the month of March, as compared with the same period a year ago is reported by Manager Parker. The Gimbel department made some especially fine sales of Style V Victors to several of the Milwaukee schools during the past month. Mr. Parker has the distinction of having sold Victors to practically every school in Milwaukee. He is a strong advocate of the use of the Victor in teaching music and in the regular routine work of the lower grades, and the campaign which he has carried on has done much to increase Victor sales not only in Milwaukee schools, but in the schools about Wisconsin.

Lawrence McGreal, Edison jobber for Wisconsin and president of the National Association of Talking Machine Jobbers, furnished practically all the Milwaukee newspapers with Edison stereopticon machines for use in flashing the returns of the recent municipal election.

A. G. Kunde, Columbia jobber and retailer, 516 Grand avenue, announces that he has established a new branch Columbia dealer in the foreign section of the Milwaukee downtown district. General trade at the Kunde store has been showing a steady increase during each month of the present year.

E. H. Phillips, manager of the credit department of the Thomas A. Edison, Inc., stopped over in

Milwaukee recently as the guest of Lawrence McGreal. He was on an extensive Western trip and reported conditions as favorable. He said that the new Edison disc machine may be expected to make its appearance on the market during the late spring or summer.

Mr. McGreal has received news that the Thomas A. Edison, Inc., will place its Home moving picture machine on the market within the near future. It is probable that he will assume the Wisconsin State agency for the machine.

News from Miss Gertrude Gannon, head of the Wisconsin Talking Machine Co., Victor jobber for Wisconsin, indicates that she will probably not return to Milwaukee before May 1. Miss Gannon, in company with a party of friends, has completed a trip up the Mediterranean, through the Holy Land, down the Nile into Egypt and is now touring Europe. Harry Fitzpatrick and Joseph Gannon, in charge of the Wisconsin Talking Machine Co. during Miss Gannon's absence, report a brisk Victor business and announce the securing of several new Victor dealers about the State.

The new store at 1120 Walnut street, conducted by J. H. Becker, Jr., under the name of the Talking Machine Co., is meeting with a steadily increasing business and Manager Becker reports some especially fine sales of Victrolas XXIV., XVI. and VI. A brisk business in Red Seal records, including records by Caruso, is reported. Mr. Becker, as usual, has an attractive window display that is bringing him much business. An Easter exhibit of more than ordinary merit has brought out much favorable comment. Mr. Becker is now devoting much of his time in calling upon the outside trade, leaving his new store in charge of Mrs. Becker, who is proving herself to be a most able saleslady in the talking machine field.

The William A. Kaun Music Co. has awarded contracts for the remodeling of its recently acquired quarters at 90 Wisconsin street, where it will be located about the latter part of the month. A new front will be erected, new fixtures and a new heating system will be installed and the store will be made into one of the finest in the Milwaukee downtown section. Mr. Kaun will have more room at his disposal in the new store and will be able to give up considerably more space to the talking machine phase of his business. A full line of Victor machines, supplies and records is carried.

WHY TRADE IS GROWING.

Business has been growing so rapidly with the Schafford Album Co., New York, that it has been forced to seek larger quarters. Recently it moved from 182 Grand street to 23-25 Lispenard street, where it will have three times the room—approximately 10,000 square feet of room. In fact, this company has been cramped for space during the past few months and it was only the difficulty of finding the proper quarters that prevented it from moving before it did.

To The World, T. C. Schafuss, head of this company, said: "In our new factory we can take even better care of the trade for talking machine record albums. As it is now, over 40 per cent. of the distributors buy their albums from us, which in itself is a very good testimonial of the merits of the Schafford album. Price and quality of goods make the Schafford the 'best buy' for the talking machine man who wants the most profits and the quality reputation."

L. J. REID NOW IN CHARGE.

(Special to The Talking Machine World.)

Louisville, Ky., April 9, 1912.

Leo J. Reid, of the Columbia Co.'s St. Louis store, has been transferred to the local house and will have charge of the retail and instalment business here. Mr. Reid has been with the Columbia Phonograph Co. for two years and is one of its best salesmen. R. G. Gay, of Little Rock, Ark., has also joined the retail force.

The retail business of the Columbia Co. store is increasing by leaps and bounds, the February business being a large increase over February, 1911, and March shows a still larger increase. A Pyro day and night sign has just been installed—one of the handsomest signs in Louisville. The sign was furnished by the E. C. Plume Co., of Chicago.

It's a Long Tale that Has No Ending

Nevertheless, the tale without an end is infinitely better than a tale with a poor ending. Poor endings have spoiled many fine beginnings. Many exquisite musical efforts have been spoiled by some slight noise at the end. That such a noise will come at the end of every talking machine record is almost undisputed. It is a raucous uprising against peace and harmony. It has been the chief drawback to the talking machine. An automatic stop to put an end to these noises became a necessity. Necessity, mothering invention, brought forth the

CONDON-AUTOSTOP

The demand for this device is unending. Every talking machine owner needs it.

The naturally strong selling features of the Condon-Autostop are to be backed up by an extensive advertising campaign. We are just starting this campaign. The first advertisement will appear in the Saturday Evening Post issued for April 20th. This is to be followed by other strong sales getting advertisements.

The Condon-Autostop is a thoroughly practical device—tried and true. It works silently and effectively, but does not put any strain upon the machine.

The Condon-Autostop stops the record at the place desired. At the same time it stops the machine it lifts the needle from the record, preventing any chance of the record becoming damaged.

Using the Condon-Autostop in the salesroom, it allows a salesman to attend several machines at once, increasing his sales efficiency.

The Autostop makes the records fit closer to the table of the machine, producing a smoother tone and giving the record a longer life.

The universality of the Condon-Autostop is a strong selling feature. It fits any disc talking machine and any length record. A few moments are all that are required to adjust it to the machine.

The Condon-Autostop comes either nickel or gold plated to match the mountings of the machine. Prices \$3.00 and \$4.00.

Write for samples and circulars explaining the Condon-Autostop more fully and giving "cuts" of advertising to appear soon.

HOW THE TALKING MACHINE ELEVATES MUSICAL TASTE

The Remarkable Work Accomplished in the Public Schools of Boston, Mass.—The Reader Is Taken in Spirit Into One of These Institutions and a New Conception of the Usefulness of the Talking Machine Is Received—"Talkers" Bound to Win A Still Wider Recognition.

The growing appreciation of the value of the talking machine and specially selected assortment of records, when used in schools, on the part of the school authorities, and more particularly on the part of the daily papers, is a factor that should prove most pleasing to those who are interested in the development of the talking machine and its field for business reasons, and also those who are interested in the development of a taste for the best in music on the part of the children.

Among the numerous references to the use of the talking machine in the schools, which have appeared in the daily papers of the country recently, one of the most interesting articles has been published by the Christian Science Monitor, of Boston, regarding the use of the talking machine in the schools of that city, and to which paper we are indebted for the cuts reproduced in connection with the article which reads as follows:

Seventeen and a half minutes had been ticked off by the schoolroom clock and there had not been a sound worth mentioning. Little feet had shifted on the floor, little bodies had wriggled in the seats, there had not been an occasional sound of hard breathing signifying intent application to some task in hand; but, for little boys and girls no bigger than is usual at six years, it had been quiet enough. In fact, the quiet was becoming rather burdensome when Harrigo sat back in his chair with a force that made everybody around him look up, and raised his hand.

"What is it, Harrigo?" said Miss Foley.

"Can't we have 'Tramp, Tramp, Tramp?'" requested Harrigo.

Instantly every little short-cropped or be-ribboned head in the room bobbed up and the faces were turned eagerly toward Miss Foley, rippling into smiles when for answer she went to a table in a corner of the room, and taking from it a box-like looking arrangement placed it on her desk. Presently there came from it that stirring old-time melody, "Tramp, Tramp, Tramp, the Boys Are Marching," sung and played with a fervor like that which called it forth half a century ago. The

children listened with radiant faces, then returned to their words and letters while the music kept on. After a few moments came the pitter-patter of "Rain, Rain, Do Not Go," and at a signal from Miss Foley they joined in the second line, "Rain, rain, we love you so," and sang it through to the end.

The "talking machine" is a new thing in the Harvard school at Charlestown, and the children, seemingly, cannot hear it enough. It was introduced a month ago, to the wonder and delight of all who heard it. The first time it was used in the first grade "Tramp, Tramp, Tramp" was put on,

CHILDREN OF EIGHTH GRADE CLASS IN THE HARVARD SCHOOL AT CHARLESTOWN LISTENING TO THE TALKING MACHINE.

and immediately after "Rain, Rain, Do Not Go." Harrigo looked at it amazed. "How did that man get out and that lady get in?" he asked.

The "Rain Song" is so pretty and they liked it so well that Miss Foley taught the children the words and played the music for them several times; then they had learned it and have sung it nearly every day since, to the accompaniment of the talking machine. This plays for them as they work, and it plays for them to march by; and pretty soon, when the right records come, it is going to play for their other singing, their folk dancing and their games. They use it now to march by and Miss Foley and Henry C. Parker, who is the master of the school, say that just for that alone it is worth all that was

paid for it. Every man who ever put on a uniform or silk hat and joined a parade can tell what a difference it makes when the band strikes up. It is just so with the children. Marching in and out among the desks is a relief from sitting still, and singing does much to enliven it; but let the machine give out "Our Director," or Mozart's "Turkish March," by Creator's band, or "Tramp, Tramp," and there is a swing and a dash to the marching that is all the most earnest advocate of that exercise could ask for as a vent for childish enthusiasm. "They move all over," as their teacher says. Their whole bodies dance in response to the music, and when they sing, too, they do it with a vim that makes people passing outside slacken their steps to listen.

The talking machine used in the first grade belongs exclusively to that room, being the personal property of the teacher; but the grammar school

pupils have one of their own, bought with their own money from a special fund raised by giving entertainments and so on. Thus far this machine has been kept in the big assembly hall, where the classes are taken by turns to hear it. One day the music had been going on for some time and the sounds wafted through the cracks of the doorways into the room across the hall, where the eighth grade pupils were busy with technical grammar. They kept perseveringly at work until the beautiful organ strains and bells of "The Coming of the Year" stole into the room. Then there was a brightening of the faces and an involuntary turning of the heads. It was not so much a welcome change from a tedious task as the expression of a genuine love for the beauty of the piece.

"Let us stop for a moment and listen," said Miss Gary. And, turning to a visitor, she added, "If it would not be cruel I would like to ask them if they would like to go into the hall, just to let you see what they would do." When the piece had ended they resumed their lesson, knowing that they could not give all their time to the renditions of the masterpieces of musical composition, but glad they could enjoy them sometimes.

It was not long before Mr. Parker opened the door and asked, "Do you think your class would like to come into the hall for a while, Miss Gary?"

Miss Gary had no need to put the question. The desks were cleared on the instant and everybody was ready to start at once. They filed into the big room in an orderly fashion, but filled it with the buzz of anticipation that always goes before the presentation of something that is expected to be good. As soon as the disc was put in place and Mr. Parker had touched the lever silence reigned. The beautiful barcarole from the "Tales of Hoffmann," as sung by Scotti and Geraldine Farrar, was given to an audience that seemed oblivious of all other things. There was a long ecstatic breath when it was over and Mr. Parker waited a few moments before he selected another record and put it on the machine. It was "Home to Our Mountains," sung by Louise Homer and Caruso and was listened to with the same intentness that had been accorded the former piece. Before playing it Mr. Parker gave the children a short talk about the opera, its composer and the two singers, telling in a general way how they ranked in their profession and what

The Petmecky Co.

AUSTIN

TEXAS

FIRST GRADE CHILDREN AT THE HARVARD SCHOOL IN CHARLESTOWN USING THE TALKING MACHINE.

they were paid for each performance. This was followed by a record given by a singer who "might get \$25 for an evening's performance." It was not difficult to make the comparison. Use of a record for the first time is preceded by a short talk covering the essential facts regarding it. These are repeated from time to time and the children are called upon occasionally to volunteer some of the statements.

The repertoire of this particular talking machine is exceptionally high class. It includes a number of selections from the greatest singers of the day. Among them are "The Miserere," by Caruso, Frances Alda and chorus, an aria from "Samson and Delilah," by Olitzka, and "Stille Nacht," by Fremstad, duets by Maria Gay and Zenatello, and the sextet from "Lucia." Once a teacher brought in her own "seven dollar record," as they call it, of Sembrich and Caruso. Then they have selections from oratorios, "The Holy City," by Evan Williams, "Hark, Hark, My Soul," by the Mendelssohn quartet, instrumental numbers of classic compositions by famous performers, "My Hero" from the "Chocolate Soldier," patriotic songs, old melodies and a few popular tunes. These latter are not so well liked. They have a place, but when the children are called upon to make their own selections they seldom choose one of them. This is regarded as remarkable in a school where the pupils are necessarily of mixed tastes, and an indication of the latent love of music which the school stands a chance of developing and cultivating away from the attractions of the cheap music hall.

When Mr. Parker asked this time what they would have next Schubert's Serenade was requested, and was reproduced as performed by Mischa Elman. Then he asked for just one more piece which would finish their music for the day. The calls for the sextet from "Lucia" and "Just Before the Battle" were so evenly divided that it was necessary to count hands. So they enjoyed both pieces. When the last note of the second piece had trailed away Mr. Parker put another record on the machine, and the room resounded with the irresistible swing of the "Stars and Stripes." "When you march out," he said, "be careful to go quietly so as not to disturb the director. Who is the director?" "Sousa," they answered. "And who is the cornetist?" "Herbert Clark."

When school was dismissed for the day two girls stopped to talk to Miss Gary about the music. "I never heard such music as that," one of them said. "I don't believe I shall ever want to go to one of those nickelodians again."

"That is one of the things we want to counteract," explained Mr. Parker, who had overheard. "One of the girls who left school last year is singing in one of these halls for a few dollars a week and the children spend their pennies to go and hear her. What kind of music is that and what kind of things do they get in the usual run of those places? By cultivating their taste for the good things they will lose any pleasure they may have experienced in the bad ones."

The talking machine is an innovation in the

schoolroom, but everywhere tried it is proving a success. It is making constant headway in public and private schools and colleges—in fact wherever it is used it has its way into favor. The one just purchased by the Harvard school in Charlestown is one of the first added to a public school equipment in Boston. Henry B. Hall has one of his own which he used at the Phillips Brooks school when he was master there, and has taken it with him to the John Winthrop district. William B. Snow, master of modern languages at the English high school, hopes to get one to assist his classes in the pronunciation of

words in other languages than English. The Bennett, Franklin and Thomas Gardner schools in Boston; the Hodgkins and the Bingham schools, in Somerville, use the machines in cultural work, entertainment and marching.

Professor Marshall, of Boston University, is using the talking machine in his lectures on the history and development of music, and also for technical work with his classes. It has been his custom to give series of lectures illustrated with selections given by singers from the Boston opera company. In future he expects to have the talking machine do this work and thus gain a wider range from which to select.

At the Dorchester high school in Boston two phonographs are in use in the commercial classes. They are used chiefly for dictation, particularly in the classes in stenography, where they are found to be of great value. While much dictation is given personally by the teacher, the use of the machine occasionally as a substitute leaves the instructor free to go about among the pupils during the dictation exercise to see how they work and aid them in their difficulties. As phonographs are in growing favor in business offices, where communications are spoken into the machine rather than to a stenographer, and are later dictated back for reproduction on a typewriter, the pupil is prepared for both kinds of dictation.

In addition to describing the success met with

the use of talking machines in the public schools of Boston, the article goes on to tell in an interesting manner of the use of talking machines in the various public and educational institutions in this country and Europe, and the methods employed for securing the best results.

DINES BOARD OF DIRECTORS.

George D. Ornstein, of the Victor Co., Tenders Luncheon to Heads of Sherman, Clay & Co. While in San Francisco Recently.

(Special to The Talking Machine World.)

San Francisco, Cal., April 6, 1912.

George D. Ornstein, representing the Victor Talking Machine Co., while in this city recently gave a luncheon at the St. Francis Hotel in honor of Sherman, Clay & Co. The board of directors of Sherman, Clay & Co. was in attendance, its members including L. S. Sherman, Philip T. Clay, Andrew A. McCarthy, Fred. R. Sherman and Fred. Stevenson. L. S. Sherman, president of Sherman, Clay & Co., made a very adequate little speech in which he emphasized the fact that the relations between the Victor Talking Machine Co. and Sherman, Clay & Co. had been exceedingly cordial during a long period of years and that in all that time not one unpleasant incident had marred the close, friendly relations of the two big houses.

PHONOGRAPH SPEECHES MADE

By Members of Sumner Society Unable to Attend Reunion in Chicago.

(Special to The Talking Machine World.)

Chicago, Ill., April 8, 1912.

Twenty-one of the original 117 members of the Sumner Society, organized as a literary club in 1873, attended their thirty-ninth reunion and banquet at the Hotel Sherman recently and recalled their schoolboy days. Phonograph records of talks that had been made by members in other cities, and stereopticon views and drawings and writings of Dr. Cornelius H. Patton during a journey through the heart of Africa, formed the program. The "canned" addresses were from John E. Wilkie, chief of the United States Secret Service, Washington; Charles A. Hilles, Los Angeles; Lawrence A. Norton, banker, and William J. Buckley, both of New York.

A plain price mark is a silent, potent salesman.

The New Regina Electric Cleaner

(MODEL "C")

is a high-class, moderate priced vacuum cleaner of a new design and construction and of exceptional merit.

Retails for \$45 with a nice margin of profit to the trade.

Fully guaranteed by a responsible manufacturer. Licensed under the basic (Kenney) vacuum cleaner patents.

218 S. Wabash Avenue, Chicago

BUYS OUTFIT FOR THE DUKE.

Miss Catherine Elkins Sends Original Present to Duc d'Abbruzzi—\$200 Machine and \$109 Worth of Records on Way to Italy.

(Special to The Talking Machine World.)

Washington, D. C., April 8, 1912.

A talking machine with many records of her own voice was the gift of Miss Catherine B. Elkins to the Duc D'Abbruzzi recently.

Following a recent victory by the flotilla commanded by Duc D'Abbruzzi, Miss Elkins appeared at a store in F street and inquired for a specified type of expensive talking machine. After testing a number of machines she finally picked out one that cost \$200.

Miss Elkins then turned her attentions to records. Songs by Farrar, Caruso, Eames, Scotti and a dozen other grand opera notables were set aside then followed a miscellaneous collection of band, orchestra music, coon songs, topical songs, waltzes, comic recitations, vocal quartets, trios and duets. The records by that time amounted to \$109.

"I want that machine and those records sent to the Duke of Abruzzi at Rome by the next steamer," she said. In order that there might be no mistake Miss Elkins wrote the name and address upon her card and handed it to the proprietor.

TO USE VICTOR IN SCHOOLS.

(Special to The Talking Machine World.)

Waterbury, Conn., April 6, 1912.

Superintendent of Schools Dr. E. H. Forbes has purchased a Victor talking machine for use in connection with musical instruction in the public

schools. The records to be used are being selected by Miss Mary H. Burns, supervisor of music.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York for the Past Five Weeks.

(Special to The Talking Machine World.)

Washington, D. C., April 9, 1912.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past five weeks from the port of New York:

March 12.

Algoa Bay, 162 pkgs., \$1,541; Batavia, 4 pkgs., \$204; Bremen, 14 pkgs., \$737; Callao, 11 pkgs., \$1,259; Chemulpo, 7 pkgs., \$400; Copenhagen, 40 pkgs., \$2,100; Havre, 13 pkgs., \$138; 10 pkgs., \$189; London, 119 pkgs., \$2,123; Manila, 47 pkgs., \$1,434; Maranham, 6 pkgs., \$365; Puerto Cabello, 32 pkgs., \$744; Stockholm, 47 pkgs., \$1,585; Valparaiso, 52 pkgs., \$2,259.

March 19.

Acajutla, 1 pkg., \$118; Berlin, 58 pkgs., \$7,570; Buenos Ayres, 10 pkgs., \$201; Callao, 1 pkg., \$129; 4 pkgs., \$619; Demarara, 5 pkgs., \$125; Guayaquil, 3 pkgs., \$203; 15 pkgs., \$969; Havana, 31 pkgs., \$1,775; Havre, 2 pkgs., \$100; Kingston, 1 pkg., \$121; Montevideo, 71 pkgs., \$3,881; Santos, 10 pkgs., \$914; Vienna, 12 pkgs., \$548.

March 26.

Acajutla, 3 pkgs., \$234; Antwerp, 2 pkgs., \$250; Bremen, 5 pkgs., \$150; Buenos Ayres, 223 pkgs., \$12,036; Colon, 2 pkgs., \$300; Corinto, 3 pkgs., \$352; Guayaquil, 2 pkgs., \$105; Havana, 31 pkgs.,

\$1,566; Havre, 10 pkgs., \$894; Iquitos, 4 pkgs., \$252; La Guayra, 5 pkgs., \$117; London, 84 pkgs., \$2,746; Montevideo, 189 pkgs., \$6,136; Rio de Janeiro, 17 pkgs., \$1,151; Santiago, 7 pkgs., \$690; Tampico, 7 pkgs., \$278; Vera Cruz, 138 pkgs., \$4,611; Vienna, 6 pkgs., \$332.

APRIL 2.

Antofagasta, 3 pkgs., \$107; Berlin, 56 pkgs., \$997; Buenos Ayres, 39 pkgs., \$6,706; Callao, 15 pkgs., \$567; 11 pkgs., \$571; Cartagena, 2 pkgs., \$293; Demarara, 4 pkgs., \$163; Genoa, 19 pkgs., \$362; Guayaquil, 4 pkgs., \$280; Havana, 5 pkgs., \$207; La Guayra, 3 pkgs., \$345; La Paz, 7 pkgs., \$846; Limon, 13 pkgs., \$1,674; London, 139 pkgs., \$2,649; 6 pkgs., \$3,018; Marseilles, 2 pkgs., \$400; Milan, 9 pkgs., \$367; Port Limon, 15 pkgs., \$593; Port of Spain, 10 pkgs., \$447; Puerto Mexico, 8 pkgs., \$359; Rio de Janeiro, 29 pkgs., \$1,820; Santiago, 3 pkgs., \$175; Savanilla, 17 pkgs., \$1,273; Stockholm, 21 pkgs., \$1,425; Valparaiso, 13 pkgs., \$879.

APRIL 9.

Barbadoes, 3 pkgs., \$100; Berlin, 404 pkgs., \$10,639; Callao, 5 pkgs., \$420; Ceara, 2 pkgs., \$387; Colon, 3 pkgs., \$103; Dunedin, 5 pkgs., \$113; Hamilton, 5 pkgs., \$159; Havana, 44 pkgs., \$1,622; 7 pkgs., \$175; Kingston, 5 pkgs., \$105; 5 pkgs., \$105; La Guayra, 6 pkgs., \$432; Liverpool, 3 pkgs., \$135; Progreso, 121 pkgs., \$4,148; Santo Domingo, 16 pkgs., \$486; Santos, 10 pkgs., \$418; St. John, 4 pkgs., \$1,644; Trinidad, 6 pkgs., \$160.

TALKERS FOR ARKANSAS SCHOOLS.

Sample Machines Exhibited to Acquaint State Educators with Their Possibilities.

(Special to The Talking Machine World.)

Little Rock, Ark., April 5, 1912.

Two samples of talking machines, which it is proposed to introduce into the public schools of Arkansas, were placed on exhibition recently in the office of the State superintendent of public instruction. They will be used to demonstrate the possibilities of such machines to educators from all parts of the State who visit the State Department of Education.

State Superintendent Cook believes that there is a big place for the machines in the public schools. They can be used, it is pointed out, both for entertainment purposes and to aid in teaching music to the pupils. Machines designed for use in schools of all sizes and selling at various prices have been produced by the manufacturers.

LEASES BIG NEWARK BUILDING.

(Special to The Talking Machine World.)

Newark, N. J., April 11, 1912.

The Edison Co. has leased the new five-story building recently erected at the corner of Central avenue and Broad street and which contains 53,000 square feet of floor space. The lease runs for eight years and ten months, and the total rental will be \$300,000.

The Influence of the Coal Strike on Business—Spending Power of the People Curtailed—Optimism, However, Rules Supreme and an Early Settlement of the Labor Troubles Is Looked For—The Attitude of Composers and Publishers Toward the New Copyright Law—Edison Public Exchange Scheme—Archives of the Imperial Academy of Sciences in Vienna Enriched with Interesting Records—Death of a Veteran of the Trade—Cylinder Record Popularity—Some Interesting Records from the Columbia Co.—Other Items of General Interest to the Trade.

(Special to The Talking Machine World.)

London, E. C., April 6, 1912.

Throughout the whole of the month of March—a truly black month for all trades, not to mention our own—the spirit of Mark Tapley has occupied the chair and infused us all with its genial character. Really, it is surprising. However optimistic one felt inclined to be, the fact could not be balked that the wheels of commerce must gradually slow up for want of the necessary oil. For the first time we have been brought to appreciate the value of coal. But that by the way. What most concerns us is the effect of this disastrous coal miners' strike upon an industry which really flourishes on the surplus spending money of the masses. As far as can be ascertained over two million of the normal working population have been thrown idle, apart from the number of short-time workers and others indirectly affected.

Strike Restricts Spending Powers.

The spending power of all these must be very considerably restricted for weeks, even perhaps for months to come, and the immediate future at any rate is therefore not too rosy for the average talking machine dealer.

But, as I have said, optimism rules among the manufacturers, and as evidence it may be mentioned that with the exception of the minor firms, the prominent record makers have maintained their average amount of advertising and in some instances increases are to be noted. When the strike was first put in operation many traders were not far removed from the panic stage, but this nervousness, fortunately, soon departed.

At the moment of writing an early settlement of the strike is within the bounds of probability, if not certainty, and while it must necessarily be quite some time before things return to the normal, a general feeling of relief, needless to say, is expressed on all hands.

Copyright Information.

As the time draws near when the act comes into operation, the different phases of the situation become more engrossingly interesting and complex. I have already outlined the attitude of composers and publishers, who it appears have now reached an agreement regarding the methods to be adopted for the proper safeguarding of their interests. There would appear, however, to have been some little dissension among themselves as the result of discovering that one of the favored collecting societies was financed to some extent by the mechanical music trade. Under these conditions it was not unjustly felt that the control of licenses and collection of royalties should be placed beyond the control of any talking machine or music roll firm, and objection was also raised against any institution which proposes to deduct a percentage of the royalties received for expenses and profit. As the outcome of their deliberations, the leading composers, lyric writers and publishers have decided to establish a separate association to look after their interests and a provisional committee was appointed. By trotting out the old bogey that sheet music sales were adversely affected by the sales of records, the publishers are to obtain a share of the royalty fees collected. It is proposed that

expenses of administration of the society should be shared equally by the three bodies mentioned; the royalties collected to be likewise divided. Hard upon this the Incorporated Society of Authors and the Society of British Composers issued a manifesto drawing the attention of composers in the United Kingdom to their powers and rights in regard to the mechanical reproduction of their works, as defined by the Copyright Act, 1911, which declares that the composer has the sole right to authorize or prohibit the making of any mechanical reproduction of his compositions. No matter what assignment of mechanical rights the composer may have made before the passing of the act, the act annuls such an assignment, and confers solely upon the composer all royalties derived from such mechanical rights. The society urges upon composers not to part with the property which is exclusively theirs by act of Parliament, not to employ any agents or agencies without careful inquiry into their financial position and stability, and not to enter into any contract for sheet publication which contains any conditions whatsoever with regard to their rights of mechanical reproduction.

The Methods of Collections.

The regulations governing the collection of royalties as prescribed by the act have not yet been issued by the Board of Trade, but I am given to understand on official authority that the plan to be adopted is under consideration and will be made public in the near future.

Valuable Work on Copyright.

The Solicitors' Law Stationery Society, 22 Chancery lane, London, W. C., has issued a King's printers' copy of the copyright act, neatly bound in a stiff cardboard cover, published at 2s. 9d. post free. The work deals exhaustively with the subject, and presents in as concise a form as possible the more important changes of copyright law made from time to time. With this work, interestingly compiled, by the way, by Messrs. Andrew Strahan and Norman Oldham (barristers-at-law), is bound up the Musical Copyright Act of 1906, Musical Copyright Act of 1902, and the unrepealed sections of the Fine Arts Act of 1862. The whole has been carefully indexed, and with tables showing where the corresponding sections of the repealed acts are to be found in the new statute or vice versa, it furnishes a key to a veritable encyclopædic mine of information essential alike to all interested in or affected by the new law.

First Edison Public Exchange Scheme.

Under date March 22 the trade was notified of an exceptionally enterprising proposition by which during March, April and May authorized Amberol dealers may make an allowance to the public on all worn, broken or otherwise disused Standard or Amberol records returned under the following conditions: Providing one new Amberol record is purchased at the same time, an allowance of 2d for each old Standard and 3d for each old Amberol record is permissible. The company specially emphasizes the fact that any attempt to increase the allowance beyond that stipulated will be considered an infringement of the price maintenance agreement.

Facilities are afforded the dealer of returning the exchanged records to the factory under a fairly liberal plan. The scheme is rightly expected to prove highly beneficial all round.

A Most Interesting Record List.

Liszt's "Hungarian Rhapsody," Mendelssohn's "Bee's Wedding" and "Spring Song," and the famous Intermezzo from "Cavalleria Rusticana" are titles to conjure with, but when we hear that records of them have been made by the New Symphony Orchestra we know that they will have received the most perfect interpretation and execution that is possible. The records figure in "His Master's Voice" April list, which also includes the following: "Songs d'Autonne" (Joyce),

Mayfair Orchestra; "Le Domino Noir," overture (Auber), band of H. M. Coldstream Guards; "The Wee Macgregor, Highland Patrol" (Amers), band of H. M. Coldstream Guards; "O Rest in the Lord" ("Elijah") (Mendelssohn), Mme. Kirkby Lunn; "A Furtive Tear" (Donnizetti), Evan Williams; "In Sympathy" (Marshall), Walter Hyde; "The Holy City" (Adams), John Harrison; "The Palms" (Faure), Harry Dearth; "Cleansing Fires" (Gabriel), Thorpe Bates; Novelletten, 1st movement (Gade), Renard Trio; "Adagietto" (Bizet), W. H. Squire, cello solo; "The Bridal Chorus," from Lohengrin (Wagner), the Grand Opera Company; "The Other Department, Please!" (Fragson), Harry Fragson; "Let Us Waltz Round Together" (Penso), Margaret Cooper, and "Little Dolly Daydream" (Leslie Stuart), Eugene Stratton.

Ten inch—"The River of Tears" (Marzials), Mme. Edna Thornton, and "Wot's the Good of Hanyfink?" (A Cockney Complaint) (Ingle), Albert Chevalier.

Valuable Records Added to Vienna Archives.

Some unusually interesting records have been added to the phonographic archives of the Imperial Academy of Sciences in Vienna.

Delegates sent to Jerusalem, says the Pall Mall Gazette, succeeded in obtaining a collection of various Semitic dialects and ancient Hebrew religious songs. These latter include melodies originating from the period of the Jewish kingdom, which are believed to have been handed down untouched by outside influences. They bear a genuinely Oriental character, but musically considered are not of great merit.

Another valuable addition to the archives comes from the Caucasus, in records of various dialects in the Georgian, Armenian, Tartar and Mingrelian tongues. These will, it is expected, provide rich material for comparative language studies.

Dr. Pospischil, of Olmütz, has done the academy a great service in gathering together records from scattered Croatian villages in Moravia. These have been found to be absolutely identical with the pure Croatian speech, leaving no doubt that these settlements are of Croatian origin.

The academy's archives already contain nearly fifteen hundred cylinder records, and it is proposed to issue a catalog of the first thousand shortly. The work has attracted a good deal of attention abroad, and similar phonographic archives have been started in Rome and Zurich.

Inquiries to a similar end have also come to the Vienna academy from several other cities.

Death of a Trade Veteran.

A picturesque and eventful career has ended with the death of Colonel George Edward Gourand at Vevey, Switzerland, says a contemporary. Colonel Gourand was born in the United States, but he lived in England for over thirty years. During the American Civil War he served with the Federal Army with distinction.

When the phonograph was one of the wonders of the world the colonel became associated with Thomas A. Edison, and subsequently represented the great inventor in England, being the first official agent for the phonograph. He named his residence at Brighton Edsonia House, in honor of the inventor, and he there accumulated a large and valuable collection of records, which he was pleased to refer to as his "library of immortal voices," declaring that he had been offered thousands of pounds for the wax cylinders, which contained impressions of the voices of many prominent persons. Queen Victoria was much interested, although she did not make a record, but Colonel Gourand was wont to boast with some pride that he had secured records from the late King Humbert, Bismarck, Gladstone and Moltke.

When Jacques Lebandy decided to proclaim a

(Continued on page 41.)

FROM OUR LONDON HEADQUARTERS—(Continued.)

"ready-made" empire in the Sahara Desert, some eight years ago, the gallant colonel was appointed governor general of the new domain. With other members of the "Emperor's" court he established himself at the Savoy Hotel and acted as spokesman for his "sovereign." He found time to act as Prime Minister, Minister of Foreign Affairs and Chancellor of the Exchequer, and declared that he had actually established relations with the Sultan of Morocco, the "neighboring friendly power." And when M. Lebandy's dream of empire faded, the colonel turned his attention to politics, conducting his election campaign by means of phonographs fastened to bath chairs. He afterward resided in Paris, and for the last two years at Vevey.

Reviving Popularity of the Cylinder Record.

As the result of one or two new departures of an enterprising measure, the cylinder class of record is likely to regain some of its old popularity, and the National Phonograph Co. is to be commended for its boldness in carrying out its new trade and public exchange schemes despite the great wave of industrial trouble which has spread over the whole of the country and seriously hampered business generally. It is true that these new propositions were, of course, planned in advance at a time when the great coal strike was, at any rate, not expected to last for any lengthened period, and although some may question the wisdom of the move at this time there can be no doubt that its result will prove its justification, at least we sincerely hope so. Particulars of the scheme are outlined elsewhere, and an excellent inducement for the public to embrace the Edison Co.'s generous offer, the first of its kind, by the way, is represented in the exceptional quality of its latest lists. That for May, which we are privileged to publish in advance, manifests ample endorsement of our statement. Complete list is as hereunder:

Edison Amberol Concert Records—"Vito" (D. Popper), Paulo Gruppe; 'cello; "Coppelia—Entr-

Acte and Waltz" (Delibes), Armand Vecsey and his Hungarian orchestra, and "Old Folks at Home" (Foster), Miss Margaret Keyes.

Edison Amberol Records—"Hogmanay" (C. W. Murphy), Stanley Kirkby; "Popular Songs—Medley," National Military Band; "I Wish It Were Sunday Night" (Godfrey and Williams), Billy Williams; "When the Harvest Moon Is Shining, Sweet Eileen" (F. V. Bowers), Thomas Jackson; "Valse Decembre" (Felix Godin), Alhambra Orchestra; "There's No One to Harmonize" (Percy Edgar and Lawrence Wright), Jack Charman; "Derby Day" (Original), Ben Albert Company and band; "So You Want to Be a Soldier, Little Man" (Trotter), David Brazell; "No Wonder You Call It the Last Waltz" (Moore and Cliffe), Stanley Kirkby; "Sunny Savannah" (T. Thurban), National Military Band; "Alexander's Ragtime Band" (J. Berlin), Billy Murray; "Ye Merry Birds, that Sweetly Sing" (F. Gumbert), Miss Elizabeth Spencer; "Angel's Serenade" (G. Braga), Venetian Instrumental Trio; "Your Smile" (D. Forster), Miss Elsie Baker; "The Broken Melody" (A. van Biene), American Standard Orchestra; "I Will Magnify Thee, O God" (J. Mosenthal), Miss Agnes Kimball and Reed Miller; "Second Polonaise" (Liszt), Edison Concert Band; "Mary was My Mother's Name" (A. Solmen), Joseph A. Phillips; "The Passing Caravan Patrol" (J. C. Schmid), New York Military Band; "Peggy Gray" (T. Chattaway), Manuel Romain; "That Hypnotizing Man" (A. Von Tilzer), Premier Quartette; "Are You Going to Dance" (The Count of Lupenbourne), Miss Elizabeth Spencer and Irving Gillette; "Old Folks at Home" (with variations) (piano solo), André Benoist, and "One Fine Day" ("Mme. Butterfly") (Puccini) (sung in English), Miss Agnes Kimball.

Edison Standard Records—"I Never Heard Father Laugh So Much Before" (Godfrey and Williams), Billy Williams; "'Tis a Far Better Thing" (Godfrey and Williams), Billy Williams;

"Take Me Where There Are No Eyes About" (Godfrey and Williams), Billy Williams; "Tim-è-lou" (Chinese Intermezzo) (H. Christine), Alhambra Orchestra; "Paper Bag Cooking" (H. Pether), Bobbie Naish; "Hush, Here Comes the Dream Man" (Weston, Barnes and Scott), Jack Charman; "I Had to Laugh at Once" (Whitlock), Billy Whitlock; "It's the Early Girl That Catches the Man" (Carter and Flynn), Miss Florrie Forde; "My Lantern Girl" (A. J. Laurence), Stanley Kirkby; "Popular Songs" (medley), National Military Band; "Alexander's Ragtime Band" (J. Berlin), Billy Murray, and "Spanish Dance"—Suite "Bal Costume" (A. Rubinstein), United States Military Band.

Thos. Edens Osborne Still in Evidence.

With his usual kindly thought, T. Edens Osborne, of Belfast, has been much in evidence of late at concerts and like functions, accompanied by his auxetophone. He has, too, been putting out some effective advertising in the local press, and seems as determined as ever to hold the talking machine trade in Belfast, etc., or as much of it as enterprise will insure.

The April Zono-Twin Records.

Full of good things, as usual, the April Zono-Twin list represents an exceptionally good batch of selections, among which the following call for special mention: Zonophone Records—"Over the Sticks" and "Riding to Order," Joe Elvin; "The Fighting Fifth" and "Grizzly Bear Two-Step," Black Diamonds Band; "The Goslings" and "Quibble's Cocoa," Zono. Concert Party; "A Farewell," and "Fiddle and I," Ernest Pike; "We're Here To-day, and Gone To-morrow," and "Love," Miss Florrie Forde; and "The little church across the way," and "Pretty little Cupid" Miss Zona Vevey.

tention here in the press and amongst business men having dealings with your country. While the law upholds that sort of practice, although establishing monopolies in more than one direction, it is felt that one cannot blame the patentee. He is only exercising the inherent laws of nature. But for the laws of man the severest condemnation is expressed and it is regarded as strong indication of the need for new legislation to prevent a repetition of these monopoly actions.

Praise from Band Master.

Mr. Channing Ellery, the proprietor of the famous Ellery Band, has written to the Columbia Company the following glowing testimony to the Columbia-Rena records of his world-famous band: "On behalf of Mr. Di Girolamo, leader of the Ellery Band, and myself, I want to congratulate you most heartily on the extraordinary excellence of the records of our organization which were taken for Columbia-Rena. So perfectly do these records reproduce the tone and style of the Ellery Band that no one at all familiar with its playing could possibly fail to recognize it after hearing but a single bar of the music."

(Signed) CHANNING ELLERY.

New Ocarina Records.

The latest addition to the Columbia-Rena list of stars is Mose Tapiero, the accomplished executant of the ocarina. The Columbia Company has secured a number of attractive selections not previously recorded by this artiste, and chosen with the express object of demonstrating the unique powers and capabilities of the player. The first of the Tapiero records is issued this month.

"The Pirates of Penzance" Record.

"The Pirates of Penzance" is the subject of the newest record in the Vocal Gems series of Columbia-Rena. In the vocal excerpt are introduced all the familiar numbers, including "The Paradox Trio," "I am a Pirate King," "Hail, Poetry," "Go, Ye Heroes," "Let Us Gaily Tread," "Come, Friends Who Plough the Sea," while the band selection takes in the "Policeman's Song" and "Poor Wandering One"—The latter as a solo for the cornet.

Two delightful old favorites stand against the name of sweet-voiced Will Oakland in the new Columbia-Rena list. Who has not longed for an adequate rendition of "White Wings"—the song of the man who apostrophizes the white sails of his ship as the wings that never grow weary—the song that can never grow old. Or who has not craved for a sentiment-laden rendering of the semi-pathetic "Only to see her face again"? To such we commend Will Oakland's latest and one of his best, if not actually the best.

Other good records to hand are: Columbia-Rena, 12-inch—"Overture to Tannhauser" Part I. Andante Maestoso, and Part II. Allegro, (Wagner) Court Symphony Orchestra; "The Pirates of Penzance" Vocal Gems, and Selections (Sullivan) Prince's Orchestra; "I'll sing three songs of Araby" (Frederic Clay), and "Songs my mother taught me" (Anton Dvorak) W. Morgan Kingston. Ten-inch—"Take a little bit off" (David and Arthurs), and "You'll do the same thing over again" (A. Gumble) Beth Yate; "The White Squall" (G. A. Barker), and "The Bay of Biscay" (J. Davy) Robert Howe; "Hoch Hapsburg March" (J. N. Kral), and "Unter den Linden March" (W. A. Crosse) (Concertina Solos) Alexander Prince; "La Traviata—Prelude" (Verdi) and Quartet from "Rigoletto" (Verdi) (Accordion Solos) Guido Deiro; and "Grizzly Bear"—One Step (with effects) (George Botsford), and "The Bogey Walk" (with effects) (J. M. Gallatley) Casino Orchestra.

New Commercial Information Bureau.

For the purpose of supplying information free of charge to those interested in British trade in South Africa a commercial information bureau has now been attached to the office of His Majesty's trade commissioner at Norwich Union building, Cape Town.

LEIPZIG'S GREAT TRADE FAIR.

Sales of Records and Machines Reach an Unprecedented Figure—Over 120 Exhibitors and a Good Display of Parts and Accessories—New Models of Disc Machines Shown—Some New Tone Arm Devices.

(Special to The Talking Machine World.)

Leipzig, March 30, 1912.

In addition to visitors from pretty well every part of the world there was an extra large number from England, and it is safe to say that the trading results of this year's fair has been exceptionally good. As usual, Peterstrasse was the scene of operations, and an animated scene it was, too, considering that at times the thoroughfare was almost impassable, so great was the crush of would-be buyers.

Machine sales reached an unprecedented figure, substantial orders having been placed by large buyers from Russia, Italy, Austria, France, Holland, England and other European countries.

In the record field individual orders were placed for tens of thousands at a time, while in bulk an enormous turn-over was experienced. A remarkable feature of the situation was the presence of several large dealers, who sought to lay for themselves a golden nest. Germany being recognized as the home of extraordinarily cheap records, which, if not actually exhibited at the Leipzig Fair, are nevertheless in other ways prominently brought under the notice of buyers, it is perhaps only natural for the enterprising dealer to assume that by going over and placing a large order direct, over the head of the home agent, special terms might be forthcoming. In many instances the little plot failed of its purpose, but there are cases on record to the contrary.

Of the 120 odd exhibitors a good percentage were showing various parts and accessories. This condition of things was more noticeable than last year, and it would seem to indicate the trend of the times in that, the practice of assembling one's own line of instruments, is becoming more general. And it is to be observed that this can often be done more cheaply than buying machines in bulk complete.

Many new models and styles of disc instruments were exhibited and prices ruled somewhat higher than in previous years. The cheaper class of machine was, as usual, much in demand, and although generally there appeared to be nothing especially new, one or two exceptions call for mention. Visitors evinced a deal of interest in a specially cheap line of the usual horn type fitted with a one-record motor enclosed in a wooden cabinet. The machine is wound up through the turntable and sells at five marks. A fair quantity of orders were placed, but it did not especially attract buyers from England. A new hornless model of somewhat better quality was more in demand. This latter instrument is equipped with a crank wind one-record motor, with a fairly good polished oak case. With six seven-inch double records it will retail at one guinea.

As the result of the recent tone-arm litigation a number of new devices have sprung into existence, and the invention of the Lindstrom Co.'s in particular attracted much favorable notice. The sound box is so fitted that it will rotate to a limited extent in the sleeve on the end of the tapered arm in which it is held. By means of an adjustable weight (a nickel ball), mounted on the projecting arm, the weight of the sound box on the record can be arranged to a nicety, while on swinging the sound box off the record the ball weight keeps it in position. Ingenious to a degree, it naturally was the object of much friendly criticism and praise.

Among the visitors to the fair I might mention the following: Messrs. Murdoch and Fulton,

(Continued on page 46.)

Don't Buy Needles That Damage Records

Bad Needles

Condor Needles

When a needle is running a record, the friction causes the polished surface of the needle to be taken off, while its interior (grain) is exposed and touches the sound waves.

Consequence:

The poorer the polishing and rougher the grain, the more the sound waves are injured!

Only *Condor Needles* are warranted to have always the highest and most perfect polish, smoothest grain. Using them means:

THE VICTROLA IN CONCERT.

The Demonstration of the Instrument in Connection With Sunday Evening Band Concerts the Latest Idea of Ludwig & Co., Victor Dealers in Wilkes-Barre, Pa.—The Success of the Plan Interestingly Proven.

(Special to The Talking Machine World.)

Wilkes-Barre, Pa., April 8, 1912.

Ludwig & Co., Victor dealers in this city, some time ago conceived the idea of arranging for band concerts on Sunday evenings for the purpose of bringing the Victor-Victrola strongly to the attention of the public. The success of the concerts,

which are given by Alexander's Band, has exceeded even the expectations of the originators themselves.

The Victrola is placed on the stage immediately in front of the conductor's stand, and after each selection played by the band a selection is given on the Victrola. During the evening vocal numbers are rendered by means of the Victrola and accompanied by the band, and in the course of the program the public has an excellent opportunity of learning much regarding the possibilities of the Victrola in furnishing musical entertainment.

ISSUES GRAPHOPHONE FOLDER.

R. A. Dinsmore Emphasizes the Desirability of Installing Such a Machine in the Home.

(Special to The Talking Machine World.)

Boston, Mass., April 8, 1912.

R. A. Dinsmore, the Columbia dealer and proprietor of the Roxbury Graphophone Store, at 1227 Tremont street, this city, has just issued to the public a well-written little folder for the purpose of calling attention to the desirability of the Columbia graphophone as an adjunct to the happy home.

In comparing the graphophone with a piano the booklet says, in part: "The piano makes piano music only, while the graphophone will make any kind of music you desire to hear, and is always uniformly good, but if you feel that you must have a piano, then buy a graphophone to teach you vocal and instrumental music.

"It furnishes for you at your home a band, orchestra, accordion, banjo, piano, violin, piccolo,

cornet, and every form of vocal music from rag-time to grand opera. It plays for you the sweet familiar hymns of childhood, or the latest comic opera hit.

"It never has to be coaxed to sing or play and it never catches cold. It plays when you wish to have it do so and its voice is stilled when you wish for quietude. It laughs with you, but never at you. Buy a graphophone, buy the best, buy a Columbia."

It is the sort of publicity that arouses interest and produces results in the way of sales.

GOOD SIDE LINE FOR DEALERS.

The Regina Co., 211 Marbridge building, Broadway and 34th street, New York, announces elsewhere a new model of Regina electric cleaner—model "C." This is a moderate priced vacuum cleaner of a new design and construction. It retails for \$45, which means a good sized profit for the dealers. In a chat with L. T. Gibson, secretary of the Regina Co., he said that many might believe that The World is a peculiar place to advertise vacuum cleaners. "But so many talking machine dealers handle Regina cleaners with profit that I know that not only Regina agents, but other talking machine dealers seeking a profitable side line will be greatly interested in this new machine.

"The method of dust separation is a special feature. Instead of hanging an unsightly dust bag on the handle, we have incased the dust receptacle, which is of special design, and have placed it between the intake and the motor, where it should be. Thus all moving parts are properly

protected and no dust, matches or sticks can be drawn through or around the mechanism, or thrown out with the exhaust." Full particulars of this model "C" will be sent upon request to the Regina Co.

STORE TALK.

A certain atmosphere characterizes every store. To this atmosphere all customers are more sensitive than employees or employers realize, and the atmosphere itself is created entirely by the mental attitude of the clerks toward their customers.

When the atmosphere of the store betokens real cordiality the customers duly appreciate that fact and call again.

ALEXANDER'S BAND AND THE VICTROLA IN RECITAL.

OPTIMISTIC IN INDIANAPOLIS.

Aeolian Co.. Concludes Successful Concert Season—Latest Victor Records Make Big Hit—Thomas Devine's Narrow Escape from Death—New Columbia Style "Princess" a Favorite—The Kipp-Link Phonograph Co. Reports an Increasing Demand for the Latest Styles of Edison Machines and Records.

(Special to The Talking Machine World.)

Indianapolis, Ind., April 10, 1912.

The local talking machine houses are looking forward to a brisk trade in the spring and early summer and believe that the phenomenal volume of business done in the past two months will be equaled if not surpassed, as all indications point toward one of the most successful years in the business. The managers of the houses handling the Columbia, Victor and Edison machines are all enthusiastic over the business of this year and predict an increase as the year rolls on.

Thomas Devine, local manager of the Columbia Phonograph Co.'s branch, narrowly escaped death last week in a traction wreck near Fortville, Ind. Another passenger in the smoking compartment of the car in which Devine was riding was killed. Mr. Devine got off with serious injuries about his legs and hips. He has been confined to his home since the accident and it will be several weeks before he is able to get about, according to his physician. The wreck resulted from misunderstood orders and the absence of a headlight on one of the cars.

A peculiar incident of the affair was that C. P. Herdman, of the local branch of the Columbia Co., intended to make the trip which resulted disastrously for Mr. Devine, but at the last moment Mr. Devine decided to go. Mr. Herdman intended to go to Muncie and close a sale of Columbia Grafonola "Regent," but Mr. Devine was obliged to go to Anderson to see about the sale of a dictaphone and he decided to go to Muncie for Mr. Herdman also. The wreck occurred while he was coming from Muncie.

The Aeolian Co. concluded a series of ten concerts last week and is planning to give a farewell concert at one of the theaters within the next few weeks. Those who attended the complete series will be entitled to tickets to the last concert. The Victrola machine is used and there has been a material increase in the sale of this instrument since the first of the concerts. Miss Wiltsie, who is now in charge of the talking machine department of the Aeolian Co.'s branch, says that business has been very good since she has been with the company. Miss Wiltsie was formerly with the Musical Echo Co. She is in reality no longer a "Miss," as she was married last month to Arthur V. Lamb. Mrs. Lamb will keep her maiden name, however, when she is busy transacting a sale of the Victor machine.

W. S. Barringer, manager of the retail Victor department of the Wulschner-Stewart Music Co., reports excellent business conditions throughout the State. This company is creating a great deal of new business by featuring the records of the latest songs as they are sung at the local theaters. Records by Christie McDonald, of the "Spring Maid," which appeared at English's opera house this week, made a "hit" locally and a large number of them were sold during the week. Theatergoers are beginning to take notice of this feature of the talking machine business and the increase in trade has been noticeable. Caruso and Lucia Sextet records have been in demand in the last few weeks and are leading the sales. The four Miss Fords, who were at the B. F. Keith Theater this week, visited the Victor department of the Wulschner-Stewart Co. Nat M. Will's, the famous "happy tramp," also stopped at Keith's this week. His Victor records are always in demand here.

Samuel Goldsmith, traveling district manager of the Victor Co., stopped for a short time in Indianapolis recently and chatted with Mr. Barringer.

The local branch of the Columbia Phonograph Co. is making a special display of the new Columbia Grafonola, the "Princess," at \$75. The fact that no other music reproducing instrument that stands on the floor independent of a separate

SHEIP & VANDEGRIFT, Inc.
PHILADELPHIA, PA.

base has ever been offered for less than \$100 is expected to make the new style a "go" here. The local branch has started an extensive advertising campaign in the local papers. The business of the Columbia Co. in Indianapolis has been in keeping with the past records that it has established. Mr. Herdman, who is in charge while Mr. Devine is away, says the branch had the best March business that he has experienced. A report sent from headquarters shows that the Indianapolis branch of the Columbia Co. stands sixteenth in its sales for February. A number of cities which are much larger than Indianapolis are behind the local branch.

New records by Weber and Fields will be put on sale by the Columbia branch in the next few days. Post card announcements of these new records will be sent out to the trade. Other new records being offered are by Leo Slezak, the Bohemian tenor, and Emmy Destinn, the famous dramatic soprano.

Special Easter records were in demand for the few weeks preceding Easter. All of the local

houses prepared lists of their records suitable for Easter music.

Walter Kipp, of the Kipp-Link Phonograph Co., which handles the Edison machine, is favorably impressed with the conditions throughout the State. Paul Bassett, who travels for this concern and who is well known among the dealers, reports excellent business conditions. Mat Kreusch, of the Edison Co., of Orange, N. J., was here recently and stopped at the Kipp-Link house. Mr. Kipp says his company now has the most complete stock since the establishment of the house.

SOME EFFECTIVE ADVERTISING.

E. F. Droop & Sons Co., general Victor distributors, 1300 G street, Washington, D. C., have been carrying some very effective advertisements in their local papers bearing on the Victor-Victrola in which they are pointing out the fact that every business man needs relaxation and that the Victor-Victrola is the tired man's tonic. The advertisement is admirably laid out, cleverly written and forms most effective publicity.

(Special to The Talking Machine World.)

St. Louis, Mo., April 10, 1912.

St. Louis talking machine men are looking forward to a fine spring trade. Their view is that the weather has been so miserable for business for three months that there must be considerable of the unfinished article lying around. The daily receipt book is not evidence of this, for business totals have been very good recently.

The jobbers say that country business is fair, that collections are not good in communities where the customers have to travel over roads to get to the store, where producers have been cut off from markets, and in the South, where planting is very late and discouraging. They think that a few warm, sunny days will change all of this and the farmer will come into his traditional good humor and all the ramifications of the trade will again smile and everyone will want a talking machine to help the expressions of joyfulness. Good crops, they say, cannot help but result from the combination of well soaked soil and sunshine, and the latter is bound to come very soon.

And then will come the school trade, not this spring, perhaps, in noticeable quantity, but it is beginning. All of the larger houses have stocked on educational records and they are beginning to move, just enough to show that the seed is well planted and that something is going to happen, and happen big, along next September when schools open. Talking machines for schools in this part of the country must be bought by patrons' associations, and these associations are nearly "broke" now, but they give picnics and entertainments about the school closing time, and replenish the strong box for next year. Then will come the sales. The jobbers say there is quite an out-of-town demand for these records, showing that this entire section is awakening.

The dealers' view is that following the sales in schools will come the sales in the homes, where the children have reported the fine music they have heard at school, and altogether it is going to be a fine prospect, especially for the Victor dealers.

The Zeigenheim Furniture Co., the largest in-

stalment house in East St. Louis, is completing arrangements for the installation of a talking machine department and the opening will be before The World reaches the readers. Mr. Zeigenheim is going into the business on a determined scale and his department will be the equal of any in the West, and he proposes to fight the St. Louis stores for every bit of trade on the east side of the river. East St. Louis has several talking machine dealers, but they have not gone after the business on so determined a scale.

Harry Levy, manager of the talking machine department of the Aeolian Co., recently made a business tour of the South and reports prospects good for late spring business.

The Koerber-Brenner Music Co., wholesale Victor dealers, is congratulating itself on the luck enjoyed recently with a badly needed record shipment. Five boxes of records were caught in a wreck and it was thought from reports that was a case of reorder, but to their surprise all but one box was saved in perfect shape.

E. C. Rauth, secretary of the Koerber-Brenner Music Co., departed for Birmingham the first of the month, with a trip to Dallas as a prospect. Mr. Rauth said that the record business was making an excellent showing in the out-of-town trade and that as it became possible to more nearly fill orders complete, there is a much better feeling in the trade. His company had recently been compelled to file several fill-in orders between times and had just received a heavy shipment of the records on the envelopes, which were much in demand.

Sales Manager Ornstein, of the Victor Co., was a recent visitor here.

Manager Levy, of the Aeolian talking machine department, says that the retail trade enjoyed by that firm recently has been quite a pleasing feature; that the country trade has held up fairly well, but needs open weather. Some difficulty is experienced, he says, in meeting orders on VIII, IX, X and XI machines, but that the record supply, which was so much of a problem for a time, is rounding up nicely.

President H. G. Koerber, of the Koerber-Brenner Music Co., returned the first of the month from Asheville, N. C., where he enjoyed an extended vacation and much needed rest. He arrived just in time to sit on the lid when Secretary Rauth was called South.

The redecoration of the Columbia phonograph store is complete, and it is quite a different looking place. All woodwork has been painted white, the walls finished in light buff and the picture frieze is light in general tone. New lights have been installed and new rugs and draperies placed in the demonstration booths, and the effect is very cheerful and clean, which was the effect desired.

The office quarters have been more completely partitioned off to give more quietness to that section, and the furniture is being rearranged and rebuilt for expediency of the business. Manager Ramsdell says he is very well pleased with results and believes that the increasing business will be handled with greater ease. "March was a very good month with us," said Mr. Ramsdell, "and we have no complaints. The new Princess Grafonola is proving a good machine for the wholesale business from this store and meets the requirements for a high class machine in the smaller stores."

The Silverstone Talking Machine Co., recently appointed exclusive jobbers for Edison phonographs in this territory, has also taken over the dealership for the Edison dictating machine and will push this work in this territory. A. M. Pierce, recently of the Chicago Dictating Machine Co., is sales manager of this department. Mr. Silverstone says that he expects excellent business to result. "The former dealers," he says, "have not paid enough attention to keeping the machine in order and, of course, trouble has resulted. I have been busy overhauling some of them, and I find that it is a job for a combination talking machine expert and electrician. I enjoy both branches of work and will show the users of these machines what good service means." An office for this department has been fitted for the present in the front booth of the Silverstone store in sight of the street, where the young woman in charge can be seen by passersby as she busies herself taking dictation from the machine and transcribing it on the typewriter.

The Columbia Phonograph Co. again enjoyed the exclusive talking machine exhibit privilege at the Household Show and got some very good business as a result. L. J. Reid was in charge of the exhibit, and Assistant Manager C. L. Byars, who is in charge of retail sales, gave a good many evenings to the booth. "There was an excellent attendance," said Mr. Byars, "and the class of trade we drew was all high class. There was no raffraff to fight away there. We got orders from there each day, and I have a good bunch of prospects left. Our handicap was the scarcity of Favorite machines. The advertising has made persons ask for this instrument and we probably would have more sales on our books if we had more of these machines to send out for trial right now, but we have been playing for those prospects which looked to be the quickest sales. The general business is holding up nicely and we have made a very creditable total on record sales, despite our handicap during the redecoration of our store."

L. J. Reid, a floor salesman with the Columbia Phonograph Co. here, has been transferred to the Louisville branch, where he will work under E

B. Walthall, recently manager of the branch here.

Mark Silverstone, president of the Silverstone Talking Machine Co., has great hopes for the talking machine future of his son, aged four. Young Mr. Silverstone is much of an enthusiast and when his mother makes a cake the little fellow wants to "wind" it for her; also he wants to "wind" the coffee grinder. There is no word stir in his vocabulary, and Mr. Silverstone is of the opinion that he son will become an enthusiast.

An interesting Easter window was a dancing egg in the window of the Silverstone Talking Machine Co. The egg rested on a presumably level piece of glass, which was, in fact, a slightly concave watch crystal. This in turn rested upon two small goblets that stood on a wooden box. The egg danced continually and with it was a sign: "This egg will not set still until there is an Edison phonograph in every home for Easter." The device was very mysterious until Mr. Silverstone permitted The World correspondent to walk among the machines displayed and place his hand on the box, then all was plain. The top of the box was thin veneer and inside was a smooth running electric motor, which caused the veneer top to vibrate ever so slightly. This vibration was conducted to the watch crystal by the goblets, which were tightly glued in place, and this slight motion jarred the blown eggshell from the center and the curve of the watch crystal sent it back. The weight of the big end of the eggshell was sufficient to keep it turning irregularly and added to the weird appearance.

Manager Horras, of the Detmer piano branch, created some excitement in the talking machine stores when he placed a Columbia symphony grand machine in his window. The assumption was that he had added talking machines to his line, but he entered a disclaimer, asserting that it was merely a pick-up in a piano trade that he wanted to sell. The machine was two years old and had never had a record on it. The owner had drawn it at a raffle and had not cared to invest in records, so had let it stand silent until it was traded for a piano.

The Thiebes Piano Co. is making a big run on a specially designed needle for opera effects sold under the name and guarantee of that company, and Manager Robinson says they have been a good card. They are guaranteed to produce better effects than regular needles and to be less wasteful of records.

"Business is excellent," said Manager Robinson, of the Thiebes Piano Co. talking machine department. "Trade is holding up well and is well balanced. The record business keeps ahead of previous years and we are having quite a little business in the educational Victor records." Mr. Robinson has recently been making window displays of Regina-Phones and reports sales of a goodly number of the boxes.

S. H. Rash, recently traveler for the wholesale talking machine department of the Aeolian Co., is with Lyon & Healy, making northern Illinois, and it is expected that he will include St. Louis in his territory.

TRADE IN SOUTHERN CALIFORNIA.

Month's Business Shows Up Well—Recent Visitors of Note—Pasadena Music Co. Remodels Quarters—New Cabinets Please—Trouble in Securing Sufficient Stock—Other News.

(Special to The Talking Machine World.)

Los Angeles, Cal., April 6, 1912.

Dealers in the southern section of California have had a very good trade during the past month, regardless of the shortage on Victor and Edison goods caused by the delay of freight on the various lines. In fact, many dealers report a phenomenal trade for the month of March.

P. T. Starck, of the P. A. Starck Piano Co., of Chicago, spent several days in Los Angeles recently and stated prospects for the future business were very encouraging in his city.

The Fitzgerald Music Co. is still continuing its special advertising, through which it is reaping many great results for this special effort.

The Pasadena Music Co., of Pasadena, has remodeled its talking machine department, thus mak-

ing a number of sound-proof salesrooms equipped in the most up-to-date manner. Mr. Campbell, the general manager, is putting every effort into the work, which has brought great returns, due to the fact that he is a real live talking machine man.

Anaheim, Cal., has a very live Edison dealer, L. B. Weber, who is having splendid success with the Amberola and Opera.

F. W. Wood, of the Wood Manufacturing Co., of this city, who is the inventor and manufacturer of the Wood filing cabinet, reports a great demand for this new disc cabinet.

E. W. Muller, of Klamath Falls, Ore., was a recent visitor in Los Angeles, where he spent several days. Mr. Muller is an active Edison dealer.

Sherman, Clay & Co., through their local manager, C. S. Ruggles, report a steady demand for all general types of Victrolas, having just received a carload of Victrola XVI. and disposing of them the same day as received.

J. J. MacGregor, of MacGregor Bros., Ventura, Cal., reports business very good in his section of the country.

GEO. W. LYLE ENTHUSIASTIC

Over Trade Conditions—Leading Cities Visited During Recent Trip to the Pacific Coast—Made Some Very Important Deals

George W. Lyle, general manager of the Columbia Phonograph Co., has returned to New York after a visit to a number of the company's stores. His trip included Atlanta, Birmingham, New Orleans, Dallas, Los Angeles, San Francisco, Denver, Omaha, Salt Lake City and Chicago.

Mr. Lyle returned more enthusiastic than ever, if such a thing were possible, as to the future of the talking machine industry. At every point visited the reports made him were uniformly to the effect that the interest in the machines and records were steadily increasing; that the best people of every community were enthusiastic users, and that the employment of the machines and records in public schools as a medium for instructing the pupils in the essentials of good music was showing a remarkable growth, and had proven unfailingly successful. Mr. Lyle had to express his gratification at more than one point at the tremendous advancement made.

So far as Columbia products is concerned, and getting down to his own company's part in this general advance, Mr. Lyle admits his complete and unqualified satisfaction. Everywhere he found Columbia stores as busy as bees, and Columbia managers elated and optimistic. Dealers handling Columbia goods were never more contented and friendly, and the public never more interested.

The aggressive and attractive advertising which the company has been placing came in for a lot of commendation by all the dealers Mr. Lyle visited, and without exception they assured him that it had proven effective and productive.

The alleged dullness in commercial circles, of which some mention is made in the newspapers, was not apparent, Mr. Lyle tells us, at any point he visited. Not only are Columbia stores at all these points extremely busy, but Columbia dealers are equally so, and all of them report collections easier and better than for several years. Judging the situation from Columbia activity and Columbia statistics he thinks there can be no question that the country is prosperous and business excellent.

An interesting fact brought out in our talk with Mr. Lyle is that several extremely important new deals were closed by him during his trip, which will be published fully later on. These provide for extensive handling of Columbia products by concerns of national repute and affiliations and whose operations are always on a magnificent scale. When we are free to publish the details we promise our subscribers some interesting news.

Mr. Lyle says he is glad he could make the trip at the time he did; glad to report such favorable conditions everywhere, and glad to be back at his desk again and to take up anew the work of promoting the interests of his company and of Columbia dealers.

Don't sing promissory notes

to your customers about having their orders filled. Fill them—give them what they want when they want it.

Even the most careful dealer may find himself unprepared at times for a "freak" rush order, but if he has the right kind of a jobber he doesn't need to "bat an eyelash."

He can just pass the "freak" along to his jobber and know that it will get the attention it needs—that is, if his jobber is an "on-the-jobber."

Well, now that we're cornered, we are willing to acknowledge that we're the big "IT" when it comes to real service—**all orders shipped the same day they are received.**

That means you can get from us at once anything you need in Victors, Victor-Victrolas, Victor Records, record cabinets, needles, horns, fibre cases, repair parts and all kinds of accessories. It's just like going into your storeroom and bringing the goods into your store.

Take us at our word. Send us a trial order and see how we rush it to you.

At any rate, write today for our catalog and booklet, "The Cabinet That Matches."

EXPANSION IN DETROIT.

Columbia Phonograph Co. Opens Branch on Woodward Avenue, Near the Square—Why the Victor Is Like a Violin—Grinnell Bros. Quadruple Victor Stock—Manager Rupp Makes Some Record Victor Sales, Both Wholesale and Retail—New Edison Opera Machine Most in Favor.

(Special to The Talking Machine World.)

Detroit, Mich., April 9, 1912.

S. E. Lind, manager of the city sales department of the Columbia branch, has a deal in pickle which will make almost everybody take a second squint when he pulls it off, but it is not ripe yet. Down in the vicinity of Cadillac square, where more people go oftener than anywhere else in the city, there is no talking machine store. A lot of people have planned to establish one thereabouts, but all have found the rents too fierce. But Mr. Lind has uncovered a proposition which looks like success, and it seems probable that Detroit will at last have a talking machine store where she needs it worst—on Woodward avenue near the square.

Manager Johns was called to Washington to-day to take charge of the Columbia branch in the national capital during the illness of Manager Grove, of that city. Mr. Johns is not a stranger to the Washington trade, being a native of that city and learning the business there. He expects to be away for a month.

"The Victrola is like the violin in one respect," said Harry Rupp, manager of the talking machine department of Grinnell Bros. "It is just the same now as when it was invented. The only changes have been in the cases, and those have been minor ones. Not a thing has been done affecting the Victrola itself. When people see what the machine is and consider that record of years' service, it gives them confidence that the Victrola is what it should be. That there is no reason for alteration is a big argument."

When the contemplated alterations and enlargements of Grinnell Bros.' talking machine department are made the company will quadruple its stock. It is planned to have a separate department for Red Seal, or grand opera records. That business has grown so that it can't be carried on in the manner it formerly was. It is necessary to carry a particularly heavy-wholesale stock of them.

"All idea that this big business in talking machines might be a flash has been dispelled," said Mr. Rupp. "Notwithstanding that there are many more dealers, the business of the old dealers has not only doubled, but it stays doubled; it does not slump again. All the firms are doing more business than they ever did before in their existence."

"I'd like to tell you of something that happened day before yesterday, but I'm afraid I would get elected to the Ananias Club. But it's a fact. Between 4 o'clock and half past 5 we sold no less than six of those Victrola sixteens, the \$200 machines. And one day last week I opened up new wholesale accounts to the extent of \$4,500. We have some very big sales in sight to new agencies."

The local agents of all lines of talking machines are all doing well. The up-State demand is equally encouraging, and the managers of the jobbers and

branch houses see ahead of them the best summer business in history. In both Columbia and Victor lines the business for the first quarter of the year was from 18 to 25 per cent. better than for the corresponding period last year, and that is not casting any reflections upon last year, for 1911 was a pleasing whirl around the sun for the talking machine folks.

The new Edison "Opera" talking machine is gaining in favor constantly, though it is a horn machine. Its bid for favor is the remarkable clearness with which it renders instrumental music, especially that of string instruments like violins. The company is sending out a fine collection of records with which to set forth this superiority.

The newest Columbia on the market is attracting the same attention here that all of the recent new models have. It is the Grafonola Princess, which sells for \$75 dollars. Not only is the Columbia branch advertising it and showing it extensively, but the Max Strasburg Co. is pushing it and some other Columbias to the fore.

Mr. Strasburg still retains the name "Victrola Shop" on his windows, but has come to the conclusion that selling talking machines is a good deal

like selling clothing, hats and other things—what suits one man's taste another spurns, and in order to do the most comprehensive and extensive business a merchant must try to meet all tastes—hence his taking on the Columbia line.

The Strasburg Co. also is advertising and making a feature of the electric Grafonola.

HOW HE WAS CURED OF SWEARING.

The Catholic Union and Times reproduces from a Buffalo journal the story of a man who was cured of swearing by hearing a phonograph repeat his language. "The gentleman was prolific of profanity; and, in an attempt to cure him, a scheme was devised to record his every-day conversation, and later turn the machine loose in his presence. It had the desired effect. He heard himself as others heard him. That was enough."

What does it cost you to do business? If you cannot tell exactly, better find out or the fellow across the street who does know will soon get your best trade.

COLUMBIA CO. IN VIRGINIA.

How the Business of This Institution, With Headquarters in Norfolk, Has Been Built Up—Emphasizes Tireless Work and Systematic Organization—A Great Business Campaign Being Developed.

(Special to The Talking Machine World.)

Norfolk, Va., April 9, 1912.

From a small place on a side street to the magnificently appointed and well equipped talking machine store now occupied by the Columbia Co. at 67 Plume street, is a marked change, but it tells the story of how the progressive policy of the Columbia Co. has won out in this city and throughout the State of Virginia.

Through the systematic organization of O. H. Tufts, the secretary and treasurer, the genial man-

agement of D. W. Causey and the suavity and hustling qualities of the salesmen, Messrs. Woodhead and Ross, the store is a trade-getter.

Practically no effort had been made to push the Columbia line in Norfolk until the inception of the Columbia Co., and one can well imagine the rife competition that had to be combatted; but success came, as the Columbia goods were pushed in every direction and one by one of the others' customers were won by courtesy, individual attention and honest belief in the excellence of the goods.

In an interview the president of the company stated that the Columbia Phonograph Co. was due a large share of the credit, as its hearty co-operation in exchange of ideas, its improvement in the design and quality of the goods and its personal interest in the upbuilding of each individual dealer has been a big help in the making of its success.

COLUMBIA CO.'S STORE IN NORFOLK, VA.

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Special to The Talking Machine World.)

Washington, D. C., April 8, 1912.

SOUND-BOX. Leon F. Douglass, San Rafael, Cal., assignor to the Victor Talking Machine Co., Camden, N. J. Patent No. 1,017,041.

This invention relates to improvements in sound-boxes for sound recorders and reproducers; and the objects of this invention are to provide in a sound-box an improved mounting for a stylus bar.

In the drawings Fig. 1 is a front elevation of a sound-box constructed in accordance with this invention; Fig. 2 a bottom plan view of the same; Fig. 3 a front elevation of a modified form of this invention, and Fig. 4 a bottom plan view corresponding to Fig. 3.

DIAPHRAGM. Frank B. Meech, New York. Patent No. 1,016,704.

This invention relates to sound apparatus where sound vibrations are received from or transmitted to a diaphragm.

More particularly the invention relates to a diaphragm where voice or musical sound vibrations are received or utilized, such vibrations or waves being compounded from many individual sound sources or component vibrations, and resulting in a complicated or intricately composed wave. If the diaphragm does not respond exactly to the wave form in all its detail and complication, the purity of the sound will be lost.

One of the objects of the present invention is to provide a diaphragm of such a character that the sound purity will be preserved; in other words, in which the sound wave will be received or utilized without changing its characteristics, even in the more minute or complicated details of sound wave form.

Diaphragms have hitherto been made on the principle of securing merely high elasticity; mica, glass, copper, aluminum or other similar sonorous substances being examples. Such materials by virtue of their elastic and sonorous character seem to be and are adapted to give certain acoustic results. The effort at improvement has hitherto been constantly in the direction of obtaining materials more elastic and more vibratile or sonorous in character than those hitherto utilized, and the latest developments are in the direction of mica as being a material having the above characteristics most prominently inherent in it.

In the drawings Fig. 1 is a perspective view of a diaphragm embodying the principles of the invention; Fig. 2 is a similar view showing a modified form of diaphragm; Figs. 3 and 4 illustrate further modifications; Figs. 5 and 6 are, respectively, sectional and front views of another modified form of diaphragm embodying the invention, and Fig. 7 shows diagrammatically the use of a diaphragm in a sound recording or reproducing apparatus.

APPARATUS FOR FORMING IMPRESSIONS ON PHONOGRAPH RECORD BLANKS AND LIKE ARTICLES. Walter C. Runge, Camden, N. J., assignor to Royal Phone & Phonogram Co., Boston, Mass. Patent No. 1,018,631.

This invention does not relate to the making of the blanks for phonograph records and like articles, but to the forming or impressing upon or into the same, of projections or recesses for the tune or other matter which is to be reproduced from the record.

In the accompanying drawings Fig. 1 is a vertical elevation partly in section of an apparatus suitable for use in carrying out the invention. Fig. 2 is a top view of a tank and appurtenances comprised in the apparatus.

Fig. 3 is an inverted or bottom view of the tank and appurtenances. Fig. 4 is a side view of a segment of an expander comprised in the apparatus. Fig. 5 is a transverse section of this expander. Fig. 6 is a longitudinal section of certain parts of a modified form.

Fig. 7 is a side view of an apparatus for ejecting the expanders. Fig. 8 is an enlarged longitudinal section of parts shown also in Fig. 1.

Fig. 9 is a central transverse section of these parts. Fig. 10 is a longitudinal section of parts of an expander. Figs. 11, 12 and 13 are views illustrating means whereby the expander is caused to exert

pressure first at its middle portion and from there progressively toward the ends; Fig. 11 showing a longitudinal section of the parts, on a larger scale than the previous views, and with the mandrel G out of engagement with the staves of the expander, which latter are shown as curved or bowed; Fig. 12 is a detail elevation of one of these expander staves showing in full lines the normal or bowed condition of said stave and showing in dotted lines the straightened out condition of such stave, produced by the action of the mandrel, and Fig. 13 is a fragmentary top view of one of the caps C', showing the openings c' therein for the escape of air.

STAND FOR TALKING MACHINES. Annibal Casagrande, Rochester, N. Y. Patent No. 1,017,848.

The present invention relates to stands for talking machines and an object there is to provide a construction adapted to support an ordinary talking machine of the type having a horn projecting

forwardly therefrom above the machine, provision being made for connecting the tapering tone tube of a talking machine to a horn which is arranged on the stand below the supporting part thereof.

In the drawings Fig. 1 is a vertical section through a stand constructed in accordance with this invention; Fig. 2 is a rear view of the upper por-

tion of the stand, and Fig. 3 is a section on a line a-a Fig. 2.

SOUND-PRODUCING APPARATUS. Richard A. Whitehead, Los Angeles, Cal., assignor of one-half to Glenn R. Waterman, same place. Patent No. 1,017,834.

This invention relates to sound producing apparatus, and more particularly to means for throwing the same out of operation at the termination of the rendition of a song or instrumental or vocal selection, or such sequence of sounds as may be produced in the operation of the apparatus; whereby operation of the apparatus is automatically terminated at the termination of such rendition, and

the invention has for its object to provide improved apparatus of the character described, of electro-magnetic character, which will be superior in point of positiveness of operation, relative simplicity and inexpensiveness of construction and organization, and sightliness in appearance, which may be applied to sound producing apparatus of standard and conventional forms and types with but slight alteration of the same, which may be readily kept in repair, and which will be generally superior in efficiency and serviceability.

In the drawings Fig. 1 is a side elevation, partly broken away and partly in section for clearness of illustration of sound-producing apparatus, or a so-called talking machine, organized, equipped and constructed in accordance with the invention; Fig. 2 is a top plan view of the same, parts being likewise broken away for clearness of illustration; Fig. 3 is an enlarged detail plan view of an essential feature of the invention, and Fig. 4 is a fragmentary side elevation of the feature shown in Fig. 3 and a feature of the general construction of the apparatus.

SOUND AMPLIFIER FOR PHONOGRAPHS. Vito Ettore D'Urso, New York. Patent No. 13,378 (re-issued.)

The present invention relates to phonographs, and more particularly to a device for amplifying the sound resulting from the contact of the reproducer with the record.

Ordinarily there is used in connection with a re-

producer of phonographic instruments a horn or similar device for amplifying the sound emanating from the reproducer. Such devices must necessarily be supported with reference to the disc or cylinder record, and owing to uncertain balance may affect the reproduction of the sound, causing improper action of the reproducer and a scarring of the record. Furthermore such horns, as have been commonly used, accentuate the mechanical sounds of the instrument and give a more or less "brassy" or "tinny" effect to the reverberations induced by the reproducer which passes over the record. Moreover, such devices are cumbersome and require adjustment with respect to the instrument, and must be applied to or removed from the instrument for the purposes of ordinary transportation.

One of the objects of the present invention is to provide a simple and compact device in which means arranged within the casing, together with parts of the inclosing casing, may be utilized as a sound amplifier.

Another object of the invention is to produce a device which will dispense with the ordinary horn type of amplifiers, which are usually arranged outside of the casing, and secure the necessary amplification of sound by utilizing a direct channel for the transmission of sound from the disc or record through the inclosing casing of the device.

A further object of the invention is to provide a casing for the mechanism of the instrument, which, in normal position, will inclose the parts of the mechanism, and when opened for use will provide an additional amplifying or sound board effect, comprising a surface to which the sound waves conveyed by the main amplifying means are directed and by which the same are smoothly deflected.

Fig. 1 is a perspective view of a device constructed in accordance with the present invention in its closed position; Fig. 2 is a similar view of the apparatus in its open position; Fig. 3 is a horizontal section taken through Fig. 2, certain parts being broken away to more clearly show the invention; Fig. 4 is a central transverse section taken through the device in its closed position; Fig. 5 is a similar section through the device in its open position; Fig. 6 is a section taken through the stop for the record; Fig. 7 is a section taken on line 7-7 of Fig. 6, and Fig. 8 is a plan view of the mechanism illustrated in Fig. 6.

AUTOMATIC PHONOGRAPH STOP. Milton E. Lewis, Oakland, Cal. Patent No. 1,019,669.

This invention has for its object to provide an attachment for talking machines by means of which the machine may be automatically stopped when the end of the record is reached.

The attachment comprises in its general features a pin mounted on the revoluble disc of the machine and a projection on the transmitter which engages said pin when the end of the record is reached and causes the pin to engage a brake which acts upon the revolving plate to bring the machine to a stop.

Referring to the accompanying drawing: Fig. 1 is a plan view of a phonograph of the disc type, provided with an attachment constructed in accordance with this invention. Fig. 2 is a view of

the top of the phonograph casing with the revoluble plate and a disc record thereon in cross section and a transmitter and a portion of its supporting arm. Fig. 3 is a detail view of an enlarged portion of the revoluble plate. Fig. 4 is an enlarged detail view of a portion of the top of the phonograph casing, looking at the upper side thereof and showing a brake employed with this invention. Fig. 5 is an enlarged detail view in cross section of a portion of a revoluble

plate and an adjustment pin employed with this invention, shown in elevated position. Fig. 6 is a view similar to Fig. 5 showing the pin in lowered position. Fig. 7 is a detail view showing the pin in elevated position and the slidable support in which the pin is mounted. Fig. 8 is an enlarged detail view of the underside of a revoluble plate showing a portion of the adjustable device employed in connection with this invention.

SOUND RECORDING APPARATUS. Thos. A. Edison, Llewellyn Park, West Orange, N. J., assignor to Thos. A. Edison, Inc., same place. Patent No. 1,019,441.

This invention relates to devices for recording sound, and the objects are the provision of a novel and efficient sound recorder of sufficient sensitivity to respond to sound waves of little power, and at the same time so constructed as to largely prevent excessive movement of the diaphragm and recording stylus in a direction away from the recording surface under the influence of sound waves of great amplitude. The improved apparatus therefore is intended to record sounds, both weak and strong, more truly than has heretofore been possible.

a modified mounting for the diaphragm.

PHONOGRAPH REPRODUCER. Thos. A. Edison, Llewellyn Park, West Orange, N. J., assignor to Thos. A. Edison, Inc., same place. Patent No. 1,019,440.

This invention relates to reproducers for phonographs and more particularly to that type which is adapted to operate upon a sound record in the form of a groove having elevations and depressions corresponding to the original sound waves.

The object of the invention is to secure a louder and more perfect reproduction than can be obtained from the ordinary form of reproducer, or to secure a reproduction of equal loudness with less wear upon the record. With this end in view there is employed a pair of reproducer styluses, one of which is arranged slightly in advance of the other with respect to the record groove, so that both styluses track the same groove together, and

although the one stylus is slightly in advance it does not interfere with the other because of the elongated character of the record groove. In other words, each sound or note which is recorded on the record consists of so many elevations and depressions that the two styluses are operated practically simultaneously with respect to the record of each individual sound, however minute.

Fig. 1 is a side elevation, partly in section, of a phonograph reproducer constructed in accordance with this invention, and Fig. 2 is a bottom plan view of the stylus lever, styluses and a portion of the floating weight.

TALKING MACHINE. Wilburn N. Dennison, Merchantville, N. J., assignor to the Victor Talking Machine Co., Camden, N. J. Patent No. 1,022,126.

The main objects of this invention are to provide in a talking machine a simple and effective joint between a hollow tone arm and a hollow support; to provide an improved joint between a tone arm and a hollow support by which the tone arm will be held yieldingly in position to permit of the free movement thereof, and to avoid rattling; to provide an improved joint between a tone arm and its support in which the tone arm will be readily detachable.

In the accompanying drawings, Fig. 1 is a side elevation, partly in vertical central section, of one embodiment of this invention; Fig. 2 a fragmentary horizontal section of the same, and Fig. 3 a rear elevation, partly in vertical section of the same.

AUTOMATIC CUT-OFF FOR TALKING MACHINES. James W. Nelson, Marion, O., assignor of one-half to Delphos C. Nelson, same place. Patent No. 1,021,109.

Fig. 1 is a top, plan view of a talking machine equipped with this invention, and Fig. 2 is a side elevation of the same.

Keeping everlastingly at the right thing does bring success.

LYON & HEALY'S VICTROLA PUBLICITY.

Lyon & Healy were so pleased with a large black and white drawing of Caruso, the work of N. Inukai, the well-known Japanese artist, that they purchased it for use in their Victrola advertising. We present a reproduction of this drawing here—

CARUSO IN JAPANESE EYES.

with and we predict that this particular view of the great singer will speedily be known from one end of the country to the other.

This is only one of the many features of the Victrola advertising that Lyon & Healy, of Chicago, are presenting to the trade.

GRAPOPHONE MUSIC FOR WORKERS.

The Woman's Trade League of Chicago has planned to have graphophone entertainments at its monthly meetings for working girls. The girls like music and dancing, and it is too expensive to hire pianos and musicians. The girls do not of-

ten have the opportunity to hear Caruso and Mary Garden in the flesh, but on the graphophone they may hear a concert by these famous singers without spending the greater part of their week's wages. The girls have denied themselves little luxuries to get the graphophone and stock of records, and now will get their enjoyment in regular monthly dances and musicals. None but the best selections will be used.

NEW COLUMBIA GRAFONOLA.

The "Princess," Just Introduced by the Columbia Phonograph Co., to Be Sold at \$75.

The accompanying illustration shows the Columbia Grafonola, the "Princess," a new instrument

THE COLUMBIA "PRINCESS."

at a new price, \$75, just placed on the market by the Columbia Phonograph Co. Embodied in the new machine are some new and exclusive Columbia features. One of these is the tone shutters, replacing the two small doors and providing more sightly, effective and convenient control of tone-volume. By turning the small knob it is easy to partly or completely close the tone-shutters at the opening of the sound chamber, regulating the volume of music without affecting its tonal integrity. This new Grafonola "Princess" is a beautiful mahogany table, 31 inches high, with a top 18 inches square, ready at all times to serve all the purposes of such a table, worthy of its place in any part of any room in any house, yet ready at any time to provide the best of good music. Further details are unnecessary. The picture reveals the graceful lines of the "Princess" better than it can be expressed in words.

H. Nathansen, dealer in talking machines, pianos and music, is now occupying his new quarters in Newburgh, N. Y. They are located at 74 Broadway.

A man that is worthy of credit as a rule is not likely to take offense by reason of having his credit investigated.

EDISON RECORDS

Your profit on Edison Records is limited only by your own energy in keeping them before the people to whom you have sold Edison Phonographs.

The purchase of an Edison Phonograph is the expression of a desire on the part of the purchaser for the best music—as it comes out. But that desire won't do all the work. In order to keep enthusiasm at top pitch you must do your part.

Every month when you receive the new record list, stir up the town with it. Use your newspaper, your mailing list and your telephone. Make it a time of good news for all your customers and all your customers will make it a time of good sales and profits for you.

THE NEW OPTICAL PHONOGRAPH.

Interesting Details of a New Kind of Phonographic Method in Which the Sound Waves Are Recorded by a Moving Beam of Light—New Method Opens Up Many Possibilities—Leading Scientists Speak Highly of This New Apparatus.

Although the invention of the phonograph dates back a good many years and the instrument has come into common use, some scientific men are still unsatisfied with the results obtained in sound reproduction and claim that there is still room for much further development along that line. The fact is that inventors have as a rule followed the beaten path and experimented with records made of wax, with the sound waves registered by means of a stylus, and have therefore been confronted with the same fundamental faults where same existed. In a recent article the Paris correspondent of the Scientific American says:

It seems probable that the most promising new developments must be looked for in some kind of a photographic method, in which the sound waves are recorded by a moving beam of light. Thus if

University of Paris, where, in collaboration with M. Victor Henri, he has worked out the ingenious apparatus illustrated in our engravings. This device, which was presented before the Academy of Sciences a short while ago, consists of a photographic recording device of the nature indicated above, and a separate instrument for reproducing the sounds. Both parts of the apparatus represent entirely new departures, the first working entirely by the photographic method, and the second making use of currents of compressed air to produce the imitation of the human voice. In the recorder any suitable membrane properly mounted to act as a diaphragm, for instance, a telephone diaphragm, may be used. A minute mirror is attached to the back of this, so that when the mouthpiece is spoken into, the mirror is set vibrating. The light of an arc lamp is thrown in a concentrated beam upon the mirror, and is thence reflected on to a screen, so that the spot of light performs upon the screen oscillations representing on an enlarged scale those of the diaphragm. The screen itself consists of a sensitized film such as is used in moving picture machines, so that when this band is drawn along rapidly in the field of the moving spot, a record is obtained of the sound vibrations impressed upon the diaphragm by the speaker. As a matter of fact, it is not a spot of light that is used, but a narrow line of light formed by transmitting the beam through a suitable slit in front of the lamp. The resulting record is therefore not a simple line, but a wavy band having a certain width, as shown diagrammatically in one of our illustrations which appear on this page.

In applying this record for purposes of reproduction, only a part of it is used, namely, the toothed upper edge of the band. More in detail, the mode of procedure is as follows: On developing the moving picture film a photographic negative is obtained. From this a positive copy is prepared on a film of gelatine treated with bichromate, all but the upper serrated edge of the band being blocked out in the usual way. The result of this operation, on developing the gelatine film, is a band perforated with a series of openings corresponding in size and arrangement to the peaks of the wave record, as shown in one of our accompanying illustrations. To use this record for reproduction, it is passed across an air jet, whereby a series of puffs is produced, varying in character and frequency according to the form of the record. For this purpose the reproducing apparatus is fitted with an air chamber fed with compressed air from a reservoir. This

chamber is provided with a slit, the length of which is such as to accommodate the maximum amplitude of the serration marks upon the perforated band. The record band is mounted upon rollers above and below the air chamber and is driven by a small electric motor at the rate of about six feet per second across the slit. As the perforations in the band pass the slit, they give a vent to the air in

Light Record (Negative) of the Vowel "u."

Light Record of Vowel "e." Perforated Positive Formed on Bichromate-Gelatine Film.

the air chamber, thus producing a series of impulses and giving rise to sound waves corresponding in pitch and character to those by which the record was prepared. It has been found by experiment that in this way a very fair reproduction of the human voice can be obtained. The invention is, however, still in its early experimental stages, and a good deal of work remains to be done in improving the apparatus. The method is quite novel

The Recorder—At the Center is Seen the Diaphragm Carrying a Small Mirror.

we have a mirror attached to a diaphragm and speak against this latter, while a beam of light reflected from the mirror is allowed to fall on a screen, the spot of light will trace upon the screen a path determined by the character of the sound wave. If the screen is made of a sensitized photographic film rapidly drawn past the field of illumination, a continuous record of the sound vibrations can be prepared in this way. So far the process presents no particular difficulties. The main problem arises when we seek to employ such record to reproduce the sounds by which it was formed, so that the apparatus constitutes, as it were, an optical phonograph. It is at this point that the ingenuity of a Russian scientist has stepped in with what appears to be a very promising mode of attack on a difficult problem. S. Lifschitz has succeeded in reproducing by his method the sound of the human voice. He began his experiments in Russia and subsequently continued them at the

and very interesting, opening up new possibilities in a direction in which the resources of the common type of phonograph seem to be well nigh exhausted. Judging from the preliminary experiments, there seems to be every promise of important future developments, and we shall await with interest the further growth of this new invention.

CONVENTION DRAWING NEAR.

Secretary Roush Losing No Opportunity of Calling Members' Attention to Advantages to Be Gained by Visiting Atlantic City and Attending Meetings.

J. C. Roush, secretary of the National Association of Talking Machine Jobbers, is, as usual, decidedly active in boosting the coming convention at Atlantic City, July 1 and 2, and is leaving no stone unturned to bring out a record attendance of jobbers on that occasion. Mr. Roush has been keeping in touch with the members of the association through the medium of picture post cards, with trite sayings on the address side and alluring views of the City by the Sea on the back, and letters of a snappy nature that are calculated to be to the point in convincing the jobbers that attendance at the meetings is a privilege to be prized greatly. Mr. Roush's latest letter is captioned, "Look Out for the Tunnel," and reads as follows:

I saw quite a remarkable thing the other day.

Several hours out of Cincinnati, from the observation car, I was enjoying the beautiful Tennessee mountain scenery. The Pullman conductor came through, closed all the transoms, shut the door. This occupied about two minutes—then on snapped the electric lights.

Hardly ten seconds after the lights were on we shot into a tunnel. Then the same man opened the transoms and the door; the lights went out.

Twenty-two times this happened. I wondered at the exact precision. He never once seemed to look out of the windows or anywhere else particularly, but at each tunnel everything was ready and lights snapped on just ten seconds before we entered the darkness.

This almost instinct was born, of course, of long experience on that particular "run"—

Is your business like this?

If it is not—why not arrange to attend the Sixth Annual Convention and get in close touch with the many changes that have taken place during the past year?

If—it is like this—come any way—for it is just as necessary to keep in touch as it is to get in touch.

Another very important matter that will come up at the Annual Convention is the question of the Association establishing an Edison Transfer Bureau for the exchange among members of surplus Edison records.

It is believed that such a Bureau could be maintained at a very small cost and in six months practically every surplus record in the country could be exchanged.

Further announcement will be made in the next letter relative to the Victor Company's invitation to spend July 3 with them.

TALKING MACHINE TELLS THE TIME.

The Home Telephone Co., of Spokane, Wash., has closed a contract for a talking machine which will, when installed, automatically give the time of day to all patrons of the company. The phonograph will tell the time twenty times a minute at intervals of three seconds. Any subscriber calling the number designated will be told the time four times before connection is cut off.

THE TALKER AND EDUCATION

Some Excellent Ideas Held by a Los Angeles Clubwoman—Training the Child's Ear.

(Special to The Talking Machine World.)

Los Angeles, Cal., May 3, 1912.

Mrs. George Goldsmith, a prominent club woman of this city and who is greatly interested in all musical matters, is a firm believer in the excellent effect that the developed talking machine will have upon future education. For her own little girl Mrs. Goldsmith has purchased an expensive talking machine and large and selected library of records. The child has not begun to play her scales yet, but her mother wants to train her ear and her understanding.

"So many of the great writers, especially poets, have loved music, that it makes one realize what an elevating influence it has," said Mrs. Goldsmith. "In the future the preservation of great compositions, interpreted by great artists, certainly will have a wonderful educational effect. Milton had no ear for music, although he alludes constantly to it. What an added interest would be given to the allusions if we could hear his voice reading them!"

Glancing quickly through the paper she is preparing, Mrs. Goldsmith quoted from Martin Luther: "Music is the only art that can calm the agitations of the soul." Napoleon, musing at St. Helena, wrote: "Of all the arts, music has the greatest effect on the passions. A well-composed song stills and softens the mind." Huneker, the extremist of moderns, says: "Other arts give us definite pleasure, but music alone has the power of restoring us to ourselves," while to Balzac tones were definite ideas.

"If tones are really definite ideas—and I believe they are—think how marvelous their effect will be on the education of the future, when the talking machine is sufficiently developed to store away flawless records," said Mrs. Goldsmith. "If an absolute reproduction, for instance, of Elenora Duse's voice could be in every household, what an education it would be in beautiful voice production! I think, even apart from the historic interest, children of the future will benefit unspeakably from the talking machine which is now exercising a great influence."

TRANSFERRED TO NEW DEPARTMENT.

John H. Gill and C. W. Phillips, who have long and successfully represented the phonograph department of Thomas A. Edison, Inc., will in future travel for the home kinetoscope department of the company. The transfer comes in the nature of a promotion and is in recognition of the salesmanship ability of the two men.

CONCERTS IN PARKS THIS SUMMER.

The Park Commission of Memphis, Tenn., Arranges for Additional Features—Talking Machine Will Assist—First Concert in Which the Auxetophone Was Heard Occurred Late in April—Others Will Follow.

(Special to The Talking Machine World.)

Memphis, Tenn., May 7, 1912.

The park commission, of this city, has completed arrangements for a double system of public musical concerts for this summer. Through the courtesy of a local music house an auxetophone will be used to fill in the dates that the band cannot reach.

The new instrument is the latest invention in the phonographic line. It is run by electricity. The same records and needles used on a talking machine are used, but by the aid of pneumatics on the same principle as a pipe organ, the volume of tone is magnified about fifteen times.

Seven concerts will be given each week during the coming summer season. The program will be arranged so that there will be no conflict with the band. The band concerts will not begin for several weeks. In the meantime the first concert was given Thursday evening recently in Court Square, the instrument being furnished by the O. K. Houck Piano Co.

Through this source the voices of some of the greatest singers in the world will be brought to the public in open concert. The program will be full of first-class numbers by the Marine Band and other selections by Caruso, Homer and the Metropolitan Opera House chorus.

The program for Thursday night follows:

Old Faithful March.....Holzmann
Played by Pryor's Band.
"Absent".....Metcalf
Tenor solo in English by Evan Williams.
"Love and Music" from the opera "Tosca".....Puccini
Soprano solo by Agnes Kimball.
Selections from "Carmen".....Bizet
Played by Sousa's Band.
Sextette, from "Lucia".....Donizetti
Sung in Italian by Tetrizzini, Caruso, Amata,
Journet, Jacoby and Bada.
"My Heart at Thy Sweet Voice Opens," from "Samson et Delila".....Saint-Saens
Contralto solo in French, by Louise Homer.
Manila Waltz.....Chofre
Played by United States Marine Band.
"Love is Mine".....Teschemacher-Gartner
Tenor solo in English, by Enrico Caruso.
Miserere, from "Il Trovatore".....Verdi
Sung in Italian by Caruso, Alda and Metropolitan Opera House Chorus.
"Lights Out," March.....McCoy
Played by Pryor's Band.

Cream rises to the top of milk. Cream is richer than milk. Cream men and women rise to top of the millions. Their minds and bodies are richer than the minds and bodies of the millions.

Ackerman & Co., Edison jobbers of Scranton, Pa., has removed from 523 Lackawanna avenue to 537 Linden street, that city.

EASTERN TALKING MACHINE COMPANY

177 TREMONT STREET

BOSTON, MASS.

FOR SIXTEEN YEARS AN EXCLUSIVE TALKING MACHINE HOUSE

THE TALKER'S PRACTICAL SIDE.

There Are Uses for the Talking Machine Outside the Realm of Amusement, Mr. Dealer, and You Should Acquaint the Public with the Facts—Some Valuable Suggestions.

Did it ever occur to you that the talking machine might be made to appeal even to that unique class (rare, but still existing) who seem to have no use for the greatest of all entertainers, by bringing within range of their skeptical vision its practical side? By practical side I mean its ability to be of service outside the world of sheer pleasure.

Vacation time is fast approaching and Philip and Mildred will soon be home from the academy. In all probability they have both taken a rather strenuous course in elocution during the school term just ended and have become quite proficient in the art of declamation.

Now, Mr. Dealer, here is the point I wish to drive home to you with emphasis: If those kiddies, Philip and Mildred, are to retain the oratorical knowledge they have gained through months of earnest application, coached by competent instructors, they must have a private tutor during the vacation period, and that tutor must be a fascinating fellow. He must hold a magnetic influence over his juvenile charges. He must, above all things, be versatile. His knowledge of things recitative must be boundless. He really should be all the leading speakers of the world rolled into one.

Now, tell me, Mr. Dealer, where upon the face of this funny old sphere can such a storehouse of oratory be found? Can even the Vandergoulds and the Astorbilts, with their uncounted gold, procure such a prodigy in human form to guide their children's footsteps up the ladder of fame? Can they acquire the services of a man or woman with the voices of Taft, Bryan, Hilliard, Davenport, Spencer, Bell, Terry or Bernhardt? The answer comes back crisp and brief as a Marconigram: "Nothing doing!"

You, Mr. Dealer, can solve the problem for them with the talking machine.

Teaching the Young Ideas.

Ask the public speaker the secret of his success. Question the brilliant after-dinner talker; confer with the lecturer; speak to the clergyman. Their replies will be in accord; expressed in one word: "Practice!" Therefore it behooves Philip and Mildred, with public careers looming ahead along life's highway, to add to their store of knowledge during the summer months by cultivating the acquaintance of that companionable instrument, the talking machine.

It is quite the proper thing just now for woman to acquire the ability to declaim, for she is fast forging ahead as a figure of prominence in public life. Mrs. L. B. Tague, who presides over the County Court of Eagle County, at Red Cliff, Colo., which court is now entirely manned by women, is a fluent speaker. All women who have risen to great heights, whose names and portraits appear in the public press through their social, political or philanthropic distinction, have some knowledge of declamation. They must have—it is part of the game.

Master Young America, just venturing into the kindergarten, his little brain reeling under the

weight of mysteries that confront him there, is greatly benefited by the talking machine. Nursery rhymes, simple child poems and stories, when recorded by a master voice and reproduced for him, are absorbed unconsciously, and his parents are much amazed when they hear their offspring, aged six, recite Jim Bludso with such gusto as to bring to their very ears the churn of the racing paddle wheels, and to their eyes the yellow flare of the sweeping blaze, foretelling the doom of the Prairie Belle and her gallant pilot.

They hasten to his teacher with expressions of deep and heartfelt gratitude and ask her how she did it.

"How can we ever thank you for making an elocutionist of Willie at the tender age of six?" they inquire breathlessly.

"Don't thank me," replies the schoolmarm, with all due modesty; "I must place the credit where it belongs," and she introduces them to the talking machine.

The schools are fast awakening to the gigantic possibilities of the talker as an aid toward higher education. In fact, nearly all the public schools in our great cities are equipped with one or more of the different types of 'phones or 'graphs and, therefore, the average boy or girl has grown accustomed to hearing great orators and golden-voiced singers. This being so, would it not be good business, Mr. Dealer, for you to speak to the mother and father of that boy and girl, through the advertising pages of your local paper, or in any way you deem fitting, explaining to them how at very slight cost their children may enjoy, during the vacation time, the same opportunities toward oratorical enlightenment as were extended to them in the schoolroom?

Impress upon their minds how great an expansion will take place in the minds of Philip and Mildred through their associations with the talker. Show them that instead of deteriorating during the months of freedom, as the brains of most school children do when the reaction from study sets in, theirs will progress rapidly onward toward a high position in some branch of public life.

The parents of every kiddie who swings a book satchel should have a talker, Mr. Dealer. Why not tell them so?

HOWARD TAYLOR MIDDLETON.

Won't You Have a Lesson in Spanish?

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

International Correspondence Schools
Box 918, Scranton, Pa.

A "PERFECT" PIANO RECORD

Can Be Made, According to C. H. Carr, if Sound Amplifying Qualities of Small Steinway Were Curtailed and Hammer Felts Made Softer.

Despite the rather remarkable talking machine records of famous pianists, which are now on the market, there are still a multitude of buyers, many of those musically gifted, who find the tone effects of piano records not entirely to their liking. In this connection C. H. Carr, of B. F. Carr & Son, practical piano makers and tuners of Chicago, Ill., writes The Talking Machine World under recent date as follows:

"Gentlemen—Being a practical tuner, repairer and builder of pianos and a talking machine dealer, I believe I am able to explain why we do not get as good piano records as when one hears the performer.

"The fault is in the piano alone. Everyone has noticed the tin-pannie effect. The piano from which those records are made is most likely the very best concert grand that can be obtained. The sounding board area is enormous, consequently the vibrating of the board is too much to make a good record.

"It would be impossible to get an artist to play on a piano specially constructed and voiced so that a perfectly natural record could be made, just because it would not sound natural to the performer while playing.

"I am confident that if I had a small sized Steinway upright piano and purposely cut down the full quality of its soundboard amplifying qualities and also voiced the hammer felts softer, a perfect record could be made."

The suggestion is passed along to the manufacturers of talking machine records for consideration.

What happens when a customer asks you for a Bispham record? If you haven't the goods you're stuck—stuck bad, because there's no substitute for Bispham.

Tribune Building, New York**

"OH, DO NOT BE DISCOURAGED!"

Despite the Howlers That Crop Up Each Presidential Year, the Country Is Not Going to the Dogs—Spellbinding Will Not Undermine Foundation of the Country.

There is an old hymn that for years has been lustily sung by tens of thousands in camp meetings and revivals, the opening words of which are, "Oh! do not be discouraged!" It is an invitation to hope, to the upward look, to an advance along optimistic lines. It is a hymn that might well be adapted to secular, to political, to business and to national things. There is nowhere a need of the dark forebodings and the dismal prophecies which are a fad among a class of bilious prophets to-day. They point miserably to the efforts made by a few to tear down and belittle, forgetting the fable of the fly on the wheel, who imagined that he was the wheel itself.

"About this season," to paraphrase the old almanac, "look out for the howlers." A Presidential election is pending, and the gentlemen who are out and desire to get in, and the gentlemen who are in and have no desire to get out, find themselves in need of issues about which the country must rally if it would be saved. It is nothing new. The country has been going to the dogs every four years since the days of Washington. The liberties of the people have been in danger, the ballot corrupted, the voters unfit to be trusted, the constitution tottering, the judiciary unfit, the old flag a fluttering reminiscence of heroic days, every time the platform orators have been let loose and the newspapers looking out for the city or country printing. They are sawing the air as usual to-day, and yet, brethren, isn't it a good time to strike up the old hymn and sing it with a will:

"Oh! do not be discouraged!"

The country is all right. The people are all right. The Constitution is built upon a rock as solid as it was in the days of our fathers. The old flag flies to-day over more free people; over people more secure in their freedom; over a wider area of the world; over more wealth employed in expansion and development; over labor that works less and is paid more; over a greater volume and a better assortment of human happiness, and more advanced intelligence and education than it or any other flag ever before, here or elsewhere, in the history of the world.

As the orator howled from a western stump some years ago: "This country, fellow citizens, are all right—and don't you forget it!" The sensible people are not forgetting.

HELPS IN VOCAL TEACHING.

Clarence B. Ashenden, one of the leading voice teachers of the South, who occupies a studio in the Watkin building, Dallas, Tex., has installed a Columbia Grafonola and finds it a great help in illustrating certain pieces for his pupils.

Almost any kind of a bargain offering will attract buyers, but it takes quality in the goods sold to make steady customers.

RECITALS AS TRADE GETTERS.

Some Excellent Work Being Done by the Abelowitz Phonograph Co. in Upper New York.

The Abelowitz Phonograph Co., 1353 St. Nicholas avenue, New York, is securing an excellent business by means of special Victrola recitals. All through April weekly concerts were given on Wednesday afternoons, and the printed programs contained twenty numbers which were admirably selected, appealing to every form of musical taste. The entire arrangement of the programs and the general plan of campaign were admirable and entirely in line with the suggestions which have appeared in these columns, from time to time, as best illustrating a progressive policy of doing business.

In discussing the programs which are distributed to patrons throughout the territory, the Abelowitz Co. states:

"In our new quarters, which we have opened recently, we have space to accommodate from forty to fifty persons. We issue new programs weekly and arrange to play about twenty selections. During the course of the recital our Chester Abelowitz describes to the audience the Victor in detail, which is certainly received with great interest. We are pleased to say that as a result of our first concert we sold two Victrolas. There is everything to lead us to believe that these recitals will draw us a good deal of business. Besides issuing programs, we announce the recitals in the local newspapers of our district. It is surprising to note the amount of letters we receive the day preceding the concert requesting us to reserve seats. Chester I. Abelowitz, who has recently joined our forces, is devoting a good deal of time and is very much interested to make these Victrola recitals an absolute success. Business for the opening month in our new salesrooms was more than expected, and with the amount of advertising we are doing we are bound to receive a good share of the Victor business in our locality."

MUTES PRESENT AN OPERA.

Members of Cast Imitate Actions of Characters in "Il Trovatore" While Gramophone Furnishes the Voices.

Verdi's "Il Trovatore" was presented in full at the Vaudeville Theater in Paris recently with mute actresses as the "chorus," while a gramophone in the prompter's box supplied the voices as well as an orchestral accompaniment.

The principals as well as the chorus had nothing to do but to imitate the motions of singing to the notes of the gramophone. They were elaborately costumed, exactly as if the whole opera was being played under new conditions.

The performance was criticised on the ground that the voices supplied to the chorus from the gramophones were not sufficiently loud in comparison with those provided for the "singers" from the same source, while the different instruments were heard unequally. These defects, it is stated, will be corrected.

TALKING AND SINGING DOLLS.

Something of the Claims of the Klingsor Works Regarding Talking and Singing Dolls—What Their American Representative Says.

In reference to a patent described in The Talking Machine World for March bearing upon talking and singing dolls, F. J. E. Isaac, representative in the United States for the Klingsor talking machine specialties, with headquarters in Chicago, writes The Talking Machine World as follows:

"I take the liberty of calling your attention to the fact that this particular patent represents nothing new. Our London Klingsor works, which, no doubt, are known to you, have long held patents for life-sized singing dolls and figures used for advertising purposes in all countries except the United States. The reason that the American public is so little, or not at all acquainted with singing dolls like the "Klingsor," which is nothing else but a talking machine in some other form, is to be attributed to the so-called "Berlin monopoly." The patents of this company simply prevented the manufacturing of this novelty elsewhere. Inasmuch as these Berlin monopoly patents have not expired, the singing dolls, as well as the "Klingsor Resonanz talking machines," will soon be introduced to the people of the United States. A clipping of our London catalog of 1908 is enclosed."

The enclosure referred to consists of an illustration and description of "Arnola," the wonderful talking and singing doll, clothed in an attractive and modish costume. There certainly should be a market for such a specialty as the talking machine doll in this country, particularly around the holidays.

FORBIDDEN TO MAKE RECORDS.

Shuberts Issue Drastic Order to Principals of Winter Garden Company—Actors May Fight Decision and Court Proceedings Result.

All of the principals of the Winter Garden company recently received an order from the Shuberts, it is said, forbidding them to sing for phonograph records. The Shuberts say that their contracts with the actors are for their exclusive services, and also that "singing into a talking machine is liable to injure the voice, as several grand opera stars have discovered." The players have found the making of records a profitable source of revenue, and some who have been most successful have been Al Jolson, Stella Mayhew, Jos Collins, Billee Taylor, the Courtenay sisters and Mildred Elaine. It is expected that the singers will resent the order and probably will let the question go to the courts for a decision as to a manager's right to prevent their making money this way.

When you really want to get ahead you quit criticising the bad things you see in your business and spend all your time creating good things. Build a backbone into your business.

The Equitable Phonograph Co., of 120 Delancey, street, New York, has changed its firm name to Spiegel & Rodbar.

One way for you to corral the *extra* profits that are possible only to dealers who handle the Edison Phonograph is to play the home-recording feature for all you're worth.

This is one of the Edison's strongest features. It turns doubtful prospects into customers and by keeping up their enthusiasm boosts your sales of Standard and Amberol Records.

But aside from all that, the home record making habit means a continual profit on blank records and the shaving of blank records—a profit too big and too steady to overlook.

If you are not well stocked up on recording equipment and blank records—and if you have no shaving machine—order them from your jobber today.

Thomas A Edison
INCORPORATED

59 Lakeside Avenue, Orange, N. J.

And another way to get all that *can* be yours is to sell an Amberol Attachment to everyone in your locality who ever bought an Edison Phonograph before Amberol Records appeared.

There's good money in the sale of Amberol attachments alone, but each one sold and installed has a far greater value to you than as a one-time money maker.

It brings the instrument to life—widens its scope of entertainment by adding all that Amberol Records can offer—gives it a new and powerful attraction for its owner and throws wide open another outlet for your stock.

Everybody knows about Amberol Records and everybody wants them because they play more than twice as long and give more than double the enjoyment.

Get your stock in shape to take care of this important end of the business. Write your jobber now.

NEW YORK, MAY 15, 1912.

TRADE stability is of vital interest to everyone connected with an industry, for unless the basic conditions of an industry be sound so that men feel confidence in them then the whole conditions may become seriously disorganized, so that after a little profits will be wholly lacking.

Bills have been introduced in Congress by Congressman Oldfield which, in our opinion, if enacted into law would seriously affect the future of many special industries, particularly the talking machine industry, for it would prevent manufacturers from fixing and enforcing retail prices on patented goods.

Some of our legislators feel that manufacturers of patented articles make abnormal profits and these bills are perhaps introduced to benefit the public; but, according to our reasoning this assumption is incorrect and the record of the talking machine industry would show it to be an absolute fallacy.

Outsiders, in the first place, have very little idea of the enormous amount of money expended in experimental work before even the patented article is produced.

In the talking machine field vast sums have been expended in experimental work of various kinds and it cannot be truthfully said that exorbitant charges for the finished products prevail.

On the contrary, the purchasing public has been enabled to secure the best products at prices thoroughly consistent with the values offered.

IF the manufacturers of patented articles are not afforded the right to restrict their prices, it is pretty sure that there will be conditions arising which will seriously interfere with the stability of the trade, and what we need for trade betterment is a policy of stability.

In the talking machine trade manufacturers have been enabled to control the situation to such an extent that irresponsible price cutting has not been indulged in; and, during the stress and storm of the years which have followed the panic of 1906, the talking machine trade has stood up marvelously well.

Does anyone for a moment figure that this condition could have existed if men could have, under pressure of needed finances, placed their stocks upon the markets and offered them at cut-rate prices?

As a natural sequence of disrupted business conditions there would be no profits for anyone engaged in the retail line who might be handling patented articles.

Dealers themselves would lose a certain confidence in those

products and would be loath to invest their money in stocks which might go tumbling down in value under price pressure at any time.

Of course, there are always variations of cost due to the operation of certain business laws; but, price cutting, broadly speaking, would seriously disrupt conditions in this trade and World readers everywhere should see to it that their influence is thrown towards maintaining price stability. Write to your congressmen.

IF we take other trades wherein price cutting has been indulged in to a large extent, it will be seen that disaster has been encountered.

The editor of this publication has just returned from a survey of the situation in Europe where price restriction has not been maintained.

In England and on the Continent it must be frankly admitted that the trade is in an exceedingly demoralized condition.

Some of the men who have made large investments in talking machine stock are perplexed as to the real value of their investments.

In other words, the entire situation is clouded with doubt and perplexity.

Then the question comes up as to the right to control the sale of accessories which go with patented articles.

IT must be admitted that the men who control the patents and create the products are the ones who established the industry and their pioneer work should receive its full share of reward, for, without their money, their brains, their inventive ability there would be no industry.

Therefore, it is fair that they should be safeguarded in a reasonable way so that certain restrictions may be placed upon the trade which they are selling in order that they may have something to say regarding the accessories which go with that product.

This publication has been a large financial loser by the operation of this law; but, the individual is nothing—the principle is everything.

When the Edison directors sent out their first edict regarding supplying their own horns as a part of the phonograph, we were doing a large special horn business with advertising clients.

In truth, the promulgation of the horn Edison doctrine swept away immediately large revenues from the paper.

We could have antagonized it, fought it, and, of course, in the end have created much annoyance and some trouble for the manufacturers, but after all, if we had worked along those lines our efforts would have been for purely a selfish purpose, because we felt that in laying down this policy the Edison people were simply controlling the sales of their own products to which they had a moral right.

Therefore, we simply accepted the situation without attempting to disturb conditions.

These things are not at all times pleasant for all men, yet the fact remains that without adequate protection, certain special business, the fundamentals of which are based on patents, should be afforded protection.

The history of special trades shows that the public has not been over-charged nor is there a desire on the part of manufacturers to abuse the position.

Of course, some men may differ with us regarding these views; that is their right and privilege, but that is the way the man at The World masthead sizes up the situation at the present time.

THIS trade newspaper institution not only exercises a powerful influence in talking machine circles in this country, but in other lands as well; and we have just concluded an important arrangement which will interest foreign clients.

Karl E. Diesing will represent The Talking Machine World exclusively in Germany and Austria. He has an intimate knowledge of the requirements of the talking machine trade in those countries and is himself a leader in the talking machine publicity field. All business matters coming from the countries indicated should be placed with Mr. Diesing, whose headquarters are No. 72 Ritterstrasse, Berlin.

THAT there are big opportunities for talking machine development in Latin America is conceded by all who have given the subject even a superficial investigation.

For years we have been studying the question of trade development in those countries which lie south of us, and we have concluded that the only way to bring about a closer relation between the men who manufacture in American and European countries and the men who sell in Latin-America is to produce a publication which appeals to the jobbers and sellers in the Spanish towns. Hence, arrangements have been made to produce a Spanish publication entirely separate from The Talking Machine World, but one which will contain a vast amount of educational and instructive matter which will be calculated to aid talking machine development in all the countries which lie south of us.

This publication will be termed La Maquina Parlante Munoo. It will be entirely distinct from The Talking Machine World, but under the same management.

A PUSHING EDISON HOUSE

Is the Eureka Phonograph Co. the Management of Which Is Now in the Hands of Wm. Hesseman, an Experienced Man.

(Special to The Talking Machine World.)

Eureka, Cal., May 5, 1912.

The management of the Eureka Phonograph Co., of this city, was recently taken over by Wm. Hesseman, who is seen at the entrance of his establishment in the accompanying photograph. This firm is one of the largest handlers of Edison goods in California outside of the larger cities, covering practically the entire territory north of Cape Mendocino and west of the Coast Range

View of Front of Eureka Phonograph Co. Store.

mountains. Besides its main store in the thriving lumber town of Eureka it has a branch at Fort Bragg, and its work extends back to the remotest mining camps of the Trinity county mountains and through all the isolated lumber and farming communities along the coast of Del Norte, Humboldt and Mendocino counties. At present the only communication which this district has with the outside world is by lumber steamer or stage, but a railroad into Eureka is rapidly being completed by the Northwestern Pacific, which will open up one of the finest lumber and agricultural districts and incidentally some of the finest scenery of California. Fort Bragg also will soon have rail connection with this line and a rapid growth of business is expected to result. Mr. Hesseman enjoys great personal popularity in Eureka, and under his management the company is making rapid growth.

BUSY TIMES WITH UDELL.

The Well-Known Cabinet Makers Getting Out New Models—Working Nights to Meet Demands—D. G. Williams at Conventions.

Daniel G. Williams, who represents the Udell Works in Indianapolis, Ind., in the talking machine and piano trade, last week started on an extensive trip. He will visit Dayton, Columbus, Sandusky, Toledo, Detroit, Cleveland, Buffalo and Rochester and will arrive in Atlantic City in time for the convention of the piano merchants and manufac-

turers. He will make his headquarters at the Marlborough-Blenheim Hotel.

The Udell Works are getting out some new samples of cabinets to be included in the new catalog that they are now assembling. This will eclipse anything that they have ever before attempted, which, from their standpoint, is saying a great deal, as the literature that they have sent out in the last year pertaining to talking machine, sheet music and music roll cabinets is most striking and effective.

The Udell Works report being a little behind in filling orders this spring, owing to the unusually strong demand, but they have been running nights at their factory for the past six weeks and are now in pretty good shape to look after all orders placed with them with the utmost despatch.

FOLLOWING UP DEBTORS.

The Successful System Adopted by One Credit Man to Secure Action from Delinquents.

As to the "follow-up" system, a credit man of experience said that he "had found that when a customer is behind, the simplest method to pursue is to send a mild request for payment, making two carbon copies of the letter, one of which goes to the regular file, and on the other is marked in pencil by the credit man, the date on which he expects to receive a reply; this carbon is brought out by the stenographer on that date with all other

This trade newspaper institution to-day is conceded to be the most powerful in the world relating to talking machine industries, and in this new enterprise we shall produce a paper which shall occupy just as strong a position in Spanish speaking countries as The Talking Machine World does in the lands where English is the fundamental tongue.

We have concluded arrangements with Karl E. Diesing, who will be sole representative of La Mundo in Germany and Austria.

Mr. Diesing has a splendid knowledge of the requirements of the trade in those countries and will be able to handle the business in a most satisfactory manner.

In London, W. Lionel Sturdy, who has represented The World for the past six years, will continue in the same capacity for the new publication.

Advertisers in those countries who desire representation in this paper should communicate with the respective managers, who will immediately forward their instructions to the home office.

matters calling for that day's attention. If no reply has been received, a second and stronger letter follows, the carbon of the second being attached to the carbon of the first and put forward, as usual. Letters to each customer are kept separate. Thus matters are not neglected, and the earlier letters enable one to recall the facts and avoid errors. Requests for financial statements are treated in the same way, the result being that the records of the office are easily referred to, which means much in avoiding unending and profitless search. With a simple, easily worked system, the credit man undertakes his task with renewed strength and encouragement every day, for he feels that he is steadily marching toward the goal. The wheels are not forever becoming clogged."

NEW LOFT FOR VICTOR CO.

Leases Quarters on West Thirty-seventh Street for the Accommodation of the Recording Laboratory in New York City.

The Victor Talking Machine Co. recently leased for a term of years a spacious loft in the building at 12-14 West Thirty-seventh street, New York, which will be given over entirely to the uses of the recording laboratory. The new quarters are larger and more convenient in many respects, than the former quarters of the local laboratory, and are better fitted to meet the demands made upon that department.

The DITSON Pledge

Is to see that our clientele has a better service than ever—setting a new standard in Victor jobbing deliveries. The demands of alert Victor dealers—the kind that grow—are many and varied, and we furnish the "first-aid" in every instance.

We believe this year's Victor business will be of tremendous proportions, and it will pay you to have

The Fastest Victor Service

which is a requisite in this hustling age. We possess the largest stocks, the best organization and most up-to-date equipment in the Eastern half of the country.

This covers Victor machines, records and supplies of every kind, not to mention cabinets, needles and trade-marked accessories.

Will you let us tell you more about Ditson co-operation? A postal gets this information!

ROLIVER DITSON CO., Boston, Mass.

No. 105. Top $20\frac{1}{4} \times 24\frac{1}{4}$. 34" High. Holds 110 Records. Fitted with Salter's Patent Felt Lined Shelves. Made Specially for Victors IX, X, and XI.

PACIFIC COAST CONDITIONS.

Trade Quiet but Healthy in San Francisco—Situation in Southern California Discussed by W. S. Gray—Mauzy Improvements—Daniels Withdraws from J. R. Smith Co.—E. W. Scott in New Quarters—J. J. Black in Automobile Accident—Wm. W. Wyper, of Australia, on Way to Edison Factory.

(Special to The Talking Machine World.)

San Francisco, Cal., May 6, 1912.

The talking machine dealers along the Coast have by no means been swamped with business during April, but as the month is usually a quiet one in this line there is no complaint, reports in most cases being better than for the same period last year. Just now sales of records are picking up again and the opening of the outing season is expected to bring out considerable activity in the cheaper classes of goods. Few changes have been made of late, as the local departments all completed their improvements earlier in the season and are now well equipped to handle all the business they can get. Dealers in some towns which have a large summer population are placing good-sized orders, but those in other parts of the country are inclined to hold off until the principal crops are harvested.

Andrew G. McCarthy, of Sherman, Clay & Co., states that, notwithstanding the apparent quietness of business in general, a comparison of the past month's Victor sales with those of April, 1911, shows quite an encouraging gain in both wholesale and retail departments. He has just received a large shipment of Victrolas, most of which are being shipped out without delay, and this brings the month's record up considerably.

W. S. Gray, Coast manager for the Columbia Phonograph Co., has just returned from a ten days' trip through southern California, having gone as far south as San Diego. On his way back he visited the towns of the San Bernardino valley, which he had not seen for five years or more, and says that all the towns of that district have made a surprising growth. He is well pleased also with conditions in all other parts of southern California. Since the first of the year the San Francisco office of this company has confined itself to wholesale business exclusively, and Mr. Gray is very well pleased with the results, stating that the volume of sales has never been as large as for the last four months. This policy has apparently resulted in a wider distribution, and with more dealers giving their attention to Columbia goods

they have made a very decided gain. H. L. Wilson, assistant general manager of the Columbia Phonograph Co., is expected to arrive at the San Francisco office about May 8 on his tour of the country. A. G. Farquharson, traveler for the company in the southern California and Arizona territory, has just started on a visit to the factory and central offices of the company. E. A. Parsons, who has been for years connected with the Dictaphone department of the Chicago office, has been transferred to San Francisco and is taking charge of that department here. Miss M. B. Brown, for some years past bookkeeper for the San Francisco office, was married a couple of weeks ago to Wm. R. Roblin.

Byron Mauzy has made some additional improvements in his talking machine rooms and is well pleased with the increase of business brought by the special attention he is giving to this department. The first two talking machine recitals, given when the new records appeared, were so successful that Herman Beck, the talking machine manager, decided to make the recital a daily event. Some advertising has been done in this connection and the little hall connected with the department has been crowded every afternoon for the last week. This has naturally brought out quite a lot of record business, as well as a good number of prospects for high-priced machines.

E. W. Scott, who handles Columbia goods in the Kohler & Chase store, is now comfortably settled in his new quarters on the balcony over the general offices and enjoying a much more active business as a result of his more prominent and accessible position. The rooms are about the finest in the city, the entire department being enclosed by glass walls, while the separate rooms also are of glass, in solid mahogany frames. A hallway between the front and the rooms excludes all outside sounds, and another passage between the rooms, with record racks on one side in the approved manner is located at the rear. Mr. Scott has a private office on the side next the street, the demonstration rooms being lighted by handsome electroliers, and the whole place is comfortably and handsomely furnished.

An important change has taken place in the J. Raymond Smith Co., R. A. Daniels having withdrawn from the organization and taken over its store on Market street, near the Ferry building, in which talking machine goods are a leading feature. While Mr. Daniels gives much of his attention to the piano end of the business he has efficient help on the talking machine end, and his improvements in the quarters and arrangement of stock have

shown quick results. This store catches practically all the commuters' trade, which is a big item in machines as well as records, and Mr. Daniels expresses great satisfaction with the location.

James J. Black, manager of the Wiley B. Allen Co.'s talking machine department, recently had his wrist broken in cranking his automobile, but is looking after business as usual. He is greatly pleased with the improvements recently made in his department, the new elevator between the ground floor and the rooms in the basement being a great time saver as well as a convenience to customers.

The Pacific Phonograph Co. reports quite a heavy demand for records this month, but has found the movement of machines rather light. The interest in the Edison Opera machine, however, helps to compensate for the dulness in other lines.

Mr. Grafton, who has charge of Benj. Curtaz & Son's talking machine business, has been putting in some very effective work of late. At his suggestion some radical improvements were made in the arrangement of the department, and further improvements are contemplated.

Wm. W. Wyper, managing director of Thomas A. Edison, Ltd., of Sydney, Australia, passed through San Francisco early in April on his way to the factory, and stopped for a visit to several local dealers.

The Wiley B. Allen Co. recently made one of the prettiest and most striking talking machine displays ever seen in San Francisco, the occasion being the production of the "Pink Lady" in a local theater. The display, of course, featured "Pink Lady" records, but the attraction was a life-size model in a handsome pink costume, which was borrowed from a local department store and placed in the window.

MORE PRICE CUTTERS RESTRAINED.

Thomas A. Edison, Inc., Secures Restraining Orders in the United States District Court in Illinois Against Two Concerns in That State.

The United States District Court for the Southern District of Illinois, on April 10, handed down restraining orders against Robert Saxby, W. R. Saxby and Charles Saxby and against Clarence F. Brawley, on the charge of price cutting made by the New Jersey Patent Company and Thomas A. Edison, Inc. The action brought in Springfield is only in line with the policy of Thomas A. Edison, Inc., to insist upon the maintenance of the prices on Edison phonographs and records and indicates the light in which the courts regard price cutting on such products. The restraining orders referred to above were handed down by Judge Humphrey.

ENGAGED, PHONOGRAPHS IT.

Girl's Odd Way of Making Announcement to Her Friends.

(Special to The Talking Machine World.)

Leominster, Mass., May 8, 1912.

Miss Edith Lee Dewitt startled some friends whom she had invited to meet her brother's bride-to-be, Miss Otis of Medford, by having a phonograph announce her own engagement.

"We'll have a song on the phonograph," said Miss Dewitt to her guests.

She cranked up the machine and then came these words, in the voice of the young woman's father: "Ladies and gentlemen, I beg to announce the engagement of my daughter, Miss Edith Lee Dewitt, to Vallery H. Tarbell, of No. 1293 Commonwealth avenue, Boston. Now get busy, for the next thing on the programme is the congratulations."

WILL VISIT EUROPE.

Marc K. Mermod, head of Mermod & Co., 505 Fifth avenue, New York, sails in a week or two for a three month's sojourn in Europe, where he will divide his time between business and pleasure,

RAIN HELPS QUAKER CITY TRADE.

Inclement Weather Creates a Demand for Indoor Entertainment—April Does Not Equal First Three Months of the Year in Volume of Business—Thomas K. Henderson Enters Piano Trade as Manager for Estey Co.—Sunday Evening Concerts in Columbia Ware-rooms—Employees to Be Banqueted—What the Various Prominent Talking Machine Houses Are Doing in Philadelphia.

(Special to The Talking Machine World.)

Philadelphia, Pa., May 6, 1912.

The talking machine business in Philadelphia during April was generally satisfactory; but it was not nearly as good as the first three months of the year. The machine and record proposition has eased up considerably in consequence, and the dealers are now pretty well stocked with both. A great many machines could have been sold during the first three months of the year if the dealers could have been able to have secured them, but when purchasers had to wait so long, they countermanded their orders and the dealers having sent in these orders they were supplied with machines which they are now holding.

For the past month we have had rain almost all the time, and that is usually a good time for the talking machine business, as people are kept in the house and must resort to some means of entertainment at home. For some reason that has not been the case with this rainy spell and the dealers do not exactly know how to account for the falling off of business and are more or less pessimistic as to the rest of the spring and the summer months. They are all preparing, however, for a big fall trade and are not worrying over the stock they have on hand, expecting it to help them out when the busy season comes.

Mr. Ellwell, manager of the talking machine department of C. J. Heppe & Son, reports that April ended a little dull with them, but they are ahead of last year by quite a tidy little sum. He says that they lost a number of sales on account of customers not being able to get the goods promptly and thereupon canceling their orders, but this has made the machine situation ease up somewhat. Among the visitors to the Heppe department were Harry F. Cake, of Pottsville, and J. Harry Halt, of Mt. Holly, N. J. Mr. Halt reports that he has been having a very nice business during April. Mr. Cake has opened up new quarters at Eighth and Market streets, having moved from 728 Market Street, where he has a much larger wareroom and where he can handle a much larger stock.

Thomas K. Henderson, for several years manager of the Columbia Phonograph Co.'s branch store in this city, has resigned and has accepted a position as manager of the Estey Co.'s Philadelphia store. Mr. Henderson has not been in the piano business, but his success in musical lines for a number of years warrants the opinion that he will succeed with the Estey line, where he will be manager over the various departments.

O. C. Dorian, who had been assisting Mr. Henderson, is temporarily in charge and he may be

appointed permanently. He is a son of the treasurer of the Columbia Co., Marion Dorian. The latter was a Philadelphia visitor the past week.

The Columbia business has been growing steadily and April was an excellent month. The company has a very attractive window display at present, not of instruments but of a fine model of the new French liner, which is attracting a great amount of attention, a crowd being around the window at all times.

The Columbia Co. is arranging to give some Sunday evening concerts at its warerooms, the programmes being made up of religious numbers and high class operatic selections. The out-of-town business of the firm is very good and the morning I called large orders had been received from Kirk Johnson of Lancaster, who has just moved into his new store, a large portion of which he will devote to the talking machine. Mr. Johnson is also an extensive dealer in pianos.

The Columbia Co. is in receipt of a number of the new models of the Favorite Grafonola. This machine, instead of having doors on it, has little shutters, which open on thumb screws. They are very attractive in appearance and the new idea seems to meet with general favor. These machines are sold for \$50.

The Columbia Co. is arranging a banquet for its employees which will be held on May 30th.

The Estey Co. will go into the talking machine business on an extensive scale. The department may not be opened until fall, but Manager Henderson, being thoroughly familiar with the business, will no doubt make a success of it. Both the Victor and Columbia companies' products will be handled. The Estey Co. has plenty of room for a fine display, and having a large concert hall, can make such a department most attractive.

Louis Buehn, head of the firm of Louis Buehn & Bro., reports that their April business has shown up very good. It was considerably better than last year and much better than Mr. Buehn expected it would be. However, it shows a falling off over March of about 60 per cent., but then it must be remembered that the firm's business this year during the first three months had doubled itself over last year. Their March business was almost as large as their December business, and their December was the biggest month they have ever had. Their Pittsburgh branch is doing very well. Their business there has run considerably ahead of what they had anticipated and by fall they contemplate considerably enlarging their store.

Lit Brothers' talking machine department is being admirably managed by Harry Hovey, who took charge several months ago. It looks like an entirely different department and he keeps it always in excellent shape and in every way up to date and in comparison with similar departments in other department stores. Within the last ten days another new room has been added to the department which they will use to demonstrate the Edison machine.

Gimbel Bros. has its plans drawn to add several new rooms to its talking machine department, but has decided that it will not put them in place before fall. Gimbel Bros. have sold Victrolas to a number of the Philadelphia public schools.

An entire change has been made in those in charge of the talking machine department at the Wanamaker store, the former head of the department, Mr. Holzbauer, being replaced by E. P. Cornell, a man well qualified for the work. The department is under the direct supervision of the piano department, but otherwise Mr. Cornell looks after all the details of the business. The department has been growing rapidly of late and they had a very satisfactory April business.

PRESENTATION FOLIOS

For Talking Machine Records and Adapted to Birthday and Wedding Gifts, Now Being Placed on the Market.

Something new in talking machine circles is the Schafford Record Folio for birthday gifts, wedding gifts and gifts of remembrance. It seems that the inventor of this folio, T. C. Schafuss, noticed the many people entering talking machine stores and buying two, three or four records as a gift to some dear friend. He wondered if an attractive folio holding half a dozen records would not sell quicker than the smaller number sold in bulk, and therefore, created this folio. His idea proved correct, according to the orders received from dealers, who have found that they practically double their record business by putting the half dozen records into this folio.

Mr. Schafuss is head of the Schafford Album Co., 23-25 Lispenard street, New York, who manufacture this new folio, and he reports that over 3,000 of the folios were sold by their salesmen in New York City in three days, which certainly shows how strongly the live merchants of this metropolis have recognized the merits of the proposition. Elsewhere in this issue is an advertisement of this company which bears close perusal.

This concern also manufactures Schafford Record Albums in 10 and 12 inch size, each holding 16 records. The prices of these are about half of what are ordinarily charged and the album retailing for a dollar permits an 80 per cent. profit to the dealer. This is rather a startling amount of album profit—80 per cent.—when you consider that the album retails for \$1, but the Schafford Co. make them in large quantities and understand everything about record album construction. The head of the company is credited with originating the first album ever made for talking machine records. Both the albums and folios hold either Victor or Columbia records.

"CATCHING FLIES WITH HONEY."

When the conduct of men is designed to be influenced, persuasion, kind, unassuming persuasion, should ever be adopted. It is an old and true maxim that a drop of honey catches more flies than a gallon of gall. So with men. If you would win a man to your cause first convince him that you are his sincere friend. Therein is a drop of honey that catches his heart, which, say what he will, when once gained, you will find but little trouble in convincing his judgment of the justice of your cause, if, indeed, that cause really be a just one.—Abraham Lincoln.

The Talking Machine Trade in New England

THE VICTOR IN BROOKLINE SCHOOL

Used to Play Accompaniments to Folk Dances of Children in Boston Suburb—Three-Day Celebration Arouses Much Interest.

(Special to The Talking Machine World.)

Boston, Mass., May 11, 1912.

One of the especially interesting events of the month in the talking machine domain has been the practical demonstration of a Victor machine given at the Lawrence School in Brookline, Mass., where on three days the latter part of April and the first part of May a program of folk dances was given. The musical end was in charge of W. J. Fitzgerald, of the Eastern Talking Machine Co., who was ably assisted by Miss Gladys White, who largely arranged the dances and proved herself an adept at the art of picturesque posing. The exhibition was held in the school hall, and the pro-

Dancing the Highland Fling.

the youthful dancers, who had been admirably trained, the occasion was one long to be remembered. As for the musical accompaniment, it proved a revelation to those unacquainted with the merits of Victors and Victrolas as to the practical uses that these machines can be put, and Mr. Fitzgerald at the close of the performance was showered with congratulations for the able manner in which he looked after his end of the program.

CAREFUL PACKING OF NEEDLES.

How Duplexetone Products Are Put Up to Attract—Put Up in Rustproof Paper.

W. H. Bagshaw, of W. H. Bagshaw, Lowell, Mass., manufacturers of talking machine needles for the trade, and as well the producers of Duplexetone Needles, was in New York recently on a business trip.

The many friends of W. H. Bagshaw will be glad to know that he has recovered from an attack of pneumonia and is again about the Lowell factories.

In this age of packing goods, it is noteworthy to note the progress made in the packing of talking machine needles by the House of Bagshaw. All Duplexetone needles and all other kinds, shapes and styles of talking machine needles are packed in envelopes of "rustproof" paper. This paper

is made specially for W. H. Bagshaw and it maintains the clean looking appearance of needles that is so characteristic of Bagshaw products.

To all dealers who will drop a card to W. H. Bagshaw, Lowell, Mass., mentioning the name of his jobber, a bunch of Duplexetone needles will go forward postpaid free of charge.

THE EDISON HOME KINETOSCOPE

And Films Proving Popular with Talking Machine Dealers—Pardee-Ellenberger Co., New England Jobbers, Make Good Report.

(Special to The Talking Machine World.)

Boston, Mass., May 7, 1912.

The Pardee-Ellenberger Co., Boston and New Haven, report a number of dealers who have secured the representation of the Edison Home Kinetoscope and Films, for which they are the jobbers for New England. In creating a selling force, a dealer in a city of a certain size has to

Edison Home Kinetoscope.

secure two or three machines in order to qualify; and a city of double the size, a double quantity would be necessary. This number is narrowed down to the smallest amount in order to co-operate with the dealer.

Judging from the way New England dealers are taking hold of this new invention, it is destined to have a tremendous sale. Pardee-Ellenberger Co. are to be congratulated upon the energetic manner used in the introduction of this proposition.

FROM VARIOUS PARTS OF THE STATE.

Quarters for Wardell in Lowell—Foster Expansion in Providence—Peabody Admires Edison Opera Style—Skelton's Extensive Tour Next Month.

Thomas Wardell, of Lowell, Mass., who is the exclusive Edison jobber in that city, is making arrangements to move into a new store on the same street, where he has been for twenty years. He hopes to be well settled in his new quarters by June 1. He is arranging the interior so that he will have several elegantly appointed booths for demonstration. The quarters are much larger than the old ones.

* * * *

Business with the J. A. Foster Co., of Providence, R. I., has been growing so steadily of late that John H. Massey, the department manager, says he will soon have to look around for larger quarters. The establishment is centrally located, and is well equipped for transacting business.

* * * *

Fred W. Peabody, who has large stores at Amesbury, Haverhill and Newburyport, Mass., and Portsmouth, N. H., is one of the most enthusiastic admirers of the new Edison Opera phonograph. Mr. Poor is in charge of the Haverhill store, Mr. Merridith is head of the Amesbury and Newburyport stores and Mrs. Hazlett manages the affairs of the Portsmouth establishment, and all these report business as splendid.

* * * *

H. R. Skelton, familiarly known as the "Edison Spoon," is planning an extensive tour during the next month. He will go through New Hampshire and Vermont and will proceed to stir up things in the trade.

Dancing the Tantioli.

gram consisted of many national dances by the fourth, fifth, sixth, seventh, eighth and ninth grades, and the music in each case had been especially selected by Mr. Fitzgerald. For instance, as in the pictures here reproduced, the Scotch Highland Fling was danced to the accompaniment of No. 17,001 of the Victor records, a Scotch folk dance, while the Tantioli, also here illustrated, was executed to the music of 17,002 in the Victor catalog, entitled "Reap the Flax." There was a large audience present and, with the handsome and characteristic costumes and the various movements of

The Pardee-Ellenberger Co.

with motion picture films and lantern slides.

This machine retails at \$65 to \$88, and allows the dealer a good profit.

Be the first in your city to sell this wonderful machine. Very little money required.

Write To-Day For Full Particulars

The Pardee-Ellenberger Co.

BOSTON, MASS. NEW HAVEN, CONN.

FROM OUR BOSTON HEADQUARTERS

324 WASHINGTON STREET, JOHN H. WILSON, MANAGER.

(Special to The Talking Machine World.)

Boston, Mass., May 8, 1912.

Manager Arthur Erisman went down to Fall River the other day to make arrangements for adequate representation of the dictaphone of the Columbia Phonograph Co. A few days previous he was over in Worcester making similar arrangements, acting in both cases through the medium of the Office Equipment Co., which is proving of valuable assistance in placing good business propositions in good commercial centers.

Business Shows Increase.

Going into the Victor department of the Oliver Ditson Co. one will there always get the same cordial greeting from Henry Winkelman, manager of the department. Naturally a man of marked cordiality, he is more so when business is at the top notch of prosperity, which has been the case at these quarters now for some time past. Mr. Winkelman says that the April business was just 25 per cent. bigger than was the business for the same month the year before. Considering that the April, 1911, business was already very large, this is going some.

Severs His Connection.

The Boston trade was surprised at the beginning of the month to learn that Charlie Trundy had severed his connection with George Lincoln Parker in the Colonial building, with whom he had been for nearly two years. Mr. Trundy had been in charge of Mr. Parker's rapidly growing Victor department, which, because of its recent rapid development, had been moved over across the hallway into more exclusive quarters, so that Mr. Trundy had better equipped rooms than before. Mr. Trundy has been conceded to be a very able salesman. For the present this department of Mr. Parker's is in charge of Lawrence Davis, who has been with Mr. Parker some time.

William H. Beck a Visitor.

William H. Beck, president of the Eastern Talking Machine Co., has just been in town visiting E. F. Taft, secretary and general manager of the company. This was Mr. Beck's semi-annual visit, and while here he also called at the offices of the New England Telegraph & Telephone Co., in which he has an interest, besides being a close friend of President Vail, of the company. Mr. Beck is a prominent attorney of Washington, and is a man of many business interests.

Honor May Go to E. F. Taft.

There is considerable local interest being manifested in the forthcoming annual convention of the National Association of Talking Machine Jobbers, and the identity of the future president of the organization is being discussed everywhere with interest. E. F. Taft, secretary and general manager of the Eastern Talking Machine Co., who is vice-president of the national body, is being talked of for the presidency, and everyone who hears his name mentioned says he's just the man for such a post of distinction. According to present evidences Boston promises to send a very good representation to the convention.

Some Pointers on Efficiency.

Those who follow the fortunes of the dictaphone, which in Boston is distributed through the quarters of the Columbia Phonograph Co., are interested in a booklet which the Columbia Co. has put out bearing on the conclusions reached by the President's Commission on Economy and Efficiency which lately has shown how the Government can be saved as much as \$500,000 a year. One of the principal subjects of investigation by the commission was the handling of correspondence, and it was supplied with an equipment of dictaphones for use in the commission's offices, where they were severely tested. Subsequently, by request of the commission, thirty dictaphones were provided for a demonstration in the division of rural mails in

the Post Office Department. The result was an unqualified success in every respect, and the commission's recommendations have been directly and personally endorsed by President Taft. The booklet, which Manager Erisman is distributing to his friends, makes very interesting reading for those interested in this great labor saving device, which, by the bye, Manager Erisman is placing in a large number of offices throughout commercial Boston.

Weber & Fields Records Popular.

There is a cleverly executed colored drawing of Weber and Fields in the show windows of the Columbia Phonograph Co. which serves to call to mind the new records made by this talented pair of stage performers. Everyone is inquiring who did the picture, and Manager Erisman points with pride to Miss Bessie Langam, who is the company's

instalment ledger bookkeeper, and who is immensely clever when it comes to handling the brush and pencil.

In Good Company.

Christie McDonald, who is playing at the Tremont Theater in "The Spring Maid," is finding good company just a few doors away, where in the windows of the Columbia Phonograph Co. a splendid testimonial to the work of the Columbia machines and their records is being conspicuously displayed.

Norman T. Mason, floor manager of the Columbia Phonograph Co., is receiving congratulations of the trade on becoming a proud father. His heir is a fine boy, which was born early in the month. Cigars, please, Mason.

SOFT
Position

Possible only with DUPLExETONE NEEDLES

Inquires have come to us from all over the world for samples of Duplexetone needles, and the orders that have resulted show that the entire trade are most enthusiastic over the marvelous tonal results achieved by these needles.

For all this business in so short a time, there is but one answer, that the trade has found the Duplexetone needle the best one on the market.

No other needle so admirably fulfills the requirements of LOUD and SOFT tones with the same needle. The creation of Duplexetone needles is one of the big improvements in talking machine circles.

Want a sample package of Duplexetone Needles? Write us to-day, giving name of your jobber, and a generously filled envelope goes to you by return mail—postpaid.

W. H. BAGSHAW, Lowell, Mass.

The Columbia "Favorite" met competition—stepped on its neck. The new "Princess" will do the same thing—but there's no competition. Get that? No competition! What are you doing about it?

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

FROM OUR BOSTON HEADQUARTERS.
(Continued from page 17.)

Ten Business Commandments.

Manager Arthur Erisman has been distributing some taking cards and leaflets pertaining to free demonstration of the Dictaphone. One is headed "Ten Business Commandments." Both show a business man sitting at a desk engaged in dictating into the machine.

R. H. White Co. Adds Talking Machines.

The R. H. White Co. is the latest of the large department stores to introduce a talking machine department. It has a fine location on the fourth floor and is being managed by George J. Krumschied, who formerly was associated with Louis Dederick at the Tel-Electric establishment. The department is fitted up with three sound-proof rooms for demonstration and all the appointments are most artistic. Although opened but a short time Mr. Krumschied has been meeting with marked success.

Victor Machine for Billie Burke.

Ubert Urquhart, manager of the Victor department for the Henry F. Miller Piano Co., in Boylston street, was over in New York the first of the month on a business trip. Francis T. White, of this same department, has lately moved from East Braintree to Brookline, which brings him within easy distance of his business quarters. This department made a fine sale of a Victor machine, cabinet and a quantity of records lately to Miss Billie Burke, the well-known actress, who was playing a successful engagement at the Hollis Street Theater. Miss Burke expressed herself as more than pleased with the machine and its wonderful achievements.

Eastern Talking Machine Associates Meet.

The members of the Eastern Talking Machine Associates held their usual monthly meeting the latter part of April and talked over plans for the summer outing which it was decided should take place on June 17 at one of the several desirable resorts down the Providence River, using the city of Providence as a starting point. The members also talked over some projected plans for rearrangement of the interior of the store.

Shows Gain of 60 Per Cent.

The business at the Columbia Phonograph Co. was up to the usual mark during April, that is to say, it showed an improvement of 60 per cent. over the corresponding month last year. Manager Erisman has one competitor among the Columbia headquarters and that is Manager R. F. Bolton, of the Chambers street, New York office, and these two are having a neck and neck friendly race to see who can produce the most business. One month Bolton is a little ahead, and the following month Erisman gets in the lead, and thus it goes.

Eastern Co. Rearranging Stock.

The Eastern Talking Machine Co. is just now engaged in rearranging its large stock and discarding the "cut-outs." All the records are being put into new stout envelopes and when the work is finally completed the stock will be so arranged that it can be more expeditiously handled than ever before.

Making Good Report Anent Business.

Samuel Katz, who has two stores in this city, one at 9 Portland street, the other at 95 Stanford street, says he is having a large call for all the goods which he carries, the Victor, Edison and the Zonophone lines. Both his stores are well equipped in every way for the quick handling of business.

Columbia Machine as a Therapeutic.

Manager Erisman lately has been negotiating with the heads of several of the insane hospitals with a view to installing Columbia machines by way of entertaining and diverting the patients suffering from mental ailments. Outfits have been placed in the Medfield Insane Asylum and the physicians and attendants are giving careful study to the effects upon the patients, for it is thought that these machines can be made the instrument for the most beneficial curative results. Outfits also have lately been installed in a number of schools. The Carr School in Somerville has been equipped and the Samuel W. Mason School in Roxbury has had one put in.

Featuring the Edison Kinetoscope.

Manager Silliman, of the Pardee-Ellenberger Co., is very busy these days getting ready his quarters in Batterymarch street so that he can accommodate the Edison Home Kinetoscope which lately has been given several demonstrations in Boston, with the greatest success. All the jobbers about Boston have seen this wonderful home device and they are most enthusiastic to handle it. Mr. Silliman has rearranged one large space to be given over to a sort of demonstration room. This will mean that in order to take proper care of the Edison talking machine business additional room will have to be taken in the building. Mr. Silliman says that his quarters are swamped with orders for the Kinetoscope, but he hopes to be able to make deliveries by the 20th of the month.

W. O. Pardee, president of the Pardee-Ellenberger Co., was in Boston the first part of the month and remained here several days.

Thos. W. Lawson Buys Dictaphones.

Thomas W. Lawson is one of the latest business men in Boston to become converted to the value of the Dictaphone as a labor-saving device. He lately placed an order for several of the machines and he uses part of them at his downtown offices and some of them in his home.

Victor in New Steinert Providence Store.

The Arch street Victor headquarters of the M. Steinert & Sons Co. is experiencing the usual delay in getting sufficient goods to supply the demand. Manager Herbert L. Royer has been much interested in the completion of the new Providence store of the Steinert Co., for in that new establishment the Victor goods are going to have a special department where they can be handled in a suitable manner. The Victor department of that handsome Westminster street establishment will be on the second floor and a feature will be a concert hall which will be admirably adapted to demonstrations. Mr. Royer has been down to Providence several times lately.

J. S. Coughlan Head Salesman.

John S. Coughlan is now the head salesman at the Columbia department of the Henry Siegel Co.

Mr. Coughlan formerly was with the talking machine department of Houghton & Dutton. Mr. Reisman, who has come over to Boston from New York, is the buyer for this department of the Siegel Co.

PLAYER-PIANO AND PHONOGRAPH

To Operate Automatically, Just Patented by Philip J. Meahl—Patent Assigned to Aeolian Co.—Some Interesting Details.

Philip J. Meahl, Bayonne, N. J., the well-known inventor of devices and improvements in connection with player-pianos and music rolls for same, has just received a patent (No. 1,025,200) on a combined player-piano and phonograph, which he has assigned to the Aeolian Co., by which the music roll on the player-piano is thrown into opera-

tive connection with its driving gear by means of a contrivance actuated at the proper time by the record element of the phonograph. According to the claims made for the invention, the stylus of the phonograph controls through a lever, the valve actuating a special bellows in the player-piano, which in turn serves to throw into operating position the mechanism controlling the movement of the music roll.

In the accompanying drawings in which like letters of reference indicate like parts in all the figures Figure 1 is an elevation, partly in section and partly broken away, showing parts of the music box, parts of the phonograph record, and illustrating one embodiment of my invention. Fig. 2 is a detail side view of the phonograph transmitter showing the means on the same for starting the music sheet driving coupling mechanism. Fig. 3 is a face view of the transmitter showing the same parts as shown in Fig. 2.

TO HANDLE TALKING MACHINES.

Krausgill Piano Co., Louisville, Ky., Will Probably Install Line of Victor and Edison Machines and Records in the Fall.

(Special to The Talking Machine World.)

Louisville, Ky., May 10, 1912.

It has been announced by Arthur G. Krausgill, president of the Krausgill Piano Co., of Louisville, that a line of "talkers" will probably be taken on by that concern in early fall. The Krausgill Piano Co. is one of the most prosperous concerns in the local music trade, having been formed only a little more than a year ago and later incorporated with a capitalization of \$50,000. Mr. Krausgill has not yet decided as to what lines he will carry, but will probably sell Edison and Victor instruments.

STRONG FIGHT BEING MADE FOR PRICE MAINTENANCE.

Talking Machine Manufacturers Active Factors in the Fight Now Being Carried on in Congress Against the Revision of the Patent Law Proposed by the New Oldfield Bill—Waldon Fawcett Cleverly Sums Up the Situation at Close Range—Representatives of Thomas A. Edison, Inc., The Columbia Phonograph Co., and the Victor Talking Machine Co., Attend the Hearings—Some of the Arguments Offered for the Defeat of This Unpopular Bill.

The leading men of the talking machine industry in the United States are just now engaged in a spirited fight to preserve what might almost be denominated the foundation stone—the vital principle of the industry—namely, that of price maintenance. The menace to the custom of enforcing a standard, uniform price for talking machine products has arisen all of a sudden—a bolt out of a clear sky, it might be denominated. Indeed, this crisis has been precipitated so suddenly that it is safe to say that there are many men in the trade, jobbers and retailers alike, who will not be aware until they read this issue of the Talking Machine

machine manufacturer or maker of records will have the right to hold dealers to the one-price system as at present. Furthermore the license system upon which the trade now operates will be knocked out. When a machine or a record is once sold that ends all control of it in so far as the manufacturer is concerned. The firm or individual who buys it can lease it or resell it, fixing any price he sees fit and the manufacturer or jobber will have absolutely nothing to say in the matter.

Now any talking machine man with half an eye can see what will be the result of this letting down

of the bars as concerns the mail-order houses that delight to cut prices in order to make "specials" that attract attention in their catalogues and some of the department stores in the cities that for the sake of having "leaders" will sell goods at cost or even at less than cost if they are not restrained by their contracts. These price slashers would operate with no one to say them nay. Similarly there would be no ban as at present

on the so-called "fire sales" and on job lots and other expedients for placing new or slightly damaged records on sale at prices that would tend to demoralize the whole local market.

The harm done by the mail-order houses and the department stores, if given the opportunity, has, within the past few days, been most forcefully brought to the attention of Congressmen at Washington by officers of Thomas A. Edison, Inc., the Columbia and the Victor companies.

Transcribing the Testimony

Given by the manufacturers at the Congressional hearing on the proposed new patent law.

The officials of these concerns are making a most energetic fight against this attempted legislation. They have sent appeals to every jobber and dealer on their lists urging each and every one to write at once to his own Congressmen protesting against the passage of the bill. And the officers themselves have been at Washington appearing personally before the Committee on Patents of the House of Representatives, which has been holding public hearings, to ascertain the temper of the public before reporting a bill for passage by Congress. It must be admitted that most of the members of this Patent Committee seem to be in favor of this new legislation, but the speeches in opposition which are being deliv-

E. B. Moore.

The latest portrait of the U. S. Commissioner of Patents, who is the real author of the proposed new patent law. Special pose for The Talking Machine World.

ered by men in the trade may nevertheless do much good, for they bring the manufacturer's side of the question to the attention of the hundreds of other Senators and Representatives, each of whom will have a vote on the measure when it comes up for passage.

But to get back to the mail order and department store proposition, it may be noted that the severest arraignment was made by Frank L. Dyer, president of the Thos. A. Edison, Inc., in an address which he made before the Congressional Committee a few days ago. Said he, in part: "The mail-order houses have been most anxious to get hold of our goods without restrictions. They want to list our products in their catalogues at a cut price on the theory that when a man opens a catalogue and sees an Edison phonograph quoted at a cut price he believes that clothing and furniture and shoes and everything else in that catalogue is also sold at a cheaper price. These mail-order houses are the persons who have given the manufacturers trouble. They go out in the open market and buy goods at the full retail price and sell them either at the retail price or actually below the retail price."

Taking up another phase of this same question, Mr. Dyer pointed out that the Edison corporation never interferes with the private citizen—the customer who buys a machine or records for his own use. "The only people we bother with," he said, "are the pirates—the men who seek to get into this business in an irregular way; men who know all about our contracts, but who urge our different dealers to try to violate contracts. For instance, we had a large department store in Pittsburgh which we had to bring suit against for handling our goods without license. We found that they had persuaded a man to set up a store in a small place; signing a dealer's agreement with us, and he got these goods and scratched the price off and turned them over to this department store. These are the kind of people we have to contend with, many of whom know all about the conditions; know all about the agreements; and yet try to break into the business and cause the dealers to violate their contracts."

One of the most interesting statements made by the head of the Edison interests was that to the effect that the successful patentee at the present time is the man who goes into the business of manufacturing his patented invention. Continuing, he said: "In the case of Edison, if you put on one side of the ledger all the money he has received for his patents as patents and on the other side of the ledger all the money he has spent to obtain the patents, and to litigate them, and to prevent infringements on the patents you will find that he has spent more money than he has taken in, and at the present time he is only a manufacturer of patented goods." The Congressman before whom Mr. Dyer appeared asked him a great many questions with regard to the Edison business and in the course of his replies he stated that the Edison concern now has a total of 111 jobbers and 11,130 dealers located in all parts of the country. New York State leads with 819

Exclusive new photo of the famous building where talking machine patents are handled, on first floor of left wing.

World that there is a cloud on the business horizon that threatens to revolutionize their whole method of doing business.

This unpleasant state of affairs arises from the proposal to enact a new or rather a revised Patent Law at Washington. Bills providing for such revision have been introduced in the United States Senate and the House of Representatives and there is some chance that they will pass unless there is very vigorous opposition by the talking machine trade and others interested. These new bills, as originally drafted, provide for a number of changes in the laws governing patented articles, but the Congressmen who are sponsors for the bills have about given up hope of securing legislative sanction for all these innovations. Consequently they are concentrating on one provision and will attempt to secure its adoption, to the exclusion of all the rest.

Unfortunately for the talking machine trade this one "reform" that is being sought is the very one that would most seriously disrupt the trade should it become a law. It is nothing less than a taking away of the privilege of allowing a manufacturer of patented articles to dictate the prices at which such articles shall be sold at retail. If this revolutionary measure becomes a law no talking

STRONG FIGHT FOR PRICE MAINTENANCE.
(Continued from page 19.)

dealers; Illinois has 551 dealers and there are 452 retailers in Minnesota. The Edison Company, he said, was wedded to its present plan of marketing its goods through dealers and he ventured the claim that every one of the dealers was heartily in favor of the principle of price maintenance—the policy that gives the smallest dealer in the most out-of-the-way location the same opportunity to do business as is enjoyed by John Wanamaker or the large mail-order houses.

Another big man in the trade who has been at Washington fighting valiantly for a continuance of the present method of conducting business is Mr. M. Dorian, treasurer of the American Graphophone Company and its selling agent, the Columbia Phonograph Company, General. Mr. Dorian made a most favorable impression by his frankness in disclosing details of the Columbia business in reply to the leading questions that were fired at him. For instance, he turned over to the committee of Congressmen copies of the various Columbia dealers' contracts and discount sheets and in summarizing the terms offered he said: "We have three classes of discounts. We have one to the small dealer who buys two or more machines—a discount of 40 per cent. To the dealer who buys initially an order of \$500 at a time and undertakes to purchase a minimum quantity during the next 12 months we allow 40 and 10—what we call the purchaser's quantity. To a jobber who purchases \$2,000 worth and who is handling the goods only as a jobber or distributor, we give 50 per cent. discount as to some types."

Mr. Dorian stated that the factory at Bridgeport now gives employment to more than 2,000 persons and that the Columbia Company maintains about fifty stores of its own throughout the United States, in addition to offices or branches in Europe and throughout the world. He added that the heaviest export business of the firm is with Mexico, South American countries, China, Japan and Australia. In answer to an inquiry, he said: "Our company has owned at different times two hundred to three hundred different patents, but those under which we are actually operating now probably number only twenty or thirty. There is one patent on which we have been paying royalties for the past eight years and we have not manufactured new machine under this patent in three years and we are not likely to, either, because that invention is passé."

The Columbia representative explained, too, that his concern does not make any machines in Europe—all of the machines are made in this country and shipped abroad and the factory in London is used exclusively for making records. And speaking of records, it may be added that Mr. Dorian's testimony gave some interesting side lights on the subject of the record business. For instance, he stated that his factory was now unable to turn out copies of the "Stop Kickin' My Dawg Aroun'" record rapidly enough to supply the demand, whereas in two months from now it may be that they could not give those records away. "On the other hand," said he, "we have another record called 'Herd Girl's Dream,' which has been popular for

four years and is just as popular to-day as when we brought it out." He explained, too, how careful the company is to go through its catalog every now and then and cut out obsolete and unpopular selections and told of the exchange arrangements open to dealers—particularly the new scheme of a flat exchange of record for record which has been put into effect this spring. Mr. Dorian laid stress upon what his company is doing for the dealers through the medium of general advertising and told of spending \$8,000 for the recent two-page advertisement in one issue of the Saturday Evening Post, which has attracted so much attention in the trade.

The Columbia representative, like the president of the Edison corporation, told of the troubles resultant from price cutting. Said he: "At the present time we are practically free from price cutting. But I can cite a recent case of a merchant at Frederick, Maryland, who buys through our Baltimore store. He bought something like \$2,000 worth of goods and was doing a nice business with them when a dealer in similar lines, who had never handled our particular product, got hold of some of our records, a small quantity, and began to advertise a cut price. Our merchant notified us and we got busy on the proposition right away. We found out the source of supply of this price-cutting dealer and cut off his source of supply, and then gave him the option of promising not to cut the price any more or to stand suit, and he thought it would be a wise course to say he would not cut the price any more. In fact, he had no more goods on which he could cut. This is a recent case which has just come to our attention." In conclusion Mr. Dorian expressed the fear that if the new bill became a law it would enable the department stores and large private buyers to make it impossible for the small stores to sell a supposedly one-price article at all, because the smaller dealer could not afford, even though he bought as cheaply, to sacrifice his profit on the article. Nor could he afford to carry the stock on his shelves until the department stores withdrew the cut price.

Horace E. Pettit, the eminent attorney, appeared at Washington in behalf of the Victor Talking Machine Company. He made an able and exhaustive argument, but it had largely to do with the legal phases of the subject. He did take occasion, however, to emphasize that in the talking machine field it is the retail dealers who reap the greatest benefits from the policy of price maintenance.

Mr. Pettit said further that most patent attorneys would prefer to see the law stand than have the Oldfield bill passed. He said it has taken a vast amount of litigation to prove just what the present law is and all that would have to be gone over again. Furthermore, he said, he opposed any provision which tends to deny to the patentee the privilege of retaining all rights to his patent. He said the statutes have given a patentee a monopoly and this has been guaranteed by the Constitution. To cut off any privilege would be unconstitutional. He thought that Congress would have to give the patentee a monopoly for one or five years at least, after which a condition could apply.

Mr. Pettit's opposition to the bill was presented

in a most forceful and able manner and was based chiefly on the argument that Congress under the Constitution had no power to limit the rights and privileges of the inventor under the patent law, and he backed up his argument with much convincing data.

RED SEAL RECORD CATALOG

**Just Issued by the Victor Talking Machine Co.
Is a Most Complete Publication.**

Recent catalog productions of the Victor Talking Machine Co. have been designed along the most complete and interesting lines, and the latest issued in this connection—a catalog of Victor Red Seal records—takes its place as among the most artistic and effective of the many admirable examples of Victor literary effort on file.

No attempt has been made to furnish an elaborate catalog, but rather give a most complete and comprehensive arrangement of Victor Red Seal records in a dignified and convenient form.

To enable one to instantly turn to any artist's list of records, or any particular record, an alphabetical index of the artists has been made on page 3, while on pages 108 to 116, inclusive, there will be found an alphabetical index of the operas, titles of selections, etc.

The book is illustrated with portraits of the artists with a condensed and interesting synopsis of the artists' public career. The volume is printed throughout in two colors, red and black, and will prove a veritable *vade mecum* for those desirous of having a complete key to the library of famous voices.

The volume should give an impetus to the Red Seal record business. Copies are now being shipped to distributors so that they may be sent to dealers about May 15 and shipments to far Western distributors to reach their destination about June 1.

INCREASING DEMAND REPORTED

**By the Condon-Autostop Co. for Its Popular
Automatic Disc Stop for Talking Machines—
Messrs. Scott Sinclair and Geo. G. Blackman
Representatives of This Company in
New York Territory.**

The Condon Autostop Co., 26 Front street, New York, report a very large volume of business and an increasing demand for their automatic stop for disc talking machines from representative houses throughout the country. The demand from jobbers would indicate that this stop is proving a big seller with the dealers.

The very artistic advertising carried by the Condon-Autostop Co. in the Saturday Evening Post and Collier's Weekly, two of the leading magazines of the country, is proving most helpful in stimulating sales of autostops.

The Condon Autostop Co. states that W. W. Aube is no longer in its employ, having been succeeded by Scott Sinclair; also that George G. Blackman, formerly with the Blackman Talking Machine Co. is now representing the Autostop in New York territory in addition to Mr. Sinclair.

THE SITUATION IN ST. LOUIS.

April Business Proves Rather Disappointing to the Majority of Talking Machine Houses—Rainy Weather Holds Up Sales—Houn' Dawg Record Proves a Ready Seller—Reports from the Flooded Districts—Interesting Personal Items—New Styles of Machines in Demand—Uses Edison Record to Deliver Absent Speech—Victor Co.'s Newspaper Campaign.

(Special to The Talking Machine World.)

St. Louis, Mo., May 10, 1912.

Talking machine men hereabouts are not especially proud of April business. Some dealers exceeded last year's April totals by a narrow margin, but the margin was not in keeping with others of previous years.

The weather was very bad for business, it being much too rainy to expect persons to keep appointments, and to make sales at all it was almost necessary to send machines out on approval. Also the floods in a part of St. Louis territory were embarrassing and the late planting of early crops was discouraging. Collections have been fair in town, but woefully slow in a large part of the St. Louis jobbing district. But May starts with different prospects. The floods have passed and there is going to be time to plant any crop the farmers care to, the edge has been taken off the extremely high prices of vegetables, the winter crops have come out wonderfully, and orchard owners, except the peach men, are convinced that they have bumper harvests ahead of them. All of this tends to better feeling and things are going to move forward, unless all concerned are poor prophets.

That "Houn' Dawg" record is the wonder of the day with dealers. It is selling and reselling and none can guess why, unless it is a spirit of patriotism. The three big record houses made it and supplied all agencies and retailers on first shipment, order or no order. After the dealers had played it they placed the records for return, but the demand came in unexpected quantities and now it is expected to last through the campaign. Harry Levy, of the Aeolian Co., says: "We ordered the 'Dawg' by name and are selling it on the name for first sales, but heaven only knows why the re-sales." Mark Silverstone, the Edison jobber, says: "It is patriotism pure and simple and I expect the patriotism to last through the campaign." Anyway the "dawg" has proved a good advertising card whether there is music about it or not, chiefly not. The cardboard "dawg" looks attractive in an otherwise somber window and the joke of the thing appeals.

Manager Robinson, of the Thiebes Piano Co., used a picture of the "dawg" to a good advantage in a Sunday ad. He had the "dawg" looking at the Victor dog and remarking: "They aint never kicked you aroun'." It was a new note to connect the two dogs.

C. C. White, of New Madrid, Mo., wrote to the Silverstone Talking Machine Co. that water was three feet deep in his store during the height of the flood, but that he was doing business at the old stand, and while the people could not work they needed entertainment. He enclosed an order for \$300 worth of machines and records as an evidence that he was in need of stock and gave roundabout shipping directions that ended with a boat trip. The great drawback in Mr. White's case was the slowness of collections. It was difficult to get about and see the folk and likely most of them would not be at home, or if they were likely they had forgotten to bring the pocketbook up from the lower story when they moved upstairs. He got the goods all right.

Retail Manager Byars, of the Columbia Phonograph Co., says that that company will start May with a view of promoting sales of the Princess machine, keeping in line with the national advertising campaign of the company. "We find it very easy to promote many sales following this advertising and our success with the Favorite during the running of those ads was remarkable. We had some difficulty with deliveries and possibly lost a few sales, but we have a shipment arriving now that will probably place us even with the game. We like the Princess, as the table proposition is a very

good one, and that idea of a machine is popular with the best trade." Mr. Byars says that the trade has been very good and that the quality average was very high.

E. C. Rauth, secretary of the Koerber-Brenner Music Co., Victor jobbers, reports that his company is in pretty good shape on deliveries of both records and machines and has a fair reserve stock of most of the models most in demand. "We have had some trouble with special finishes of sixteenths," he said, "but otherwise we are in splendid shape. The record situation is much improved and we are filling orders almost complete."

The Koerber-Brenner Music Co. has welcomed back L. A. Cummins, who recently quit their service in the local field to go to Colorado on account of Mrs. Cummins' health. Mrs. Cummins is much improved, but will remain in Colorado for a time, and Mr. Cummins will travel in Missouri and Illinois for Koerber-Brenner. While in Colorado Mr. Cummins did considerable free lance sales work for the firm and opened some good accounts for talking machines and small musical merchandise. Guy Hawkins, recently with the Koerber-Brenner Co. as salesman, is not now traveling for that firm.

Harry Levy, talking machine manager for the Aeolian Co., was preparing for a southern trip the first of the month. He says that the jobbing trade has been holding up very well and that he expects from reports to find conditions vastly improved since his trip of a month ago. "We are still having our troubles with machine distributions," he said, "and we find a retail inventory very difficult because of the number of machines outstanding awaiting delivery of certain styles. The XVI continues the feature of the trade, both retail and wholesale. The record situation is vastly improved and we are enlarging our racks and hope within a few weeks to be prepared to stock sufficiently to carry us through any further stringencies. The quality of the retail trade recently has been excellent."

Miss Elizabeth Carpenter, saleswoman for the Silverstone Talking Machine Co., has been off duty several weeks because of a seriously injured foot. She is recovering.

Mark Silverstone, of the Silverstone Talking Machine Co., says the Edison trade is running largely to opera machines in the local field. "And the machine deserves its popularity," he declares. "We are enjoying a very good business in the dictating machine department and hope soon to have this feature of the trade established on its deserved popularity. Our retail trade has been fair and the wholesale trade has been holding up finely. We closed a good month and expect May to be a better one." Mr. Silverstone has not yet concluded to add the moving pictures to his line.

"We have been running very largely to Victor Sixteenths," said Manager Robinson, of the Thiebes Piano Co. "Our trade has been fair and of fine quality. We anticipate good results from the advertising campaign of the Victor Co. The improved jobbing service has helped largely in relieving the situation as to both records and machines."

The A. F. Mengel Music Co., 4300 Olive street, has greatly enlarged the talking machine department of that store and is making a good fight for general business. New demonstration parlors have been added for record demonstrations.

The Grand Leader Department Store is showing renewed interest in the talking machine game and the first ad in several months was printed early this month. The talking machine department is being

allowed to share the recital hall, and some good music is to be heard there in concert style. The dollar down and dollar a week plan is being followed. A. E. Robinson, of Cleveland, O., a brother of Manager Robinson, of the Thiebes Piano Co.'s talking machine department, has been installed as manager for the Grand Leader Department Store and with him comes some new ideas and a general revival is promised. Mr. Robinson is an experienced salesman, but has recently turned to talking machines, believing it to be the most promising line on the market at present.

The Zeigenheim Furniture Co., of East St. Louis, the opening of whose talking machine parlors was announced as to occur last month, has suffered a series of delays, but will be ready within a few days. This company will be equipped equal to any in this section for handling the best trade and expects to make a determined fight for the trade which the large stores have drawn across the river. Several firms in the East Side have handled talking machines, but not on a pretentious scale, and this effort with the Victor line is something of an experiment.

The Silverstone Talking Machine Co. made a special six-minute record on an Edison dictating machine for William F. Saunders, secretary of the Business Men's League, who had been invited to deliver an "absent speech" at the annual banquet of the Oakland, Cal., Ad Men's Club. Mr. Silverstone said that he enjoyed the work very much because of the amount of advertising information Mr. Saunders put into his short talk. The dictating machine was used because of the longer speech possible. The record was tried out and responded excellently.

The Victor Co.'s advertising campaign is meeting with excellent support by the local dealers, and there was quite a scramble to contract with the newspapers for the preferred positions in the mortises. The Aeolian Co., of course, got the inside place, and in the principal morning paper Bollman's landed the next best. In the most popular afternoon paper the Thiebes Piano Co. scored. Other advertisers joining with cards are Val Reis Piano Co., Schaper Bros., Reliable Furniture Co., J. H. Buettner & Co. and A. F. Menger Music Co.

GOOD NEWS FROM DETROIT TRADE.

The Max Strasburg Co. to Secure Additional Quarters to Handle Growing Business—Big Increase Reported by Grinnell Bros.—New Store in Polish District—Cigar Dealers Make Good in Talking Machine Retailing—The Month's News in Brief.

(Special to The Talking Machine World.)

Detroit, Mich., May 9, 1912.

The Max Strasburg Co., the Victrola shop, will soon have the additional space so earnestly desired. Mr. Strasburg stated to-day that negotiations for the store adjoining the Victrola shop on the north had been practically completed. The bargain was held up a couple of months ago by a hoist in price that Mr. Strasburg felt he could not meet. Persistent parley has resulted in a compromise, aided by the fact that the Victrola corner is increasing in value daily, owing to the rapid growth of the new business district east of Woodward avenue.

The additional space will give the Strasburg company three more demonstrating rooms. The company already occupies the basement under the north store, three demonstrating rooms being located there. The present lease holder wants ninety days in which to move out, and the Strasburg company probably will take possession about August first.

"April was a dandy month for us, in spite of the fact that it was the month that people spend a pile of money buying new Easter habiliments," said Mr. Strasburg. "It was equal to March, which is saying a good deal for April, because for some inexplicable reason April almost always is a slack month in the talking machine business in Detroit. May is opening up with a rush that promises to make it the best month in our career."

Grinnell Bros., state jobbers of the Victor line, report that twenty-two of their twenty-four branch stores have shown a considerable increase in business in the first four months of the year and the other two have at least broken even with the

former record. Port Huron, Flint, Saginaw, Bay City, Kalamazoo, Jackson and Lansing are the best centers of the business up-state.

The Grinnell store in Detroit had a business in the first four months of 1912, exceeding that of the similar period of 1911 by fifty-one and one-half per cent. Manager Harry Rupp attributes the phenomenal increase to the growing demand for the high priced machines, brought on by the fact that men who are able to buy the two hundred dollar phonographs are learning the virtues of the talking machine. The multiplying call for medium priced machines must not be overlooked, however,

K. M. Johns, manager of the Columbia Phonograph Co. general store in Detroit, is still out of the city. He is in Providence now, and will go to Chicago and some other cities before returning. Auditing is the business which keeps him out on the Columbia circuit, and he is pretty good at it. In his absence Samuel E. Lind is holding down two jobs, his own and Mr. Johns', and is getting away with it in first class style. Witness the following excerpt from a letter he received to-day from Mr. Johns:

"I have not had time previously to say 'good work' on the excellent month you closed for April. The wholesale result is particularly interesting, indicating that you did not find it necessary to neglect your people to take care of my desk."

The "good work" that called forth this congratulation was a 30 per cent. increase in April over March, and with the Columbia, as well as the other companies, March generally is a better month than April.

Mr. Lind this week opened a new branch store on Canfield avenue, in the largest store in the Polish district. He put in a complete series of Polish records. Another new branch also was opened, but Mr. Lind does not care to announce the name this month.

The wholesale business in Detroit is particularly gratifying. For the hundred and fifty and two hundred dollar machines April has been the best month since December.

The history of the Goldberg Phonograph Co. is

a testimonial to the way the talking machine is making its own way in this part of the world. The Goldberg Company a couple of years ago was a cigar and tobacco house, with a large patronage. Mr. Goldberg put in a "talker" more for the entertainment of his customers than anything else. It was so entertaining that he sold it in short order and then put in another. That was the beginning of the end of the cigar business. Mr. Goldberg discovered that all that was necessary to do to sell a talking machine was to demonstrate it. Faster and faster he sold them—always to people who came to buy his other wares and who did not know what a talking machine could do. Presently the cigars took the back end of the store and finally were forced out altogether. The Goldberg Phonograph Co. now does as large a business as any store in the city except the two big state jobbers, the Columbia Co. and Grinnells. Mr. Goldberg carries both Columbias and Victors.

TO ATTEND CONVENTION.

Geo. P. Metzger Will Attend Gathering of Advertising Men in Dallas, Tex., and Later Visit Columbia Agents in South and West.

George P. Metzger, the energetic and capable manager of the Columbia Phonograph Co., will attend the national convention of the Association of Advertising Clubs, to be held at Dallas, Tex., May 19. Following the convention, he will visit a number of the leading Columbia agents in the South and West and get in close touch with conditions in this territory. As Mr. Metzger oozes enthusiasm, a visit from the Columbia publicity promoter cannot fail to stimulate the greatest degree of activity at all points where he touches.

THE MAN WORTH LISTENING TO.

Any one can tell you what a poor hand you hold. The only man worth listening to is the man who can tell you how to play what cards you have to the best advantage.

Stop Looking and Listening for the end of the record. It is bad for your nerves.

The **Condon-Autostop** will shut it off at the end quietly and effectively. It cuts out the disagreeable noises at the end of the record. These noises have long been the bane of the talking machine.

In the hurry to shut these noises off, many records have become scratched, cracked and broken. By eliminating this hurry and hustle the records are saved.

The **Condon-Autostop** makes the record fit tighter to the table of the machine, making the tone much smoother. It is an

AUTOMATIC STOP

to any disc talking machine and to broken records. It lifts the needle from the record and prevents any chance of the record becoming damaged or scratched. There can be no wear to either the machine or to the **stop** as it stops the machine in the natural way.

These self-selling devices appeal to all talking machine owners. By using the **Condon-Autostop** a dealer is enabled to attend a number of machines at the same time, increasing his selling capacity.

We are preparing an extensive advertising campaign, the first of which has already appeared in the Saturday Evening Post and Collier's Weekly.

The **Condon-Autostop** comes either nickle or gold-plated to match the mountings of the machine. It retails for \$3.00 and \$4.00. Write for circulars and samples.

WINS SUCCESS IN A DECADE.

Past Month Marks the Tenth Anniversary of the Establishment of the Blackman Talking Machine Co.—Rapid Progress Made—Interesting Business History of J. Newcomb Blackman—Entered Business on His Own Account When Sixteen Years Old—Strict Adherence to Set Policies Produces Results—The Value of Co-operation Between Employer and Employee.

The month of May has a particular interest for the Blackman Talking Machine Co., the prominent Victor distributors and Edison jobbers at 97 Chambers street, New York, owing to the fact that it marks the tenth anniversary of the establishment of the business by J. Newcomb Blackman. In the course of a single decade the business has been developed from a minimum jobber's stock occupying a store 25 x 40 feet, to a point where the total space occupied is equivalent to that contained in a six-story building 25 x 75 feet in size. Withal, the growth of the business has been normal and conservative and the expansion has always been with a view to meeting conditions rather than in anticipating them.

The business history of Mr. Blackman, although comparatively short in point of years, is long in experience and full of action and should prove decidedly interesting, not only to those connected with the talking machine trade, but all those who appreciate what is accomplished by hard and persistent work, confidence in the outcome and strict honesty of purpose.

Mr. Blackman began his business career in his fifteenth year as an office boy, after having refused to enter the employ of his father, a prominent flour merchant and a member of the Produce Exchange, stating that he wanted to make his own way, and after working in that capacity for a year, and later as a bill clerk, entered into partnership with H. B. Newcomb, a manufacturer of chain lubricants for bicycles. A year later in 1898, Mr. Blackman was elected secretary and treasurer of the house of Barkelew & Kent, jobbers in bicycle sundries at 26 Broadway, and at once introduced a stock of talking machines and records, the "stock" in this particular case consisting of an Edison Home machine, a Standard machine and about 150 records.

The Edison phonograph had only been on the market for a short time and attracted much attention, with the result that the phonograph business, in a few months, practically crowded out the bicycle sundries.

The real beginning of the present business of the Blackman Talking Machine Co. was when Mr. Blackman resigned from Barkelew & Kent and went into business as an Edison phonograph jobber in a small store at 19 Beekman street. He believed that it was the proper time to get in on the ground floor as a talking machine jobber, and though his capital was small, he refused several offers of employment and capital to branch out on his own account. The first six months proved rather uncertain for the new store, but then there

was a change and before the end of the first year the trade was firmly established. Since that time the progress has been continuous and rapid. The requirements of the business which first demanded the services of two employees now occupy the full time of over a score of employees. Frank Roberts, who was the first man employed by Mr. Blackman, is still actively connected with the house. An interesting fact in connection with the growth of the house of Blackman is that the business transacted during the past year was ten times that done during the first year, the volume of business during December being just twice that for the first twelve months.

In the beginning of his business career Mr. Blackman laid down certain policies to which he has adhered strictly at all times. At times the Blackman policies have been criticized by some, and condemned by others, but they have not been shaken and in the end have generally triumphed. At all events they have not been changed throughout the ten years and still obtain to-day.

In speaking of the rules that have governed and

J. Newcomb Blackman.

still govern the Blackman business, and to which he ascribed a large part of his success, Mr. Blackman said: "When I first went into business on my own account I adopted the golden rule as my principal guide, and have always endeavored to treat all those with whom I come into business contact with fairness and impartiality, while at the same time insisting upon an absolutely square deal from them. I have not only lived up to the letter of my agreements with the manufacturers regarding prices, but on cabinets and other accessories, where the prices have not been fixed I have set a price which I considered would leave me a fair profit and give the dealer a chance, and then adhered to that price absolutely. Confidence enters into every business transaction. It may be misplaced, but it must be there in the beginning to make the sale possible, and there is nothing that is so sure

to destroy confidence as price cutting. I have lost business, much of it, have offended business and personal friends and laid myself open to ridicule as a result of the strict one-price policy, but in the end the firm stand has usually been appreciated and the loss has only been temporary.

"The elements of business success are buying well and selling well—to buy nothing that has not a real value and in which the dealer can place confidence and support, and to sell it at a price that is fair, a price that allows a profit and which can be maintained constantly, even in the face of strong competition. The business man owes it to himself and those who extend credit to him to so conduct his business as to keep it on a solid basis at all times and this can only be accomplished by selling goods in which he can feel confidence and in selling them at a fair price.

"When the business has grown it has been the rule of the Blackman Talking Machine Co. to expand conservatively and to an extent that would not prove embarrassing if a lean year should happen along. We have never grown so fast that we have not been able to discount every bill and the only times that we have asked accommodation of the banks has been when such accommodation would permit us to discount large bills and make money on the deal."

Mr. Blackman believes with many modern and progressive business men in cultivating a better understanding and confidence between employer and employee and does not confine his theories to flamboyant writing on the subject or to loud talk, as is too often the case, but actually puts the idea into practice. He has filled every position in his business from office boy to head, and has combined his knowledge of the problems that confront the different employees with a practical appreciation of those problems. In 1909 the Blackman Talking Machine Co. put the business on a profit-sharing basis, on the theory that if the business was good or bad the employees were largely responsible for the outcome and should share in the profits that were earned by their labor. All those who have been in the employ of the company for over a year receive a bonus at the annual outing given each summer, the bonus being determined by the position held by the employee and his term of service. Friction between employees is discouraged at all times as interfering with the operation of the business.

There are many similar factors in the Blackman business and the policies controlling it, that go far to explain the success that has been achieved during the first decade of its history.

THE VICTOR LINE IN PITTSBURGH.

Henry Kleber & Bros., the prominent piano dealers of 513 Wood street, Pittsburgh, Pa., have taken on the complete Victor line of machines and records and have devoted the entire first floor of their store to that department. The store is handsomely decorated and the equipment includes four soundproof demonstrating parlors.

J. C. Van Horn, formerly of Wanamakers, New York, is now located in San Francisco.

We Are 10 Years Old (1902-1912)

TEN YEARS AGO on May 1, 1902, after a previous experience of five years in the Talking Machine Business, J. NEWCOMB BLACKMAN established the BLACKMAN TALKING MACHINE CO. as a JOBBER at 19 Beekman Street, New York.

He started in a Modest Way, in a Small Store, with Small Capital and Two Employes, but with a Firm Conviction that he would succeed and that no work would be too hard that would make success possible.

A BIG BROAD POLICY was adopted, supported by very little "WISHBONE," but a determined "BACKBONE." It was a policy of "A SQUARE DEAL FOR ALL." A policy not to attempt too much at once, to be honest and conservative in buying and selling and not to "plunge."

The confidence of everybody was sought, and Mr. Blackman decided not to sell any goods he could not stand back of.

The first six months was "HARD SLEDDING," but at the end of the first year success was assured and each year since has shown a STEADY and HEALTHY GROWTH.

The sales for last year, ending April 30, 1912, are 10 TIMES those of the FIRST YEAR, and those of the one month only, DECEMBER 1911, were DOUBLE the ENTIRE FIRST YEAR'S SALES.

We believe this indicates that the "BLACKMAN POLICY" is a good one and that the trade that supports such a Policy is a good trade. We want the "BEST POLICY" and therefore complaints and suggestions will always receive careful attention.

"BLACKMAN SERVICE" must always be the BEST we know how to make it.

J. NEWCOMB BLACKMAN, the founder, head and controlling owner of the business, tenders his sincere thanks and appreciation to all patrons, creditors, employes and others who have contributed to the success of the business, and pledges himself to continue the "BLACKMAN POLICY" of the last 10 years, or any Policy that will make for "Honest Dealing" and "Reciprocity Square Deal" for all.

BLACKMAN TALKING MACHINE CO.

EDISON PHONOGRAPHS and VICTOR TALKING MACHINES

TRADE NEWS FROM GERMANY.

Business Generally on the Continent Very Active—Caruso Interested in New Record Company—New Record-Lending Library in Berlin and How It Is Operated—Talking Machines in Theaters—Austrian Dealers Form Association—Statistics from Various Countries—Some Big Dividends Declared.

(Special to The Talking Machine World.)

Berlin, Germany, May 4, 1912.

Conditions in the talking machine trade in Germany and throughout the Continent generally are flourishing and there is apparently no diminishing of the interest of the public in either machines or discs. Of course, the hornless model is now the accepted type, while equal progress has also been made in the records, which are now offered in a larger list of titles and are generally of superior reproductive quality.

Caruso Interested in New Company.

Much interest is shown in a new company recently registered in this city, the Pianissimo Record, owing to the fact that Signor Caruso, the famous grand opera tenor, is heavily interested in the new venture. The new company plans to make records up to 41 cm. (about 16 inches) in diameter, and it is claimed that they will be of particularly high quality.

Record-Lending Institute in Berlin.

Berlin has now its lending institute for talking machine discs. A former venture of this kind, which was intended to cater mainly for restaurant proprietors, proved a failure owing to the discs soon becoming useless through wear. The new undertaking has profited by the experience of the old and is restricting its attention to private users. Three styles of discs are carried. The cheapest subscription is three and a half marks for six discs. The same number of the most expensive discs cost five marks a month. Arrangements have also been made to furnish 10 discs a month at prices ranging from 4.20 to 6.75 marks a month and discs for from 5 to 8 marks. For 24 double discs per month the price varies between 6 and 10 marks, according to the kind of disc. Any disc can be exchanged against other discs of the same kind during the whole duration of the subscription. The exchange can be effected daily, weekly or monthly at the option of the subscriber. The subscriber can also exchange the discs singly or all at once. No doubt this idea of unlimited exchanges will be the greatest attraction to subscribers. And yet it would seem to be a perfectly sound offer and one which entails no risk to the venture, because it must always be borne in mind that only in very few cases will a subscriber exchange his discs every day. It seems safe to calculate that on an average subscribers will keep discs for at least a week.

If this venture proves a success it means severe competition for the dealers in discs and records and many of them will be compelled to follow suit. On the other hand, it should certainly greatly increase the popularity of talking machine. It will, therefore, be interesting to watch developments in this direction.

Talking Machine as Aid in Theater.

Talking machines are often used with success in theaters, being set up behind the scenes, for instance, to imitate the cries of a crowd, of a chorus, etc. They were recently employed for a novel purpose in the Royal Opera House in Berlin. In Josef Lauff's work, "The Great King," which was given as a gala performance on January 26, in commemoration of the 200th anniversary of the birthday of Frederick the Great, the ringing of the bells of the Garrison Church at Potsdam is heard during the last scene, which takes place in the park at Sanssouci. A wonderful imitation of the peal of bells was effected by means of a gramophone disc prepared by the German Gramophone Co. to order of the management of the Royal Theater. So true to nature was the reproduction by the auxetophone of this really magnificent record that it certainly created the impression that one was listening to the actual bells of the Garrison Church. This disc will also be placed on the public market.

Austrian Dealers Organize.

Word comes from Austria of the formation of a strong association of the Austrian talking machine

dealers for the purpose of regulating various trade matters of direct interest to their business. The officers of the new association are: Herr Pickler, chairman; Herren Pick and Arlett, vice-chairmen; Herren Wieder and Hornyak, secretaries, and Herr Czadel, treasurer.

Statistics of Austro-Hungarian Trade.

The statistics of the Austrian and Hungarian talking machine trades for 1911 show imports amounting to 5,106 cwts., of a value of 8,169,600 kronen, against 5,680 cwts. (value 9,088,000 kronen) imported in 1910. This fall in imports of some 600 cwts. of a value of about 918,000 kronen, seems to suggest that the now large home industry is receiving increasing support. The exports reached 616 cwts. (value 739,200 kronen), against 638 cwts. (value 765,600 kronen). Of the imports by far the greater volume came from Germany, this country contributing 3,480 cwts., or some 68 per cent. of the total. France sent goods to the amount of 272 cwts., Great Britain 151 cwts. and Switzerland 227 cwts. On the other hand, of the exports Germany takes 36 per cent., the remainder being distributed between Bulgaria, Roumania, Servia, Russia in Europe and Switzerland.

Form Limited Liability Companies.

A large number of the manufacturing and retail talking machine houses in Germany have recently been converted into limited liability concerns for the purpose of facilitating the transaction of their growing businesses.

Declare Big Dividends.

The extent of the talking machine business in this country is to be realized when the earnings of the Carl Lindstrom Co. for the past year are considered. The net earnings of the company are given as 492,529 marks, and the Beka Record Co. and the Fonotopia Co. paid dividends of 12 per cent. and 20 per cent., respectively. The Lindstrom Co. paid dividends of 20 per cent. on 2,000,000 old shares and 10 per cent. on 1,500,000 new shares.

The International Talking Machine Co., of Weissenau (Germany), owned by the Fonotopia Co., declared dividends of 100 per cent.

China a Poor Market.

Notwithstanding a population of some 400 millions, China is still only a small buyer of talking machines. The figures of the imports for 1910 show that they totaled only 163,386 taels (a tael equals about half a crown). Nevertheless this is a 50 per cent. increase over the figures for 1907. In this market curiously enough the German exporter has not got it all his own way. He has never reached a higher position than third place, which is that he occupied in the year in question. On the other hand, Canada and the United States, who in previous years accounted for about half of the whole of the imports between them, only accounted in 1910 for 17 per cent. of the total. The actual distribution was France 17 per cent., Belgium 13 per cent., Germany 11 per cent., Russia 11 per cent., Canada 9 per cent. and the United States 8 per cent.

PERFECTS TALKING PICTURES.

Professor William Stirling, of London, Succeeds in Inventing Means for Synchronizing Operation of Cinematograph and Gramophone and Gives Interesting Demonstration of the Process at the Royal Institution—Separate Motors of Identical Pattern Used to Produce the Effect—Calls New Invention the "Chronophone"—Americans Will Be Interested.

A dispatch to the New York Times gives an interesting report of a demonstration given at the Royal Institution, London, on May 10 by Prof. William Stirling of an invention by means of which cinematograph films and gramophone records taken of a public man making a speech can be presented simultaneously with the sounds and movements in perfect unison. Prof. Stirling said that the invention, which is due to the ingenuity of Leon Gaumont and his collaborator, comprised two electric motors of identical pattern for driving the gramophone and the cinematograph. There is a special arrangement by which any want of accord between the sound and the movement can be immediately rectified.

A demonstration of the "chronophone," as it is called, was given two years ago, but was then not

quite perfect. Since then the inventors have overcome all difficulties.

A distinguished gathering of scientists and others witnessed the demonstration. On the screen one saw Ian Colquhoun and heard him recite "The Clampherdoun." M. Gallipaux acted a comic monologue, illustrating the humor of an irate telephone subscriber who cannot get his number, and this was followed by a lion tamer cowing lions that roared and leaped about him. The next was a banjo player, and a one-act comedieta, which had a railway carriage for its scene, concluded the program.

The prelude to the entertainment was a wonderful living picture of a rooster that crowed. It appeared on the screen brilliant in its natural coloring, for all the "chronophone" pictures are in natural colors, so that one saw the bronze sheen of the plumage, the red comb, and pale yellow spurs. It flapped its wings, rolled its eyes, thrust its neck upward and forward, and from its wide-opened beak there came the triumphant crow. The whole audience could watch the characteristic movements of the rooster just as if it were real and living before them.

The picture of the lion tamer in his den was even more remarkable, for here there was a mixture of sounds, the man speaking, the crack of his whip, the thud of an iron bar falling on the floor of the cage, and the terrible snarls and growls of the lions, all so lifelike that it seemed impossible that the actual lion cage had not been somehow spirited into the room.

The possibilities of the invention are obvious. At election times, for instance, a great leader can be seen and heard simultaneously in every constituency. The records of famous people will go down to posterity as they appeared and talked. Every town will be able to have its "chronophone" opera house.

FORM EFFICIENCY COMMITTEE.

New Committee of Columbia Phonograph Co. Will Visit Branches and Inaugurate New and Improved Methods.

In line with their usual progressiveness the Columbia Phonograph Co., General, New York, has formed what is in the future to be known as an efficiency committee. The head of the committee is H. L. Willson, assistant to General Manager Lyle, of New York. Mr. Willson is at present in the West and will pay visits to all of the larger branch stores of the company, going as far West as California. His route calls for the Western trip through the Northern sections of the country and returning via the Southern route.

The object of the above-mentioned committee is to promote efficiency in the branch stores, inaugurate new and more economic methods of management in both the selling departments and the manufacturing. It is easy to see that the committee has prospects of doing much good service in the interest of the Columbia company.

The Farrand Co., of Detroit, Mich., has arranged to handle the Victor talking machine in its new store in Detroit next month.

Salesmen Wanted

WANTED—Three salesmen. Must have experience at selling Victor Talking Machines at retail. Permanent position and good salary to the right men. Apply promptly by letter only, giving full particulars, to Max Landay, general manager, Landay Bros., 563 Fifth Avenue, New York.

ANOTHER COLUMBIA

This is the way we featured the new Grafonola "Saturday Evening Post" of May the fourth. The design, another Columbia instrument that will meet your requirements. Read this advertisement and you will see that we would follow throughout our 1912 campaign of business to the dealers' doors.

The "Princess" is going to be as big a winner of substituting for it. That looks pretty good for the Columbia.

Are you one of us? If not, come in. There is no policy is the open house policy.

\$84.30 for this new Columbia

including the "M 10" series of Columbia Double-Disc Records and Record Album

Until July 1, delivered ON APPROVAL by 7500 dealers, payment terms \$7 a month—no interest, no extras—and subject to a guarantee of full satisfaction.

Or \$75 flat for the instrument alone. No other upright instrument has ever been offered for less than \$100, with NO records.

This new Grafonola "Princess" is a beautiful mahogany table, ready at all times to serve all the purposes of such a table, worthy of its place in any part of any room in the house, yet likewise ready to provide music of any class you happen to desire, and capable of all the quality of tone of any instrument by which you may happen to judge it.

This newest musical instrument, with the "M 10" outfit of records—a total of 24 different selections, sufficient for an entire evening's delightful entertainment, together with an album to contain them—costs you just \$84.30, and until July 1st, may be paid for at the rate of \$7 a month, and will be delivered on approval by your dealer. Besides the "M 10" series of records, do not miss the opportunity of hearing this most versatile of all musical instruments render selections by Lillian Nordica, Olive Fremstad, Mary Garden, Emmy Destinn, Alice Nielsen, Zenatello, David Bispham, and any of the other great artists whose voices appeal to you.

Go To Your Nearest Dealer

The nearest one of 7500 dealers will place this complete outfit in your home on free trial, giving you an opportunity to combine an evening's entertainment with a thorough demonstration, and guaranteeing the outfit to be exactly as advertised or money refunded.

If by any chance there is no dealer in your neighborhood who is prepared to supply you, drop us a line and we will see that your inquiry is attended to.

Tribune Building, New York**

STRONG ARGUMENT AGAINST PATENT REVISION BILL.

Made by the Treasurer of the American Graphophone Co. Before the Committee on Patents of the House of Representatives—Shows in a Most Detailed Way Why the Provisions of Sections 17 and 32 of the Oldfield Bill Are Harsh and Oppressive and Work a Distinct Injury to the Interests of the Trade and Kill the Maintenance of Prices So Essential to Its Health and Development—Why the Bill Should Be Opposed.

We present herewith the argument recently made by M. Dorian, treasurer of the American Graphophone Co. before the committee on patents of the House of Representatives in opposition to the harsh and oppressive provisions of sections seventeen and thirty-two of the Oldfield bill introduced in the House of Representatives to codify, revise and amend the laws relating to patents.

To the Committee on Patents, House of Representatives:

Gentlemen—The American Graphophone Co. is a manufacturing corporation organized under the laws of the State of West Virginia. Its principal factory, located at Bridgeport, Conn., gives employment to 2,000 people. Its output consists of graphophones and gramophones—two types of so-called talking machines—and sound reproducing records for use thereon.

All of its output is manufactured under letters patent of the United States owned or controlled by it. All of this output is marketed through its sole selling agent, the Columbia Phonograph Co., which organization maintains about 50 stores throughout the United States, in addition to having a large number of dealers and distributors.

Neither the American Graphophone Co. nor its selling agent, the Columbia Phonograph Co., is a member of any pool, combination or syndicate for the control or regulation of the business in which it is engaged.

It fixes the retail price at which its products may be sold by a dealer's contract or price maintenance agreement, of which copies are herewith submitted for the information of the committee.

It is vitally interested in the bill now under discussion and requests consideration of the views herein expressed.

While many paragraphs of the bill affect it seriously it confines its present argument to two sections only—17 and 32—which it regards as particularly objectionable and unwise, and which it opposes for the reasons which follow:

SECTION 17.

Working.—Paragraph 2 of Section 17 provides that if at any time during the term of the patent, except the first four years, it shall not be manufactured to an adequate extent any person demanding it shall be entitled to a license, etc.

This is what is commonly known as the "working" provision, and in most foreign statutes a simple, relatively inexpensive, but effective procedure is provided which is in great contrast to the drastic, mandatory and oppressive one proposed here.

Under the English statute of 1907 the inventor is given a reasonable time after notice within which to manufacture in adequate measure or show cause why he does not. If he makes a proper showing he is entitled to a further period of 12 months in which to comply with the law.

The notice to the inventor emanates from the Patent Office and his showing is made there, where he can appear in person, if he so elects, or by an attorney. Even if he employs an attorney the expense is small and the procedure simple.

Compare this rational, humane and simple provision with the one proposed in the pending measure.

Without preliminary notice of any kind the inventor is cited to appear before the district court and show cause why he should not be compelled to grant a license to, perhaps, his principal rival in business or his bitterest personal enemy.

It is no answer to say that the Court may not award the license. The inventor cannot appear before the Court in his own proper person. If he does he has a fool for a client. He must retain patent counsel and they are an expensive class of counsel. He must fight a long drawn out and costly suit involving many pages of typewritten testimony, printed briefs and records and numerous other items of cost incident to even ordinary litigation.

He may be too poor and friendless to do these things and the case goes against him by default. He is ruined. He may have impoverished himself and his family in bringing his invention to the point where it could be covered by an application; he may find it necessary to improve and perfect it, and may, in fact, have reached the point where he has succeeded in doing this and is ready to begin the actual manufacture, but is at the end of his resources for the moment. Just at that psychological moment comes this summons to appear and show cause why he should not be compelled to grant a license. It may be, and in many cases will be, a fact that the summons has been craftily timed for just that moment; that there will be a number of them either as the result of a well laid conspiracy or pure accident. Just when the poor inventor sees an end to all his struggles and sacrifices and success within reach, he is smothered, annihilated, by a storm which carries him and all belonging to him to destruction.

This is not exaggeration. It will occur and frequently if this provision of your bill is enacted.

It is the most expensive, protracted and oppressive method which could be devised. It affords a legalized means of persecution which will be unscrupulously invoked by business rivals and enemies to ruin where they cannot coerce or cozen.

Give the inventor a chance. Minimize the danger of oppression. Be more just and provide a simpler, less expensive method. The public can be protected just as effectively.

Compulsory License.—The same paragraph of Section 17 contains another provision which is on a plane with that of the court procedure for oppressiveness.

I do not wish to convey more than that both provisions will be utilized by the unscrupulous as a means of coercion and oppression. They will employ them to harass and ruin if they cannot make them serve as instruments of blackmail.

Why legislate in favor of the schemer, the wrecker and the blackmailer? What justification can there be for entering into a combination with this class and against the inventor? Is it upon the mistaken theory that the public, the people, will be the gainers? Quite the contrary, because the inventor, who is a useful productive member of the family, will be discouraged and disheartened.

After one such experience he will either invent no more or will keep his inventions secret as long as he can and never disclose them to the public.

What justification can there be for depriving the inventor of any part of his rights and conferring them upon another for the mere asking? Why not impose upon that other some obligations and conditions? Why not compel him to enter into an undertaking to the State to do and perform that which he alleges the inventor has failed to do? He wouldn't give such undertakings. He would be a fool to do it in view of the fact that any person can obtain a license in the same way he secured his, but if no restrictions are imposed upon him who has contributed nothing to that particular invention or discovery and who is actuated solely by mean motives—of greed, spite or destructiveness—why impose them upon the man who has added something to the world's fund of knowledge, has produced something useful and good?

In the effort to curb or regulate some abuses which have crept into or become grafted upon our patent system our legislators appear to have gone astray; to have laid aside their wonted calm deliberateness and customary cool judgment and to have engaged in a frantic assault upon the whole fabric of our latent law and practice. Nowhere is this more apparent than in this proposed provision of compulsory license. The idea is borrowed bodily from the English statutes, but without the safeguards of the English law. This provision may fit in well with English needs and conditions, although there is room for doubt as to that, but is entirely out of place in

the United States and will not produce the results anticipated or promised.

Its introduction into the English law was an attempt to give the British manufacturer and the British workman an advantage over his foreign rivals; to confiscate for their benefit the inventions, discoveries and processes of their more progressive and inventive American and German trade rivals. It was aimed at the British patents issued to these foreign inventors, to acquire which by confiscation was the purpose of the law.

During the discussions which preceded the act of Parliament of 1907 the English newspapers were full of editorials and special articles making clear that this was the end in view. I was living in England at the time and was naturally very much interested in the whole subject matter, as I was representing an American company which owned a number of British patents, some of which we were "working" in England and some of which we were not.

The newspapers and trade journals freely discussed the probability that many valuable inventions and processes owned by American and German manufacturers would be abandoned and would fall into the laps of the British. Later these same papers declared that many products manufactured abroad under equivalent foreign patents would have to be produced in England, thus affording employment to British workmen. This did come to pass, but not to the extent anticipated, because the Germans have an abiding distrust of the British workmen, and when they erected plants in Great Britain, as some of them did, imported German workmen to operate them.

Great Britain, being a free trade country, was undoubtedly at a disadvantage, and this, coupled with the fact that their manufacturers and workmen are less inventive and progressive than the American or German, afforded some justification for the efforts of the government to help by legislation.

No such conditions exist or are ever likely to prevail in this country. The American manufacturer and inventor have never up to the present trailed any other. They lead. They are being followed pretty closely by the Germans just at present. The hope is we can continue to lead, but a few more jolts like this proposed measure will put the American in the "also ran" class and give the German the advantage. He will not need urging to profit by it. The German government is mighty careful of its manufacturers, and no legislation adversely affecting them can get on the statute books until it has passed through many tests.

We have had the same idea in this country for many years, especially in the matter of patent legislation, but we seem to be getting away from it in this bill.

The man whom the framers of our patent laws have always had in mind until the present day is the man in whose brain the "idea" germinated—the man behind the invention—the inventor.

He seems to have been left out of the present measure entirely; to have been replaced by some imaginary being who is hideous and repulsive, someone or something to be attacked, hampered, hindered and crippled, affrighted and discouraged.

"Any person demanding it shall be entitled to a license." Mandatory and confiscatory. Not mere annulment of the patent, a donation of it to the public so that all may use and enjoy it, but only that the owner has his property confiscated, and that property turned over to his business rivals and enemies for wrecking.

Once the inventor is forced to grant these indiscriminate licenses his control over the invention is gone forever. What was once a valuable property or capable of being made such, soon becomes a valueless, discredited thing fit only for the discard.

Not one of the great inventions of the last twenty years but would have been arrested short of development to the point of practicability by the enforcement of such a provision. Not one of them was sufficiently developed within four years from the date of the original grant of letters patent to have achieved commercial success. Had such a provision been a part of our patent law not a single one of all the marvellous discoveries which have made American inventors and scientists famous in the past twenty years would have progressed beyond the stage of discovery, because it would have been impossible to finance the experiments and the exploitation necessary to develop and perfect them. Timid capital will not embark

in a frail craft. With such a possibility confronting him as a compulsory license feature no inventor could interest capital—no invention which was not complete and perfect at the date of grant of patent could command any support.

All, or nearly all, really great inventions are crude, immature, unripe things in the beginning, requiring to be made useful and practical by the expenditure of time, money and patience. The ability to grant exclusive rights in exchange for the necessary capital is imperatively essential to this development and perfecting. Take away this possibility by compelling the granting of these indiscriminate licenses and the incentive to develop and perfect is gone. Many highly useful inventions possessing great potentialities for good will "die aborning."

In 1878 the Committee on Patents of the United States Senate in a report on the patent system recognized that it had been the foremost agent in promoting the progress of the useful arts, and in discussing changes used this language:

"No change should be made in the patent law to weaken the inducement which it offers to those who will successfully invent, and to those who by perseverance and expenditure will perfect the inventions and the machines in which they are embodied, and push their introduction so far as to put the public in possession of perfectly working machines, or perfectly finished product."

There is nothing remarkable about that paragraph except its homely, everyday common sense. The same kind of common sense which the gentlemen of this committee bring to bear upon their own business problems. I venture the assertion that if any one of you were approached by an inventor to finance his discovery your first point of investigation after its merits would be that of freedom from attack during the period of development which you would know had to be gone through.

SECTION THIRTY-TWO,

Price Maintenance.—Paragraph 2 of Section 32 is another provision of this measure which, if enacted, will work incalculable harm. It grants to the purchaser of a patented machine or manufactured article powers which nullify completely and effectively all the essential terms of the grant of letters patent. It makes not only possible but probable the destruction of all control of the invention, and turns into jest the terms "exclusive right to make, use and vend the invention or discovery throughout the United States."

The paragraph provides that any purchaser of a patented machine, manufacture, or composition of matter shall have the "unrestricted right to vend, or lease to others to be used the specific thing so purchased without liability to action for infringement."

This is not alone inconsistent with the grant to the inventor. It is destructive of it. It is a mockery because "unrestricted" right to vend means unrestricted right to revend, and that is putting it beyond the power of the inventor to fix or maintain an established price on his article, reasonable or otherwise.

It is a long step backward and a blow at a large number of very deserving and very important people in this country. I mean the country merchants and the small storekeepers in the towns and cities. Some of them may be inventors, but I am considering them only as merchants and storekeepers. They are vitally interested in this feature of the bill, and if enacted in its present form it will hit them hard. I will show you how later, but first permit me to remind the committee very briefly of one or two fundamental principles underlying our patent law.

First.—The inventor is the absolute master of his idea, his discovery, or his process only so long as it has not left his brain. Once he discloses it or publishes it the public acquires immediate rights in it.

If his idea be one which can be utilized by him secretly and need not be disclosed to be made productive to him and his successors there is no power on earth which can compel its disclosure and he might go on enjoying the monopoly indefinitely.

Second.—The Government, wishing to give the people the ultimate property in these ideas, inventions and discoveries offers an inducement to inventors to refrain from keeping their ideas and discoveries secret.

It says, in effect, disclose them; make them known so that all may ultimately be enriched, and you will be rewarded and compensated by a grant, under solemn seal and pledge of the Government, of the exclusive right to make, use and vend the invention or discovery for a term of seventeen years.

Third.—At the end of the prescribed term the monopoly terminates, and the idea or discovery falls into the common or public domain and anyone may use it.

It is a contractual right which the inventor enjoys. The law says to him that if he will communicate his discovery so that the public may benefit by it he may take in exchange for it this exclusive right for the prescribed period.

That, briefly, is the whole story in a nutshell. On that basis and upon those simple terms and conditions we

FOR SALE.

5,000 Zon-o-phone 10-inch records, 15 cents each; 5,000 Edison 2-minute records, 10 cents each. DENINGER, 335 North St., Rochester, N. Y.

have been operating for a hundred years. It has placed this country far in advance of all others in the development of the liberal arts; made American machinery, tools and appliances the standard of excellence all over the world. That solemnly pledged protection which the patent has always heretofore afforded induces the patent owner—and is all that will induce him—to disclose his discovery and to expend time, energy, money and patience in perfecting it.

To fasten upon his grant the proviso or condition referred to is farcical because he then no longer enjoys the protection which he bought by his disclosure.

The reason is simple and easily comprehended. To make his product, be it machine or composition of matter, profitable he must create a market for it and he must maintain and protect that market. If his article be a necessity, it is perhaps easier but even then he has to create his market. If his be an article in which there is competition the creation of that market is a matter requiring years of unremitting effort, and constant vigilance lest it be taken from him.

In the maintenance of his market one of the strongest, if not the strongest, factor in his favor is the stability of his article. Stability as to quality and price. Quality he must have but if he have quality alone and no stability of price he fails inevitably in creating or retaining a market. If his article be sold at one price today and another price to-morrow, or at one price in Washington and another price in Baltimore, it may be accepted as a fact, that no large stocks of his article will be found on the shelves of merchants.

If the article is one which can be sold by department stores, and they are allowed to offer it at a bargain price no small storekeeper or country merchant will stock it at all.

Price maintenance, therefore, is as essential to success as quality, and sometimes more so. The right to fix a uniform price and to maintain that price is as vitally important to the inventor as the right to make, use and vend his invention.

This right has been recognized by our Courts for more than 16 years. Not as a right which a strained or distorted interpretation of the law would produce, but as a right which is of the essence and spirit of the law. A right which the public is under obligation to respect and protect.

This is the interpretation given by the Circuit Court of Appeals of the Sixth Circuit in which Judge Taft, now President of the United States, and Judge Lurton, now an Associate Justice of the Supreme Court, both concurred, and has been repeatedly cited with approval of the Supreme Court of the United States.

There are numerous other decided cases which adopt this same interpretation.

The paragraph under consideration would destroy utterly such control of the established price. It would place it in the power of a competitor to utterly discredit an article no matter how great its merit. It would enable the department store or the large private buyer to make it impossible for the small storekeeper to sell that article at all because the small dealer could not afford, even though he bought as cheap, to sacrifice his profit on the article. Nor could he afford to carry it on his shelves until the department store withdrew the cut price in the hope of eventually getting his investment out of it.

All over this country the small merchants, such as stationers, druggists, etc., rely upon the sale of articles on which the manufacturers maintain a uniform price for a large per cent. of their profits. Articles which are in constant demand and which they can supply to their customers as readily as the department stores and cut-rate drug stores solely because a uniform price is maintained.

Take away this protection by the enactment of this provision and all that trade will inevitably be diverted from the small merchant to the big one and there it will stay. The public may buy cheaper but that is a doubtful advantage if it results in driving many good men out of business.

A LITIGIOUS BILL.

Had the entire Patent Bar of the United States met in convention and solemnly deliberated as to ways and means to promote litigation between patentees and owners of patents—assuming that the Patent Bar could so demean itself—to the end that patent counsel and patent experts might wax rich and powerful, no more powerful and fruitful medium could have been evolved than this same bill, had they deliberated for months.

If this bill be enacted into law the crop of new suits will be appalling. The courts will be choked with litigants. Years must pass before we will begin to see light out of the obscurity of many clauses and sections.

Had it been desirable to wrest from the small storekeeper and the country merchant the last measure of protection which has stood between him and annihilation at the hands of the department store syndicate, the cut-rate drug store and the mail order house, no more effective, sure and swift means could have been devised than the abolishment of the price maintenance agreement which this bill proposes.

CONCLUSION.

The subject is too vital to the welfare of the Nation to be hastily disposed of. It is physically impossible to do it justice in the limited time at the disposal of your committee.

A commission should be appointed and authority given it to consider all phases of the question, to summon witnesses and experts, take testimony and report to Congress its findings, conclusions and recommendations. That way only safety lies.

Respectfully submitted,

AMERICAN GRAPHOPHONE COMPANY,

M. Dorian, Treasurer.

THE COLUMBIA IN THE SCHOOLS.

How Manager Walthall, of the Louisville Store of the Columbia Phonograph Co., Succeeds in Introducing Machines Into the Schools of That City—Putting the Matter Up to the Teachers and Awaiting Results.

(Special to The Talking Machine World.)

Louisville, Ky., May 10, 1912.

In line with the recent announcement that part of the musical education of the children of Louisville, received in the public schools, is to be administered through the medium of the talking machine, the Louisville store of the Columbia Phonograph Co. is definitely presented with the prospect of selling sixty-five Columbia Grafonolas.

There are sixty-five schools in Louisville, including the grammar and primary institutions. To the principal and teachers of each school E. B. Walthall, manager of the Louisville Columbia store, has addressed a letter, calling attention to the fact that Miss Caroline Bouregard, supervisor of music in the local system, has sanctioned the use of the phonograph in improving the juvenile idea of harmony and tone.

Mr. Walthall has made it a point not to appeal to the Board of Education for an appropriation to cover the cost of instruments for the schools. He has put the proposition directly to every school itself, together with a special price and payment plan which will easily permit of each corps of teachers securing funds for the proposed purchase.

Mr. Walthall's idea of selling talking machines to the schools themselves is greatly simplified through the existence of Parent-Teacher Associations throughout the city. These organizations work toward the benefit of the institutions with which they are connected, and it has proved to be an easy matter for the association, through entertainments, popular subscriptions, etc., to raise enough money to cover the cost of an instrument. Although the local Columbia campaign has been

pushed for only a week, two Grafonola sales have been completed outright.

Mr. Walthall has extended himself in affording every possible conclusive demonstration to the principals and teachers that a phonograph is really a *sine qua non* in the public school. A special salesman has been engaged to wait upon the scholastic trade, showing the values of phonographic music in the children's marches from one class-room to another, in keeping primary classes good-humored and in inculcating an appreciation of really good selections throughout the school.

Special assortments of records are provided with the school phonographs. A new Columbia selection, "Peek-a-Boo," has proved to be just suited to the primary grades, being composed of simple melodies which are easily caught by the youngsters. The records are scaled upward to meet the requirements of the various grades until the high school students are found enjoying "Aida," "Lohengrin" and "Tannhauser," as opposed to the raucous but popular strains of "Everybody's Doing It" or "Alexander's Rag-Time Band."

The Louisville Columbia store expects to extend its system of school phonograph sales through the twin cities of Jeffersonville and New Albany, Ind., as soon as Louisville is covered.

LOUIS F. GEISSLER DISCUSSES NEW PATENT BILL.

Sees Commercial Catastrophe if Congress Prohibits Maintenance of Fixed Prices—Issues a Strong Statement to the Trade in Which He Points Out the Unsoundness of the Attacks Upon the Fixed Price Principle—Bill Before Congress Would Demoralize Trade at Large and He Makes Earnest Plea to the End That Merchants Everywhere Protest to Congress Against the Proposed Legislation—Action Should Be Taken at Once and by Everyone.

Louis F. Geissler, general manager of the Victor Talking Machine Co., in discussing the bill now before the Legislature in Washington, for the purpose of revising the patent law, and which prohibits the manufacturer from giving protection to the dealers against price cutting on patented goods, has uttered the following very timely and pertinent words, which should appeal particularly to dealers so that they may at once get in touch with their representatives in the National Senate and House of Representatives to the end that their views may become known. Mr. Geissler said:

There is placed in jeopardy, by a proposed legislation now before the Congress of the United States, the whole system of distribution through a price maintenance system of any article of merchandise; the proposed legislation, through a revision of the patent laws, is aimed at patented articles, but the result must be that any price control or price agreement on any article between the manufacturer, the dealer and from the dealer to the public, will be annulled.

We believe that every dealer—and the great public itself—will agree with us, after deliberate thought, that such a condition would be nothing more nor less than the greatest possible commercial catastrophe, and it would seem almost impossible to anybody dealing in merchandise (and every man, woman and child has something to sell and is a salesman of his commodities or his talents) that any law could be passed which would prevent any person in control of any article—and especially a patented article—from making an open and above-board agreement to sell this article at a minimum fixed price.

Practical merchants and observers, whether they be merchants or exclusively consumers, know that the very foundation upon which low prices are built and through which the lowest of prices are quoted, is the business principle of "one price" and "fixed prices" marked in plain figures.

These very conditions are a guarantee that in 99 cases out of 100 the "fixed price," the "plain figure price," is the lowest price that the manufacturer or merchant is able to quote with any kind of an assurance that he can live.

In the first place, he knows that by thus establishing prices his business is an open book to all competition; the price is established so low that he believes there is little probability of anyone being able to sell the commodity at a lower price and live for any length of time.

Twenty years or so ago it was, generally speaking, the custom for merchants to mark their goods in cipher, and the purchaser was compelled to inquire the price of every article he handled. In the largest cities, where competition was extremely keen, merchandise soon found its proper level, but this left 49 out of 50 cities in America which might charge—and did charge—the purchaser any exorbitant profit that they might feel able to obtain; the purchasers in smaller towns were astounded by the lower prices at which the same commodities might be purchased in larger cities.

The wiser and more experienced merchants in larger cities soon saw the possibilities of increased trade by reaching out, with their one price system and their illustrated and fixed price catalogs, into this profitable and uneducated territory.

The influence of so-called "mail order" business extensions undoubtedly caused the reduction of prices by the smaller dealers in smaller towns on all wares that were known to be identical with those in the catalog.

Admitting that the above is substantially correct—as we know you will—this first illustration proves the advantages to the purchasing public of the advertised "fixed price" system, as emulated by the largest merchants and catalog houses, but higher up and behind the catalog houses lies the most potent influence for low retail prices and stability

of values—that mostly sought after quality in all affairs of life—in the manufacturer, he who adopts a selling system embodying fixed prices to the dealer and to the public.

To insure his own permanent success, this manufacturer must go about this in the following manner:

Primarily and constantly does he consider the interests of the purchasing public. The prices which he places upon his goods must be attractive, they must be unassailable. He does not dare for one moment to fix a price one cent higher

Louis F. Geissler.

than he feels would leave him safe from constantly threatening competition. He knows that the moment his goods appear upon the market at a fixed and uniform price, imitations and inferior replicas will appear almost instantly, and having decided to adopt a uniform fixed price throughout the United States, or the world, he must, of necessity, fix that sum so low that, having created a demand for same, and established deposits and merchants for its distribution throughout the country, the interests so involved and the capital invested are not likely to be seriously assailed by an imitation, at a somewhat less price.

This manufacturer is next concerned with the creating of a nation-wide demand for his wares. Largely in advance of any accrued profits from the sale thereof, hundreds of thousands of dollars of capital are invested in advertising the wares for sale at fixed minimum prices throughout the United States. A demand usually follows good advertising and good quality.

Whatever profit there is between the cost of manufacture and the fixed low minimum retail price is divided between the dealer and the manufacturer, by far the larger percentage going to the former to pay for the cost of distribution and the capital invested, the manufacturer being content with the smaller manufacturers' profit in consequence of volume and concentration of business and usually prompt collections.

We must next consider the practical working out of the "fixed price" system upon goods either well known and protected by a reputation or upon goods with a well advertised trademark or upon goods manufactured under a patent, presuming that they are all sold at advertised prices, fixed by the manufacturer or proprietor.

The dealer is far better satisfied to sell goods

for which there is a demand, at even a small profit, than to invest his money in articles, the sale of which is very doubtful or dependent entirely upon his own comparatively meagre efforts to dispose of same.

The safeguard to the public, however, in advertised fixed prices is the impossibility of the dealer advancing these prices to the great majority of buyers who live in the smaller towns and in the country. No merchant has the temerity to overcharge his customers when they are aware of it or likely to learn of it.

No influence has been so powerful towards the lowering of costs on merchandise to the purchasing public as the fixing of prices by the manufacturer or proprietor, whose every interest is served by having the consumers' price fixed at the lowest possible point which will permit of distribution of the goods.

The point is that the manufacturer is concerned only with the interests of the public. If they are served and the public is pleased, his goods will be sought after and found, no matter how far removed may be the source of supply; the dealer and jobber being only too anxious to engage in the distribution of his wares to supply a demand already created.

A manufacturer seeks to safeguard his article by the fixing of a retail price, and perhaps surrounding it with other conditions of sale only that one dealer may be as fairly treated as another, and, to protect dealers against the illegitimate assault of piratical price cutters and those who would pull down hundreds of structures, if only they could profit temporarily by a so-called "cut price" article or sale, and surely no fair-minded person would wish to see, throughout the country, up and down the main streets of their cities and in their most reliable stores all the chaotic conditions of a Monday morning "bargain counter sale" in a department store, for that must eventually lead into a similar state of chaos in their own industry and private interests, no matter what that be.

"Patent Monopoly" is being considerably ranted about at present. There is practically no such thing as patent monopoly. Competitive patents appear in the field almost instantly with the original; evasions, modifications, improvements and exact copies make their appearance immediately after any invention secures much attention.

No sooner has any original conception been made known to the public than that special field of labor is immediately developed and the most harassing piratical attacks immediately follow the exploitation of any successful patented article.

The patentee must shoulder all the ordinary difficulties of exploiting and finding a market for his new conception, besides which, at once, he is required to defend himself legally from attack on all sides from those who would usurp his field.

We cite as an instance our own experience with the Berliner fundamental patent, for which we paid \$800,000; spent more than that in defending and trying to sustain it and only succeeded in so doing three years before the term of the patent expired. There was not a moment during all these years that infringing goods were not being sold throughout America by a number of our competitors.

This is simply typical of the situation of any business based upon patents and than which there is certainly no more harassing calling in the field of manufacturing and merchandising endeavor.

The patent laws of the United States should be strengthened in favor of the patentee rather than weakened.

The term of the life of a patent, in justice to the owner, should commence upon the date that it is finally adjudicated in the courts of the country, for, up to that time, he has had no exclusive rights in it.

This view is taken by most patent attorneys and is held by many eminent jurists, but no organized effort has been made to secure this palpably just situation to the patentee.

We might say that the patent laws, as well as the trademark and copyright laws, are susceptible

(Continued on page 34.)

Destinn, Fremstad, Nordica, Garden, Nielsen, Gay, Pasquali, Zenatello and Bispham. People want these records. Do you carry them? They're some of the Columbia exclusives.

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

L. F. GEISSLER DISCUSSES NEW PATENT BILL.

(Continued from page 33.)

of infinite argument; we are neither capable nor desirous of going deeply into the matter, but the fundamentals that we are concerning ourselves with in this letter and regarding which the agitation in our legislative chambers at Washington is being made are too important to every consumer, dealer and manufacturer in this country of ours to be ignored; each dealer must take them to heart and do what he can to see that the proper information is disseminated and that the favorable sentiment of every consumer is aroused in their behalf. They are these.

First—That the privilege of the present patent law, to fix the price at which his article shall be sold, both at wholesale and retail, must not be taken from the patentee.

Second—That his present right to sell or not to sell his patented wares to whomsoever he pleases must not be questioned.

It surely must be plain to you that to enact any law interfering with the above constitutional rights of a citizen would be to attempt to interfere with the inherent rights of every one and should meet with the most vigorous and outspoken objection from every voter in America.

This is a very, very, vital question and to lay this matter aside without making an attempt to defend yourselves and your interests from such an interference with our present patent laws would stamp you as being utterly dead to the best interests of yourselves and your customers.

FRANK L. DYER TO EUROPE.

President of Thos. A. Edison, Inc., to Spend a Couple of Months in Europe—To Visit Headquarters in Berlin and Paris—W. W. Wyper Also Leaves for the "Old Country."

Frank L. Dyer, president of Thomas A. Edison, Inc., accompanied by Mrs. Dyer, sailed Wednesday morning last on the Lusitania bound for a few months' visit in Europe. Mr. Dyer was given a great send-off at the pier by the managers and heads of departments. He is planning to visit the Edison offices at Berlin and Paris, thus combining a little business with pleasure.

Sailing on the Lusitania, too, was W. W. Wyper, managing director of Thomas A. Edison, Inc., in Sydney, N. S. W., who has been at the Edison plant for the past few weeks. This is Mr. Wyper's first trip to the United States since he went to Australia six or seven years ago to assume his managerial duties. As reported in last month's World, he was tendered a dinner by his associates on leaving the Antipodes for the United States and Europe.

JOHN WANAMAKER AND SUCCESS.

I think I could succeed as well now as in the past. It seems to me that the conditions of to-day are even more favorable to success than when I was a boy.—John Wanamaker.

WANT A TWO-PRICE SYSTEM.

The Talking Machine Retail Dealers' Association of Philadelphia, Discusses the Desirability of Separate Prices for Cash and Instalment Sales—Call on the Victor Co.

(Special to The Talking Machine World.)

Philadelphia, Pa. May 11, 1912.

At the last meeting of the Talking Machine Retail Dealers' Association of this city, much time was given to the discussion of means for inducing the manufacturers to fix separate prices for goods sold for cash and those sold on the instalment plan. It was claimed that there was an increased price announced and charged on goods sold on the instalment plan it would induce many people to take the advantage of the lower cash price with the consequent saving and thereby give the dealer a better chance to carry his business. It was pointed out that the dealers were expected to pay their bills on a thirty-day basis no matter on what terms they sold their goods.

Considerable complaint was also made regarding the practise of the department stores in securing the jobbers privileges, with the greater profit and then advertise particular low instalment rates on high-class machines.

The officers of the local association, including Wm. Gibson, president; John A. Popp, vice-president; M. A. Goetz, a member of the by-laws committee, and M. Goodstein, recently called upon Louis F. Geissler, general manager of the Victor Talking Machine Co., and spent some time in the discussion of the two-price system with promising results.

300 PER CENT. INCREASE IN MONTH.

Excellent Sales Record Claimed by the Louisville Store of the Columbia Phonograph Co.—Some Personal Items of Interest.

(Special to The Talking Machine World.)

Louisville, Ky., May 10, 1912.

The Louisville store of the Columbia Phonograph Co. has announced with justifiable pride that its sales during April aggregated 300 per cent. more than those of the corresponding period in 1911. The phenomenal increase, according to Manager E. B. Walthall, may be attributed to the popularity of Columbia Grafonolas, from \$50 upwards in price, with the better classes in Louisville which are becoming accustomed to purchase talking machines just as readily as they buy pianos and player-pianos.

T. A. Laurie, an assistant auditor of the Columbia Phonograph Co., with headquarters in New York City, recently paid a visit to Louisville, expressing himself as being extremely gratified with current trade in the South.

U. J. Chambers, for several years connected with the Columbia store in Memphis, Tenn., has joined the retail sales staff of the Louisville headquarters of the same company.

H. E. Jones, manager of the Columbia Dictaphone Department of the Columbia store in Louisville, recently supplied full business phonograph

equipment to the Delker Brothers Buggy Co., of Henderson, Ky., one of the biggest vehicle manufacturing concerns in the Western portion of the Bluegrass State.

A NEW VICTOR RECORD CATALOG.

Advance Copies of the May Subject and Alphabetical Catalog of Victor Records Just Sent Out to the Dealers—January Edition of the Catalog Accorded Enthusiastic Reception.

The Victor Talking Machine Co. has just issued to the Victor dealers advance copies of the May Subject and Alphabetical Catalog, which will be ready for distribution within a few days. In the letter to the dealers, which accompanied the new catalog, the Victor Co. says:

"The January edition of this great catalog was accorded just the reception we thought it would receive from distributors, dealers and the great army of Victor owners. Never has any catalog ever published been so unanimously endorsed, or brought forth so many interesting letters of appreciation.

"We are convinced that the influence of this catalog on the sale of Victor records was instantaneous, and we can assure you that all the little errors and omissions of the January edition have been corrected in this May issue and you will also find many new subject headings and pronunciations following titles, names, etc., right in the body of the catalog. A short story of the composers is also one of the new features

"You cannot afford to allow a single copy of this catalog to be wasted or remain idle. We want you, as you receive your supply, to make it your personal business to see that a copy is placed in the hands of every Victor owner."

A CLEVER WINDOW DISPLAY.

A window display which attracted much attention to the Field-Lippman store in Maryville, Mo., was recently arranged by R. H. Hancock, the manager of the store, and represented a miniature touring car made entirely of Victor-Victrolas. The wheels were made of turntables. Two cabinets made the body of the machine. The seat was made entirely of needle boxes, the winding key was the crank. A beautiful doll occupied the seat and the "Victor doggie" sat beside her, all attention to "His Master's Voice."

NEW LINE OF FINISHES READY

Columbia Phonograph Co. jobbers are now in position to fill dealers' orders for the popular "Mignonette" Grafonola in Fumed and Golden Oak finishes, as well as mahogany. The various finishes which it is now possible to obtain in this machine should be a big boost toward making the instrument even more popular than ever. The "Mignonette" combines the machine and record cabinet as a unit.

It is a mighty fine thing to train oneself to regard the unpleasant things that bob up now and then as mere punctuation marks in a long paragraph of pleasure.

FROM OUR CHICAGO HEADQUARTERS

ROOM 806, NO. 37 SOUTH WABASH AVENUE, E. P. VAN HARLINGEN, MANAGER.

Slight but Seasonable Lull Noticed in the Talking Machine Trade in the West—What the Various Prominent Houses Are Doing—The Talking Machine Co.'s Modern Methods—New Salter Cabinet Catalog Soon—Recitals Producing Results—Successful Protest Against Advanced Freight Rates—Handsome Quarters of the Talking Machine Shops—Elaborate Interior Decorations—Wurlitzer Co. Pushing the Victrola—Specialties in Strong Demand—Great Educational Campaign Being Conducted by Manufacturers and Jobbers Alike—Personal Items of Timely Interest That Are Worthy of Record.

(Special to The Talking Machine World.)

Chicago, Ill., May 10, 1912.

The talking machine business is now experiencing its annual seasonable lull. This is the word given out by the principal dealers in talking machines along Wabash avenue. April was not an exceptionally good month, although March preceding it was not so bad. However, when compared with the general piano business, the talking machine business has been good and it is a notable fact that dealers who have handled the two lines together have had the best business for the past two months. It would seem unusual at this time that the sales in talking machines should run mostly to the more expensive instruments, but it is true according to the dealers, who say that the burden of their sales in April was in the \$200 line.

The talking machine department of Rudolph Wurlitzer Co. has been conducting a special rush on the \$15 Victrola. In discussing this proposition Fred A. Siemon, who devotes his time to the talking machine department in Wurlitzer's, said to The World:

"We push the small machines at this time of the year not so much for the profit we get out of them but because they have proved to be feeders in the long run for sales on the more expensive machines. We consider that when one of these machines goes from our salesrooms it means a sale of a higher priced one in a few weeks or a few months at least. We are certainly satisfied to do business in this way, for there is a small profit on these machines and since they mean extra sales later we reap two profits.

"I expect," said Mr. Siemon, "that business from now until fall will be about as it has been for the two months past. This is the dull season in the talking machine business. However, it is no duller this year than it has been in years past."

Davidson brothers, of the talking Machine Shops in the Steger building, say the bulk of their sales for April was on the \$200 machines, with a special run upon records. A few numbers of the Red Seal records were especially in demand. Among these were, the "Elegie" by Mme. Gluck; the violin obligato by Efreim Zimbalist and "Il Segreto di Susanna." In the cheaper lines the Missouri dog song has led the list.

Vital Educational Work.

Too much importance cannot be ascribed to the developmental work being done by the Talking Machine Co. of this city. Take for instance the methods they are pursuing in aiding the dealers whom they establish in expanding their business. They have a trained force of men whose business is not simply to get orders, but to aid the dealers in landing prospects and in working them up. They have a series of letters which they will send direct to a selected list of customers in the territory with the direct purpose of getting high grade Victrola sales and doing it, of course, through

the local dealer whose name is always mentioned. They also have a number of sales plans and those of them which particularly apply to the dealer's locality will be furnished them without charge. An important branch of this work is the care which they have lately taken in the development of propaganda for the use of piano dealers. The Talking Machine Co. believes that the piano dealer can handle talking machines to peculiar advantage. This department will not only swell the sales profit but will also be an important feeder for the piano business. They would be pleased to write a letter to any piano dealer who does not handle talking machines at present, telling them how a profitable department can be inaugurated.

New Salter Cabinets.

The Salter Manufacturing Co. of this city, manufacturers of talking machine record and music roll cabinets, has now in press a new catalog which shows some most attractive styles of talking machine record cabinets now put on the market for the first time. Several of these will be found illustrated in the company's page advertisement in this issue. They also have had great success with their patent corners for cabinet tops, which were illustrated in the last issue of the World and which enable the dealer to adopt a cabinet to various sized machines. This device has now been patented. The company is having an unusually fine trade and are greatly encouraged regarding the outlook in the talking machine trade.

Restaurant Uses Victrola.

As an extra feature of entertainment for the patrons of his restaurant, A. J. Meves of Portland, Ore., recently installed a Victrola in his establishment. The machine was furnished by the Eilers Music House, and each day during the luncheon hours a programme is given. Mr. Meves, who is himself a great lover of music, allows nothing but classical selections to be played and his excellent eating establishment is gradually getting an enviable reputation for that reason.

Believes in Recitals.

In taking advantage of the advertising campaign being conducted by the Columbia Co. on its Grafonola Princess through the Saturday Evening Post and local newspapers, Miller's Grafonola Shop, 1126 East 63d street, this city, arranged a special concert to patrons this week. Attractively printed invitations were sent out broadcast by Mr. Miller. The invitations bore the following inscription:

"Selections to suit everybody, including the children, will be played Tuesday evening, May 7, commencing at 7:30 o'clock. Come, bring your friends, and don't forget to bring the kiddies." It is this sort of push that has enabled Mr. Miller to so increase his business. He is known as one of the most energetic and up-to-the-minute dealers in the trade.

This plan of interesting both present and prospective customers will be followed up from week to week.

Successful Protest Against Advance.

While in the East last week as chairman of the Transportation Committee of the National Association of Talking Machine Jobbers, L. C. Wiswell, manager of the talking machine department of Lyon & Healy, appeared with other representatives of the dealers' association before the Official Classification Committee of the railroads.

The meeting was used by the dealers to protest against certain railroad freight rate classifications which make a distinction between talking machines with horns and those in cabinets. A number of freight inspectors have been putting the cabinet talking machines in the same class with furniture, which make the shipping charges upon them almost one-half more than upon talking machines with horns. This was deemed unfair, and in fact excessive, the rate on horn machines to Chicago from the factory being \$2.55, while on cabinet machines

(Continued on page 36.)

The Fibre Needle was one of the revolutionary departures in the talking machine trade, but it remained for the WADE FIBRE NEEDLE CUTTER to make it thoroughly practical. Repointing fibre needles is a joy—a positive diversion when the Wade cutter is used.

It works like a pair of scissors or pliers. Has a triangular guide for holding the needle in position while repointing, and other unique and practical features.

PRICE ONLY \$1.50 LIST

Ask Your Jobber or Write Us for Name of Nearest Jobber

WADE & WADE

1227 East 46th Street, CHICAGO, ILL.

FROM OUR CHICAGO HEADQUARTERS—(Continued from Page 35.)

it was approximately \$1.35 more, when there is, so far as shipping rates are concerned, no difference in the two instruments. Had the classification which the inspectors enforced been allowed to stand, the talking machine business in Far Western States would have been practically a money-losing proposition, owing to the high freight rates which would have made the cost of shipping a single machine from the factory to Montana about \$22.

When the dealers' side of the matter was explained the new classification was ordered nulled, Mr. Wiswell says, and a saving of thousands of dollars a year to dealers was accomplished.

Attractive Talking Machine Quarters.

Davidson Brothers, proprietors of the Talking Machine Shops, have now completed the interior finishing of their ware and sales rooms on the fourth floor of the Steger building. A complete stock of all styles of talking machines is carried on the floor and is displayed to extra advantage because of the fine general appearance of the room and excellent light that comes in from two sides of the building—the south and west. In accordance with their plans outlined in the World of last issue they have stocked their demonstration booths with lines of machines all in one finish. For instance, one booth contains all of the different styles of instruments in the mahogany finish; another those of golden oak finish. This gives the booths

one of the most attractive window displays advertising the Victor that has appeared recently on Wabash avenue. A hunter's camp in the woods with all out-door-life utensils and accoutrements has been reproduced and prominent in the foreground of the scene is a much used Victrola and selection of records. The window is so attractive that there is a crowd in front of it from morning to night.

Have Good Exhibit.

The Chicago office of the Columbia Phonograph Co. has a most attractive exhibit at the Chicago household show which is in progress at the Coliseum this week. They are showing practically all types of their machines and are doing a nice business.

A Universal Service.

Lyon & Healy are not only able to give dealers a splendid service on Victor and Edison goods and talking machines auxiliaries of all kinds, but can also supply them with everything in the musical line, including Lyon & Healy and Washburn pianos and player-pianos from their own great factory, band instruments, small goods, sheet music and music books, etc. It constitutes a great, unified service which the trade should not lose sight of.

Good Auto-Stop Trade.

Mr. Carlton, the Western representative of the Condon-Auto Stop Co., is meeting with great suc-

F. D. Moses.

Beloit, Wis., he put in vacations and a good deal of time during school terms at the talking machine store of Alva Snider and proved himself a young man of initiative and a high degree of ability. He is an athlete, was instructor in boxing and wrestling at Beloit University, and was an expert baseballist and footballist. From his appearance he evidently realized the ideal of a sound mind and a sound body, and with the remarkable facilities furnished travelers by the Talking Machine Co. to visit dealers in their plan of sales promotion on Victor goods should get a splendid trade and make a great success in his new connection.

AD SERVICE FOR THE SMALL DEALER.

Trade Producing Assistance Offered by the E. C. Plume Advertising Agency—Combating the Mail Order Houses Successfully.

(Special to The Talking Machine World.)

Chicago, Ill., May 8, 1912.

Throughout the country Edward C. Plume, head of the E. C. Plume Advertising Agency, of Chicago, is becoming noted as an enemy of the mail order store and a champion of the interests of the small town merchant. His company was organized to furnish an advertising service to the small merchant which will enable him to secure the

New Quarters of the Talking Machine Shops.

a very pretty appearance. On the main floor of the display rooms a number of instruments in different finishes and styles have been placed effectively.

The floor has been carpeted to match the finishing of the woodwork and what furniture there is in the room, all of which is mahogany. In contrast with the dark richness of the woodwork are the ten demonstration booths grouped around the south and west walls, all of glass and white enameled woodwork. As soon as convenient a few additions are to be made to this room in the way of record cabinets. It is the intention of the Talking Machine Shops to carry a complete line of records on the floor. At least one of every number in the catalogue will be in this stock, while the reserve stock has a place to itself in the rear of the quarters near the repairing and shipping rooms.

The interior photo shown herewith is a view of the quarters from the elevators with the camera pointing towards the southwest. The picture includes most of the booths, a number of the machines and the elegant furniture and appointments of the room.

Wurlitzer's Victrola Advertising.

Very attractive advertising is being used by the Chicago store of the Rudolph Wurlitzer Co. to push the \$15 Victrola, upon which they are now making a special run. The ad calls attention to the fact that Music is no longer a luxury, but a necessity and that "the Victor brings all the Music of all the world to you." In connection with the newspaper advertising campaign Wurlitzer's have

cess on the company's specialty which automatically stops the record at its conclusion. They are selling large quantities of these devices to the jobbers and is doing good missionary work with the dealers whose orders he takes but turns over to the jobber of their selection.

Fibre Needle Cutter Sales.

Wade & Wade, manufacturers of the Wade fibre needle cutter, have been getting some remarkably large orders from jobbers. The ease with which this cutter is handled and the accuracy of its work commends it to the trade at large.

Visitors and Personals.

E. D. Eastman, president of the Columbia Phonograph Co., was in Chicago last week on his way to the Coast. He reported the Columbia factories very busy, and says the outlook for the talking machine trade, and particularly for the Columbia product, is very promising.

H. L. Willson, assistant to General Manager George W. Lyle, of the Columbia Co., was a recent visitor to the Chicago office, of which he was manager some years ago. He talked very optimistically regarding business.

W. C. Fuhri, district manager of the Columbia Phonograph Co., returned this week from a trip to the head office in New York.

New Traveler for Talking Machine Co.

F. D. Moses, the latest addition to the Talking Machine Co.'s traveling force is a young man who will undoubtedly be a success in his work, which will be the State of Wisconsin and Northern Michigan. Mr. Moses is by no means new to the talking machine trade. While attending Beloit University,

E. C. Plume.

business in his own community that rightfully belongs to him. A few years ago it would have been practically impossible to sell a bill of goods by mail order to the rural consumer, but with the advent of peculiarly seductive advertising methods which especially characterize the mail order schemes the business has now grown to an enormous size.

mous size and the number of large mercantile establishments that are thriving at the expense of the unwary out-of-town customer and his own striving local storekeeper is steadily increasing. Mr. Plume has realized that the only way to combat the mail order proposition is to use as a weapon against the mail order houses the same means they use in securing their following—that is, advertising. With that end in view he has originated a service of newspaper salesmanship for the country merchant, and in speaking of his plan he says:

"Without it you cannot hope to win or hold your own against such mighty odds. By ignoring it you are hastening the day when smaller town stores will be a rarity, when post offices will have to employ express wagons to carry the rural mails laden with orders filled by the great mail order concerns who will flourish on the business you are now permitting to slip from you."

The E. C. Plume Co. also manufacture the Pyro single incandescent bulb electric street light, which is an effective but inexpensive advertising feature for the country dealer.

SPRING RUSH IN MILWAUKEE.

Talking Machine Dealers Much Pleased with the Outlook—Crop Conditions Excellent—Collections Show Improvement—Dealers Preparing for Summer Resort Business—Lawrence McGreal Joins Junket of Merchants and Manufacturers Association—Activities of the Various Dealers—Recent Visitors of Record—Other Interesting News.

(Special to The Talking Machine World.)

Milwaukee, Wis., May 10, 1912.

The spring business has opened with a rush in Milwaukee and about the State, and talking machine dealers and jobbers believe that the result will be one of the most successful seasons in the history of the trade. While conditions in some lines, particularly in the iron and steel industry here, are hardly satisfactory, the talking machine situation is indeed bright. People seem to be buying just as many machines and records as though the country was not in the throes of a big political campaign, with a Presidential election only a few months away.

Conditions about the State are especially hopeful. It has been many seasons since the crop outlook has been so good as it is this year. The heavy snow of the past winter put the soil in excellent condition, and a heavy yield in all lines is predicted by crop experts. Money is plentiful in all the smaller cities and town about the State, and talking machine dealers believe that they ought to get their share of the prosperity.

Collections in Milwaukee are showing considerable improvement and very few repossession of instruments are reported. Conditions in general are taking on new life with the spring revival, and money is not quite so "tight" as it has been. Dealers say that the demand for high grade machines is still strong.

Talking machine dealers all over Wisconsin are now busy in their preparations for the big summer resort business that is anticipated this season. Wisconsin and Michigan are both well-known summer resort States, both being dotted with hundreds of attractive little lakes. Dealers have been pushing along this trade each season, educating the people to the enjoyment that may be gained from taking a talking machine with them on their outings. The result has been that this phase of the business has shown a remarkable growth, and the prospects all point to a larger trade this season. One enterprising young dealer has conceived the plan of selling people a smaller Victrola to be taken on the summer outings, in order that a fine collection of records need not lie idle during the hot summer months, just because the owner does not like to cart his big Victrola to his summer home or into the wilderness.

Miss Gertrude F. Gannon, head of the Wisconsin

Talking Machine Co., jobber for the Victor line in Milwaukee and about the State, sailed from Liverpool on May 3, and is expected to arrive in Milwaukee some time before the middle of the month. Miss Gannon, in company with a party of friends, has been spending several months in touring the Holy Land, Egypt and other countries, returning through Europe, where she visited England, Ireland and Scotland.

Friends of A. G. Kunde, Columbia jobber and retailer, will not know his downtown store at 516 Grand avenue, after the work of remodeling the establishment has been completed. The entire store is being redecorated and enlarged, and several new sound-proof booths are being installed. Seven booths will be in readiness for the trade within a few days. It is only a few months ago that Mr. Kunde erected a new store front, and, when the improvements now under way are completed, the establishment will be one of the finest in the downtown section.

Mrs. A. G. Kunde, wife of the Columbia jobber and retailer, who is associated with her husband in the business, spent a few days at the Chicago office of the Columbia company recently.

George D. Ornstein, sales manager of the Victor Talking Machine Co., stopped over in Milwaukee a few days recently while on his way to the Pacific Coast. Milwaukee is the old home of Mr. Ornstein, and two of his sisters live in this city. Mr. Ornstein reports that the prospects are bright for a good spring and summer trade in the Victor field.

Lawrence McGreal, president of the National Association of Talking Machine Jobbers and Edison jobber for Milwaukee and Wisconsin, will again be a prominent member of the party of Milwaukee business men, members of the Merchants and Manufacturers' Association, who will enjoy the annual junket of the organization. This year's trip, which will be taken from June 3 to 9, will cover the leading trade centers in Southern, Central and Northern Wisconsin and points in Northern Michigan. Mr. McGreal, as usual, will take several machines and a large supply of records with him on the trip, and will make himself one of the most popular members of the party as a result. Mr. McGreal will call on his dealers and he expects that the trip will be a successful one for him from the standpoint of both business and pleasure.

Among the recent visitors in the Milwaukee trade were Roy J. Keith, of The Talking Machine Co., of Chicago, and Daniel G. Williams, of the Udell Manufacturing Co., well known cabinet concern of Indianapolis, Ind.

Miss Elsie Meiser is still in charge of the talking machine department of the Hoeffler Manufacturing Co., 306-8 West Water street. Miss Meiser, who was placed in charge of the department when J. H. Becker, Jr., resigned to accept the management of the new Victor store at 1120 Walnut street, is making a big success of the business.

Emil O. Schmidt, 310 Grand avenue, the "one price" piano dealer of Milwaukee, who took over the agency for the general Victor line some months ago, is still without a manager for his talking machine department. Otto F. Leidel, former manager, resigned some time ago to become connected with the Milwaukee branch of the F. G. Smith Piano Co. Mr. Schmidt reports several good Victrola sales.

Harry W. Krienitz, enterprising young talking machine dealer, carrying the Edison and Victor lines, 439 National avenue, is planning on moving into new quarters at 326 Grove street. The entire interior of the new store will be remodeled, and he will have one large salesroom and three sound-proof booths.

J. H. Becker, Jr., in charge of the new Victor store at 1120 Walnut street, is paying particular attention to the sale of Victrolas IV and VI for installation in summer homes of Milwaukeeans. Mr. Becker has found that many Victor records lay idle during the summer months, while the owners were at their summer homes, and he came to the correct conclusion that it was because owners of Victrolas XIV, XVI and other large machines did not like to move them to their summer residences. Now

he is finding that these people are willing and anxious to buy the Victrolas IV and VI to take along with them to the country. Mr. Becker believes that this is an opportunity for good business that every Victor dealer should make use of. Mr. Becker is not neglecting the Victrola XVI, however, and reports the sale of several of these large instruments during the past two weeks.

Mr. Becker is following his plan of window exhibits, with which he made such a success at the Hoeffler store. Just at the present time Mr. Becker has an attractive window, advertising the "Dawg Song," while the new Victor card, depicting the stage setting of the "Tales of Hoffmann," is attracting much favorable attention. Mr. Becker has arranged a new flashlight illumination in his windows that will be sure to bring him much new business.

Joseph Gannon, assistant manager of the Wisconsin Talking Machine Co., Wisconsin jobber for the Victor line, is ill at the home of his father in Dixon, Ill., where he went for a few days' visit. His condition is not regarded as serious.

William P. Hope, traveling representative of the Thomas A. Edison, Inc., in Wisconsin and Upper Michigan territory, spent a short time in Milwaukee recently while on his way to Western Wisconsin.

The William A. Kaun Music Co. has finally decided to drop the talking machine line with the view of paying particular attention to the sheet music and musical merchandise departments. Mr. Kaun carried Victor machines and records.

Some good Victrola sales are reported by Joseph Flanner, who now carries a complete stock of Victor machines and records.

VICTOR RECITALS MAKE GOOD.

Plan Worked Out by the O. K. Houck Piano Co. for the Purpose of Demonstrating Victor Goods Proves Successful.

(Special to The Talking Machine World.)

Louisville, Ky., May 15, 1912.

That the Bluegrass policy of phonographic demonstrations is being enthusiastically advocated further in the Southland is evidenced by news recently received in this city from Nashville, Tenn., where the O. K. Houck Piano Co. has been featuring the Victor line through periodic concerts. The Houck Company, one of the best-known in the Tennessee capital, has been using the Victor operatic stage in presenting scenes from well-known grand operas, accompanied by corresponding selections upon the Victrola. Two concerts per day at regular intervals during the past month have been given, admission being secured only through coupons appearing in the Houck newspaper ads. The demonstration stunts have proved to be thoroughly practicable in boosting Victor business for the Nashville dealers.

CARRYING A BIG LINE OF SUPPLIES.

One of the important distributors of talking machine supplies is Mermod & Co., 505 Fifth avenue, New York, who sell spring motors, turntables, tone arms, sound boxes and original constructions for inside and outside horn types, its specialty being to furnish these materials to houses who want to build their own talking machines. This company guarantees the quality of its goods to be A-1 in every respect, even to the motors, which is an unusual thing for a supply company to do and shows its faith in Mermod specialties. The head of this house is Marc K. Mermod, who has been in and about the talking machine arena for years, and to those who are large enough and are interested in building their own machines, Mr. Mermod will be glad to send some information that will show how to be a talking machine builder.

The Whitney Central Trust & Savings Bank and W. C. Soria, receivers of the National Automatic Fire Alarm Co., of Louisiana, who handle Victor talking machines and Edison phonographs in New Orleans, report total liabilities of \$65,129.98 and total assets of \$46,559.98. These figures are based on the appraisal of the appraisers appointed by the court.

ACTIVITY RULES IN CINCINNATI.

Business During April Keeps Up to Mark Set by Preceding Months—Joseph Krolage Co. Opens Talking Machine Store in That Arcade—What the Various Department Managers Have to Report—Better Grade Machines Have the Call—The News of the Month.

(Special to The Talking Machine World.)

Cincinnati, O., May 4, 1912.

The members of the trade appear to be in a very good frame of mind. Business during April, according to accounts, was a repetition of the good results obtained in March. The houses are spending more money in newspaper advertising than has been customary. It appears to be a case of one firm trying to tell the public that it has talking goods for sale in just a little better tone than the other fellow. It's just like a continuous show.

One of the prospective important developments of May may be an announcement by the Joseph Krolage Co., on Race street, of the opening of a talking machine store in the Arcade. The concern has secured an option on a store there and has until June 1 to exercise the same. As it is known that the company has been buying pretty heavy in the Victor and Edison lines there is every reason to believe that the deal will go through. Mr. Krolage said it was impossible to sell a record at the same time a customer was trying out a piece of sheet music on a piano. Then, too, the talking machine department is now in a basement, which is not a satisfactory arrangement.

The R. Wurlitzer Co., in chatting of trade conditions, said: "The month of April showed a big increase over the same month of the past year. The business was rather light in the beginning of the month, and the latter part of the month extremely heavy. Outfits for summer homes are already being sold and from the present outlook the Victor Victrola is going to be an essential requisite in every well-equipped cottage and summer camp. The demand for the May records was the heaviest in local history, and judging from the number of active record buyers the record season will run through the summer with very little diminution. Shipments of Victrolas are not as yet any way near equal to the demand, but they are coming through in better shape and have brightened the outlook very considerably. It will still be some time, however, before the shipments will be equal to the demand."

Manager Ahaus, of the Victor department of the Aeolian Co., made the following statement: "We had an exceptionally good month and found it quite a task to keep stocked up, particularly in records. Our feature sales were to several public schools. Mr. Robinson, of this department, devotes two afternoons each week at the various schools and we are getting the results. The educational campaign of the Victor Co. has been of great assistance to all our salesmen."

The Columbia Phonograph Co. reported a continuance of their very large and satisfactory March business in April, Manager R. J. Whelen stating: "The arrival of new goods continually keeps both

retail and wholesale departments stirred up and alive to the fact that they have to keep busy to be up to date. The 'Princess Regent' at \$75 has made the decided hit of the season and it met with immediate favor, as there is no other reproducing instrument that stands on the floor independent of a separate base that sells for less than \$100, and this \$100 instrument is the famous Columbia Grafonola 'Mignonette.' Special records have been more than interesting, the new records by Weber & Fields attracting unusual attention from all Columbia customers. Post card announcements of these records have been sent out to the trade. New records are also on sale by Zenatello, Alice Nielson and Pasquali, which have been enjoyed and appreciated by our music loving patrons. The May Festival in Cincinnati May 7 to 11 was the usual gorgeous musical treat. Ellison Van Hoose and Alessandro Bonci, two of the Columbia Co. popular singers, appeared.

The Dictaphone department came in for its share of a satisfactory month's business in April, C. M. Beckett, of Springfield, placing a number of Dictaphones with the American Seeding Machine Co. of that city, while the Cincinnati manager has placed a large number in several departments of the Big Four railroad offices of this city.

A. W. Roos, one of the Columbia Phonograph Co.'s auditors, was a welcome visitor at the Cincinnati store this month.

NEW AGENCIES IN BALTIMORE.

Rosenstein Piano Co. and the Hub Piano Co., Both Newcomers in the Field, Handle the Full Columbia Co. Line—Governor of Maryland Buys a Victrola—Various Houses Making a Strong Bid for Business—General Happenings of the Month.

(Special to The Talking Machine World.)

Baltimore, Md., May 6, 1912.

Two things characterized the talking machine trade in this city during the past month. The first was the establishment of two new Columbia agencies with two new comers in the talking machine and piano field and the fact that the sales for the month of April showed up better than for the same period last year. The new comers into the local field are the Rosenstein Piano Co. and the Hub Piano Co., who have just gotten started in a business way during the past month. Both of these firms are carrying a full line of Columbia machines and records and are making attractive displays with them.

That the trade as a whole has been in excellent shape during April is shown by the general statements made by all of the dealers. Each and every one of them report good sales and a heavy demand for both the Red Seal and popular air records.

One of the best sales recorded during the month was that of a \$200 Victrola to Governor Goldsborough, of Maryland, by the H. R. Eisenbrandt Sons Co., Inc. Charles E. Stran is in charge of the talking machine department, and he also reports that the Chief Executive of Maryland made an elaborate purchase of Red Seal and popular

records along with the Victrola. Mr. Stran also reports a nice demand for Victrolas from the Naval Academy at Annapolis, Md.

Wm. Knabe & Co. is making a big effort in the talking machine field with its line of Columbia machines and records, and thus far it has had pretty good results. This week one of the most attractive displays consists of thin streamers fluttering around the window display of Columbia machines by means of an electric fan. The arrangement is such as to attract the curiosity of all passers by. S. A. Butler, who possesses considerable artistic ability, is the one who arranges these displays and he is now making preparations to have a miniature camp life display with all the necessary equipment that goes in connection with camp life.

S. A. Dennison, manager of the local branch store of the Columbia Phonograph Co., believes in boosting, and he now offers a fine new hat to each and every one of his salesmen who make sales of \$300 and over within a specified time. All of the men on Mr. Dennison's staff are working hard for these hats and the indications are that all of them will be sporting new head gear before long at the expense of their manager. Mr. Dennison reports a good steady trade for April in all branches of the Columbia line.

E. F. Droop & Sons Co., Victor and Edison representatives, is making enthusiastic reports as to the local trade for April. Manager Roberts says that as far as he can see there are no indications of a let up and he has every reason to believe that a steady demand will be in progress all during the summer. He says that Baltimoreans want talking machines and all the latest records and that they are not bothering very much whether they get them in the summer or in the winter time.

A good month with the Victor line was also experienced by Cohen & Hughes. Manager M. Silverstein states that things have been moving along nicely from a sales standpoint and that he has no complaints to make. He declares that everything looks good for a splendid late spring trade and that he has reasons to believe that there will be more doing than usual this summer.

Thomas Gordon, manager for the talking machine department of the Kranz-Smith Piano Co., and Albert Bowden, manager for this department for Sanders & Stayman, both of which firms handle the Victor and Columbia lines, speak well of trade conditions during April and make similar predictions to those of the other dealers as to the prospects for the late spring and summer season.

A GOOD IDEA OF THE SQUARE DEAL.

I believe in paying for overtime in taking stock, but not for trimming a window or working one or two nights. I had six people out sick at one time and yet I paid them all. It amounted to a great deal of money and I believe that something should be done to regulate the length of the sick period, says a merchant. One stenographer worked for me twelve years and has not been out sick for one day during all this time. I think this sort of service should be rewarded.

POINTERS ON RECORD SELLING.

Some Valuable Suggestions Based on Long Experience, the Basis of a Very Interesting Talk by Raymond Stotler, Manager of the Milner Musical Co. of Cincinnati.

(Special to The Talking Machine World.)

Cincinnati, O., May 9, 1912.

Manager Raymond Stotler, of the Milner Music Co., who is one of the live wires in the Cincinnati talking machine colony, has some views on the selling of talking machines which might be of interest to the general trade. In this connection he said yesterday:

"The realization of the seriousness of the record end of the talking machine business usually comes to a dealer abruptly. He finds that the placing of orders left to intelligent but incapable employes has resulted in far too healthy a stock of records remaining on hand, that is, records least in demand, usually there is a shortage on the popular ones. To eliminate this unsatisfactory condition two things are necessary: First, to reduce the stock on hand, and second, to place the future orders intelligently.

"The solution of the first problem lies with the record salesman, referring to the record sales force as distinct from the talking machine force. The average talking machine salesman is too impatient to sell records—the proposition looks too small and takes too much time, taking the amount of the sale into consideration. He may be right, for time is required to sell records. When a customer has selected a machine let him be turned over to

a skilled record salesman or saleslady, one who has studied the supplement and other data; one who can by intelligent suggestions sell good substantial selections; one who knows what and where your overstock is.

"Every customer should be handed the latest supplement and list of records (not the general catalog), for invariably when the customer turns to the selecting of records he asserts that he wants the 'very latest.' By thus indicating his willingness to assist in this selection the salesman inspires instant confidence. Of course it is necessary to have a complete stock of the latest records, that is, records included in the newest supplement, on hand; for nothing disappoints a customer more than to be informed that some record he imagines he would prefer is 'out' and he is liable to become skeptical. It is an easy matter to keep an entire stock of at least one month's records.

"When a certain selection is called for the salesman should play it. There are then two openings for suggestions that will appeal strongly to the customer. One is the rendition of the particular selection itself and the other is the artist or artists making the record. Victor record No. 17055 (May Supplement) is a good sample. This piano rendition of 'The Rosary' is a 10-inch D. F. record. When called for it offers a splendid opportunity to play three 10-inch S. F. records of the same selection and a splendid chance to sell a \$3 R. S. record. It also offers an introduction to Paderewski, Bachaus, LaForge and others. The salesman who interests his trade in the higher-priced records is usually favored

with the steadiest increase in business. He should be able to explain every record and awaken an interested, intelligent anticipation in his customer before playing the record. The hearing of the \$3 Red Seal record of 'The Rosary' acquaints the customer with that splendid artist, Mme. Schumann-Heink. The salesman then has this interesting singer and all of her beautiful records in the limelight. The customer will get a splendid value in any of them. Does the salesman know where the over-stock is in this series? In order to make the above effective the new supplements must be studied by every clerk each month and all records suggested by the new list noted.

"By going carefully over past sale records and reorders the demands of your trade can be learned. You have, no doubt, been surprised already to find that the largest portion of your records sales has been confined to comparatively a few selections. Do you sell mostly minstrel and march song records? Does your trade prefer standard instrumental and vocal numbers? Which artists do they call for most? These are things that should be known.

"Before placing a new order it is not bad policy to visit the sheet music departments in several stores in your city and learn from the sales people there what the 'hits' are, which ones they are pushing, how the sales on certain 'hits' are holding up, etc. You will find that in each sheet music department the big sheet music publishers who control them concentrate and push one 'hit' at a time, furnishing the theaters with slides, singers with professional copies, etc. This might be a good suggestion for the record department in advertising and pushing the new records each month; it would certainly help solve the problem for the talking machine dealer.

"The artists and theatrical attractions that are to visit your city the coming month must also be considered. They mean an unusual opportunity to attract customers and to aid in anticipating a demand. If these few things are carefully remembered you will find not only the good sellers in stock in the middle of the month when the demand comes, but also at the end of thirty days an even and well-balanced stock of new records."

INDIAN MUSIC FOR HISTORY CLUB.

The City History Club of New York held its annual meeting at the Colony Club last Wednesday evening at 8 o'clock. Mrs. A. Barton Hepburn, Mrs. Malcolm Stuart, Dr. George F. Kunz and Reginald Pelham Bolton reported the year's work. Dr. Joseph K. Dixon, leader of the expeditions sent out by Rodman Wanamaker to study and record the manners and customs of the North American Indians, delivered an illustrated lecture on "The Farewell of the Chiefs." Incidental Indian music was played on the talking machine.

TALKING MACHINE MOTORS HYDRA-SYSTEM ARE Without Competition

In case of breakage of the spring or damage on the spring box the latter can be exchanged by a child within 30 seconds, thus practically avoiding any interruption in the use of the machine.

FROM OUR EUROPEAN HEADQUARTERS

1 GRESHAM BUILDINGS, BASINGHALL STREET, LONDON, E. C., W. LIONEL STURDY, MANAGER.

While the Coal Strike Troubles Are Over Business Is Still Dragging Somewhat Throughout Great Britain—Manufacturers Planning to Spend Large Sums in Publicity During the Next Few Months—If the Dealers Co-operate This Should Act as a Great Stimulus in Opening Up Trade—Columbia Phonograph Co.'s London Factory Totally Destroyed—Bulk of the English Record Matrices Saved—Factory to Be Rebuilt—Regulations of Copyright Law—Gramophone Co. Urging Dealers to Develop Summer Trade—Great Demand for Columbia-Rena Ragtime Music—German Patent Law Changes—News of the Month Chronicled by Our Correspondent.

(Special to The Talking Machine World.)

London, E. C., May 5, 1912.

Fortunately the coal strike is now a thing of the past, but it has left with us a sufficiently unpleasant state of things to warrant the belief that its trade-disturbing effect will be noticeable throughout the next month or so, particularly in relation to commodities other than those which constitute absolute necessities. But all circumstances considered, and given an absence of labor disputes in the immediate future, I believe that talking machine sales, while perhaps not up to the average of last summer, will, however, make a fair showing; this in view of the optimistic and energetic spirit which seems to pervade the ranks. The leading manufacturers, too, have planned to spend a substantial sum in publicity during the next few months, and things will doubtless shape out not unsatisfactory, especially if dealers and factors co-operate and adopt the many excellent suggestions propounded by the manufacturers.

Columbia Co. Factory Burned.

As reported elsewhere, the Columbia Co. has unfortunately experienced perhaps the most disastrous fire known in the history of the trade this side. Practically the whole of their up-to-date factory was razed to the ground. But even a disaster of such magnitude has its silver lining, for it must have been a source of keen gratification to the Columbia officials to be the recipients not only of sympathy from the whole trade, but to receive practical offers of assistance from their competitors. It is eloquent testimony of the fine spirit of camaraderie which exists among record manufacturers, despite the keenness of competition. The cause of the fire, by the way, is unknown. Elsewhere is published a statement as to the damage to matrices, etc.

Final Phase of Copyright Act.

The Board of Trade Statutory rules and orders concerning the collection of royalties have now been issued, and an advance verbatim report is given hereunder. Leading members of the record manufacturing fraternity have accepted the official plans with equanimity, confident in the belief that the protective measures which they have adopted will effectively safeguard their interests.

It is asserted that some of the clauses embodied in the following regulations will need to be interpreted liberally, and not always in conformity with the strict letter of the law. But as to that time alone can determine. Here is the official memorandum which I received from the Board of Trade:

Preliminary.

1. These Regulations may be cited as the Copyright Royalty System (Mechanical Musical Instruments) Regulations, 1912, and shall come into operation on

NOTICE.

2. The notice required by Section 19 (2) of the Copyright Act, 1911, shall contain the following particulars:

- (a) The name and address of the person intending to make the contrivances.
- (b) The name of the musical work which it is

intended to reproduce, and a description sufficient to identify it.

(c) The class of contrivance on which it is intended to reproduce the musical work (e.g., whether discs, cylinders or music rolls).

(d) The ordinary retail selling prices of the contrivances; the maximum number which, until further notice, it is intended to make for sale at each price and the amount of the royalty payable on each contrivance in respect of the musical work.

(e) The earliest date at which any of the contrivances will be offered for sale.

(f) If any other work is to be reproduced on the same contrivance with the musical work specified in accordance with paragraph (b), the name of such work.

3. The notice shall, not less than 14 days before any contrivances on which the musical work is reproduced are offered for sale, be sent by registered post or published by advertisement as follows:

(a) If the name of the owner of the copyright, or his agent for the receipt of notice, is known or can with reasonable diligence be ascertained, the notice shall be sent to such owner or agent at his address, if known (if such address is not known and the musical work has been published) at the address of the publisher.

(b) In any other case the notice shall be advertised in the London Gazette; such advertisement shall give the particulars required by paragraphs (a) and (b) of Regulation 1 and shall also state an address from which a copy of the notice described in Regulation 1 may be obtained.

4. If at any time it is desired to make additional copies of the contrivances in respect of which notice has been duly given in accordance with Regulations 1 and 2 further notice shall be given in the same manner, but as regards the particulars required by paragraphs (a), (b), (c) or (f) of Regulation 1, it shall be sufficient in such further notice to refer to the previous notice and to state that the particulars given herein remain applicable, if such is the case.

Payment of Royalties.

5.—(a) Unless otherwise agreed, royalties shall be payable by means of adhesive labels purchased from the owner of the copyright and affixed to the contrivances.

Adhesive labels of the required denominations shall on demand be supplied by the owner of the copyright, from some place within the United Kingdom, at a price equal to the amount of royalty represented thereby, and subject to these regulations no contrivances shall be delivered to a purchaser until such label or labels denoting the amount of royalty payable have been affixed thereto.

(b) If the owner of the copyright neglects or refuses to supply within a reasonable time after demand adhesive labels of the required denominations in cases where royalties are payable by means of labels, the contrivances specified in the notice may be delivered to purchasers without having labels affixed thereto, and the amount of the royalties shall be a debt due from the person making the contrivances and payable on demand made by the owner of the copyright.

(c) When royalties are by agreement payable in any other mode than by means of adhesive labels, the time and frequency of the payment shall be such as are specified in the agreement.

(d) The adhesive label supplied as aforesaid shall be an adhesive paper label, triangular in shape, each side being not greater than $\frac{3}{4}$ inch in length.

Ordinary Retail Selling Price.

6. The ordinary retail selling price of any contrivance shall be calculated at the marked or catalogued selling price of single copies to the public, or, if there is no such marked or catalogued selling price, at the highest price at which single copies are ordinarily sold to the public.

Inquiries.

7. The inquiries referred to in Section 19 (5) of the Copyright Act, 1911, shall be made by letter sent by registered post to the owner of the copyright at his ordinary address and containing:

(a) A statement of the name of the musical work in respect of which the inquiries are made, and a description sufficient to identify it.

(b) A statement of the name and address of the person making the inquiries.

(c) An allegation that a contrivance has previously been made by means of which the musical work may be mechanically performed, with a description of such contrivance.

(d) An inquiry whether the contrivance so described was made with the consent or acquiescence of the owner of the copyright.

8. The prescribed time for reply to such inquiries shall be 14 days after the date when the letter making the inquiries would be delivered in the ordinary course of post.

Interpretation.

9. In these Regulations the expression "owner of the copyright" has the same meaning as in Section 19 (2) of the Copyright Act, 1911.

Universal Copyrights, Ltd.

As the outcome of the meeting of talking machine manufacturers, previously reported in these columns, a new company has been formed, having for its object the protection of the rights and interests of those who are responsible for the payment of the royalties. The company, which is a private one, is registered under the title of Universal Copyrights, Ltd., with a nominal capital of £10,000 in £1 shares, and its registered office is at 32, Poultry, E.C. The subscribers, who comprise practically all the record manufacturers, have appointed Sir George Croydon Marks, M.P., chairman, and Paul H. Cromelin (National Phonograph Co., Ltd.), and Louis Sterling (Columbia Phonograph Co., General), as directors. Hugh Cumming Rabbidge is the secretary.

In the memorandum of association a summary of the objects of the company as set forth are in part:

3.—(A) To acquire copyrights, musical, dramatic, artistic, etc., and to sell, lease, or deal with the same.

(B) To enter into agreement with any person or firm in any part of the world for dealing with or exploiting the right of production anywhere.

(C) To act as publishing agents and to undertake the collection of royalties, etc.

(D) To act as agents between publishers or authors and mechanical, etc., reproducers.

(E) To publish and produce any literary, etc., work.

(F) Foreign registration.

(G) To protect members against infringement of copyright, etc.

(H) To procure information for members.

(I) To consider questions relating to copyright, and to promote and oppose legislation, etc.

International Copyright.

In the House of Commons, in reply to Sir G. Baring, Mr. Buxton said that the Berlin Copyright Convention of 1908 had not yet been ratified by his Majesty's Government. Of the 16 countries which were members of the Berne Copyright Union at the date of the International Conference held at Berlin in 1908, 12 had up to the present ratified the Berlin Copyright Convention.

Dealers Form Society Against Price Cutting.

The query as to whether a trader is entitled to sell goods below the price stipulated by the manufacturer remains to all intents and purposes a matter of opinion, and sometimes a matter of circumstances. There are those who hold that freedom in this regard is imperative to commercial existence, because while not always desirous of

(Continued on page 43.)

underselling, it is a matter of necessity when the trade locally is not cut up by competitors as to render maintenance of full prices absolutely useless. Many straight-dealing talking machine retailers are in this unhappy position. They have to stand by and see their trade decline, and pass to the benefit of local competitors who do not hesitate to offer the public records at prices which leave little or no margin of profit, hoping, however, to make good on other lines. A sprat to catch a mackerel, a kind of fishing which, figuratively speaking, more often than not destroys the net in the finish. In the meantime your hard-working dealer finds his endeavors to maintain prices impossible. He, too, must cut in order to save the fast departing vestige of what was once a prosperous business. It is a really deplorable situation, and the remarkable thing is that the manufacturers' efforts, such as they are, do not indicate the slightest check on this ever-growing evil.

Things have reached such a serious, not to say grave, aspect that certain of the dealers themselves have moved in the matter, with the result that a society has been formed under the style and title of the British Gramophone and Phonograph Dealers' Protective Association.

The chairman is W. E. S. Wilcox, 33, Oxford street, W., and Henry Seymour, Kelvin House, 1, Richmond Crescent, London, N., has been appointed honorary secretary and treasurer pro tem.

As set forth in the provisional memorandum, the objects and rules are as hereunder:

Objects.—To vindicate the principle of price maintenance in the sale of gramophone and phonograph goods; to prevent "cutting" and other forms of unfair competition, and to protect the interests of the trade generally.

What May Be the Real Object.

Doubtless the real object of the association, always providing that the membership is sufficiently strong, is to bring pressure upon the manufacturers

with a view to forcing them to take more vigorous action against known price-cutters. Alone, I have no great hopes of the association ever reaching that strength and influence so necessary to the successful carrying out of their plans, but if they can only obtain the active co-operation of the manufacturers then their future should be a brilliant one. The manufacturers are the fountain source of supply, and as such they and they alone should devise and put into effect measures of sufficient practicability to ensure control of their output. Perhaps something of this nature may result from the action of the little gallant band of dealers, who have at any rate shown earnest recognition of the necessity for immediate action against those who if allowed to continue their operations unhampered much longer will surely drive all respectable dealers out of the business.

Details of the Columbia Co. Fire.

An exciting and destructive fire broke out on Saturday morning, April 20, in the factory of the Columbia Phonograph Co. at Bendon Valley, Earlsfield, London. The firm occupy a range of buildings of two or three floors, covering an area of something like 150 feet by 150 feet, and fortunately, when the alarm was given, all the men and girls on the premises, numbering about 200, were able to get safely out. A grinder named William Cole, however, was unfortunately burned on the face and arms, but this was the only case of injury. The outbreak was first discovered in a room known in the works as the "Black Hole," where mixing and grinding processes were carried on. Spreading quickly to the inflammable materials used in the manufacture of records, the fire developed too rapidly for the staff to cope with, and the alarm was given. On the arrival of the brigade in strong force, hydrants and steamers were set to work at every possible point, but the fire had by this time gained such a hold that the whole place seemed doomed. By strenuous work the firemen were able

to restrict the area of the damage to about two-thirds. In the remaining portion effective work was performed by the members of the London Salvage Corps. The loss of valuable machinery and materials, it is said, will run into many thousands of pounds sterling.

Statement by the Company.

We are glad to learn from the company that they believe the bulk of the English record-matrices were saved. They have issued a notice to the trade saying that pending the rebuilding of the factory, they are making temporary arrangements for manufacturing and hope to be in a position in a fortnight or so to start delivering records again. It will, however, be some weeks before any machine deliveries can be made.

Spurring Dealers to Summer Activity.

"A word in time" is the slogan of the Gramophone Co.'s initial appeal to their dealers regarding the opening-up of summer trade. They promise dealers an extra amount of advertising support and many other advantages. And there is little doubt but that, given normal conditions in the land, they will conjointly make things hum.

If the excellent bill of fare offered each month has any bearing in this regard, and who can doubt it? there can be no question but that the program for May is extra special and will considerably assist to stimulate dealers to renew their efforts towards ensuring a record trade this coming summer. Signor Franz, the leading tenor of the Paris Opera House, is the newest acquisition. He has signed an exclusive contract to record only for "His Master's Voice." The complete list of titles for May is as follows:

"Egmont Overture" (Beethoven), New Symphony Orchestra; "La Bohème" fantasia (Part I) (Leoncavallo), and "La Bohème" fantasia (Part II) (Leoncavallo), Mayfair Orchestra; "Mickey's Birthday," two-step (Joyce), and "Dreaming,"

Gramophone Co. Dividend Declared.

An interim dividend at the rate of 10 per cent. per annum, less income tax, on the ordinary shares for the past quarter, has been announced by the Gramophone Co., Ltd.

New Offices for National Gramophone Co.

The National Gramophone Co., Ltd., has announced their occupation of new offices and recording rooms at 15 and 17 City Road, London, E. C.

New Company.

Whiner Record Co., Ltd.; capital £100 in £1 shares. Disc record manufacturers. Registered office, Willowbrook Grove, Camberwell, London, S.E.

Copyright Protective Society (Mechanical Rights), Ltd. Limited by guarantee. No address given.

A Tall Yarn.

An American lady who did not wish to receive a newspaper representative sent her gramophone to speak to him instead. This clever idea is not likely, however, to appeal here, as there is still a something in the timbre of a gramophone which does not adequately represent an English lady's voice.

Nevertheless, says the *Bystander*, there is a great deal to be said for substituting a gramophone for oneself on certain occasions. If some dull people are calling, for example, or the tax collector, and you don't personally want to meet them, but you want to say something to them that will prevent them calling again, what could be more useful?

There are lots of golfers we have met who would be far happier if they sent a gramophone to do a round for them instead of going themselves. The gramophones would, in some ways, be more effective, too, for you can't really always say what you want to when you are hot and annoyed.

Change in German Patent Law.

From time to time attention has been drawn to the fact that there is a need for alteration in the existing laws of this country, so that invention may be encouraged. It is also worth noting here that during the year a change was made in the German patent law, which now brings it into line with that existing in this country. A German patent can now be revoked if the working is being effected either exclusively or principally outside the German Empire or its colonies.

Announces Change of Address.

Dans Clarke, maker of the famous Flex diaphragm, announces a change of address. His new quarters are located at 14 Lorne Grove, Fallowfield, Manchester, England.

Feature "The Pink Lady" Records.

As a foreword to their supplementary list of titles for June the National Phonograph Co. refer to the records they have issued of selections from that successful musical comedy, "The Pink Lady," which is meeting with an exceptionally hearty reception at the Globe Theater, London. The selec-

INJUNCTION REFUSED TO NATIONAL PHONOGRAPH CO.

in Its Action Against the National Gramophone Co., Ltd., of Great Britain, to Restrain the Latter from the Use of the Name "National"—Defendant's Claim That They Only Desired and Intended to Trade in Gramophones, Upheld by Court—Some Interesting Points Raised in the Testimony Offered in Connection with the Trial of the Suit.

(Special to The Talking Machine World.)

London, Eng., May 6, 1912.

In the Chancery Division on Wednesday, 24th April, before Mr. Justice Eve, the action by the National Phonograph Co., Ltd., v. the National Gramophone Co., Ltd., was dismissed with costs. The plaintiffs claimed an injunction restraining the defendant company from carrying on under the name of the National Gramophone Co., Ltd., the business of manufacturing, selling, or dealing in talking machines and accessories thereto, or any other business carried or likely to be carried on by the plaintiff company. The defense was that they only dealt in and intended to deal in gramophones and gramophone records, in accordance with the Packman patents acquired by them, whereas the plaintiffs or the American company for whom they were agents, only dealt in phonographs and phonograph records. The defendants further denied that the plaintiff or the American company had commenced to manufacture or deal in gramophones or gramophone records. They declared that the plaintiff's goods were always known to the trade and to the public as Edison goods, and they denied that confusion was likely to arise.

The plaintiffs were represented by Mr. E. Clayton K.C., and Mr. Cyril Hartree (instructed by Mr. R. O. Reed) and the defendants by Mr. P. O. Lawrence K.C. and Mr. D. M. Hogg (instructed by Messrs. Roger Sadd & Stollard). The plaintiffs case occupied three days. Mr. E. Clayton K.C. opened the case. The plaintiff company, he said was registered by Messrs. Young & Sinclair, in 1902 without authority of the American Co., called the National Phonograph Co. of America. In 1902 Sir George Croyden Marks as attorney for the American Co. brought action against Messrs. Young & Sinclair to restrain them from using the name of National Phonograph Co., Ltd. In that action an affidavit was filed by Mr. Young, in which he swore that having heard other persons were about to register the company with the plaintiffs' title he wrote to the plaintiff company at Antwerp to know whether they had any objection to his registering the title of National Phonograph Co., Ltd., and said that unless he heard to the contrary by return, he would proceed to do so; and not receiving any reply after waiting a month, he registered the company for the protection of plaintiff company and that he was ready and willing to transfer to the plaintiff company the title and registration upon reasonable and proper

terms. That action was settled by the plaintiff company paying costs of action and registration and taking over the benefit of the company registered by Mr. Young.

The plaintiff company were now sole agents for the American company. The defendant company was registered in June, 1911, and Mr. Lewis Young became a party to the contract for sale to the defendant company, as trustee. Counsel suggested that the title of the defendant company was chosen at the instigation of Mr. Lewis Young and that this was a repetition of what had occurred in 1902.

Continuing plaintiffs' counsel stated that the plaintiff company was commonly called the National Co. Their goods were known as genuine Edison goods, but it was very common to speak of them as "National" goods. And he argued that if he was able to satisfy the court that the title of defendant company was chosen with intent to deceive or that the use of such title was calculated to deceive or probably lead to confusion, the plaintiffs were entitled to succeed.

Plaintiffs' counsel further explained that the plaintiff company had up to the present time only dealt in phonographs and phonograph records, but that for some time past they had been experimenting in gramophones and gramophone records and that in July, 1911, an announcement was made in the Talking Machine World that it was the intention of the American company to introduce into the market, gramophone disc records. And he suggested that the title of defendant company was adopted for the purpose of obtaining the benefit of the plaintiffs' good will.

Sir George Croyden Marks was called. He said that since 1902 he had been attorney for the American Co. The American Co. dealt in phonographs and cylinder records, but not in disc records. He explained that the only distinction between disc and cylinder records was the shape of the article and that Mr. Edison's patent covered both records. The words "phonograph" and "gramophone" had no particular meaning except in relation to talking machines and the words were interchangeable among the public. The American Co. had been manufacturing disc records ever since November, 1910, and in October, 1911, they were ready for the market.

By Mr. P. C. Lawrence K.C. cross-examining: The plaintiff company only supplied the trade and the trade knew the difference between phonograph and gramophone.

tions are "My Beautiful Lady," sung by Miss Elizabeth Spencer; "By the Saskatchewan," by Frederick Weld and chorus, and "The Pink Lady" selection, by the American Standard Orchestra.

Attention is also directed to the June Amberol Concert Records, which, by the way, have found much favor this side. In the list under notice two new and exclusive Edison artistes deserve mention. Eleonora de Cisneros has sung the contralto roles in almost every important opera, and the Hoffmann Quartet, which has acquired a very high reputation in the musical world, will be recognized as the representative instrumental quartet of Boston, U. S. A. The former artiste has recorded the famous "Ben Bolt," and the latter are responsible for "Molts Lento," quartet, Op. 17, No. 2 (Rubenstein). Other records in this supplement are as follows: *Edison Amberol Records*—"Regimental Marches" (No. 1, Brigade of Guards), National Military Band; "Meet Me To-night in Dreamland" (Friedmann), Glandon Roberts; "Keep on Toddlng Along" (Godfrey and Williams), Billy Williams; "God Save Ireland" (T. D. Sullivan), David Brazell; "See What Percy's Picked Up in the Park," Miss Rose Hayes; "When Your Luck Is In" (Ellerton and Mayne), Stanley Kirkby; "The Charge of the Light Brigade" (Lord Tennyson), (recitation), Bransby Williams; "March of the Cameron Men" (Campbell), T. F. Kinniburgh; "Silly Ass" (David and Arthurs), Jack Charman; "Selection from Iolanthe" (Sullivan), H. M. Irish Guards Band; "The Count of Luxemburg"—"Waltzes" (F. Lehar), American Standard Orchestra; "God Is Love, His Mercy Brightens" (C. Kreutzer), Miss Agnes Kimball, Reed Miller and Frank Croxton; "Happy Days" (A. Strelezki), Venetian Instrumental Trio; "Do You Remember the Last Waltz?" (Bennett Scott), Irving Gillette; "So So" polka (xylophone duet), (P. Fahrback, Jd.), Chas. Daab and William Dorn; "Say Au Revoir But Not Good-bye" (H. Kennedy), Will Oakland and chorus; "Boston Commandery March" (T. M. Carter), Edison Concert Band, and others.

Ragtime the Rage.

Abundant evidence of the present demand for

ragtime music is the issue of a special supplement of Columbia-Rena records embracing four new ragtime hits—and this exclusive of the double-record in the current monthly supplement which gives us the "Mysterious Rag" and the "Chanticleer Rag." The ragtime numbers on this special Columbia-Rena supplement include a band record of "Alexander's Ragtime Band" and "That Mysterious Rag," and a vocal record of the big ragtime number from which the Empire Theatre revue takes its name, "Everybody's Doin' It." Opportunity is taken to enumerate all the previously listed ragtime numbers on Columbia-Rena, and we may be sure that the dissemination of this timely supplement and the records it offers will only serve to intensify the ragtime boom.

One String Fiddle

STROH VIOLS

VIOLIN, VIOLA, ETC.

The mellow and matured tone of these instruments, which are constructed largely of aluminum, yet possess none of the characteristics of the gramophone or wind instrument, is only one of its many points which are fully set out in an illustrated booklet which will be mailed free on request to the sole makers.

Violin

He admitted that some hundreds of companies were registered with the word "National," but he claimed the exclusive right to the use of the word "National" in connection with talking machine goods. He would not object to a title, such as the National Talking Machine Co. Plaintiff company had never used the word gramophone in connection with their goods. The plaintiffs never referred to their goods as "National" goods.

They were emphasized as Edison goods, with the trade-mark "Thomas A. Edison." Counsel put in several advertisements and catalogs issued by the plaintiff company, in which their goods were described as Edison goods, and the company as the Edison Co. He also put in cylinder records upon which the name of the National Phonograph Co. did not appear at all, but the name Edison or signature "Thomas A. Edison" appeared on every record.

Sir George agreed that the gramophone could not be taken for the phonograph and that the gramophone records could not be used for the phonograph. He disagreed with the opinion of Mr. Justice Parker in the gramophone case and stated that the general public did not distinguish between gramophone and a phonograph. Witness' attention was drawn to the statement appearing in the Talking Machine News in September, 1911, where it was stated that any announcement as to the introduction of gramophone records by the plaintiffs was premature and unauthorized.

Sir George contended that Mr. Lewis Young registered the plaintiff company before there was any time for a reply to be sent to the letter he had written; the company, however, was not registered for a month after the letter. He did not make any affidavit in response to that filed by Mr. Young in the proceedings referred to and the action was settled by the payment of Mr. Young's costs and the expenses of registering the company.

Mr. Cromelin, managing director of the plaintiff company said that since May, 1911, he had known that the American Co. had been engaged in the manufacture of disc records. He had heard rumors to this effect before May. No samples had ever been shown in this country. The word "National" had become a distinctive part of their title. They had spent millions in advertising (presumably dollars) and not one per cent. of the public knew the difference between phonograph and gramophone and the only difference was that one was designed for a disc record and the other for a cylinder record.

Cross-examined by Mr. G. M. Hogg: The new departure in disc records was an interesting event in the trade. No notice appeared in any trade journals before July, 1911. His happening to know before that date was the result of making special inquiries. There were no disc machines or disc records manufactured by the American Co. anywhere on the market. He did not know that a "National" record was already on the market and had never seen before the "National" record, which was now shown to him in court. He had been in this country since June, 1911.

Plaintiffs advertised their goods as Edison goods and he could not give any instance where the goods were advertised as "National." The dealers also advertised as the National Phonograph Co., and being the only company with the word "National" it had become convenient to call the company the National Co. Witness believed that the plaintiffs were entitled to the exclusive right to use the name "National." The plaintiffs' records were known to the public as "Edison Records" and nothing else and that was what they wished. The trade generally understood the difference between the gramophone and the phonograph and were familiar with the plaintiffs' goods. They were not genuine unless the signature "Thomas A. Edison" appeared thereon.

Mr. J. G. Murdoch, managing director of J. G. Murdoch & Co., Ltd., Farringdon Road, E.C., said they always referred to the plaintiff company as the "National Co." They always called their goods the "Edison product." They were not called by any other name that he was aware of. He first heard of the defendant company at Leipzig Fair in March last. Many months before May, 1911, Mr. Graf told him that the American Co. were manufacturing disc records. This had been discussed for two years, but he had not seen any on the market yet.

Cross-examined: He had never heard the plaintiff company called the Edison Co.

Mr. A. Ficker, manager of the new Polyphone Supply Co., Ltd., of 2 Newman street, said he had ten years experience with the plaintiff company. In talking of plaintiff company he would simply say "National People" or "National Goods." He had heard in September, 1910, that plaintiff company were bringing out a disc machine. He did not think it had been widely discussed, because there were no such goods to offer to the public.

Cross-examined: He knew what an Edison record was; and that no goods were genuine without the trade-mark "Thomas A. Edison." The goods of the company were described as Thomas A. Edison or Edison goods. If a dealer ordered Edison records he would inquire if the dealer meant an Edison Bell record, Thomas A. Edison record, or a National record. Edison goods were confused with Edison Bell goods. He had never seen any document in which plaintiffs' goods were described as National goods. They advertised them as Thomas A. Edison goods.

Mr. A. W. Gamage, of A. W. Gamage & Co., Ltd., said

his company dealt in all the different makes of gramophones and phonographs and they had dealt with the National Phonograph Co. from the beginning. He had got to know it as the National Phonograph Co. He also knew it as the Edison Co. The goods were generally spoken of as the National Phonograph goods or National goods. The word phonograph was not always put with the title as it was rather a long word. If he heard the National Co. mentioned he would think it referred to the National Phonograph Co. with reference to Edison products.

Plaintiffs' goods were spoken of a "National" to distinguish them from "Edison Bell." He heard of defendant company some months ago.

Cross-examined by Mr. P. O. Lawrence. He did not sell in the shop himself, except that he might do so occasionally. He knew Edison goods, but the words "National" generally appeared thereon. He would not be surprised if his salesman did not know what record was referred to if he were asked for a "National" record. The gramophone was more popular than the phonograph. His firm sold more of the former.

Mr. R. J. Ross, manager for Messrs. Stockalls, Clerkenwell Rd., E. C., also gave evidence in support of plaintiffs' case.

Cross-examined he did not read the Talking Machine News, but agreed it was a well-known paper. Messrs. Stockall always used the word "Edison" in their advertisements relating to Edison goods. They did not use the words "National" and their factors and dealers advertised in the same manner. It was also well known to the trade and to anyone who dealt in plaintiff company's goods that no goods were genuine unless they bore trade-mark "Thomas A. Edison." He invoiced Edison goods as standard or Amberol records. He knew the distinction between gramophones and phonographs and that the plaintiff never supplied gramophones.

Mr. Wilcox, 23 Oxford street, retail dealer, and Mr. Dawson, manager of Messrs. Brown Bros., gave similar evidence, as did Mr. Brian, of Croyden, and C. B. Woolton.

Mr. A. I. Paskell, carrying on retail businesses as Paskell's & Key's, gave evidence to the same effect.

Mr. Cyril Hartree having addressed the court in support of the plaintiffs' case.

Mr. P. O. Lawrence, K.C., submitted that there was no case for the defendants to answer. In his argument he pointed out that no evidence had been given in support of the allegation that Mr. Lewis Young had improperly registered plaintiff company in 1902, or that the registration of the defendant company was a repetition of what had occurred in 1902. He pointed out that Mr. Young had given notice to the American Co. of his intention to register the National Phonograph Co., Ltd., for their own protection and did not proceed to register it for a month, after notice was given. After the action was brought against Mr. Young the latter offered to give the plaintiffs' the benefit of registration, which was accepted, the plaintiffs' paying costs of the action and of the registration.

Mr. Lewis Young had no connection whatever with the defendant company and took no part in its incorporation. He was a stranger to all the parties interested in the defendant company, except Mr. Packman, the patentee. The only evidence connecting Mr. Young with the defendant company was that he acted in a nominal capacity, and he so acted on a request of Mr. Packman and no other person could so act.

Dealing with the allegation that the defendants were aware that the plaintiffs intended to introduce gramophone records upon the English market, and adopted the title National Gramophone Co., Ltd., with the object of acquiring the plaintiffs' good will, counsel pointed out that defendant company was registered in June, 1911, and the title must have been fixed some time before that date. While the first intimation of the plaintiffs' intention to use gramophone discs appeared in an American paper, in the following July. The plaintiffs up to the present time had not introduced gramophone discs to the market and it was not known whether such records were to be introduced at all. Counsel further pointed out that the plaintiff company were referred to in the trade journals as the Edison Co.; that they were known in the trade as the Edison Co., and that the records were always advertised both by the plaintiffs and their dealers as Edison records and were not genuine unless the trade-mark Thomas A. Edison was upon them, while the defendants' records were prominently marked with the title National Gramophone Co., Ltd., and the trade name Marathon had been applied for with the object of placing it upon their goods. Finally plaintiffs only dealt in phonographs and phonograph records, while the defendants only dealt with gramophone records, and the products of one company, not possibly be mistaken for the goods of the other company.

Mr. Justice Eve intimated that whatever his opinion might be of the plaintiffs' case, having regard to the view of the Court of Appeal, he was not prepared at the present stage to withdraw the case; but thought the defendants should proceed.

Mr. Lawrence then called Mr. P. J. Packman, the inventor of the patent gramophone record acquired by the defendant company. In the course of his evidence he

(Continued on page 46.)

Don't Buy Needles That Damage Records

Bad Needles

Grain of

Condor Needles

When a needle is running a record, the friction causes the polished surface of the needle to be taken off, while its interior (grain) is exposed and touches the sound waves.

Consequence:

The poorer the polishing and rougher the grain, the more the sound waves are injured!

Only *Condor Needles* are warranted to have always the highest and most perfect polish, smoothest grain. Using them means:

Finest Reproduction, No Ruin of Record.

The largest manufacturing plant in the world devoted exclusively to the manufacture of Master-Waxes and Master-Blanks for

Gramophone and Phonograph Recording

Sole Manufacturer of **Wax "P,"** the best recording material for Berliner-cut.

stated he was one of the vendors of the company of the improvements of the patent. He said that gramophones were more popular than phonographs, and larger sales replaced this preference. The witness proceeded to explain that the title of defendant company was fixed in April, 1910, by himself and his co-vendors, and he told how the title came to be decided. The word gramophone was chosen instead of the general term talking machine, as the former denoted the class of goods to be dealt in by the new company. First of all he suggested "International" but this was objected to by the other parties interested, because it was the intention to sell the foreign rights and it was thought more appropriate to use the word "National." The witness stated that he knew Mr. Young about 9 years ago, but had only seen him six or seven times during the nine years. Mr. Young had taken no part whatever in fixing the name of the defendant company, or in its registration. At this stage Mr. Clayton, K.C., intervened and stated that his clients had instructed him that raving regard to the views expressed by the learned judge, they did not desire to continue the action and accordingly withdrew.

Mr. Justice Eve thereupon directed that the action should be dismissed with costs.

National Co. to Change Its Name.

As a direct result of this case I am given to understand that the National Phonograph Co., Ltd., will trade under a new name in the near future. It has in contemplation the adoption of some such title as the Thomas A. Edison Co., Ltd.

GRAND RAPIDS DEALERS ORGANIZE.

Talking Machine Men Form Association for Mutual Protection.

(Special to The Talking Machine World.)

Grand Rapids, Mich., May 5, 1912.

Talking machine dealers of the city met at the Livingston one evening recently and formed a talking-machine association for the purpose of mutual benefit and protection. The Friedrich Music house will be headquarters of the association and J. A. J. Friedrich will act as temporary chairman, with John Bodbyl secretary.

A collection system and exchange bureau for machines will be installed with the following firms affiliated: J. A. J. Friedrich, Young & Chaffee Furniture Co., Heyman Co., John Bodbyl, Winegar Furniture Co., L. E. Phillips, Herrick Piano Co. and M. M. Marrin & Co. Meetings will be held monthly.

REPOINTING OLD NEEDLES.

Ten thousand dollars will be put into the business of repointing worn talking machine needles by a Japanese firm at Los Angeles, Cal. Yoichiro Sugimura and Y. Teraoka are in receipt of letters patent on a new invention for this purpose and the company will be incorporated immediately with the above mentioned capital.

Take the Trouble—It Will Pay You. One of the secrets of the success of this business is the general willingness to "take the trouble"; to do each detail in the best, possible manner.

PATENT APPLIED FOR.

Standard Loose Leaf Holders for Disc Records

Each leaf affords a separate compartment for the perfect protection and preservation of the record. By our loose leaf method records can be arranged to suit the user, making them easy and quick to find. Leaves can be added at any time, and in any quantity desired. Name of record read at a glance. Write for dealers' terms and discounts.

THE SOUTHERN CALIFORNIA TRADE.

General Reports of Trade Conditions Most Satisfactory—Columbia Grafonolas for Pasadena Music Co.—New Company to Manufacture Device for Illustrating Disc Records Automatically—An Instance of Chinese Politeness—News from the Smaller Towns.

(Special to The Talking Machine World.)

Los Angeles, Cal., May 5, 1912.

Many dealers in the city and the surrounding country report that trade for the month of April was very gratifying in all grades of machines and records. The new Columbia Princess is showing itself to be a good seller for such a short time on the market.

Los Angeles can be proud of the fact that it is again the chosen city for the great gathering of Shriners, who are now gathering and whom we so cordially welcome.

Ed. Borgum, who has spent many years along the coast in the talking machine line, is now engaged in the manufacturing business of the new improved lift and force pump.

The Pasadena Music Co. has recently installed a complete line of Columbia Grafonolas. Mr. Campbell, who is in charge, is an enthusiastic admirer of the table grafonola. He and his chief assistant, Harry Vejer, have already sold quite a number of these instruments in Pasadena.

The San Diego branch of the Southern California Music Co. is enjoying an excellent boom in the talking machine line. This is due to the untiring energy and hard work of Mr. Dible, who is manager of this department. His courteousness and endeavors to please commend themselves to all who meet him.

A. Friedman, distributor of the Hiles & Thahammer automatic electric record-stop, reports a good demand for this specialty.

The Eilers Music Co. has added several more sound-proof rooms to its talking machine department, thus being able to accommodate more customers.

W. A. Voltz, the representative of the Thomas A. Edison (Inc.), is making calls on dealers of the suburban towns, both in the valley and along the coast.

A new company has been incorporated under the laws of California called the International Phonoscope Co., to manufacture an instrument that can be attached to any disc talking machine for the purpose of illustrating disc records automatically by means of colored or plain film slides, made up on the order of the moving picture film. This instrument has aroused a great deal of interest among all who have seen it operated, which gives it the name of a perfect song illustrator. It will be moderate in price. Henry Seeman is the inventor.

C. W. Phillips, representing the Thomas A. Edison (Inc.), was in Los Angeles for several days demonstrating the Edison Home Kinetoscope, which he had no trouble convincing dealers of its merits as to popularity and success.

H. B. Hinman, the well known manager of J. B. Brown's talking machine department, has engaged the services of Mr. V. B. Chatter, formerly of Fletcher Bros. of Vancouver, B. C. He is well versed in both Victor and Columbia lines.

The Southern California Music Co. has been successful in securing the jobbing agency for the Edison Home Kinetoscope. A department has been fitted up with dark rooms with all the comfort possible for the demonstration of this special machine. O. A. Lovejoy, manager of the talking machine department, also has charge of this new department, for which he predicts a most wonderful trade in this line, which opens up entirely a new field for the dealers.

Messrs. Shireson Bros., of Los Angeles, relate a story which well illustrates the inherent politeness of the sons of the Celestial Empire, or, should we say republic. A vigorous advertising campaign has lately been undertaken by Shireson Bros. in the Chinese newspapers, and the results have been extremely profitable. In addition to the numerous applications for machines and records, the follow-

ing answer was received one morning (written in Chinese, of course):

"Esteemed Ones—It is my great and never-dying hope that you will ever live in happiness and prosperity, etc., etc. I have read your gratifying advertisement in the newspaper and admire it beyond praise. I unfortunately already own a talking machine, so will not need to buy one.

(Signed) "Ting Lee Hop."

The above is a free translation, but shows the true spirit. Were advertising results ever more gratifying?

SOME STRIKING PUBLICITY

On Behalf of Landay Bros., Inc., in the New York Papers Wins High Praise.

Some of the most remarkable retail advertising in promotion of Victor talking machines and records is that which has been running and is now appearing in the New York papers over the name of Landay Bros., Inc. This copy is bringing good results to that house, as indeed good copy should. The illustration at the top always fits in admirably with the headline of the text, and the selection of type faces is pleasing to the trained eye and easily seen by the readers of the papers. For clean-cut modern retail advertising of the Victor, the Landay publicity is worthy in every respect of great praise. These advertisements are prepared under the direct supervision of Max Landay of this company, at the uptown offices and warerooms, 563 Fifth avenue, New York. The other Landay stores, as the trade know, are at 400 Fifth avenue and 27 West 34th street.

RECORDS BY CELEBRITIES

Just Issued by the Columbia Phonograph Co. Should Interest the Trade.

The June supplement of Columbia Double-Disc records is out and in the hands of the dealers. Featured in this latest supplement to the Columbia catalog of January, 1912, are many of the famous artists of the present day. Among those to whom special space in the supplement is devoted is Georgette Leblanc Maeterlinck, who has won much fame since her entree into American operatic affairs. The first two Maeterlinck records are from Carmen and Thais. New records by David Bispham, Olitzka, Barron Berthald and the popular comedians, Weber and Fields, are listed.

ADVERTISE FOR IT, OF COURSE.

"Will you allow me to ask you a question?" interrupted a man in the audience.

"Certainly, sir," said the lecturer.

"You have given us a lot of figures about immigration, increase of wealth, the growth of trusts and all that," said the man. "Let's see what you know about figures yourself. How do you find the greatest common divisor?"

Slowly and deliberately the orator took a glass of water.

Then he pointed his finger straight at the questioner. Lightning flashed from his eyes, and he replied, in a voice that made the gas jets quiver:

"Advertise for it, you ignoramus!"

The audience cheered and yelled and stamped, and the wretched man who had asked the question crawled out of the hall a total wreck.

See the point?

Talking Machine Manager Wanted.

Talking Machine Manager to take charge of a very large Victor retail business located in one of the largest cities in the country. In answering give present employer, references and details about personal habits, etc. State salary desired. Excellent opportunity for advancement. Address V.E.C., care of The Talking Machine World, 373 Fourth Ave., New York.

TRADE CONDITIONS ACTIVE

In Cleveland and Locality—Hart Piano Co. Buys Stock of Talking Machine Co.—Manager Madsen Makes Cheery Report Regarding Conditions with Columbia Co.—B. Dreher's Sons Co. to Have Larger Quarters on Euclid Avenue—Buescher & Sons Co. to Locate in the New Swetland Building—Dealers Well Pleased with Present Conditions and Prospects.

(Special to The Talking Machine World.)

Cleveland, O., May 7, 1912.

With the advent of beautiful spring weather a livelier aspect is presented in the talking machine stores and sales are multiplying rapidly. Distributors of Victor goods complain that they are still unable to obtain sufficient of some kinds to meet the demand; however, they are handling a large volume of business and are hopefully looking forward to the time when supplies will be ample for all requirements.

The gratifying volume of trade during April, and which has continued without abatement since the first of this month, is very satisfying to the dealers, who have reason to be pleased with the business now in evidence. There is a very satisfactory percentage of gain reported compared with the same period last year, while the prospects are of the most flattering character, from the fact that general business is good.

A notable feature in talking machine circles has been the removal of the B. Dreher's Sons Co. from the old-established quarters in The Arcade to the new and elegant store on Euclid avenue, and the heads of departments are now busy arranging the goods in the various departments.

On the first of June the W. H. Buescher & Sons Co. will move to the new Swetland building, 1016 Euclid avenue, a few doors from the present location. The rooms are now being fitted up and it is claimed will be as fine as any in the country. When the company has moved the talking machine business will be largely centered in that locality.

Charles I. Davis has remodeled his store, putting in new and enlarged show windows, show cases and shelving, making a most attractive and useful improvement. He now has three large demonstration rooms and is strenuously pushing the talking machine department of his music business.

The Hart Piano Co. has purchased the stock of the Talking Machine Co., 42 The Arcade, and has moved the goods across the way into the piano store. The company has fitted up two fine demonstration rooms and will handle Victor and Edison goods.

Conditions at the Columbia store are very satisfactory. "Business," said Mr. Madsen, "is fine and is increasing every month. April showed the largest volume of business since the opening of the Cleveland branch. We credit the increasing business to the elaborate advertising campaign of our house, and the new types of Grafonolas, which keep up the dealers' enthusiasm and simply makes them hustle for business." There are several new faces in the Columbia store, among which is Sig. Olindo Marscylla, a talented young musician, with a thorough knowledge of operatic music, who is in charge of the retail department, and Miss M. A. Brown, saleswoman formerly with the U-S Phonograph Co. Mr. Madsen says business throughout Cleveland is excellent, new dealers being signed up each month.

The Eclipse Musical Co. reports business continues, as it was throughout April, of the most prosperous character. Mr. Towell, manager, stated the volume of business was constantly expanding and would be much larger if supplies could be more promptly obtained. The company is busy in both the wholesale and retail departments.

Phil Dorn, manager of the talking machine department of the Collister & Sayle Co., stated that business was very good, fully up to normal at this season of the year, in both the wholesale and retail departments. He said the demand at present was largely for the Victor IV and the cheaper

SOLID WOOD (NOT VENEERED)

Mr. Dealer!

The MUSIC MASTER is still in demand.

Music
Master
Solid Wood Horn

All the
Name
Implies

**"OF ALL MY DREAMS OF EARTHLY BLISS
THERE IS NONE THAT SEEMS SO REAL AS THIS"**

The magic of the Music Master Solid Wood Horn is it is built right—its shape, its dimensions are the result of universal public approval, the most costly shape to manufacture, but the public prefer it and it produces the best results of any wood horn or hornless machine on the market to-day.

Have you got samples to demonstrate?

Isn't it a fact that you do not know a good horn until you hear one?

It is the only horn guaranteed.

Should your jobber be unable to supply you, write us.

SHEIP & VANDEGRIFT, Inc.
PHILADELPHIA, PA.

styles of Victors and that the record sales were good.

The H. E. McMillin & Son Co. are doing an excellent business in the talking machine department. The company features the entire Edison line as well as the Victor and are building up a nice, large business. The company's store was entered on the night of April 28 by a burglar, who broke open the safe and took \$100. He over-looked \$275 right at hand.

Business is moving along prosperously with the local Edison distributor, Lawrence A. Lucker. A good, steady demand for machines and records, both locally and from the outlying districts, keeps the manager and force busy six days a week.

The W. F. Frederick Piano Co. is doing a remarkably fine business in its talking machine department. N. H. Cook, manager, is pleased with the patronage already secured and in prospect, both here and at the Canton store. The Victor department is now in full operation and has opened under the most flattering auspices.

All the retail dealers in the city are making daily

satisfactory sales of both machines and records and express themselves pleased with the business they are doing.

TALKING MACHINE EXPORTS.

The Figures for March Presented—Reports Show Falling Off for the Month.

(Special to The Talking Machine World.)

Washington, D. C., May 8, 1912.

In the summary of exports and imports of the commerce of the United States for the month of March (the latest period for which it has been compiled), which has just been issued by the Bureau of Statistics of the Department of Commerce and Labor, the following interesting figures relating to talking machines and supplies are set forth:

The total exports of talking machines, records and supplies for March, 1912, amounted to \$176,369, as compared with \$224,456 for the same month of the previous year. The nine months' exportation of talking machines, records and supplies amounted to \$2,019,873.

Every time a Weber and Fields record is played somebody laughs—and a Columbia dealer capitalizes the laugh. What do *you* make on that laugh?

Columbia Phonograph Co., Gen'l
Tribune Building, New York

GO THOU AND DO LIKEWISE.

The Letter Sent by M. J. Roth Protesting Against the Changes in Patent Laws Affecting the Fixing of Retail Prices Contains an Excellent Resume of the Situation from the Dealer's Standpoint—Worth Simulating.

Talking machine dealers have been earnestly urged by manufacturers to communicate with their representatives in the Senate and in Congress with the object of protesting against the passage of hasty laws prohibiting the fixing of retail prices on patented articles.

A very excellent letter in this connection was sent Senator O'Gorman and Congressman Kindred by M. J. Roth, talking machine dealer and general merchant at 1495 Third avenue, New York. It is a model well worth simulating and covers the various points at issue in a very exhaustive and interesting way. Mr. Roth is to be congratulated for his good work in this connection. The letter follows:

"Dear Sir—I am informed that several bills are before Congress affecting our patent laws. Among these are House Bills No. 23192 and 23193, introduced by Congressman Oldfield, to prevent manufacturers and patentees from fixing selling prices on their products.

"As one of many retail merchants directly affected by such restrictions, I must respectfully request you to use your personal influence towards preventing any hasty and radical changes which may have far-reaching and retarding effects on our commercial prosperity. The matter requires consideration and thorough study by the hearing of all parties interested pro and con. Our patent laws may need revision to suit modern conditions, but hasty action by our legislative bodies is liable to cripple or ruin many lines of industry without benefiting anybody in particular.

"The wonderful progress of our country is directly traceable to our liberal patent laws, which put a premium on human ingenuity and its exploitation. The great bulk of articles now sold at fixed prices have gained their popularity by unremitting energy and perseverance on the part of their manufacturers. They have become the standard of their kind through the law of 'survival of the fittest.' Vast capital is at work to keep them at the top. The very fact that they have a fixed value and are sold at the same price to all, maintains their standard (the same as our dollar represents 100 cents and not 79). Articles retailed at fixed prices are continually in the public's eye and must meet its final judgment as to their quality and value.

"A patentee or manufacturer marketing his product at a fixed price can count on a fair and certain percent of profit. He will constantly endeavor to improve his goods or reduce his production cost and selling price to gain new fields for his output. He not only benefits himself, but more so his employes by being able to pay liberal wages and by opening new channels for their ambition. He benefits his selling agents, distributors and dealers handling his goods, which may number thousands scattered all over the country, by

giving them protection against price cutting and illegitimate competition, securing them a living profit tending towards general prosperity. He benefits the consumer by giving him a standard article, the best that can be produced, with the manufacturer's guarantee, at a price which he can well afford and is willing to pay. He gives the public intelligent, expert service, through interested selling agents. Unrestricted imitations and cheaper substitutes act as a constant check against unreasonable profits and exorbitant prices.

"Take off restrictions and make the fixing of retail prices by the manufacturer unlawful and you open the valve wide for illegitimate competition. Big concerns, combination of retailers and mail order houses will seize the opportunity to slaughter standard, popular articles for a while, using them as cheap advertising mediums, the profit loss on which the public has to pay for otherwise. Small dealers, not able to sell at a loss, will gradually be driven out of business. The manufacturer, finding his output diminishing on account of the false standard of value created in the minds of the public through price cutting and the crippling of his channels of distribution, will soon find himself at the mercy of these big retailers and will be compelled to market his wares at their terms.

"Another step towards favoring concentration of merchandising against which these measures are supposed to be aimed. Another step towards suppressing individuality. Another step towards reducing the army of small, independent merchants, who constitute a great part of the intelligent middle class, the strength and sinews of the nation.

"Arguments for the maintenance of fixed prices on articles of merchandise could be multiplied indefinitely, far outweighing the doubtful temporary benefits which a few consumers may gain by prohibiting price protection. I therefore ask your special interest for the subject and the dangers of any law that may prove a serious check on profitable industries and commercial progress."

NEW HEARING TUBE SUPPORT.

A Progressive Feature of the Edison Dictating Machine.

As if to prove that their limit of mechanical perfection is never reached, the Edison people at frequently recurring intervals add some brand new improvement to their dictating machine, which seems for the time being to complete the measure of usefulness and attractiveness of that most excellent office appliance.

Their latest addition, while not so much of an invention, is without question a great convenience and as such will be appreciated by transcribers, for whose exclusive comfort it has been designed. It is a support for the improved aluminum hearing tube.

The new device removes whatever "drag" of the tubes on the transcriber's ears there may have formerly been. This will unquestionably insure the popularity of the improved metal hearing type design, which it is already recognized possessed features that recommended it to instantaneous popularity.

The new hearing tube support, as the accompanying illustration shows, consists of a support arm of brass (attached in a bracket in the machine), which acts as a sound conveyor and takes the place of the same length of rubber tube. It carries twelve inches of rubber tube at the machine end where it connects with the sound modifier and reproducer, and at the end toward the transcriber eighteen inches of tube which connects the arm with the hearing tube.

An ingenious little spring support extending from the support arm into the rubber tube at the transcriber's end prevents the tube from closing, even slightly, and thus insures an unobstructed passage for the reproduction at all times.

The new device will be appreciated by transcribers

Support for Hearing Tube.

not alone because it removes practically the entire weight of the tubes from the ears, but for its convenience in other directions. The support permits the tubes to be dropped from the ears and to hang within easy reach, where they can be taken up again with no trouble, or it can be pushed up, as shown in the dotted lines of the illustration, and out of the way until wanted, obviating entirely the possibility of breaking the aluminum tubes.

The support, following the idea of universality which obtains in each and every improvement to the Edison machine, can be applied to machines now in use. Any regular hearing tube can be divided into the lengths mentioned (18 and 12 inches) and attached to the support. It will hereafter be supplied, at no additional cost, with transcribing outfits where regular hearing tubes are ordered.

MAIL ORDER TRADE IN RECORDS.

The Will A. Watkin Co., Dallas, Tex., writes The World that the Southwestern Talking Machine Association has announced that the four most popular records in Texas are "Red Wing," "Dixie," "Rainbow" and "Turkey in the Straw." In this connection we may say that the Watkin house is carrying on a great post card campaign and in this way an immense mail order trade for talking machine records has been built up. This emphasizes afresh the fact that the men who are going after trade energetically and persistently are winning out.

"If you must blow your own horn, don't use too much hot air."

TRADE IN INDIANAPOLIS.

Slight Slowing Up in Business—The New Edison Kinetoscope Being Featured by the Kipp-Link Co.—Daily Papers Giving More Attention to Talking Machine Records, Thus Helping the Local Dealers—Activity with the Columbia Co.—Other Trade Gleanings.

(Special to The Talking Machine World.)

Indianapolis, Ind., May 10, 1912.

The replenishing of the coal pile may be responsible for the slight slump in the talking machine business in Indianapolis; at any rate, the talking machine men here are wishing that the man in charge of the weather would not prove so tardy in his spring delivery. Business is good, but April did not measure up, with one or two exceptions, to the record set in February and March, even though the weather has been of the kind that is dealt out in those months.

The local talking machine houses, and also those throughout the State, are appreciating a monthly feature introduced by the Indianapolis Star, one of the daily papers. Each month this paper gives more than a half column of space to the new records in the different talking machine houses. The readers of the paper look forward to the announcement of the new records each month. While the companies are not backward in their use of the advertising columns of the papers, they appreciate the value of space in the reading matter columns.

With the coming of spring the talking machine companies are paying more attention to the lighter ballads. The Kipp-Link Co., State agent for the Edison machine, announces three new I. O. O. F. records. The first of these gives the opening and closing odes, the second the initiation and installation odes and the third the funeral ode. They are given by a male quartet, accompanied by the organ.

The kinetoscope, the invention of Thomas A. Edison, has been on exhibition at the Kipp-Link store, and the interest resulting from the exhibition leads the local Edison house to believe that a large number of the machines will be sold. The machine on exhibition is the only one, so far, that has been brought to Indiana. A. G. Buck, of New York, had charge of the machine. The exhibitor emphasized the educational value of the machine. Mr. Buck explained that pictures have been made to be used in connection with public school text books up to the high school grade. The machine, Mr. Buck said, would bring the motion picture into the home.

Thomas Devine, manager of the local branch of the Columbia Co., has recovered from the injuries received in the traction wreck recently, and is now in charge of the store again. Mr. Devine says the store has had a good trade in the last month, but that business was not quite as good as it was in February and March.

A. W. Roos, assistant auditor of the Columbia Phonograph Co., paid his first official visit to Indianapolis recently. Mr. Roos has been with the Columbia Co. for a number of years, having been stationed at St. Louis, Chicago and Rochester.

H. H. Meyers, formerly with the Columbia and Victor companies, but who is now selling land in Louisiana, was in Indianapolis not long ago and visited the local talking machine men and talked over the prospects. Mr. Meyers has not lost his interest in the talking machine business.

Reed Miller and Harold Jarvis, tenor soloists, who sing for the Columbia Co., gave a recital in Indianapolis recently and the local store made a special display of their records, boosting their sales considerably.

Mr. Devine has just received a stock of Weber and Fields records. They are proving to be big sellers.

Albert Janpolski, who sings for the Victor Co., visited the Victor department of the Wulschner-Stewart Music Co. recently. W. S. Barringer, of the retail department, reports a good retail business. The sales of April this year exceeded considerably the sales of the same month last year. Mr. Barringer says the Victor department of the Wulschner-Stewart Co. has grown wonderfully in the last year or so.

Willis M. English, traveling representative for the Victor Co. in Indiana, says that the summer and fall trade will be good. Mr. English has been pleasing the local house by turning in large orders from all parts of the State.

H. O. Socy, of the Victor Co., Camden, N. J., visited the talking machine department of the Aeolian Co. recently. Miss Wiltsie, in charge of the department, says that the Aeolian Co. had a better talking machine business in April than in the preceding month.

Harry H. Nagle, who has had charge of the library of the Aeolian Co., has been transferred to the Victor department and will look after outside prospects.

NEW USES FOR FILM SHOWS

Taken Up by Preachers, Teachers, Railroads and Clubs.

A Louisiana teacher changed the entire character of picture shows in her town by asking the manager to co-operate with her in class work. When her pupils in literature were reading "The Vicar of Wakefield" the manager exhibited a picture film of that classic. When the geography class began to study about Switzerland the manager secured films showing Alpine climbing.

The Iowa Federation of Women's Clubs has started a movement to induce moving picture managers to show Red Cross films and other hygienic subjects throughout the State. The senior class of the high school at Florence, Colo., has made the introduction of high grade films into the local picture houses their year's work in civics.

The Woman's Municipal League of Tecumseh, Neb., made an arrangement with the manager of the Lyric Theater of that city to give them a percentage of one day's receipts each week, and exhibit certain films illustrating the civic needs and work of the city, according to the Woman's Home Companion. This has brought manager, patrons and social workers closely together for the city's good.

The president of the Great Northern road is encouraging immigration to the Northwest by sending out twenty thousand feet of special films showing industrial and agricultural life along its route. These are displayed in cities where congestion should suggest the slogan "Back to the Farm." The Tarrant County Medical Society, Ft. Worth, Tex., has started an educational campaign by showing in moving pictures how to keep food clean and pure, the care of milk, sanitary dairies, etc.

The New York State Board of Charities wished to interest the public in the work and methods pursued in various State institutions. It had a film company take moving pictures in orphanages, reformatories, hospitals, schools for the blind and the crippled, homes, etc. These are now exhibited in commercial clubs and at conventions and county fairs.

The Rev. Walter Burr, pastor of the Congregational Church at Olathe, Kan., found that he could not induce people to come to his church during hot weather. On summer Sunday nights he rented the local airdome, showed religious films and talked to enormous gatherings. C. B. Vickery, general secretary of the Missionary Educational Movement, is doubling and trebling the attendance at his meetings by introducing films showing phases of foreign life which missionaries aim to alleviate.

TEACHING AIDED BY PHONOGRAPH.

Keeper at Milwaukee's Zoo Has Great Hopes for His Class of Ten Chattering Birds.

Teaching magpies to talk is one of the pleasant tasks Keeper Edward H. Bean, of the Washington Park Zoo, in Milwaukee, Wis., has taken upon himself. Ten of the birds were donated to the aviary recently by the Washington Park Zoological Society, and for experiment Mr. Bean will endeavor to teach at least a few of them to speak.

Mr. Bean proposes to use phonograph records. By leaving the talking machine in the cage for a few weeks he hopes he will be able to develop several magpie linguists.

Our flag is nailed to the mast

We're after the business of every Victor dealer who wants "real" service.

We have one hard and fast rule that always insures his getting it—all goods shipped the same day the order is received.

That's why we never fail our customers; why we get more customers all the time.

What about your jobber? Is he delivering the goods and keeping you in right with your customers?

If not, you know the answer. Whatever your needs in Victors, Victor-Victrolas, Victor Records, record cabinets, needles, repair parts, fiber cases, horns and other accessories, we have them right here all the time and a call from you will bring them on the jump.

Give us a trial order and you'll say "Fine," for you'll get the goods as fast as wheels can turn.

A card brings our booklet, "The Cabinet That Matches," and our latest catalog.

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Special to The Talking Machine World.)

Washington, D. C., May 7, 1912.

PHONOGRAPH ATTACHMENT FOR KINETOSCOPE. Peter John Mukautz, Kansas City, Mo. Patent No. 1,020,362.

The invention relates to record holders for phonographs used in connection with kinetoscopes, the phonograph supplying the lines for the actors in the pictures projected by the kinetoscope.

Fig. 1 is a side elevation of the machine, certain parts of which are shown in section and broken

away; Fig. 2 is a cross section on the line 2-2 of Fig. 1 and upon an enlarged scale; this view illustrates especially the construction of a clutch by means of which the record holder is thrown in or out of operation; Fig. 3 is a section on the line 3-3 of Fig. 1 and further illustrating the construction of the record holder; this view is also upon an enlarged scale; Fig. 4 is a cross section on the line

4-4 of Fig. 1 and further illustrating the construction of the holder; this view is upon an enlarged scale; Fig. 5 is a cross section on the line 5-5 of Fig. 1; this view is upon an enlarged scale, and Fig. 6 is a side elevation illustrating a shaft connection which is employed where the phonograph is located at a distance from the kinetoscope; this view is upon a reduced scale, and certain parts are broken away and shown in section.

PHONOGRAPH. Harry B. McNulty, East Cleveland, O., assignor by Mesne assignments to the United States Phonograph Co., Cleveland, O. Patent No. 1,020,151.

The object of the invention is the provision of a phonograph that will be adapted to operate, as desired upon records having threads of different fineness, as for instance, upon records having 100 and 200 threads to the inch, or as they are commonly known "two minute" and "four minute" records. Such adaptation involves a change in the rate of the movement of the sound-box along the record to correspond with such thread-fineness, and a corresponding shifting of the stylus, since a stylus suitable for playing or cutting one thread, as for example, the finer thread, will not work satisfactorily in the case of the coarser thread, and vice versa. The present invention is designed to supply simple and conveniently operable means for correlating and simultaneously effecting these two adjustments.

The annexed drawings, certain mechanism embodying the invention, such disclosed means constituting, however, but one of various mechanical forms in which the principle of the invention may be used.

In said annexed drawings: Fig. 1 is a front elevation of a phonograph embodying the several improvements; Fig. 2 is a transverse sectional view thereof with parts appearing in elevation; Fig. 3 is a similar transverse sectional view of a part only of the device, the sound-box and adjacent parts alone appearing and being shown in a different operative position from that of Fig. 2; Fig. 4 is a view similar to Fig. 3, but showing the parts in question in yet another operative position; Fig. 5 is a plan view of the sound-box carriage with parts broken away to show certain operating details; Fig. 6 is a transverse sectional view of a phonograph corresponding to that of Fig. 2, but showing certain modifications in construction; Figs. 7 and 8 are similar sectional views, showing the sound-box and adjacent parts only, such latter appearing in different operative positions from that of Fig. 6; and Fig. 9 illustrates, by a corresponding section, the adaptation of the invention to a slightly different type of sound-box.

PHONOGRAPH REPRODUCER. Thos. A. Edison, Llewellyn Park, West Orange, N. J., assignor to Thos. A. Edison, Inc. Patent No. 1,020,485.

This invention relates to phonograph reproducers and has for its object the provision of an improved mounting for the stylus lever in order that the same may have great freedom of movement in tracking the grooves of the sound record, and in order that the defects due to inertia of the moving parts may be obviated.

More particularly, the object of the invention is to provide a mounting for the stylus, which shall permit the latter to be used in connection with records having two hundred threads to the inch, and track the same faithfully and without injury to the record or the stylus. While the stylus mounted in the manner of the invention is equally well adapted for use in connection with records having one hundred or some other number of threads per inch, the requirement of great facility of movement of the stylus lever both in a direction parallel to and transverse to the record groove, is particularly important in the case of the two hundred thread record or other record having a great number of threads per inch, owing to the thin walls between the record grooves, which might be broken down or jumped across by a stylus, the parts moving with which have considerable inertia, and owing to the character of the record grooves generally. Accordingly, a stylus mounting of the greatest freedom of lateral movement and the least possible inertia is very desirable. This is provided for in the invention by mounting a comparatively light member pivotally on or in a recess in the floating weight, so that the said member may be free to rock upon its pivot in a plane nearly parallel with that of the diaphragm, the said pivotally mounted member carrying the stylus lever pivoted thereto on a horizontal pivot. The stylus lever is thus free to oscillate in a plane at right angles to the plane of the diaphragm in response to the undulations of the record groove, and also is free to move laterally with the member to which it is

pivoted with the very slight inertia belonging to the very light pivot member above referred to. It is to be noted that the floating weight to which this member is pivoted is itself mounted for a limited movement in planes substantially parallel to and crossing at right angles the plane of the diaphragm, as is common in the art. It is preferable to pivotally mount the member which carries the stylus lever at a point not far distant from the pivotal point of the floating weight.

A further object of the invention is to provide yielding means by which the pivot member and the stylus lever carried thereby may be normally held in a central position axial to the record groove tracked by the stylus.

Fig. 1 is a central vertical section through a reproducer equipped with the invention. Fig. 2 is a bottom view thereof.

AUTOMATIC BRAKE FOR TALKING MACHINES. Theodore Birnbaum, London, England, assignor to the Victor Talking Machine Co., Camden, N. J. Patent No. 1,021,756.

The present invention relates to an improved automatic brake for talking machines.

According to this invention a brake is provided which will automatically stop the machine when the selection has been played and the brake may either be operated by putting sidewise pressure on the sound arm as it reaches the end of the selection, in the manner proposed with other known constructions of automatic brake, or this sidewise pressure may be dispensed with and the record furnished with an auxiliary spiral, in well known manner, running from the end of the sound line to a circular track around the center of the record.

A further feature of the invention is that the

brake can be taken off, so as to start the machine running, by bringing the sound arm back to the starting position, that is, the position which will bring the reproducing needle to the commencement of the sound line.

This invention is illustrated in one form in the accompanying drawings.

Fig. 1 is a plan view of part of a disc talking machine fitted with the improved brake, the brake being shown in the off position. Fig. 2 is a similar view, but with the brake on. Fig. 3 is a side elevation of Fig. 2. Figs. 4 and 5 are side elevation (partly in section) and plan, respectively, of the brake on an enlarged scale. Fig. 6 is a top plan view of a modified form of this invention, and Fig. 7 is a fragmentary front elevation of a portion of the same, looking in the direction of the arrow in Fig. 6.

PROCESS FOR MAKING SOUND RECORDS. Frank L. Dyer, Montclair, N. J., assignor by Mesne assign-

ments to Thos. A. Edison, Inc., West Orange, N. J. Patent No. 1,021,973.

This invention relates to phonograph records and more particularly to processes for manufacturing the same, and the object is to provide an inexpensive and efficient form of record in a novel and efficient manner.

This invention is an improvement on the invention disclosed in an application of Jonas W. Aylsworth, filed June 5, 1909, Serial Number 500,415, entitled "Phonograph record and methods of making the same," this invention differing in certain details from that of said Aylsworth.

The improvement is particularly directed to the provision of a secure connection between the outer or record film and the inner or backing cylinder.

Attention is hereby directed to the accompanying drawing, forming part of this specification and representing a vertical longitudinal section through a form of apparatus in which the improved process may be carried out, a record being shown in position therein.

REPRESSING DISC SOUND RECORDS. Thomas H. Macdonald (deceased), Bridgeport, Conn., assignor to the American Graphophone Co., same place. Patent No. 1,022,100.

This invention relates to disc sound-records and has for its object to utilize old disc records. In the manufacture of disc records by the American Graphophone Co., two materials are employed known, respectively, as ingredient No. 1 and ingredient No. 2. These ingredients consist of the ordinary material or stock employed in making such articles, namely, earthy matter and a binder consisting of a gum or gums. What we call ingredient No. 1 contains a considerable amount of shellac, which is desirable for giving the proper surface to the sound record; whereas ingredient No. 2 contains little or no shellac, but has the equivalent therefor in the form of a cheaper gum or gums as the binder. Ingredient No. 2 is employed for the main body of the disc, and ingredient No. 1 constitutes the surface.

TALKING MACHINE. John B. Browning, Camden, N. J., assignor to the Victor Talking Machine Co., same place. Patent No. 1,022,180.

The objects of this invention are to provide in a talking machine a plurality of sound boxes arranged to reproduce either simultaneously or separately the same tones from a single record, and to arrange the said boxes so that the operator is enabled to change the volume and quality of the sound at will, by raising one box while the other continues playing; to provide means whereby a pair of independent sound boxes may be supported by a single sound tube, and to provide other im-

provements, as will appear hereinafter.

In the accompanying drawings Fig. 1 is a plan view of a talking machine constructed in accordance with this invention; Fig. 2 a side elevation of the same; Fig. 3 an enlarged plan and partial end view of a detail of the same; Fig. 4 an enlarged top plan view one-half in longitudinal central section of a detail of the same; Fig. 5 a side elevation of one portion of Fig. 4; Figs. 6 and 7

are a side elevation and a longitudinal central section, respectively, of a detail of the same; Figs. 8, 9 and 10 are a rear, a fragmentary central sectional and a fragmentary bottom view, respectively, of an improved sound box forming a part of this invention, and Fig. 11 is a diagrammatic view of a detail of the same.

POSITIVELY-FED DISC GRAPHOPHONE. Thomas H. MacDonald, Bridgeport, Conn., assignor to the American Graphophone Co., same place. Patent No. 1,008,605.

This invention relates to talking machines employing a sound record in the form of a disc, and preferably having the record groove of the up-and-down type rather than of the usual zigzag type.

The object of the invention is to provide for such talking machine, positive means for feeding the sound box across the face of the record disc, sound record having double, or more than, the usual number of convolutions to the inch.

With the ordinary form of disc sound-record, where the record-groove is of the so-called "zigzag" type, of substantially uniform depth, the side walls of the groove serve to propel or feed the sound-box, besides vibrating the stylus and its diaphragm; but a record-groove of the vertically undulatory type, with varying depth, owing to the comparative shallowness of the groove, and the comparatively gentle slope of its side walls, would not suffice to feed the sound-box with certainty. Again, by providing a positive feed, the machine may be employed, with a suitable recording-stylus, for making the original recordings upon a tablet of suitable material; and such recording-stylus may be mounted to vibrate either longitudinally of its axis (to and from the tablet) or laterally, to produce either the vertically-undulating or the laterally undulating type of sound-record.

One feature of the invention consists of providing a spiral thread or feed-screw beneath the turntable that carries the disc record and concentric therewith, and in co-operation with said screw a guide-pin on an arm connected to the sound-box, whereby the feed-screw will propel the sound-box (substantially radially) across the face of the record-disc.

Another feature of the invention consists in locating the spiral feed-screw upon an independent disc separate from the record-carrying disc, and giving the feed-screw a comparatively coarse pitch, while providing reduction-gearing whereby the comparatively-slow rotation of the comparatively-coarse feed-screw will feed the sound-box at the proper rate across the face of a record-disc provided with a comparatively-large number of convolutions per inch.

Still another feature of the invention consists of means for disengaging the reproducing-stylus from the record-groove, and for disengaging the feed-arm from the spiral feed-screw, the two actions being preferably performed simultaneously.

The invention consists of one or more of all of the foregoing features, and also of the vari-

ous details of construction and arrangement to be hereinafter pointed out and claimed.

In the drawings Fig. 1 is a vertical section through a portion of a disc graphophone, illustrating a preferred embodiment of the invention; Fig. 2 is a plan view of the same, partly broken away, and Fig. 3 is a detail, viewed from the left in Fig. 2.

MULTIPLE-RECORD PHONOGRAPH. Richard B. Smith, Sydney, N. S. W., Australia. Patent No. 1,023,047.

This invention relates to phonographs wherein is employed means for carrying a plurality of records, say, four, six or more, each of which is adapted to be brought into co-operative relation to a reproducer in such manner that the record will remain in place and be rotated axially while the reproducer travels along said record, after which the next record is brought into position with relation to the reproducer, so that the aforesaid operations may be repeated, and so on throughout the number of records used in the machine.

The machine embodies a carrier for the desired number of records, means for holding the carrier at rest, means for rotating one record while the carrier is at rest, a reproducer, and means for imparting traversing motion to the producer.

One feature of novelty of the new machine consists in an automatic feed mechanism for the record carrier. This mechanism includes a shaft geared to the record-carrier, a sliding member, a pawl and ratchet device actuated by the sliding member for operating the aforesaid shaft and means for moving the sliding member. In connection with the shaft and the record carrier there is provided a locking mechanism which holds the carrier at rest, but which is releasable automatically at the period of moving the carrier, so as to present a new record to the reproducer.

Another feature of this apparatus is a means for returning the reproducer automatically to its starting position after said reproducer shall have traversed one of the records. In addition to the common feed screw, this machine is equipped with a coarse thread feed screw which is suitably driven, and the traveler is equipped with two nuts or nut sections which are adapted to respectively engage

with the feed and return screws. A shiftable tension arm is associated with the traveler so as to hold it in one position or the other, in order that the feed nut or the return nut may have engage-

ment properly with the feed screw or the return screw, according as one or the other is in operation. Combined with this tension arm are tripping devices, one on the feed screw and the other on the return screw, said devices being so related to the arm as to automatically shift the same when the traveler reaches the limit of its motion in one direction or the other.

Fig. 1 is an elevation looking at the rear of a multiple record phonograph, constructed in accordance with the invention; Fig. 2 is an end elevation looking at the right hand end of the machine shown by Fig. 1; Fig. 3 is a plan view of the invention, parts being broken away and in section, in order to more clearly represent other parts, and

Fig. 4 is an elevation looking at the front side of the machine; Fig. 5 is a plan view of a part of the machine illustrating automatic stop devices by which the record carrier may be arrested at the end of the reproduction on each record or at every record or third record; Fig. 6 is an elevation looking at one end of the devices shown by Fig. 5, and Fig. 7 is a view looking at the other end of Fig. 5.

AMPLIFIER FOR SOUND-REPRODUCING DEVICES. John C. English, Camden, N. J., assignor to the Victor Talking Machine Co., same place. Patent No. 1,022,582.

This invention relates to sound reproducing devices and particularly to those devices which are used to augment or amplify the sounds which are being reproduced from a record of sound, the present application being a division of a prior application, Serial No. 326,827, filed July 19, 1906.

One object of the invention is to dispense with the ordinary megaphone, sound amplifying trumpet or horn which is usually used to amplify the sound reproduced by talking machines and the like and to increase the volume of the tones by means of an amplifier having sounding boards which are caused to vibrate in sympathy with the air inclosed by the same to which the sound waves are conducted from the reproducer of a sound reproducing machine.

A further object of the invention is to provide the amplifier with a portion or section, whereby the vibrations are conducted from the swinging arm or conveyer and are amplified to some extent and to allow said vibrations to emerge from said portion or section between sounding boards.

A further object of the invention is to provide an amplifier with a rigid hollow portion or section which shall also act as a rigid support for the vibratory portion, whereby the vibratory portion is rigidly supported from one end only and whereby the sounding boards, by means of which the sound is further amplified, are free to vibrate substantially throughout their entire area and to vibrate in sympathy with the waves of sound conducted in proximity with the same.

A further object of the invention is to make the sounding boards or sounding surfaces used in connection with the sound amplifying device resonant or capable of being readily set into vibration by sound waves.

In the accompanying drawings forming a part of this specification in which similar parts are referred to by the same reference characters, Fig. 1 illustrates a sound reproducing device or talking machine provided with improved amplifier, the main portions of the same being shown in cross section; Fig. 2 is a perspective view of the improved sound augmenting device; Fig. 3 a diagrammatic view of the method employed to make the sounding boards of the sound amplifying device resonant, and Fig. 4 is a view similar to Fig. 3, showing the method of constructing the sides of the vibratory portion of the amplifier.

NEEDLE FOR SOUND-REPRODUCING MACHINES. Benard Tendler, Schulenburg, Tex. Patent No. 1,022,515.

This invention relates to improvements in needles for sound reproducing machines, and relates more especially to needles used in connection with the gramophone type of reproducing machine.

The object of this invention is to provide a needle which will, when turned for adjustment at various positions within its socket, produce tones of any desired volume.

A further object is to provide a needle which will give a true, clear toned reproduction free from objectionable, harsh, mechanical noises made by most of the needles now in use.

Figure 1 is a side elevation of a socket with one of the needles in place within; Fig. 2 is a side elevation of the needle, on an enlarged scale; Fig. 3 is an edge view of a needle on an enlarged scale; Fig. 4 is a sectional view taken on the line 4-4 of Fig. 2; Fig. 5 is a longitudinal sectional view of the needle within the socket; Fig. 6 is a sectional view taken on the line 6-6 of Fig. 5, and Fig. 7 is a view similar to Fig. 1, except that the needle is shown in a different position.

PHONOGRAPH. Charles L. Hibbard, East Orange, N. J., assignor by Mesne assignments, to Thomas A. Edison, Inc., West Orange, N. J. Patent No. 1,023,250.

This invention relates to phonographs and more particularly to phonographs of the general type shown in United States patent No. 772,485, granted October 18, 1904, to Weber and Hibbard.

This invention has for its object the provision of improved means for raising and lowering the arm which carries the reproducer or recorder or both. This arm is lowered to bring the reproducer or recorder stylus into contact with the record and is raised to remove the same therefrom in order that the record may be changed.

By this invention a simple and effective lifting device is provided, which is self-locking in each of its extreme positions, and which is thrown by gravity into either extreme position without the necessity of using springs.

Referring to the accompanying drawings disclosing one embodiment of the invention, Fig. 1 represents a plan view of a portion of a phonograph equipped with the invention. Fig. 2 is an end elevation of so much of a phonograph as is necessary to disclose the invention, the carrier arm being shown in raised position. Fig. 3 is a similar view of the carrier arm, the same being shown in lowered position, and Fig. 4 is a detail view showing the various positions of the stop and locking pin on the lifting arm corresponding to the movements of the latter.

THE VICTROLA AND THE FLOOD.

Interesting Story of the Flooded West Appearing in an Omaha Paper.

An interesting story from the flood districts of the West recently appeared in the World-Herald of Omaha and told of an unique sale of a Victor-Victrola as follows:

"Many sidelights on the flood condition of the Union Pacific are given by Assistant General Passenger Agent W. K. Cundiff, who was at Fremont during the big congestion of trains there.

"Mr. Cundiff tells of a Milwaukee millionaire, John E. DeWolf, who had been called to his home office from California on a very important piece of business. Mr. DeWolf tried in every way to get out of Fremont to Omaha, but finding it impossible, settled down to make the best of a bad bargain. He was a great entertainer. He bought a handsome Victrola from J. C. Acton and had handbills printed advertising a big show in the observation car of his train in the Fremont yards, all delayed passengers being invited. The program was given Tuesday night and lasted four hours, swarms of marooned travelers streaming in and out of the car, where refreshments were served at Mr. DeWolf's expense. Mr. DeWolf is in the investment and bond business at Milwaukee. His fellow-passengers gave him a vote of thanks."

COLUMBIA LINE IN PROVIDENCE.

Among the more recent piano houses to install the Columbia line are the John Shepard Co., Providence, R. I.; Heidleberg Piano & Organ Co., New Orleans, La.; Hub Piano Co., Baltimore, Md.; Pasadena Music Co., Los Angeles, Cal., and the Craft Piano Co., of Richmond Va. All of the above have placed a large initial order for machines and records.

EDISON HOME KINETOSCOPE.

The Famous Inventor Has Perfected a Tiny Machine with Non-Inflammable Film, Which Throws a Picture 2 x 11-2 Feet—Would Use It in the Schools—In This Way Many Topics Like Geography Would Become More Interesting and Innumerable Stories Could Be Told in An Effective Way.

Thomas A. Edison, the veteran inventor, sent over two of his assistants to the Astor House last week to demonstrate for the instruction and edification of a group of experts and reporters the actual workings of his very latest—the Home Kinetoscope. This invention, which is the product of a great deal of labor and a great deal of money, is simply a miniature moving picture machine, a biograph that a child can handle, and that an ordinary living room can hold. Its chief difference from the ordinary commercial kinetoscope lies in the fact that it is very simple, very compact and that its films are non-inflammable.

Parlor L in the old downtown hostelry was devoted to the demonstration, and the little machine, about as large as a talking machine, was set up about twenty feet from an aluminum screen, a film, not much larger than a narrow typewriter ribbon, was adjusted, the connection was made with the nearest chandelier socket, and off started the story on the screen.

The pictures shown vary in size, according to the strength of the lens used, the size of the machine and the distance from the screen. The ones produced were about two feet by a foot and a half. The machine will project a picture on your visiting card, held close. It will project on a screen sixty feet away. The best home results, however, are obtainable at a distance ranging from fifteen to twenty-five feet, but a perfectly distinct and satisfactory series can be run off with the machine and the screen only ten feet apart.

The films, both as to their size and their material, presented the most knotty problem Mr. Edison had to deal with. So far all those prepared for demonstration, have been made by reducing from films already prepared for commercial use. Mr. Edison has a system of reversing the ordinary photographer's process of enlargement, and his result is a tiny, thin ribbon of film, eighty feet at the longest, which carries in infinitesimal proportions the material for moving pictures that take sixteen minutes to operate.

This reduction is brought about, both by a contraction of the actual pictures on the film and a tripling of the pictures on a given film length, for each film has three rows of pictures which are run off successively. A tiny white spot appearing on the picture, and therefore on the screen, is the

warning to the operator that one row is nearly finished, and that it is time to reverse the course of the turning.

The three rows are run off without an objectionable break, and the space saving is considerable, for a single foot of the Home kinetoscope film will contain 210 pictures, seventy in each row. The eighty feet of film corresponds to a thousand feet of commercial film. The reversing process needed for this space-saving enables the facetious operator to have a vast amount of amusement by reversing the film at the wrong time so that the reporters were diverted by the sight of whirling, agile people falling into, instead of out of, trolley cars, and particularly by the vision of Niagara Falls falling toward the sky.

According to Mr. Phillips and Mr. Gill, the two demonstrators who showed the invention, the films have withstood all tests of their non-inflammability and their non-explosiveness.

But Mr. Edison's great dream is one of education by moving pictures, and, according to Mr. Phillips, the children in Public School 155 are saving up to buy one of the new machines for their own edification. A text book publisher is already on the road looking into the possibilities, and he is arranging to have scenarios made from school books.

SIGNS FOR COLUMBIA DEALERS.

Publicity Plans Perfected by Columbia Phonograph Co. in Order to Help Their Dealers—Opportunity of Securing an Army of Silent Salesmen.

The Columbia Phonograph Co., General, New York, is launching a new departure in up-to-date advertising. In a letter and circular mailed to the trade on April 23 the company outlines a sales promotion plan for the benefit of its dealers. The plan in brief is this: The Columbia Co. will supply one hundred steel signs, printed in colors, of the "Roadside" variety, the dealers name and town will be printed on each sign. The signs are made of the best government thirty gauge steel and are good for at least three years. The wording is lithographed directly onto the steel and embossed, and each sign is punched so it can be wired to any fence or nailed to any suitable surface.

This plan offers the dealer an opportunity of securing an army of hustling silent salesmen. The signs well posted on the highways will constantly impress the dealer's name, business and location upon the minds of the purchasing public. The arrangement should appeal particularly to the dealers who are desirous of reaching suburban trade.

The offer of one hundred signs, printed and ready for posting for \$10.75, is worthy of much serious consideration. The company announces that May 25 is the last day which they will accept orders for the signs. They will be shipped about June 25.

COLUMBIA LINE WITH KESSNER.

The talking machine adjunct of the large department store of the J. L. Kessner Co., Twenty-third street and Sixth avenue, New York, has added the Columbia line of talking machines. The Victor is also carried.

MONTALVO REMODELS STORE.

Live New Brunswick, N. J., Dealer Makes Special Arrangements for Handling His Rapidly Increasing Business—Believes in Advertising.

(Special to The Talking Machine World.)

New Brunswick, N. J., June 5, 1912.

Ramon Montalvo, Jr., the prominent and successful talking machine dealer of this city, has just

Montalvo Boosting New Brunswick Week.

completed the remodeling of his quarters at 209 Neilson street, where he has installed two new sound-proof booths for demonstrating records at the convenience of his customers. Mr. Montalvo held a special opening on May 25, which was continued during the following week, which was set aside as "Boost New Brunswick Week," and attracted much attention to the event through live advertising, part of which took the form of a number of boys in white uniforms, who were sent about the city on various errands. Mr. Montalvo, who handles typewriters and vacuum cleaners in addition to Victor, Edison and Columbia talking machines, is a firm believer in advertising, to which he owes much of his business success.

EASTERN DEALERS ELECT OFFICERS.

David Switky Assumes the Presidency of the Eastern Talking Machine Dealers' Association—Other Officers Elected.

The annual meeting of the Eastern Talking Machine Dealers' Association was held at 330 Sixth avenue, New York, on May 28, when the following officers were elected: President, David Switky; vice-president, John G. Bremner; treasurer, J. Lasus, and secretary, J. Henry Dodin. Considerable business was transacted in the way of developing plans for an active campaign to enlarge the membership of the association and to consider several questions of vital interest to the future of the industry as far as the retailing end is concerned. It is planned to hold several meetings of the executive board to develop these plans.

THE MAKING OF THE SALESMAN

A Problem the Solution of Which Rests with the Salesman Himself—A Broad Knowledge of Business Necessary to Win Success.

One's job is what he makes it. He can either do barely enough to hold it, or he can, by self-development, raise the importance of his place to prominence and profit. It lies in the "I will" in a man, and in the concentration of his mind applied continuously to the work in hand. The will to do comes first because conscious effort requires the whip and spur.

The salesman performs one of the necessary functions of business. He has the biggest opportunity of any man to make his place whatever he will. Salesmanship keeps business going. It is an art with the glib and superficial, and both an art and a science to the ear-

nest, the thoughtful and the industrious.

Efficiency of mind increases by use. Mind asks little of body except that body be kept in health, and depends not at all upon the size of stature or confirmation of the physique. The measure of a man, therefore, is not in the size of his biceps, nor in the number of pounds drive at the end of his fist, but the deep gray convolutions inside his skull.

To be a Class A salesman is to be a big man in mental stature—to have a broad knowledge of business—to know commercial customs—to know something of forms and accounts—to keep up with the current thought of the day—to be alive—to be generous—to have charity and sympathy—to have a sense of humor—to have cheerfulness, determination, philosophy, in defeat as well as in victory; and finally, essentially, one must know his goods, not superficially, but thoroughly, as they apply to the business of the prospective customer. More than this, the salesman must know the competitor's goods in order that he may intelligently prove to his customer that his own goods have points of superiority which should give them the preferred place.

The best salesmen are the broad men, the big men—not those whose entire horizon is narrowed down to one set of ideas. These men are originators and producers.

The time to make plain to a salesman your wants and wishes regarding him and his work is when you hire him. It is much easier to object to certain habits before the employe has shown that he possesses them.

INTEREST ON INSTALMENT SALES.

Talking Machine Dealers of Los Angeles Resolve to Charge and Collect Interest at the Rate of Seven Per Cent. on Time Sales Other Than Those Sold on 30 Days' Time.

(Special to The Talking Machine World.)

Los Angeles, Cal., June 6, 1912.

At a meeting of the talking machine dealers of this city, held recently, the following important resolutions were adopted and signed by the leading houses, bearing upon interest charges on instalment sales of talking machines—a move which the local dealers hope will be put in practice universally throughout the country:

"We, the undersigned talking machine dealers of Los Angeles, Cal., believing it for the best interests of the business, do hereby agree and bind ourselves that from this date on we will charge and collect interest at the rate of seven (7) per cent. per annum on all instalment or time sales of talking machines other than those sold on 30 days' time open account.

"We pledge the honor of our respective firms that this agreement be faithfully lived up to in letter and in spirit hereafter. Southern California Music Co. (per C. H. Rundel), the Wiley B. Allen Co. (E. P. Tucker, manager), J. B. Brown Music Co. (by B. J. Everest, secretary), Smith Music Co. (per E. E. Smith), Boston Piano Co. (per J. H. Montgomery, secretary), Max A. Schiresohn, Baxter-Nothup Co. (by H. V. Baxter), the Bender Piano Co. (C. C. Bender), T. J. Johnson (T. J. Johnson), E. J. Brent (per F. F. Foley), George J. Birkel Co. (A. E. Geissler, vice-president and secretary), Andrews Talking Machine Co. (J. W. Andrews), Eilers Music House (E. O. Johnston, manager), Angeles Talking Machine Co. (per A. Pfaff), Fitzgerald Music Co. (J. T. Fitzgerald), Pasadena Music House (by W. R. J. Campbell), Crown City Music & Piano Co. (Z. M. Meyers, manager), Wilson Music Co. (C. R. Wilson), Schireson Bros. (J. Schireson), The Talking Machine Shop (Albert D. Wayne)."

CLEVER VICTROLA PUBLICITY.

New Form of Advertising Carried on by a Live Dealer in New Jersey—Copy That Should Arouse Interest and Bring Results.

The following is the manner in which a talking machine dealer in West New York, N. J., calls attention to his stock of Victrolas and late records through the columns of the local papers. It is an idea that should arouse interest and bring real results:

OVERHEARD ON A PALISADE TROLLEY CAR.

John—Say, Bill, that there song of Champ Clark's is a hummer; everywhere you go you hear it; gee, it's great, "You Gotta Quit Kickin' My Dawg Aroun'!" You know I was in George's last night, and, by Jove, he was playing it on one of his Victrolas.

Bill—That so?

John—Yep; and not only that, but he had an orchestra selection called "The Gaby Glide" that was some glide, all right; jest couldn't make my feet behave, and a couple of others—oh, yes, two songs by a fellow named Bill Murray; his name made me think of you. One was "Gee! But I Like Music With My Meals," and the other was a corker, "Take a Tip From Father."

Bill—Here, here, what are you raving about? Where is the show, anyway? What's it all about?

John—Why, I thought you knew. George Stabel's new Victrolas, and the records that he played for me were some of the new ones that just came in. I'd have stayed longer to hear more, but my car came along just then. You can bet your life I'm going to save up and get one of those machines just as soon as I can. They're all right.

CONDITIONS MOST FAVORABLE

As Far as It Affects the Talking Machine Trade in Cleveland and Vicinity—U-S Phonograph Co. Busy—Opening of the B. Dreher's Sons Co.'s New Store—Hart Piano Co. Installing Several Demonstration Rooms—Large Manufacturing Concerns Order Dictaphones—High Class Machines Have the Call—The News of the Month in Detail.

(Special to The Talking Machine World.)

Cleveland, O., June 7, 1912.

Reports generally touching conditions in the local talking machine trade are of a very favorable character, and both jobbers and dealers are optimistic regarding future business. The steamers and yacht clubs have contributed largely to the expansion of sales of machines and records this season, as also have the numerous summer resorts. The first half of the present year has developed a volume of business in excess of the corresponding months of last year, and the prospects are of the most encouraging nature.

The United States Phonograph Co. is very busy these days, orders showing a daily increasing demand for both machines and records. The company is adding numbers of fine new selections to its already extensive catalogs.

The Hart Piano Co. has fitted up several demonstration rooms in its quarters, No. 33, The Arcade, and the talking machine department is in full operation. Succeeding to the Talking Machine Co.'s business, which the Hart Company recently purchased, it has stepped into an established trade, which is reported very satisfactory.

The Columbia Phonograph Co. reports very prosperous conditions, and a profitable trade for the past month. Manager Geo. R. Madson said: "The month of May closed very satisfactorily for us, showing a large increase over the same period in 1911, in both the wholesale and retail departments. The marked call for the more expensive types of Grafonolas as well as for our symphony records, at this time of the year is very gratifying.

The Eclipse Musical Co. reports business during the past month has been fair. "Our record trade," said Roscoe R. Gorham, in charge, "is holding up remarkably well, and is especially marked for the Red Seal list. Recently there is an increasing demand for the small Victrolas, for camp, yachting and out-of-door use. There has not been so much demand for the large Victrolas though we are making many sales of them."

Mrs. Frances E. Clark, head of the educational department of the Victor Co., attended a playground convention here June 6. She is greatly pleased with the success she is meeting with.

The W. H. Buescher & Sons Co. is moving into its new quarters on Euclid avenue. Business

is being continued at the old stand while the moving is in progress, and Mr. Roberts says it is remarkably good. He claims the new store will be unsurpassed in design and beauty. The new location is across the street from the Columbia Co., next to the B. Dreher's Sons Co. building, a few doors from the Eclipse Musical Co., and a stone's throw from the W. F. Frederick Piano Co., H. E. McMillin & Son Co., and the Caldwell Piano Co. They are all pleasantly situated in the new "Talking Machine Quarters" of the city.

The B. Dreher's Sons Co. had an opening of the new store, Nos. 1028-30 Euclid avenue, May 24 and 25, which was the event of the week in musical circles. The five-story building and basement is occupied by the company. The first, second, fifth and basement floors are devoted to the display of pianos, player-pianos and music rolls. The third floor contains the general and private offices. The entire fourth floor has been set apart for the talking machine department, and under the supervision of F. B. Guyon, manager, has been artistically arranged with a view to its practical use. There is a lobby a large reception room and several sound-proof demonstration rooms, the furnishings vying with the Victrolas in beauty. Mr. Guyon stated that notwithstanding the interference occasioned by moving, business had continued remarkably good, and that with the superior location and greatly improved facilities, he expects to do a largely increased business.

Business in the talking machine department of the Caldwell Piano Co. compares favorably with that of the piano trade. The new manager of the department, Earl Wagar Bachert, who has succeeded H. D. Scroton, who has returned to Buffalo, said business was fairly good, and had been very good for two months past. Mr. Bachert is making strenuous efforts to introduce Victor machines in the public schools and believes he will be successful.

G. F. Probeck, manager of the Dictaphone department of the Columbia Phonograph Co., is highly pleased with the condition of business in his line, and well he may be, for he has just installed a number of Dictaphones with some of the large manufacturing concerns of the city. Among others, the Printz-Biederman Co., large cloak manufacturers, have purchased twelve machines. The Atlantic Refining Co., prominent competitors of the Standard Oil Co., have also had fifteen machines installed, while sales have been negotiated with a number of smaller users.

Manager Norman H. Cook, of the talking machine department of the W. F. Frederick Piano Co., reports the demand for high class machines and records holding up to the high standard fixed by the company at the installation of the depart-

ment here and more recently at the Canton store. "Judging from our very successful business in May," he said, "and thus far in June I begin to think there is no such thing as a 'dull season' in the talking machine line. In several instances our every resource was exhausted to enable us to obtain Victrolas sufficient to supply our waiting patrons, numbers of whom we are daily adding to our list."

"You may truthfully state," said A. O. Peterson, manager of the Lucker Edison distributing house, "that considering the season of the year orders are coming in remarkably good. There is a normal demand for both machines and records, and dealers generally are doing an excellent business, judging from the number of orders we are in daily receipt of. The Amberola No. 3, both in beauty of design and absolutely correct tonal qualities, is a musical marvel. Everybody is pleased with it, and I have already booked a number of orders. Notwithstanding it is a Presidential year I predict we are going to have a good year's business."

The talking machine department of the Bailey Co. is one of the busy places in that establishment. Mr. Friedlander, manager, said he was selling some \$200 machines and a good many of the cheaper grades, and that the record demand was fine. "We are having a good trade in our small musical goods line," he stated. "The business is improving and we are enlarging the department. We are now doing quite a mail-order business and shall materially extend it this year."

Miss Ethel M. Volk, manager of the phonograph department of the Macy Co., said: "Business is quite good. We are having an excellent trade in machines and records, in both the Victor and Edison lines. The Edison June list contains many exceptionally attractive Amberol records. That of Eleonora de Cisneros, 'Ben Bolt,' is fine, both in the words and music, and 'My Dreams,' by Thomas Chalmers, is attracting many buyers. The prospects are very encouraging."

Sam Goldsmith, the urbane and popular district manager of the Victor Talking Machine Co., spent several days in Cleveland during the past few weeks. He is an earnest seeker for and winner of business.

The H. E. McMillin & Son Co. is doing an all-around fine piano and musical instrument business, and not the least busy portion of the establishment is the talking machine department. An excellent demand for both Victor and Edison machines and records was reported.

If you consider advertising a gamble, you will be wise to leave it alone. It should be treated as an investment which will pay the store regular dividends.

Victor-Victrola

Music dealers have seen the Victor-Victrola take foremost place among the world's musical instruments.

They have seen prestige and profits come to dealers from their association with this greatest of all musical instruments.

They have seen the Victor-Victrola elevate this branch of the musical industry from comparative insignificance to a position of dignity and refinement, and become the most profitable part of the entire retail music trade.

And backed by the tremendous resources of the Victor organization, the influence of the Victor-Victrola grows bigger every day, constantly enlarging the field and profits of dealers everywhere.

DISCUSSES EUROPEAN BUSINESS.

John A. B. Cromelin, General Manager of the Columbia Interests in London, Visits Headquarters in New York—Completes Plans for Rebuilding New Quarters to Replace Those Recently Destroyed by Fire, Which Will Be Larger and More Complete—Discusses Price Maintenance and Price Cutting in London.

John A. B. Cromelin, European general manager of the Columbia Phonograph Co., arrived in this country on the Lusitania a day or two ago, and sailed again for Europe on the same ship, after spending a week-end in New York.

In a talk with the representative of The Talking Machine World, Mr. Cromelin said: "After the serious fire which took place recently in the Columbia plant in London, in which a large part of the buildings and machinery were destroyed, I came to this country to have a talk with the head officials in the home office with reference to the changes and enlargements that should be made when rebuilding the plant in order to take care of the large and rapidly growing business of the Columbia Co. in Great Britain and Continental countries.

"Although the firm has had a big and well equipped plant, it has been found inadequate for the last two seasons to satisfy public demand for this line of records, which have been brought to an enviable position in public favor by constant and aggressive recording of the highest quality, the use of well known and popular artists, and wide public advertising. When the Columbia plant was established in London it was laid out on a generous plan with the idea that it would be adequate for many years to come, but the most optimistic anticipations have been far surpassed, it having frequently been necessary to run the plant day and night for months at a time in order to cope with the demands. Even then the company was in both a fortunate and unfortunate position, having to sublet some of the business that was offered it,

seek emergency suppliers, owing to its inability to run the plant more than twenty-four hours a day. In graphophones and Grafonolas it has been the same story, the handsome and up-to-date line of these models, with their attractive design and exclusive Columbia features, having so met the appreciative taste of the careful and discriminating European buyers that the quantities which the previous facilities of the Columbia have enabled the company to turn out in Europe have been largely oversold. This has brought the Columbia Co. face to face with an urgent necessity for very much bigger space and manufacturing facilities, both for machine and record lines."

Mr. Cromelin said he found the officials and board at the home office greatly pleased with the prosperous state of business in Europe, and the clear prospect of further large expansions of trade right at hand, and cordially approved the proposal for utilizing the old Columbia site and the buildings which were unimpaired as a nucleus for a more imposing and spacious plant. "In addition to restoring the previous principal buildings as they were," said Mr. Cromelin, "floors will be added, and a large three-story building will be erected on the only remaining available ground. This increased space and the additional machinery which will be installed will provide for a substantial expansion in product, and the Columbia people believe will enable them to take care of all the trade that is offered them during the next several years."

In reference to the question of maintenance of prices on the other side of the water, where it has been said the trade was largely demoralized as the result of the widespread cutting of prices there, Mr. Cromelin said that there had been a good deal of trouble in this respect, but that as the result of the active campaign waged by the Columbia people against price cutters, conditions have been improved to such an extent that so far from feeling discouraged they are going ahead to erect a bigger plant than ever before in order to take good care of the business of the legitimate deal-

ers, who have loyally supported them in their efforts to stamp out price cutting in the Columbia line.

"One of the most gratifying details during the last year or two," said Mr. Cromelin, "has been the increasing prominence of the Dictaphone, this indispensable office appliance being also a Columbia product. The Dictaphone is handled in Europe along lines similar to those in the United States, as a separate and distinct product marketed through exclusive representatives, each one covering a specified territory and having an organization of specialty salesmen in all principal European cities. The increase in the use of this system in the last year or two has been amazing, the well-known advantages of the Dictaphone being as widely recognized in Europe as in the United States."

"TALKER" RECITAL DRAWS CROWDS.

The Talking Machine Co. of Minneapolis Has Large Audiences at the Recital of "Madam Butterfly"—Foster & Waldo Take on the Victor Line—W. J. Dyer & Bro., St. Paul, Open Talking Machine Department on Second Floor—Other News of Interest.

(Special to The Talking Machine World.)

Minneapolis, Minn., May 17, 1912.

The Talking Machine Co. gave a recital of "Madam Butterfly" one evening recently at its new store at 928 Nicollet avenue. The store was beautifully decorated with Japanese lanterns and umbrellas, and the burning of joss sticks gave the atmosphere of Japan. The story was told and songs explained in an able manner by Mr. Matheis. This was a special evening for the school teachers, and a very novel idea was introduced during the "Duet of the Flowers." While this song was being described beautiful flowers were passed around to everybody, which was very effective. The S. R. O. sign was out, and the sidewalk was blocked to the street by outsiders who could not gain admission. Mr. Matheis has made these recitals about the most popular thing in the talking machine line in the city of Minneapolis. All of the operas have been reproduced, as well as recitals of all the artists who have appeared in the city during the winter.

Foster & Waldo, the well-known piano dealers, have put in the Victor line. Their store is located about a block from the new store of the Talking Machine Co., on upper Nicollet avenue, directly across the street from C. A. Hoffman, the optician and Victor dealers. This will concentrate the talking machine business in this section, and with all firms pushing should result in much good to all. Arthur Magoon, the well-known talking machine salesman, lately of Dyer's of St. Paul, and the New England Furniture Co., is in charge of the department, and will make a good go of the new venture.

Koehler & Hinrichs, of St. Paul, are adding many new dealers; business has been good, and they look forward to an increased trade in the fall.

W. J. Dyer & Bro., of St. Paul, have opened a new department on the second floor. This gives them the most elaborate quarters west of Chicago. Beautiful rooms, splendid lighting effects and a grand recital hall in the rear make it something that other dealers should see and try to work up. Mr. Mairs has been working day and night on this for months. There was a grand opening a few weeks ago, when a reader gave a description of several operas, and the whole affair was a grand success.

AN ATTRACTIVE VICTOR WINDOW.

The retail talking machine store of David Switky, 330 Sixth avenue, New York, has been the subject of much interest from passers-by owing to the very attractive window display which he has arranged and in which the possibilities of the Victor as one of the essential equipments for camping out is demonstrated.

In writing a business letter, make its meaning so clear that there can be no question as to what you intend to say. Remember that inflection of the voice and accent does not appear in writing.

Won't You Have a Lesson in Spanish?

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

International Correspondence Schools

Box 918, Scranton, Pa.

An initial large profit, a rapid turn over, and a practical lien upon every Columbia instrument you sell, because every purchaser of a Columbia instrument comes back constantly for Columbia records.

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

AN ATTRACTIVE RECITAL ROOM

**Is That of the Florida Talking Machine Co.—
Smaller Quarters for Recital and Demonstration Purposes Possess Advantages That Often Are Not Realized in Larger Halls.**

That comparatively limited space can be put to excellent use as a recital hall by talking machine houses has been demonstrated by a number of progressive concerns in various parts of the country, who have devoted small rooms or sections of their store to recital purposes, taking small groups at a time and perhaps getting better results, from

Music Room of Florida Talking Machine Co., Jacksonville, Fla.

a sales point of view, than if they were demonstrating before a large hall of people wherein the individual was lost.

This is shown in the accompanying view of the music room of the Florida Talking Machine Co., Jacksonville, Fla., which seats close to one hundred people without crowding, and where a number of successful Victrola recitals have been given at regular and stated intervals. The room is attractively decorated, potted plants abound and the walls are hung with pictures, all tending to relieve the bareness and make the members of the audiences feel at ease and in a mood to listen to good music.

POINTS WORTH STUDYING.

Every salesman must consider and study these points, viz:

1. The best way to show the goods.
2. The strongest talking features of the goods,
3. Its uses to the customer.
4. The best answers to objections.
5. The best way to approach the customer.
6. Consider the class of trade you seek.
7. Compare present sales in your territory with those of the past.
8. Determine to make these sales steadily increase.

ACTIVITY IN LOS ANGELES.

**Wiley B. Allen Talking Machine Department
in Charge of R. E. Wolfinger—Bowling
League of Southern California Music Co.
Has Good Time—Many Orders Placed by Visiting Dealers—Edison Home Kinetoscope in Favor—Agency Secured by Dealers.**

(Special to The Talking Machine World.)

Los Angeles, Cal., May 28, 1912.

After one week of the most gorgeous display of the visiting Shriners to this city talking machine business has again resumed its swing and

Williamson, captain. Talking Machine Department—H. H. Fish, Guy Pooler, B. H. Burke, T. T. Gardner and F. W. Carnes, captain. Wholesale Department—W. E. Smith, J. V. Hanes, O. W. Terry, H. E. Depue and O. A. Lovejoy, captain. H. H. Fish and Harold Jackson originated a very clever menu in bowling phraseology, for the occasion.

C. H. Rundel, president of the bowling league, was the toastmaster for the evening. Through the kindness of the coast manager, W. S. Gray, and Local Manager W. F. Stidham, of the Columbia Phonograph Co. (General), the bowling shirts with the notes as the emblem were donated by these two popular talking machine men.

O. A. Brehler, Edison dealer of Sanger, Cal., and I. L. A. Broderson, Redlands, Cal., who is a very successful Victor and Edison dealer, spent a few days in this city recently. The former left a good order for Edison goods.

The J. B. Brown Music Co. has taken the agency for the Edison Home Kinetoscope.

A. G. Farquharson, special representative of the Columbia Phonograph Co. (General), of this section is in the east and with H. L. Willson, assistant to the general manager, Geo. W. Lyle, of the Columbia Phonograph Co. (General), will visit the principal cities from the Pacific to the Atlantic.

W. G. Walz, Jr., secretary of the W. G. Walz Co., El Paso, Tex., is spending a few days in Los Angeles enroute to San Francisco, accompanied by his wife. The W. G. Walz Co., being Victor and Edison jobbers of El Paso, has been conducting a most brilliant business in the talking machine line.

Carl G. Strock, Edison dealer of Santa Ana, is making preparation to handle the Edison Home Kinetoscope.

Sr. Rafael Cabanas, president of the Cia Fonografica Mexicana, S. A. Columbia jobbers of Mexico City, has been passing several days in this city and stated business was very satisfactory in his section of the country.

M. J. Buck, of the M. J. and B. M. Buck Co., Lansing, Mich., Victor dealers, was one of the visiting Shriners to Los Angeles.

Mr. Brown, of the Houston Phonograph Co., Edison jobbers of Houston, Tex., who visited Los Angeles recently, reports a steady demand for Edison goods.

A. Graham Cook, who has been manager of the talking machine department of the Geo. J. Birkel Co. for many years, will leave for the east June 1, visiting his home of boyhood days in Boston.

THE MAN THAT—

The man that knows not and knows not that he knows not is stupid—experience may educate him.

The man that knows not and knows that he knows not is appreciative—help him.

The man that knows and knows not that he knows is asleep—arouse him.

The man that knows not and thinketh that he knows is a fool—shun him.

The man that knows and knows that he knows is wise—follow him.—Elec-Tricks.

dealers are much encouraged over the results obtained during May. Great preparations are being made by those dealers who will handle the new Edison Home Kinetoscope. Enthusiasm is the keynote for this new line, which will no doubt bring very gratifying results to those interested.

The Wiley B. Allen Music Co. has just completed the remodeling of its talking machine department. All the soundproof rooms are elegantly furnished, thus making every possible comfort for its customers. R. E. Wolfinger, the new manager, is putting every effort forth to make this department a great success.

Mr. Wolfinger, formerly with the J. B. Brown Music Co. for many years, is a real talking machine man and a drawing card for the business.

A. S. Olds, of Goldfield, Nev., was in the city for several days, bringing with him good reports concerning the Edison line in the mining district.

W. T. Bryant from Hong Kong, China, is now located with the Southern California Music Co. His special line will be the Edison Home Kinetoscope department.

The first annual dinner of the Bowling League of the Southern California Music Co. was given May 14 at one of the leading hotels of this city. The teams were represented by the following: Small Goods Department—J. J. Apfel, L. V. Pippen, I. J. Westphal, Harold Jackson and W. S.

The Edison

The Opera

This type has a powerful double spring motor, geared to body. It plays Amberol Records only, and is equipped with the new style Model L reproducer which is stationary, the mandrel feeding the record past. Furnished in mahogany or oak with self supporting wood cygnet, horn to match.

All Edisons have

The right home tone.

The sapphire reproducing point.

The long playing, smooth running motor.

NEW YORK, JUNE 15, 1912.

TRADE during the summer months is usually quiet in many lines, but in special lines people have drifted into the habit of believing that business will be dull—hence they have relaxed energies and naturally a slowing up of the vitalizing forces means a lessening of trade.

Surely, there is good talking machine business to be secured during the summer months—in fact, quite as good a character of trade as in the winter.

There are yachts, camps, summer cottages and outing excursions—everything of that kind to be consistently worked for talking machine and record sales.

It requires some energy and some original planning, but there is no reason why the talking machine dealers of this country should sit down during the summer months and complain about trade stagnancy while doing nothing themselves to better business conditions.

Of course, things will be quiet if the merchants stagnate. Quite naturally sales will slow up if energy be withdrawn. There is no use to sit around and complain of the heat and say that trade is dull.

Have your men get out and see that the machines sold are in good working order. See that every adjustment is perfect and in the meantime have a nice bunch of new records to entertain the owners of new machines.

Think of the fine record sales that can be taken.

Why not ship out a few machines to good people to put in their cottages?

Let them try them for a week. They will never return them.

It is only a question of just getting down to brass tacks and trade can be dug out in satisfactory quantities during the summer months just as well as the winter months.

READERS of The Talking Machine World in every section of the country are vitally interested in price stability and, therefore, despite the fact that the patent bill may not be reported at the present session of Congress, they should continue to write their Congressional representatives expressing their opinions regarding the bill which Congressman Oldfield has introduced which, if enacted into law, would seriously affect the future of the talking machine business, for it would prevent manufacturers from fixing and enforcing retail prices on patented goods.

Now, ever man knows the value of stable conditions.

He knows that price cutting has a most demoralizing effect

upon trade everywhere; and the more communications Congressmen receive from business men the more they will be impressed with the fact that the substantial business element of this country most heartily protest against any law which will throw trade stability to the winds—in other words, permitting price cutting in a way which will depreciate stock values everywhere and make the conduct of business distinctly unpleasant.

Do not overlook this important matter—it is too vital to delay action on a single day.

FOR some time past the question has been frequently asked in talking machine circles: "When are the Edison disc machines to be placed upon the market?"

Some have found reason to complain at the delay, and considerable disappointment has been manifest in many quarters on account of the failure of the Edison disc machines to materialize.

It is well, however, before passing criticisms upon the alleged delay caused by the officials of any corporation to make thorough investigations and learn the causes.

In the first place, few people have an adequate conception of the gigantic task necessary to reorganize—revolutionize almost—a great business for the manufacture of a distinctly new creation.

A plant like the Edison, which covers many acres of ground, cannot be completely revolutionized in a month or a year. Some seem to feel that it is easy to do it over night.

It should be understood in the first place that the creation of special machinery is a tremendous task. In other words, it is creating practically a new business and at the same time maintaining all of the machinery for the old.

Visitors, however, at the Edison plant who have been favored with an inner survey of the actual developments have come away convinced that the Edison officials have been hard at work in a readjustment of their business to new conditions, and that they have succeeded in producing disc machines and disc records of a grade which is bound to interest is conceded.

The Edison records played on the Edison machines will compel attention from music lovers everywhere.

Their carrying power is somewhat phenomenal and it is certain that they will be destined to achieve success when the trade and public are invited to pass upon their merits.

Visitors to the plant are convinced that there have been preparations constantly going on for months which means the taking care of a great trade in a systematic manner.

On the various floors endless rows of cabinets for the disc machines are in evidence and everywhere there is obvious testimony to the effect that the fall will see the Edison disc machines well before the trade—also, there will be a new Edison cylinder record which is well calculated to win a large measure of admiration from music lovers.

It is certain, therefore, that the officers of the Edison corporation have carried their work along disc lines far beyond the experimental stage and have produced machines and records of rare and interesting quality.

That the trade ere long will have tangible proof of their work is sure.

Jobbers and dealers can rest assured that the Edison creative forces have not been inactive.

They have been moving with reasonable conservatism along lines of advance, so that when the finished product is put forth its owners will have the satisfaction of knowing that they have machines and records which will stand up under every test.

ASSOCIATION work may result in practical benefits to industry if there be sincerity of purpose behind any of the moves. In some industries associations meet and pass mouth-filling resolutions and then go back and fail to observe them.

They are soothing to the ear and make pleasant reading, but so far as actual benefits to the industry are concerned they amount to nothing.

Once in a while, however, we have some organizations in all trades which adopt methods and pass resolutions; living up to same in a manner which is helpful to themselves.

We have in mind in this particular the Los Angeles Talking Machine Men's Association. This organization was recently formed by the talking machine men of that city, who met for the purpose

of perfecting an association which should be helpful to the general trade. One of the initial movers in bringing the dealers together was A. G. Farquharson, manager of the Columbia Phonograph Co., who recently has been looking over the trade situation in the East. While here he received a message stating that the association was well started and that the members had met together and signed a document in which it was agreed to fix an interest rate of 7 per cent. on machines sold on the deferred payment plan.

In urging the adoption of this plan, Mr. Farquharson was following out the same business methods which had been sent out from the office of the Columbia Phonograph Co., to local distributors. The agreement, which was signed by practically all of the entire talking machine trade of Los Angeles, appears elsewhere in these columns.

The members have pledged themselves that they will charge and collect interest at the rate of 7 per cent. on all instalment or time sales other than those sold on thirty days' time open account.

Now, here is good practical work for an association, and we have local associations in many of the cities whose members could profit well by the example of Los Angeles merchants.

Here is something that does not help the manufacturer in the slightest, but it does help the pocketbook of every local dealer, and when men enter into such an agreement it is not for the purpose of avoiding the rules laid down—on the contrary, they will live up to them.

The Los Angeles Association certainly has accomplished a great move and we suggest that in cities where there are no associations existing that the men get together and form for mutual good.

There are many things which can be worked out along associations which will better the fortunes of talking machine men by increasing their revenues and this interest-bearing resolution on the deferred payments may well be repeated in the trade in cities throughout the Union.

THE Talking Machine Jobbers' Convention, which occurs next month—July 1 and 3—at Atlantic City, will quite naturally draw together the leading talking machine jobbers of the country.

It is said that a number of important topics will come up for discussion and subsequent action by the association members.

VICTOR CO. WARNS DEALERS

Against Selling Various Makes of Imported Talking Machines Which, It Is Claimed, Infringe Patents Held by That Company.

The Victor Talking Machine Co., under date of June 4, has sent the following letter of warning to its dealers and distributors relative to the sale of imported talking machines:

"We are just informed by a telegram from St. Louis, Mo., that some parties are there endeavoring to sell 'Polyphones' to dealers and consumers. The Polyphone talking machines and Polyphone records are flagrant infringements of United States Letters-Patent, owned by the Victor Talking Machine Co. In keeping with its policy of progress and development this company has continuously improved its talking machines and records, and has also secured United States Letters-Patent, protecting such improvements, and attention is directed to the fact that we claim the Polyphone talking machines and records infringe, among others, the following U. S. Letters-Patent owned by this company, i. e., No. 739,318, dated September 22, 1903; No. 778,976, dated January 3, 1905; No. 814,786, dated March 13, 1906; No. 814,848, dated March 13, 1906; No. 832,896, dated October 9, 1906; No. 896,059, dated August 11, 1908; No. 12,963 (reissue), dated May 25, 1909; No. 13,044 (reissue), dated November 23, 1909; No. 13,069 (reissue), dated January 4, 1909; No. 947,227, dated January 25, 1910.

"Although the Victor Talking Machine Co. owns and controls other patents, which may also be infringed, the above enumerated patents, it is thought, are sufficient to convince anyone that the manufacture, or sale, or use of these Polyphone machines and Polyphone records is illegal, and therefore, whoever manufactures, or uses, or sells these infringing articles makes himself liable to

be sued by the Victor Talking Machine Co. in the United States courts for an injunction and for an accounting of damages and profits."

Under these circumstances we warn all dealers against selling these infringing Polyphone talking machines and records, as we contend such acts

make them liable to be sued, and furthermore, every customer to whom these infringing goods are sold becomes also an infringer and liable also to be sued.

By stopping losses you can increase profits.

The charging of interest on instruments sold on the deferred payment plan will be one of the subjects brought up for discussion.

This is a very live topic and will interest every talking machine man, dealers as well as jobbers, all over the country.

It is a very important matter. There is considerable expense entailed in the collection of instalment accounts and no good reason can be advanced—or at least we have never heard it advanced—why a talking machine dealer should not receive interest on the unpaid account.

He has to do the bookkeeping and collecting and it is only fair that the purchasers should pay interest on the amount due.

This question will be handled by the association and it is proposed as well to suggest an increase in the number of machines necessary to qualify in the initial order as a dealer.

There are a number of other important matters all of which have direct bearing upon the talking machine business.

Secretary Roush has been working overtime in getting out attractive literature and certainly the members must feel that Atlantic City will look pretty good along about the first of July.

It is a good place to while away a day or two by the sea and this year it is proposed to reduce the schedule down to two days.

This will satisfy a great many of the members better than extending it into four.

The delegates have been invited by the Victor Co. to be the guests of its officers after the close of the convention.

The delegates are to get down to serious effort at Atlantic City because they are going to concentrate all the work within two days, and it should pay all members to journey to Atlantic City and join in with the others in the discussion of live talking machine affairs.

The coming together of men on these occasions surely should result in material good, and the more practical matters are discussed and means adopted to better the general conditions the better it is for all, and every trade association can only justify its business existence by doing things in the particular industry where it operates.

The number of members is one hundred and ten and surely out of that number there should be at least a good round hundred who will take part in the Atlantic City proceedings.

The DITSON Pledge

Is to see that our clientele has a better service than ever—setting a new standard in Victor jobbing deliveries. The demands of alert Victor dealers—the kind that grow—are many and varied, and we furnish the "first-aid" in every instance.

We believe this year's Victor business will be of tremendous proportions, and it will pay you to have

The Fastest Victor Service

which is a requisite in this hustling age. We possess the largest stocks, the best organization and most up-to-date equipment in the Eastern half of the country.

This covers Victor machines, records and supplies of every kind, not to mention cabinets, needles and trade-marked accessories.

Will you let us tell you more about Ditson co-operation? A postal gets this information!

OLIVER DITSON CO., Boston, Mass.

Columbia instruments: A line to fit the pocket-book of every possible buyer of a talking-machine. Columbia records: A line from which every dealer can meet the musical preferences of any one who owns a talking instrument.

PHONOGRAPHIC CORRESPONDENCE.

**A Hint Regarding Summer Trade Stimulation
—Conquering Dull Times.**

The average dealer looks forward to this season of the year with more or less trepidation. His customers, no matter how attentive they may have been throughout the winter and spring, find so many other mediums of amusement awaiting them upon the threshold of the good old summer time that they lose interest in the talker temporarily, relegating it to the attic, along with the overcoats and the moth balls. Of course, there are the true music lovers who keep their machines going in all seasons, but they are the exception and not the rule.

The fact that Mother Earth, gowned to display her voluptuous charms most lavishly, flirts with your patrons, flaunting her beauty in their very faces, should not discourage you. The old coquette will have "nothing on you" if you meet her attacks with sufficient energy. Make friends with the dame yourself, Mr. Dealer. Allow her to claim your customers throughout the summer for her very own if she insists upon it, but with the distinct understanding that you and the talking machine be allowed to play an active part in the drama also. There is no reason in the world why the talker should be abandoned just because the air is balmy and the birds are singing. Good music is a thing never to be thrust aside as unseasonable, and it is up to you to so instruct your customers.

The time is now ripe for the launching of that vacation advertising, and through this alone, if ably executed, you should be able to maintain the enthusiasm and patronage of your trade. Summer publicity should always be in harmony with the weather. Hot climates demand hot sauces, so do not spare the paprika.

I will not attempt to write your advertisements for you, Mr. Dealer, for I know full well that the task is far beyond me, but will attempt in my crude way to make a seasonable suggestion.

Have you ever encouraged phonographic correspondence among your patrons? Does Mr. Cityman, toiling in his downtown office, realize, I wonder, how much more Mrs. Cityman, sojourning at Bon-Air on the Roncocas, would appreciate hearing from him by record rather than by letter as at present? Hubby is extremely busy piling up the dollars, and, consequently, has very little time for recreation. Wifey, being very much in love and awfully lonesome, demands at least one letter every day, and gives the girl at the long distance switchboard a headache if she does not receive it. Hubby's stenographer finds it embarrassing also to sandwich love letters between legal documents, and, in fact, it is a very unsatisfactory arrangement all 'round.

Here's where you and the talker come in, Mr. Dealer. Get in touch with Mr. Cityman through snappy advertisements in the journal he likes best, explaining to him therein the many advantages of phonographic correspondence. Show him how, in the quiet of his office, through the use of the dictaphone or commercial phonograph, he can talk to

the one he loves best as confidentially and as freely as though he were strolling with her along the secluded pine-bordered paths at Bon-Air. All the little nothings that he knows will please her and that he would not care to place on paper or speak into a telephone transmitter, can be confided to the little wax cylinder with the utmost safety.

No fear of the guests at the hotel reading a mislaid letter and gloating over its contents if phonographic correspondence is indulged in. Even if there is a talking machine in the music room at Bon-Air, Mrs. Cityman may leave her wax missives of love around in any old place if she so desires, and no one will be the wiser as to their contents.

When Mrs. A. Scandal spies a little pasteboard box upon the piano after one of Mrs. Cityman's daily visits to the postoffice, and proceeds to experiment, she hears what sounds to her like a Japanese war bulletin or a stump speech in Choctaw, and returns the record to its place in a very disappointed and disgusted frame of mind. How is it done?

Why, it's a cinch! Listen: Furnish, as an addition *de luxe* to the standard equipment of Mr. Cityman's dictaphone, a belt slightly longer than the one ordinarily in use, and emphasize the fact that it is to be reserved exclusively for the talks with wifey. When adjusting it to his machine, he should cross it, which act, of course, reverses the movement of the mandrel, hence when reproduced, unless wifey is on to the little scheme, and performs a like operation upon her phonograph, the reproduction will be entirely unintelligible.

When oppressed and weary with the noise and gossip of the hotel, Mrs. Cityman will (if your ads so suggest) have her talking machine conveyed to the boat landing, and, comfortably ensconced in her favorite canoe, paddle to a secluded cove where the air is heavy with the fragrance from wild-rose, fox-grape and honeysuckle blooms, and kingfishers dive for perch among the lily pads. Then opening her case of records, she listens to the voice she loves. Every subtle inflection has been caught by the delicate recording stylus. *He* is talking to her, and she is soothed and rested.

Old Mother Earth has claimed her all right, but—here's the point!—her phonograph bore her company.

Now, Mr. Talker-Man, get busy with this phonographic correspondence idea. Oil up your shaving machine, and lay in a goodly store of blanks—you're going to need them this summer.

You will sell some commercial machines also if you lay this matter before business men who have not already installed them. The novelty of the thing will tickle their fancy.

HOWARD TAYLOR MIDDLETON.

MAKING MISTAKES.

Just as sure as "to err is human," to make mistakes is a good sign. If we did not make mistakes once in a while, we should be calling for our ecclesiastical harps. A mistake now and then keeps our conceit in check and our hand to the plow.

DOES GOOD WORK IN TEXAS.

Hyatt Lemoine, the Go-Ahead Traveling Salesman of the New Orleans Store of the Columbia Phonograph Co., Increases the Number of Columbia Representatives at All Points Visited During His Recent Trip.

(Special to The Talking Machine World.)

New Orleans, La., June 5, 1912.

One of the most successful salesmen on the staff of the local establishment of the Columbia

Hyatt Lemoine.

Phonograph Co. is Hyatt Lemoine. This genial and aggressive traveler for the New Orleans store has just returned from a very successful trip through south Texas, and on which many new Columbia dealers were secured. In one week Mr. Lemoine secured eight new Columbia dealers.

Every order was a bona fide and initial order and was sent in with the necessary signed contracts, etc.

The local manager of the Columbia store, W. F. Standke, counts the record made by Mr. Lemoine in this one week an exceptionally good one, and states that when you consider that the eight dealers are located in eight different towns and are among the best and largest merchants in each place, and that the orders range from the required initial amount up to \$500, this record is one that is seldom equalled.

TO EXHIBIT AT ATLANTIC CITY.

Pooley Furniture Co. to Display Full Line of Cabinets During Jobbers' Convention—Manufacturing Plant Enlarged to Meet Demands.

(Special to The Talking Machine World.)

Philadelphia, Pa., June 10, 1912.

The Pooley Furniture Co. has just bought out two new cabinets, illustrated in its advertisement elsewhere, which are attracting a great deal of attention from progressive talking machine men throughout the country. H. N. McMenimen will attend the convention of National Talking Machine Jobbers' Association at Atlantic City the opening days of July, and has engaged a display room for an exhibition of the entire line of Pooley cabinets.

Within recent date the Pooley Furniture Co. has added considerable floor space, which is given over exclusively to the manufacture of record cabinets, and even with this tremendous capacity the company finds it difficult to fill orders with that despatch which they would like. Meanwhile every effort is made to meet the demands of the trade both in standard of goods and importance of shipments.

EDWARD D. EASTON

Founder and President of the American Graphophone Co. and of the Columbia Phonograph Co., General

Twenty-fifth Columbia Anniversary

A Notable Event in Talking Machine History Which Was Duly Observed and Fittingly Celebrated by the Officials, the Business and Selling Staff of the Columbia Co.—Splendid Dinner Given in Honor of the Occasion—Addresses by President Easton, General Manager Lyle and Others—A Great Meeting of Columbia Forces and an Evening Long to be Remembered by Those Who Were Present—Interesting Reminiscent Remarks and a Delightful Entertainment Make the Occasion One to be Pleasantly Recalled by the Various Speakers.

Last month a notable milestone in Columbia history was passed, for it was on the 15th of May, 1887, twenty-five years ago, that the American Graphophone Co. was founded by Edward D. Easton. The anniversary of the founding of this talking machine business was fittingly celebrated on the evening of May 15 by a dinner given by President Easton to the members of the Columbia staff, departmental heads and branch managers.

The celebration occurred in the East Room of the Waldorf-Astoria. The room and tables were beautifully decorated in honor of the event.

Shortly after 7 o'clock the diners filed in and seated themselves at the tables, which had been arranged in the form of a horseshoe.

MENU.
 Clovises de Cherry Stone
 Potage à l'oseille, Printanière
 Radis Olives Céleri Amandes salées
 Truite de rivière au bleu
 Salade de tomates et concombres
 Medallion de filet de bœuf, sauce Colbert
 Pommes de terre, Laurette Petits pois français sautés
 Pamplemousse au marasquin
 Jeune pintade rotie en casserole
 Salade de laitue à la Russe
 Glaces de fantaisie
 Petits fours Fromage assortis
 Café

Lacrima Christi

The menu was elaborate, and between courses the diners were entertained by special talent which had been arranged by V. H. Emerson, who was aided by well-known record makers of the company.

Ted Snyder, the well-known music publisher, showed his superb skill at the piano; as well as did C. A. Prince, director of Prince's Orchestra.

Clever specialties which greatly entertained the diners were given by Byron G. Harlan, Arthur Collins, C. Allesandrini, Henry Burr, Will Oakland, Maurice Burkhardt and Fred Van Eps.

When Mr. Emerson announced the close of his part of the entertainment, President Easton arose, after the cigars had been lighted, and extended a cordial greeting to all.

Mr. Easton faced a splendid staff of men, who are in thorough accord with him in the Columbia business policies. There were heads of departments, officers of the corporation, branch managers and representatives from Canada, England and South America. Mr. Easton was received with tumultuous applause.

Edward D. Easton's Address to His Staff.

"The American Graphophone Co. was organized on May 13, 1887, and is therefore more than twenty-five years old. We have met this evening to celebrate the twenty-fifth anniversary. During that period we have learned how to design, how to manufacture, how to sell and how to use graphophones, and we have taught the world this art. Every talking machine in the world, by whomever made and however known, is technically a graphophone. The business is now a great world business; there are probably over 100,000 persons engaged in the business; there is no part of the world to which the graphophone has not gone; and the repertoire of records includes every language and dialect of importance in the world.

"In bidding you welcome to this celebration I wish to repeat what has so often been said and so truly, that it is an honor to have co-operated with the men who have created our enterprise, many of whom are here to-night, some of whom we have followed to the grave with wet eyes, all of whom I wish might be with us.

"It is a particularly happy feature of this celebration that we hold it at a time when the condition of the company, in every respect, is the best in its

history; when its financial condition is the soundest and its earnings by far the greatest. It would be difficult to celebrate if we had only age with which to congratulate ourselves, for this is an attribute that does not require very much ability, that simply comes with the passing of time and may indicate senility and decay.

"Let us realize that we cannot live upon the past; that unless we are constantly progressing we must go backward; that there is no standing still. Let us keep for our motto 'Ever Forward,' remembering that as eternal vigilance is the price of liberty, so eternal industry, watchfulness and effort are the price of business stability and success.

"For your support and devotion, for your un-

George W. Lyle.

selfish labor already so generously given and so successful in its results, I feel the deepest appreciation and gratitude; and in the still greater progress of the future I confidently predict the basis for greater congratulation."

He then called upon Geo. W. Lyle, who received hearty greeting, and whose remarks were closely listened to throughout and were applauded at various intervals.

Mr. Lyle Speaks of the Past and Present.

"It is a great pleasure to join with you in celebrating our twenty-fifth anniversary. This seems quite a ripe old age, especially when I recall the fact that at the time I entered the service, some fifteen years ago, and frequently since, so many of my friends have been most solicitous for my future and warned me many times that while the business was all right for the time and was a fad, still if I were wise I would be prepared to 'duck' at any moment; and I must admit that for some years I had a feeling of uneasiness. This was lost, however, as time went by, and especially after reading in a foreign paper an interview with our president, in which he stated that he was certain the business would at some time die, but that time would be when people ceased to have ears.

"We have all learned, however, that the business is not a fad and is still in its infancy, notwithstanding the birthday we celebrate, and that its wonderful growth is due to laboratory advance and

improvements in the art. And the growth of our own company to improvements in product, a strong advertising campaign and a definite business policy (taking care of the interest of every branch of the business, the jobber, the dealer and the user; in other words, in the words of our former President, 'Giving a Square Deal to All').

"All of the above, however, in my opinion, are small factors in the wonderful growth of our company, as compared with the fact that our company is composed of the most honorable, high-minded and loyal set of men ever banded together for the conduct of any business; and it is along this line of thought that I want to say a few words this evening.
